In May 1997 the International Bioethics Committee, a group of 36 specialists who meet under UNESCO auspices, approved a draft version of a Universal Declaration on the Human Genome and Human Rights, which aimed to provide ethical guide-lines for developments in human genetics. The Declaration, which identified some 100,000 hereditary genes as 'common heritage', was adopted by the UNESCO General Conference in November and committed states to promoting the dissemination of relevant scientific knowledge and co-operating in genome research. The November Conference also resolved to establish an 18-member World Commission on the Ethics of Scientific Knowledge and Technology to serve as a forum for the exchange of information and ideas and to promote dialogue between scientific communities, decision-makers and the public. UNESCO aims to improve the level of university teaching of the basic sciences through training courses, establishing national and regional networks and centres of excellence, and fostering co-operative research. UNESCO develops co-operative scientific and technological research programmes through the organization and support of scientific meetings and contacts with research institutions, and the establishment or strengthening of co-operative networks. With the International Council of Scientific Unions and the Third World Academy of Sciences, UNESCO operates a short-term fellowship programme in the basic sciences and an exchange programme of visiting lecturers. UNESCO also sponsors several research fellowships in the social sciences and promotes the rehabilitation of underprivileged urban areas, the research of socio-cultural factors affecting demographic change, and the study of family issues.

UNESCO aims to assist the building and consolidation of peaceful and democratic societies. An international network of institutions and centres involved in research on conflict resolution is being established to support the promotion of peace. Other training, workshop and research activities have been undertaken in countries that have suffered conflict. The Associated Schools Project (comprising some 5,200 institutions in 158 countries at December 1998) has, for more than 40 years, promoted the principles of peace, human rights, democracy and international co-operation through education. An International Youth Clearing House and Information Service (INFOYOUTH) aims to increase and consolidate the information available on the situation of young people in society, and to heighten awareness of their needs, aspirations and potential among public and private decision-makers. UNESCO's programme also focuses on the educational and cultural dimensions of physical education and sport and their capacity to preserve and improve health.

The struggle against all forms of discrimination is a central part of UNESCO's mission. It disseminates scientific information aimed at combating racial prejudice, works to improve the status of women and their access to education, and promotes equality between men and women.

CULTURE

In undertaking efforts to preserve the world's cultural and natural heritage UNESCO has attempted to emphasize the link between culture and development. The 1998–99 programme Cultural Development: Heritage and Creativity was to pursue UNESCO's objectives relating to the preservation and enhancement of cultural and natural heritage and promoting living cultures, in particular through the formulation of new national and international legislation (including an instrument on underwater cultural heritage), efforts to counter the illicit trafficking of cultural property and the promotion of all forms of creativity.

UNESCO encourages the translation and publication of literary works, publishes albums of art, and produces records, audiovisual programmes and travelling art exhibitions. It supports the development of book publishing and distribution, including the free flow of books and educational material across borders, and the training of editors and managers in publishing. UNESCO is active in preparing and encouraging the enforcement of international legislation on copyright.

UNESCO's World Heritage Programme, inaugurated in 1978, aims to protect historic sites and natural landmarks of outstanding universal significance, in accordance with the 1972 UNESCO Convention Concerning the Protection of the World Cultural and Natural Heritage, by providing financial aid for restoration, technical assistance, training and management planning. By December 1998 1998 there were 582 World Heritage Sites in 114 countries. UNESCO is assisting in the exploration of prehistoric sites in Libya, and in the preservation of sites and monuments in other countries, for example Carthage and Al-Qairawan in Tunisia, Fez in Morocco, Tyre in Lebanon and the Casbah of Algiers in Algeria. UNESCO has assisted Iraq in the establishment of a regional training centre for the conservation of cultural property in the Arab countries. In addition, UNESCO supports efforts for the collection and safeguarding of humanity's non-material heritage, including oral traditions, music, dance and medicine. In co-operation with the International Council for Philosophy and Humanistic Studies, UNESCO is compiling a directory of endangered languages.

UNESCO was the leading agency for promoting the UN's World Decade for Cultural Development (1988–97). In the framework of the World Decade UNESCO launched the Silk Roads Project, as a multidisciplinary study of the interactions among cultures and civilizations along the routes linking Asia and Europe. Other regional projects were undertaken to consider the dynamic process of dialogue and exchange in forming cultural identities, for example, a project to investigate the contributions of Arab culture to Latin American cultures through Spain and Portugal, and to promote creativity and cultural life.

In December 1992 UNESCO established the World Commission on Culture and Development to strengthen links between culture and development and to prepare a report on the issue.

COMMUNICATION, INFORMATION AND INFORMATICS

UNESCO's communications programme comprises three interrelated components concerned with the flow of information: a commitment to ensuring the wide dissemination of information, through the development of communications infrastructures and without impediments to freedom of expression or of the press; promotion of greater access to knowledge through international co-operation in the areas of information, libraries and archives; and efforts to harness informatics for development purposes and strengthen member states' capacities in this field. Within this framework, activities include assistance towards the development of legislation, training programmes and infrastructures for the media in countries where independent and pluralistic media are in the process of emerging; assistance, through professional organizations, in the monitoring of media independence, pluralism and diversity; promotion of exchange programmes and study tours, especially for young communications professionals from the least developed countries and central and eastern Europe; and improving access and opportunities for women in the media. In regions affected by conflict UNESCO supports efforts to establish and maintain an independent media service. Since September 1993 UNESCO has provided assistance for the establishment of the Palestinian Broadcasting Corporation and the modernization of the Palestinian News Agency. The strategy is largely implemented through an International Programme for the Development of Communication, which also channels funds, amounting to some US $3m. each year, to appropriate communication and media development projects, including the establishment of news agencies and newspapers and training editorial and technical staff. In December 1998 UNESCO helped to establish the Israeli-Palestinian Media Forum, which aimed to foster professional co-operation between Israeli and Palestinian journalists.

The General Information Programme (PGI), which was established in 1976, provides a focus for UNESCO's activities in the fields of specialized information systems, documentation, libraries and archives. Under the PGI, UNESCO aims to facilitate the elaboration of information policies and plans to modernize libraries and archives services; to encourage standardization; to train information specialists; and to establish specialized information networks. The objectives of the programme are accomplished by improving access to scientific literature; the holding of national seminars on information

policies; the furthering of pilot projects, and preservation and conservation efforts under the Records and Archives Management Programme (RAMP); and the training of users of library and information services. UNESCO is participating in the reconstruction of the ancient library at Alexandria, Egypt and in several national and regional projects to safeguard documentary heritage (for example, the Memory of the World Programme). PGI's mandate extends to trends and societal impacts of information technologies. In March 1997 the first International Congress on Ethical, Legal and Societal Aspects of Digital Information ('InfoEthics') was held, in Monte Carlo, Monaco. Also in March a regional InfoEthics congress, concerned with the interaction of the Islamic and Western cultures, was convened, in Morocco. At the second World 'Info-Ethics' Congress, which was held in October 1998, in Monte Carlo, experts discussed issues concerning privacy, confidentiality and security in the electronic transfer of information. A World Commission on the Ethics of Scientific Knowledge and Technology, which had been approved by the 1997 General Conference, met for the first time in April 1999, in Oslo, Norway.

UNESCO supports the development of computer networking and the training of informatics specialists, in particular through its Intergovernmental Informatics Programme (IIP). IIP's priorities include training in informatics, software development and research, the modernization of public administration and informatics policies and the development of regional computer networks. A regional conference on the use of new information and communication technologies for development in the Arab States was held in May 1997.

Finance

UNESCO's activities are funded through a regular budget provided by member states and extrabudgetary funds from other sources, particularly UNDP, the World Bank, regional banks and other bilateral Funds-in-Trust arrangements. UNESCO co-operates with many other UN agencies and international non-governmental organizations.

UNESCO's Regular Programme budget for the two years 1998–99 was US $544.4m., compared with $518.4m. for the previous biennium.

Publications

(mostly in English, French and Spanish editions; Arabic, Chinese and Russian versions are also available in many cases)

UNESCO Statistical Yearbook.

UNESCO Courier (monthly, in 32 languages).

UNESCO Sources (monthly).

Copyright Bulletin (quarterly).

Museum International (quarterly).

International Review of Education (quarterly).

International Social Science Journal (quarterly).

Nature and Resources (quarterly).

Prospects (quarterly review on education).

World Educational Report (every 2 years).

World Health Organization—WHO

Address: ave Appia, 1211 Geneva 27, Switzerland.

Telephone: (22) 7912111; **telex:** 415416; **fax:** (22) 7910746; **e-mail:** info@who.ch; **internet:** http://www.who.ch/.

WHO was established in 1948 as the central agency directing international health work.

Organization

(August 1999)

WORLD HEALTH ASSEMBLY

The Assembly meets annually in Geneva; it is responsible for policy making, and the biennial programme and budget; it appoints the Director-General, admits new members and reviews budget contributions.

EXECUTIVE BOARD

The Board is composed of 32 health experts designated by, but not representing, their governments; they serve for three years, and the World Health Assembly elects 10 or 11 member states each year to the Board. It meets at least twice a year to review the Director-General's programme, which it forwards to the Assembly with any recommendations that seem necessary. It advises on questions referred to it by the Assembly and is responsible for putting into effect the decisions and policies of the Assembly. It is also empowered to take emergency measures in case of epidemics or disasters.

SECRETARIAT

Director-General: Dr Gro Harlem Brundtland (Norway).

Executive Directors: Dr Jie Chen (People's Republic of China), Dr Julio J. Frenk (Mexico), Dr David L. Heymann (USA), Ann Kern (Australia), Dr Poonam Khetrapal Singh (India), Dr Souad Lyagoubi-Ouahchi (Tunisia), Dr Michael Scholtz (Germany), Dr Olive Shisana (South Africa), Dr Yasuhiro Suzuki (Japan).

REGIONAL OFFICES

Africa: (temporary office) Parirenyatwa Hospital, Mazoe St, POB BE 773, Belvedere, Harare, Zimbabwe; tel. (4) 4707494; fax (4) 4728998; e-mail regafro@whoafr.org; internet http://www.whoafr.org; Dir Dr Ebrahim Malick Samba.

Eastern Mediterranean: POB 1517, Alexandria 21563, Egypt; tel. (3) 4820223; telex 54028; fax (3) 4838916; e-mail emro@who.sci.eg; internet: http://www.who.sci.eg; Dir Dr Hussein Abd ar-Razzaq Gezairy.

Activities

WHO's objective is stated in the constitution as 'the attainment by all peoples of the highest possible level of health'.

It acts as the central authority directing international health work, and establishes relations with professional groups and government health authorities on that basis.

It supports, on request from member states, programmes to promote health, prevent and control health problems, control and eradicate disease, train health workers best suited to local needs and strengthen national health systems. Aid is provided in emergencies and natural disasters.

A global programme of collaborative research and exchange of scientific information is carried out in co-operation with about 1,000 leading national institutions. Particular stress is laid on the widespread communicable diseases of the tropics, and the countries directly concerned are assisted in developing their research capabilities.

It keeps diseases and other health problems under constant surveillance, promotes the exchange of information, formulates health regulations for international travel, and sets standards for the quality control of drugs, vaccines and other substances affecting health.

It collects and disseminates health data and carries out statistical analyses and comparative studies in such diseases as cancer, heart disease and mental illness.

It promotes improved environmental conditions, including housing, sanitation and working conditions. All available information on effects on human health of the pollutants in the environment is critically reviewed and published.

Co-operation among scientists and professional groups is encouraged, and the organization may propose international conventions and agreements. It assists in developing an informed public opinion on matters of health.

The WHO Regional Office for the Eastern Mediterranean works principally in the preparation of national and regional strategies for the achievement of Health for all by the year 2000 in the Eastern Mediterranean region, in accordance with the Global Strategy adopted by the World Health Assembly in May 1981. Primary health

care is considered to be key to 'Health for all', with the following as minimum requirements:

Safe water in the home or within 15 minutes' walking distance, and adequate sanitary facilities in the home or immediate vicinity;

Immunization against diphtheria, pertussis, tetanus, poliomyelitis, measles and tuberculosis;

Local health care, including availability of at least 20 essential drugs, within one hour's travel;

Trained personnel to attend childbirth, and to care for pregnant mothers and children up to at least one year old.

In May 1998 the World Health Assembly agreed that a new global strategy should be effected, through regional and national health policies. The so-called 'Health for all in the 21st century' initiative was to build on the primary health care approach of the 'Health for all' strategy, but was to strengthen the emphasis on quality of life, equity in health and access to health services.

In July 1998 Dr Gro Harlem Brundtland officially took office as the new Director-General of WHO. She immediately announced an extensive reform of the organization, including restructuring the WHO technical programmes into nine groups, or 'clusters' each headed by an Executive Director (see above). The groups were established within the framework of the following four main areas of activity: Combating ill health, incorporating Communicable Diseases and Non-communicable Diseases; Building healthy populations and communities, comprising the groups Health Systems and Community Health, Sustainable Development and Healthy Environments and Social Change and Mental Health; Sustained health, including the groups Health Technology and Pharmaceuticals and Evidence and Information for Policy; and Internal support—reaching out, comprising External Affairs and Governing Bodies, and General Management.

COMMUNICABLE DISEASES

The Communicable Diseases group works to reduce the impact of infectious diseases world-wide through surveillance and response; prevention and control; eradication and elimination; and research and development. The group seeks to strengthen global monitoring of important communicable disease problems and to increase the organization's capacity to provide an effective response to those problems. WHO also aims to reduce the impact of other communicable diseases through intensive, routine, prevention and control and, where possible, through the elimination or eradication of specific infections.

One of WHO's major achievements was the eradication of smallpox. Following a massive international campaign of vaccination and surveillance, begun in 1958 and intensified in 1967, the last case was detected in 1977 and the eradication of the disease was declared in 1980. In May 1996 the World Health Assembly resolved that, pending a final endorsement, all remaining stocks of the smallpox virus were to be destroyed on 30 June 1999; in May 1999, however, it was agreed to retain existing stocks until 2002. In 1988 the World Health Assembly declared its commitment to the similar eradication of poliomyelitis by 2000 and launched the Global Polio Eradication Initiative. By 1998 the number of polio cases world-wide had declined to 5,673, from 35,000 in 1988.

The objective of providing immunization for all children by 1990 was adopted by the World Health Assembly in 1977. Six diseases (measles, whooping cough, tetanus, poliomyelitis, tuberculosis and diphtheria) became the target of the Expanded Programme on Immunization (EPI), in which WHO, UNICEF and many other organizations collaborated. As a result of massive international and national efforts, the global immunization coverage increased from 20% in the early 1980s to the targeted rate of 80% by the end of 1990. This coverage signified that more than 100m. children in the developing world under the age of one had been successfully vaccinated against the targeted diseases, the lives of about 3m. children had been saved every year, and 500,000 annual cases of paralysis as a result of polio had been prevented. In 1992 the Assembly resolved to reach a new target of 90% immunization coverage with the six EPI vaccines; to introduce hepatitis B as a seventh vaccine and to introduce the yellow fever vaccine in areas where it occurs endemically.

As a result of the reform of WHO implemented from mid-1998, the former Division of Control of Tropical Diseases was integrated into the Communicable Diseases cluster, providing technical support to assist in the planning and implementation of control programmes, at global, regional or sub-regional level. Direct technical support is given to the design of realistic sustainable control programmes and to the integration of such programmes in the health services and the social and economic sectors of member countries. WHO takes part in mobilizing resources for disease control where needed, and co-ordinating national and international participation. WHO's Special Programme for Research and Training in Tropical Diseases, sponsored jointly by WHO, UNDP and the World Bank, was established in 1975, and comprises a world-wide network of about 5,000 scientists working on the development of vaccines, new drugs, diagnostic kits, non-chemical insecticides and epidemiology and social and economic research on the target diseases. The programme aims to strengthen research institutions in developing countries, and to encourage participation by scientists from the countries most affected by tropical diseases. In January 1998 a new 20-year programme to eliminate lymphatic filariasis was initiated, with substantial funding and support from two major pharmaceutical companies, and in collaboration with the World Bank, the Arab Fund for Economic and Social Development and the governments of Japan, the United Kingdom and the USA. A Ministerial Conference on Malaria, organized by WHO in October 1992 adopted a global strategy specifying requirements for effective control of the disease, which kills an estimated 1m. people every year and affects a further 300m.–500m. WHO has subsequently assisted countries where malaria is endemic to prepare national plans of action for malaria control in accordance with WHO's Global Malaria Control Strategy, which emphasized strengthening local capabilities, for example through training for effective health control. In July 1998 WHO declared the control of malaria a priority concern, and in October formally launched the 'Roll Back Malaria' programme, in conjunction with UNICEF, the World Bank and UNDP. Emphasis was to be placed on strengthening local health systems and on the promotion of inexpensive preventative measures, including the use of bednets treated with insecticides. WHO also supported the development of more effective anti-malaria drugs and vaccines through the 'New Medicines for Malaria' venture. In 1999 WHO planned to launch the 'African Initiative for Malaria Control in the 21st Century', which was expected to reduce the prevalence of malaria in 42 African countries by as much as 50% by 2010.

In July 1994 WHO, together with the Sasakawa Memorial Health Foundation, organized an international conference on the elimination of leprosy. The conference adopted a declaration on their commitment to the elimination of leprosy (the reduction of the prevalence of leprosy to less than one case per 10,000 population) by 2000 and WHO established a Special Programme devoted to this objective. In September 1998 WHO announced that the use of a combination of three drugs (known as multi-drug therapy—MDT) had resulted in a reduction in the number of leprosy caused world-wide from 10m.–12m. in 1988, to 1.15m. in 1997. Moreover, in April 1999 WHO announced that the number of countries having more the one case of leprosy per 10,000 had declined from 122 in 1985 to 28. WHO reported that the continued use of MDT treatment over a period of five-10 years would result in an end to all transmission of the disease, except in India, which had more than one-half of the global total of active leprosy cases. In July 1998 the Director-General of WHO and representatives of more than 20 countries, meeting in Yamoussoukro, Côte d'Ivoire, signed a declaration on the control of another emerging mycobacterial disease, Buruli ulcer.

In 1995 WHO established a Global Tuberculosis Programme to address the emerging challenges of the TB epidemic. According to WHO estimates, one-third of the world's population is infected with TB and 2m.-3m. people die from the disease each year, prompting WHO to declare TB a global emergency. WHO provides technical support to all member countries, with special attention being given to those with high TB prevalence, to establish effective national tuberculosis control programmes. WHO's strategy for TB control includes the use of DOTS (directly observed treatment, short-course), standardized treatment guide-lines, and result accountability through routine evaluation of treatment outcomes. Simultaneously, WHO is encouraging research with the aim of further disseminating DOTS, adapting it for wider use, developing new tools for prevention, diagnosis and treatment, and containing new threats such as the HIV/TB co-epidemic. In March 1997 it was announced that the use of DOTS in 10% of cases world-wide was resulting in the stabilization of the global epidemic. WHO predicted that an increased use of DOTS would prevent 10m. deaths within 10 years. In March 1998 WHO identified Morocco and Oman among several countries successfully controlling TB through the use of DOTS, while the GCC (qv.) states were undertaking a joint initiative to eliminate the disease, as well as implementing national plans of action. By late 1998, however, WHO estimated that there were still 8m. new cases of TB occurring world-wide each year, of which more than one-half were in Asia. In March 1999 WHO announced the launch of a new initiative, Stop TB, in co-operation with the World Bank, the US Government and a coalition of non-governmental organizations, which aimed to promote DOTS to ensure its use in 85% of cases by 2005, compared with some 16% in the late 1990s.

NON-COMMUNICABLE DISEASES

The Non-communicable Diseases group comprises three departments responsible for the surveillance, prevention and management of uninfectious diseases (such as those arising from an unhealthy diet).

'Inter-Health', a programme to combat non-communicable chronic diseases was initiated in 1990, with the particular aim of preventing an increase in the incidence of such diseases and their related life-

style determinants, in developing countries. WHO's programmes for diabetes mellitus, chronic rheumatic diseases and asthma assist with the development of national programmes, based upon goals and targets for the improvement of early detection, care and reduction of long-term complications. They also monitor the global epidemiological situation and co-ordinate multinational research activities concerned with the prevention and care of non-communicable diseases. In mid-1998 WHO adopted a resolution on measures to be taken to combat these diseases, the prevalence of which was anticipated to increase, particularly in developing countries, owing to rising life expectancy and changes in lifestyles. For example, between 1995 and 2025 the number of adults affected by diabetes was projected to increase from 135m. to 300m. In February 1999 WHO initiated a new programme, 'Vision 2020; the Right to Sight', which aimed to eliminate avoidable blindness (estimated to be as much as 80% of all cases) by 2020. Blindness was otherwise predicted to increase by as much as 100%, owing to the increased longevity of the global population.

HEALTH SYSTEMS AND COMMUNITY HEALTH

During 1998 WHO integrated its programmes relating to the health and development of children and adolescents, reproductive health and research, women's health, and health systems within the Health Systems and Community Health group. The group's aim is to improve access to sustainable health care for all by strengthening health systems and fostering individual, family and community development. Activities include newborn care; child health, including promoting and protecting the health and development of the child through such approaches as promotion of breast-feeding and use of the mother-baby package, as well as care of the sick child, including diarrhoeal and acute respiratory disease control and support to women and children in difficult circumstances; the promotion of safe motherhood and maternal health; adolescent health, including the promotion and development of young people and the prevention of specific health problems; women, health and development, including addressing issues of gender, sexual violence, and harmful traditional practices; and human reproduction, including research related to contraceptive technologies and effective methods. A regional workshop to strengthen national capabilities in mother and child health in the Eastern Mediterranean was convened in Cairo, Egypt, in April 1999, under a strengthened initiative to reduce maternal illness and mortality. In addition, WHO aims to provide technical leadership and co-ordination on reproductive health and to support countries in their efforts to ensure that people: experience healthy sexual development and maturation; have the capacity for healthy, equitable and responsible relationships; can achieve their reproductive intentions safely and healthily; avoid illnesses, diseases and injury related to sexuality and reproduction; and receive appropriate counselling, care and rehabilitation for diseases and conditions related to sexuality and reproduction.

WHO's Division of Diarrhoeal and Acute Respiratory Disease Control encourages national programmes aimed at reducing the estimated 3.5m. yearly childhood deaths as a result of diarrhoea, particularly through the use of oral rehydration therapy and preventive measures. The Division is also seeking to reduce deaths from pneumonia in infants through the use of a simple case-management strategy involving the recognition of danger signs and treatment with an appropriate antibiotic. In September 1997 WHO, in collaboration with UNICEF, formally launched a programme advocating the Integrated Management of Childhood Illness (IMCI), following successful regional trials in more than 20 developing countries during 1996–97. IMCI recognizes that pneumonia, diarrhoea, measles, malaria and malnutrition cause some 70% of the 11m. childhood deaths each year, and recommends screening sick children for all five conditions, in order to enable health workers to reach a more accurate diagnosis than may be achieved from the results of a single assessment.

In December 1995 WHO's Global Programme on AIDS (Acquired Immunodeficiency Syndrome), which began in 1987, was concluded. A new Joint UN Programme on the human immunodeficiency virus (HIV) and AIDS—UNAIDS—became operational on 1 January 1996, sponsored jointly by WHO, the World Bank, UNICEF, UNDP, UNESCO and UNFPA. WHO established an Office of HIV/AIDS and Sexually-Transmitted Diseases in order to ensure the continuity of its global response to the problem, which included support for national control and education plans, improving the safety of blood supplies and improving the care and support of AIDS patients. In addition, the Office was to liaise with UNAIDS and to make available WHO's research and technical expertise. At late 1998 there were an estimated 33.4m. adults and children living with HIV/AIDS; of the 5.8m. people newly affected in 1998, 19,000 were in North Africa and the Middle East.

SUSTAINABLE DEVELOPMENT AND HEALTHY ENVIRONMENTS

The Sustainable Development and Healthy Environment group comprises four departments that concentrate on: health in sustainable development; nutrition for health and development; protection of the human environment; and emergency and humanitarian action.

The group seeks to monitor the advantages and disadvantages for health, nutrition environment and development arising from the process of globalization; to integrate the issue of health into poverty reduction programmes; and to promote human rights and equality. Adequate and safe food and nutrition is a priority programme area. An estimated 780m. world-wide cannot meet basic needs for energy and protein, more than 2,000m. people lack essential vitamins and minerals, and 170m. children are estimated to be malnourished. WHO collaborates with FAO, WFP, UNICEF and other UN agencies in its activities relating to nutrition and food safety. In December 1992 an International Conference on Nutrition, co-sponsored by FAO and WHO, adopted a World Declaration on Nutrition and a Plan of Action designed to make the fight against malnutrition a development priority. In pursuing the objectives of the Declaration WHO promotes the elaboration of national plans of action for nutrition and aims to identify and support countries with high levels of malnutrition, which includes protein energy deficiencies, and deficiencies of iron, vitamin A and iodine. In collaboration with other international agencies, WHO is implementing a comprehensive strategy for promoting appropriate infant, young-child and maternal nutrition, and for dealing effectively with nutritional emergencies in large populations. Areas of emphasis include promoting health-care practices that enhance successful breast-feeding; appropriate complementary feeding; refining the use and interpretation of body measurements for assessing nutritional status; relevant information, education and training; and action to give effect to the 1981 International Code of Marketing of Breast-milk Substitutes. WHO's Food Safety Programme aims to eliminate risks, such as biological contaminants in foods which are a major cause of diarrhoea and malnutrition in children. WHO, together with FAO, establishes food standards (through the work of the Codex Alimentarius Commission) and evaluates food additives, pesticide residues and other contaminants and their implications for health.

WHO's Programme for the Promotion of Environmental Health undertakes a wide range of initiatives to tackle the increasing threats to health and well-being from a changing environment, especially in relation to air pollution, control of monitoring of water quality, sanitation, protection against radiation, management of hazardous waste, chemical safety and housing hygiene. The major part of WHO's technical co-operation in environmental health in developing countries is concerned with community water supply and sanitation. The Programme also gives prominence to the assessment of health risks from chemical, physical and biological agents. To contribute to the solution of environmental health problems associated with the rapid urbanization of cities in the developing world, the Programme was promoting globally in the 1990s the Healthy City approach that had been initiated in Europe. WHO is also working with other agencies to consider the implications on human health of global climate change.

Through its Division of Emergency and Humanitarian Action WHO acts as the 'health arm' of UN relief efforts in response to emergencies and natural disasters. Its emergency preparedness activities include co-ordination, policy-making and planning, awareness-building, technical advice, training, publication of standards and guide-lines, and research. Its emergency relief activities include oganizational support, the provision of emergency drugs and supplies and conducting technical emergency assessment missions. The Division's objective is to strengthen the national capacity of member states to reduce the adverse health consequences of disasters. In responding to emergency situations, WHO aims to develop projects and activities that will assist the national authorities concerned in rebuilding or strengthening their own capacity to handle the impact of such situations.

WHO assists UNRWA (q.v.) in providing healthcare to Palestinians living in the Occupied Territories. In October 1993, following a peace accord reached by Israel and Palestine in September, WHO launched an appeal for US $10m. to finance a technical assistance programme that was to implement the transfer of health services to a Palestinian self-governing authority, and provide for primary health care projects in the Occupied Territories. In May 1994 the World Health Assembly adopted a resolution to support the programme and to allocate the necessary funds to meet the urgent health needs of the Palestinian people.

In March 1996 a survey of health conditions in Iraq, published by WHO, generated concern at the impact on the population of the ongoing international trade embargo and, in particular, the widespread incidence of nutritional deficiencies and increasing infant mortality rates. Under the terms of Resolution 986 of the UN Security Council, which permitted the limited sale of petroleum by

the Iraqi authorities in order to facilitate the purchase of essential humanitarian supplies, WHO was responsible for distributing medicines and medical supplies, for supervising the distribution of medicines by the Iraqi authorities in central and southern Iraq and for implementing an epidemiological surveillance network in the northern Kurdish provinces of Iraq. The distribution of medicines to an anticipated 600 hospitals and health centres was initiated in May 1997.

SOCIAL CHANGE AND MENTAL HEALTH

The Social Change and Mental Health group comprises four departments: Health Promotion; Disability, Injury Prevention and Rehabilitation; Mental Health; and Substance Abuse. The group works to assess the impact of injuries, violence and sensory impairments on health, and formulates guide-lines and protocols for the prevention and management of mental problems. The Health Promotion department promotes decentralized and community-based health programmes and is concerned with the challenge of population ageing and encouraging healthy life-styles and self-care. Several projects have been undertaken, in collaborations between WHO regional and country offices and other relevant organizations, including: the Global School Health Initiative, to bridge the sectors of health and education and to promote the health of school-age children; the Global Strategy for Occupational Health, to promote the health of the working population and the control of occupational health risks; Community-based Rehabilitation, which aimed to provide a more enabling environment for people with disabilities; and a communication strategy to provide training and support for health communications personnel and initiatives.

The Substance Abuse department is concerned with problems of alcohol, drugs and other substance abuse. Within its Programme on Substance Abuse (PSA), which was established in 1990 in response to the global increase in substance abuse, WHO provides technical support to assist countries in formulating policies with regard to the prevention and reduction of the health and social effects of psychoactive substance abuse. PSA's sphere of activity includes epidemiological surveillance and risk assessment, advocacy and the dissemination of information, strengthening national and regional prevention and health promotion techniques and strategies, the development of cost-effective treatment and rehabilitation approaches, and also encompasses regulatory activities as required under the international drugs-control treaties in force.

The Tobacco or Health Progamme, which was incorporated into the PSA in May 1994, aims to reduce the use of tobacco, by educating tobacco-users and preventing young people from adopting the habit. In 1996 WHO published its first report on the tobacco situation world-wide. According to WHO, about one-third of the world's population aged over 15 years smoke tobacco, which causes approximately 3.5m. deaths each year (through lung cancer, heart disease, chronic bronchitis and other effects). In 1998 the 'Tobacco Free Initiative', a major global anti-smoking campaign, was established. In May 1999 the World Health Assembly endorsed the formulation of a Framework Convention on Tobacco Control to help to combat the increase in tobacco use and production, and to regulate aspects of the tobacco industry.

HEALTH TECHNOLOGY AND PHARMACEUTICALS

WHO's Health Technology and Pharmaceuticals group comprises the following three departments: Essential Drugs and Other Medicines; Vaccines and Other Biologicals; and Blood Safety and Clinical Technology. Accordingly, the group promotes the development and effective use of drugs and vaccines, as well as the appropriate use of traditional medicines, the self-sufficiency of immunization programmes, and world-wide co-operation on blood safety.

In January 1999 the Executive Board adopted a resolution on WHO's Revised Drug Strategy, which placed emphasis on the inequalities of access to pharmaceuticals, and also covered specific aspects of drugs policy, quality assurance, drug promotion, drug donation, independent drug information and rational drug use. Plans of action involving co-operation with member states and other international organizations in order to monitor and analyse the pharmaceutical and public health implications of international agreements, including trade agreements.

In September 1991 the Children's Vaccine Initiative (CVI) was launched, jointly sponsored by the Rockefeller Foundation, UNDP, UNICEF, WHO and the World Bank, to facilitate the development and provision of children's vaccines. The CVI has as its ultimate goal the development of a single oral immunization shortly after birth that will protect against all major childhood diseases.

Finance

WHO's regular budget is provided by assessment of member states and associate members. An additional fund for specific projects is provided by voluntary contributions from members and other sources. Funds are received from the UNDP and from UNFPA for population programmes. The two-year budget for 1998–99 amounted to US $842.65m., of which $157.4m. (or 18.7% of the total) was allocated to Africa and $90.2m. (10.7%) to the eastern Mediterranean region. In May 1999 the Assembly approved a regular budget of $842.64m. for the 2000–01 biennium, with a further $15m. to be available to fund priority programmes.

Other UN Organizations Active in the Middle East and North Africa

OFFICE FOR THE CO-ORDINATION OF HUMANITARIAN AFFAIRS

Address: United Nations Plaza, New York, NY10017, USA.

Telephone: (212) 963-1234; **fax:** (212) 963-1312; **e-mail:** info@dha.unicc.org; **internet:** http://www.reliefweb.int/dha-ol.

The Office was established in January 1998 as part of the UN Secretariat, with a mandate to co-ordinate international humanitarian assistance and to provide policy and other advice on humanitarian issues. It administers the Humanitarian Early Warning System, as well as Integrated Regional Information Networks to monitor the situation in different countries and a Disaster Response System

Under Secretary-General for Humanitarian Affairs and Emergency Relief Co-ordinator: Sergio Viera de Mello (Brazil).

OFFICE FOR DRUG CONTROL AND CRIME PREVENTION—ODCCP

Address: Vienna International Centre, POB 500, 1400 Vienna, Austria.

Telephone: (1) 26060-4266; **fax:** (1) 26060-5866; **internet:** http://www.odccp.org.

The Office was established on 1 November 1997 to strengthen the UN's integrated approach to issues relating to drug control, crime prevention and international terrorism. It comprises two principal components: the United Nations International Drug Control Programme (UNDCP) and the Centre for International Crime Prevention, both headed by the ODCCP Executive Director.

Executive Director: Pino Arlacchi (Italy).

OFFICE OF THE UNITED NATIONS HIGH COMMISSIONER FOR HUMAN RIGHTS

Address: Palais des Nations, 1211 Geneva 10, Switzerland.

Telephone: (22) 9171873; **fax:** (22) 9170245; **e-mail:** scrt.hchr@unog.ch; **internet:** http://www.unhchr.ch.

The Office is a body of the UN Secretariat and is the focal point for UN human rights activities. Since September 1997 it has incorporated the Centre for Human Rights.

High Commissioner: Mary Robinson (Ireland).

OFFICE OF THE UNITED NATIONS SPECIAL CO-ORDINATOR IN THE OCCUPIED TERRITORIES—UNSCO

Address: POB 490, Government House, Jerusalem 91004.

Telephone: (7) 2822746; **fax** (7) 2820966; **e-mail:** unscol@in.org.

UNSCO was established in June 1994 to support the Middle East peace process, in particular implementation of the Declaration of Principles with regard to interim arrangements for Palestinian self-rule (signed by the Israeli Government and the Palestine Liberation Organization in 1993), and to enhance the effectiveness of international donor assistance to the emerging autonomous areas. The Special Co-ordinator undertakes to co-ordinate UN programmes and agencies working in the region and organizes an annual inter-agency meeting. The Co-ordinator also co-chairs a Local Aid Co-ordination Committee to consider political and socio-economic developments affecting donor assistance and to identify priority areas for support.

Special Co-ordinator: CHINMAYA R. GHAREKHAN (India).

UNITED NATIONS CENTRE FOR HUMAN SETTLEMENTS—UNCHS (Habitat)

Address: POB 30030, Nairobi, Kenya.

Telephone: (2) 621234; **telex:** 22996; **fax:** (2) 624266; **e-mail:** habitat@unchs.org; **internet:** http://www.unchs.org.

The Centre was established in 1978 to service the inter-governmental Commission on Human Settlements, and to serve as a focus for human settlements activities in the UN system. A Conference on Human Settlements (Habitat II) was held in İstanbul, Turkey, in June 1996.

Executive Director: Dr KLAUS TOPFER (Germany) (acting).

UNITED NATIONS CHILDREN'S FUND—UNICEF

Address: 3 United Nations Plaza, New York, NY 10017, USA.

Telephone: (212) 326-7000; **telex:** 49620199; **fax:** (212) 888-7465; **e-mail:** webmaster@unicef.org; **internet:** http://www.unicef.org.

UNICEF was established in 1946 by the UN General Assembly as the UN International Children's Emergency Fund, to meet the emergency needs of children in post-war Europe and China. In 1950 its mandate was changed to emphasize programmes giving long-term benefits to children everywhere, particularly those in developing countries who are in the greatest need.

Executive Director: CAROL BELLAMY (USA).

Regional Office for the Middle East and North Africa: POB 840028, 11181, Amman, Jordan; tel. (6) 4629571; fax (6) 4640049; e-mail menaro@unicef.org.jo.

UNITED NATIONS CONFERENCE ON TRADE AND DEVELOPMENT—UNCTAD

Address: Palais des Nations, 1211 Geneva 10, Switzerland.

Telephone: (22) 9071234; **telex:** 412962; **fax:** (22) 9070057 **e-mail:** ers@unctad.org; **internet:** http://www.unctad.org.

UNCTAD was established in 1964. UNCTAD is the principal organ of the UN General Assembly concerned with trade and development, and is the focal point within the UN system for integrated activities relating to trade, finance, technology, investment and sustainable development. It aims to maximize the trade and development opportunities of developing countries, in particular least-developed countries, and to assist them to adapt to the increasing globalization and liberalization of the world economy. UNCTAD undertakes consensus-building activities, research and policy analysis and technical co-operation.

Secretary-General: RUBENS RICÚPERO (Brazil).

UNITED NATIONS POPULATION FUND—UNFPA

Address: 220 East 42nd St, New York, NY 10017, USA.

Telephone: (212) 297-5020; **telex:** 7607883; **fax:** (212) 557-6416; **internet:** http://www.unfpa.org.

Created in 1967 as the Trust Fund for Population Activities, the UN Fund for Population Activities (UNFPA) was established as a Fund of the UN General Assembly in 1972 and was made a subsidiary organ of the UN General Assembly in 1979, with the UNDP Governing Council designated as its governing body. In 1987 UNFPA's name was changed to the United Nations Population Fund (retaining the same acronym).

Executive Director: Dr NAFIS SADIK (Pakistan).

UN Specialized Agencies

INTERNATIONAL ATOMIC ENERGY AGENCY—IAEA

Address: Wagramerstrasse 5, POB 100, 1400 Vienna, Austria.

Telephone: (1) 26000; **telex:** 112645; **fax:** (1) 26007; **e-mail:** official.mail@iaea.org; **internet:** http://www.iaea.org/.

The Agency was founded in 1957 with the aim of enlarging the contribution of atomic energy to peace, health and prosperity throughout the world, through technical co-operation (assisting research on and practical application of atomic energy for peaceful uses) and safeguards (ensuring that materials and services provided by the Agency are not used for any military purpose).

Director-General: Dr MUHAMMAD EL-BARADEI (Egypt).

INTERNATIONAL CIVIL AVIATION ORGANIZATION—ICAO

Address: 999 University St, Montréal, PQ H5C 5H7, Canada.

Telephone: (514) 954-8219; **telex:** 05-24513; **fax:** (514) 954-6077; **e-mail:** icaohq@icao.org; **internet:** http://www.icao.int.

ICAO was founded in 1947, on the basis of the Convention on International Civil Aviation, signed in Chicago, in 1944, to develop the techniques of international air navigation and to help in the planning and improvement of international air transport.

Secretary-General: RENATO CLAUDIO COSTA PEREIRA (Brazil).

Regional Office for the Middle East: Egyptian Civil Aviation Complex, Cairo Airport Rd, 11776 Cairo, Egypt.

INTERNATIONAL LABOUR ORGANIZATION—ILO

Address: 4 route des Morillons, 1211 Geneva 22, Switzerland.

Telephone: (22) 7996111; **telex:** 415647; **fax:** (22) 7998577; **internet:** http://www.ilo.org.

ILO was founded in 1919 to work for social justice as a basis for lasting peace. It carries out this mandate by promoting decent living standards, satisfactory conditions of work and pay and adequate employment opportunities. Methods of action include the creation of international labour standards; the provision of technical co-operation services; and training, education, research and publishing activities to advance ILO objectives.

Director-General: JUAN O. SOMAVIA (Chile).

Regional Office for Africa: BP 3960, Abidjan 01, Côte d'Ivoire; tel. 32-27-16.

Regional Office for Arab States: POB 11-4088, Beirut, Lebanon; tel. (1) 752400; fax (1) 752405; e-mail beirut@ilo.org.lb.

INTERNATIONAL MARITIME ORGANIZATION—IMO

Address: 4 Albert Embankment, London, SE1 7SR, United Kingdom.

Telephone: (20) 7735-7611; **telex:** 23588; **fax:** (20) 7587-3210; **e-mail:** info@imo.org; **internet:** http://www.imo.org.

The Inter-Governmental Maritime Consultative Organization (IMCO) began operations in 1959, as a specialized agency of the UN to facilitate co-operation among governments on technical matters affecting international shipping. Its main aims are to improve the safety of international shipping, and to prevent pollution caused by ships. IMCO became IMO in 1982.

Secretary-General: WILLIAM A. O'NEIL (Canada).

INTERNATIONAL TELECOMMUNICATION UNION—ITU

Address: Place des Nations, 1211 Geneva 20, Switzerland.

Telephone: (22) 7305111; **telex:** 421000; **fax:** (22) 7337256; **e-mail:** itumail@itu.int; **internet:** http://www.itu.int.

Founded in 1865, ITU became a specialized agency of the UN in 1947. It acts to encourage world co-operation in the use of telecommunication, to promote technical development and to harmonize national policies in the field.

Secretary-General: YOSHIO UTSUMI (Japan).

UNITED NATIONS INDUSTRIAL DEVELOPMENT ORGANIZATION—UNIDO

Address: Vienna International Centre, POB 300, 1400 Vienna, Austria.

Telephone: (1) 260260; **fax:** (1) 2692669; **e-mail:** unido-pinfo@unido.org; **internet:** http://www.unido.org.

UNIDO began operations in 1967. It aims to promote sustainable and socially equitable industrial development in developing countries and in countries with economies in transition; encourages industrial partnerships between governments and the private sector and acts as a world-wide forum for industrial development; provides technical co-operation services.

Director-General: CARLOS ALFREDO MAGARIÑOS (Argentina).

UNIVERSAL POSTAL UNION—UPU

Address: Case postale, 3000 Berne 15, Switzerland.

Telephone: (31) 3503111; **telex:** 912761; **fax:** (31) 3503110; **e-mail:** info@.upu.nt; **internet:** http://www.upu.nt.

The General Postal Union was founded by the Treaty of Berne (1874), beginning operations in July 1875. Three years later its

name was changed to the Universal Postal Union. In 1948 UPU became a specialized agency of the UN. It aims to develop and unify the international postal service, to study problems and to provide training.

Director-General: THOMAS E. LEAVEY (USA).

WORLD INTELLECTUAL PROPERTY ORGANIZATION—WIPO

Address: 34 chemin des Colombettes, 1211 Geneva 20, Switzerland.

Telephone: (22) 3389111; **fax:** (22) 7335428; **e-mail:** wipo.mail@wipo.int; **internet:** http://www.wipo.int.

WIPO was established in 1970. It became a specialized agency of the UN in 1974 concerned with the protection of intellectual property (e.g. industrial and technical patents and literary copyrights). WIPO formulates and administers treaties embodying international norms and standards of intellectual property, establishes model laws, and facilitates applications for the protection of inventions, trademarks etc. WIPO provides legal and technical assistance to developing countries and countries with economies in transition and advises countries on obligations under the World Trade Organization's agreement on Trade-Related Aspects of Intellectual Property Rights (TRIPS).

Director-General: Dr KAMIL IDRIS (Sudan).

WORLD METEOROLOGICAL ORGANIZATION—WMO

Address: 7 bis ave de la Paix, 1211 Geneva 2, Switzerland.

Telephone: (22) 7308111; **fax:** (22) 7308181; e-mail ipa@gateway.wmo.ch; **internet:** http://www.wmo.ch.

WMO started its activities in 1951, aiming to improve the exchange of information in the fields of meteorology, climatology and operational hydrology, and its applications.

Secretary-General: Prof. G.O.P. OBASI (Nigeria).

ARAB FUND FOR ECONOMIC AND SOCIAL DEVELOPMENT—AFESD

Address: POB 21923, Safat, 13080 Kuwait.

Telephone: 4844500; **telex:** 22153; **fax:** 4815760; **internet:** http://www.arabfund.org.

Established in 1968 by the Economic Council of the Arab League, the Fund began its operations in 1974. It participates in the financing of economic and social development projects in the Arab states.

MEMBERSHIP

Twenty-one members (see table of subscriptions below).

Organization

(August 1999)

BOARD OF GOVERNORS

The Board of Governors consists of a Governor and an Alternate Governor appointed by each member of the Fund. The Board of Governors is considered as the General Assembly of the Fund, and has all powers.

BOARD OF DIRECTORS

The Board of Directors is composed of eight Directors elected by the Board of Governors from among Arab citizens of recognized experience and competence. They are elected for a renewable term of two years.

The Board of Directors is charged with all the activities of the Fund and exercises the powers delegated to it by the Board of Governors.

Director-General and Chairman of the Board of Directors: ABD AL-LATIF YOUSUF AL-HAMAD.

FINANCIAL STRUCTURE

In 1982 the authorized capital was increased from 400m. Kuwaiti dinars (KD) to KD 800m., divided into 80,000 shares having a value of KD 10,000 each. At the end of 1997 paid-up capital was KD 663.04m.

* Supplementary loan.

Activities

Pursuant to the Agreement Establishing the Fund (as amended in 1997 by the Board of Governors), the purpose of the Fund is to contribute to the financing of economic and social development projects in the Arab states and countries by:

1. Financing economic development projects of an investment character by means of loans granted on concessionary terms to governments and public enterprises and corporations, giving preference to projects which are vital to the Arab entity, as well as to joint Arab projects.

2. Financing private sector projects in member states by providing all forms of loans and guarantees to corporations and enterprises (possessing juridical personality), participating in their equity capital, and providing other forms of financing and the requisite financial, technical and advisory services, in accordance with such regulations and subject to such conditions as may be prescribed by the Board of Directors.

3. Forming or participating in the equity capital of corporations possessing juridical personality, for the implementation and financing of private sector projects in member states, including the provision and financing of technical, advisory and financial services.

4. Establishing and administering special funds with aims compatible with those of the Fund and with resources provided by the Fund or other sources.

5. Encouraging, directly or indirectly, the investment of public and private capital in a manner conducive to the development and growth of the Arab economy.

6. Providing expertise and technical assistance in the various fields of economic development.

The Fund co-operates with other Arab organizations such as the Arab Monetary Fund, the League of Arab States and OAPEC in preparing regional studies and conferences, and acts as the secretariat of the Co-ordination Group of Arab National and Regional Development Institutions. These organizations also work together to produce a *Unified Arab Economic Report*, which considers economic and social developments in the Arab states.

By the end of 1997 the Fund had made 355 loans for projects in 17 countries, since the beginning of its operations. The total value of these loans was KD 2,770m. Disbursements amounted to KD 1,612m. by the end of 1997.

During 1997 the Fund approved 22 loans totalling KD 244.1m. for projects in nine Arab countries (see table above).

The total number of technical assistance grants provided by the end of 1997 was 547, with a value of KD 60.8m. During 1997 41 new grants, totalling KD 4.9m., were approved, mainly for institutional support, infrastructure, training, feasibility studies and project preparation. Technical grants may be used to finance regional seminars and conferences and other general studies and research.

ARAB MONETARY FUND

Address: POB 2818, Abu Dhabi, United Arab Emirates.

Telephone: (2) 215000; **telex:** 22989; **fax:** (2) 326454.

The Agreement establishing the Arab Monetary Fund was approved by the Economic Council of Arab States in Rabat, Morocco, in April 1976 and entered into force on 2 February 1977.

* From July 1993 loans to Iraq, Somalia and Sudan were suspended as a result of their failure to repay debts to the Fund totalling US $603m. By the end of 1998 the arrears amounted to AAD 197.3m. (or some $833.4m.).

Organization

(August 1999)

BOARD OF GOVERNORS

The Board of Governors is the highest authority of the Arab Monetary Fund. It formulates policies on Arab economic integration and liberalization of trade among member states. With certain exceptions, it may delegate to the Board of Executive Directors some of its powers. The Board of Governors is composed of a governor and a deputy governor appointed by each member state for a term of five years. It meets at least once a year; meetings may also be convened at the request of half the members, or of members holding half of the total voting power.

BOARD OF EXECUTIVE DIRECTORS

The Board of Executive Directors exercises all powers vested in it by the Board of Governors and may delegate to the Director-General such powers as it deems fit. It is composed of the Director-General and eight non-resident directors elected by the Board of Governors. Each director holds office for three years and may be re-elected.

DIRECTOR-GENERAL

The Director-General of the Fund is appointed by the Board of Governors for a renewable five-year term, and serves as Chairman of the Board of Executive Directors.

The Director-General supervises a Committee on Loans and a Committee on Investments to make recommendations on loan and investment policies to the Board of Executive Directors, and is required to submit an Annual Report to the Board of Governors.

Director-General and Chairman of the Board of Executive Directors: Dr JASEM ABDULLAH AL-MANNAI.

FINANCE

The Arab Accounting Dinar (AAD) is a unit of account equivalent to 3 IMF Special Drawing Rights. (The average value of the SDR in 1998 was US $1.3565.)

Each member paid, in convertible currencies, 5% of the value of its shares at the time of its ratification of the Agreement and another 20% when the Agreement entered into force. In addition, each member paid 2% of the value of its shares in its national currency regardless of whether it is convertible. The second 25% of the capital was to be subscribed by the end of September 1979, bringing the total paid-up capital in convertible currencies to AAD 131.5m. An increase in requests for loans led to a resolution by the Board of Governors in April 1981, giving members the option of paying the balance of their subscribed capital. This payment became obligatory in July 1981, when total approved loans exceeded 50% of the already paid-up capital in convertible currencies. In April 1983 the authorized capital of the Fund was increased from AAD 288m. to AAD 600m. The new capital stock comprised 12,000 shares, each having the value of AAD 50,000. At the end of 1998 total paid-up capital was AAD 324.1m.

CAPITAL SUBSCRIPTIONS
(million Arab Accounting Dinars, 31 December 1998)

Yemen	15.40
Total	324.09*

* Excluding Palestine's share, which was deferred by a Board of Governors' resolution in 1978.

Activities

The creation of the Arab Monetary Fund was seen as a step towards the goal of Arab economic integration. It assists member states in balance of payments difficulties, and also has a broad range of aims.

The Articles of Agreement define the Fund's aims as follows:

(*a*) to correct disequilibria in the balance-of-payments of member states;

(*b*) to promote the stability of exchange rates among Arab currencies, to render them mutually convertible, and to eliminate restrictions on current payments between member states;

(*c*) to establish policies and modes of monetary co-operation to accelerate Arab economic integration and economic development in the member states;

(*d*) to tender advice on the investment of member states' financial resources in foreign markets, whenever called upon to do so;

(*e*) to promote the development of Arab financial markets;

(*f*) to promote the use of the Arab dinar as a unit of account and to pave the way for the creation of a unified Arab currency;

(*g*) to co-ordinate the positions of member states in dealing with international monetary and economic problems; and

(*h*) to provide a mechanism for the settlement of current payments between member states in order to promote trade among them.

The Arab Monetary Fund functions both as a fund and a bank. It is empowered:

(*a*) to provide short- and medium-term loans to finance balance-of-payments deficits of member states;

(*b*) to issue guarantees to member states to strengthen their borrowing capabilities;

(*c*) to act as intermediary in the issuance of loans in Arab and international markets for the account of member states and under their guarantees;

(*d*) to co-ordinate the monetary policies of member states;

(*e*) to manage any funds placed under its charge by member states;

(*f*) to hold periodic consultations with member states on their economic conditions; and

(*g*) to provide technical assistance to banking and monetary institutions in member states.

Loans are intended to finance an overall balance-of-payments deficit and a member may draw up to 75% of its paid-up subscription, in convertible currencies, for this purpose unconditionally (automatic loans). A member may, however, obtain loans in excess of this limit, subject to agreement with the Fund on a programme aimed at reducing its balance-of-payments deficit (ordinary and extended loans, equivalent to 175% and 250% of its quota respectively). From 1981 a country receiving no extended loans was entitled to a loan under the Inter-Arab Trade Facility (discontinued in 1989) of up to 100% of its quota. In addition, a member has the right to borrow up to 50% of its paid-up capital in order to cope with an unexpected deficit in its balance of payments resulting from a decrease in its exports of goods and services or a large increase in its imports of agricultural products following a poor harvest (compensatory loans). Over the period 1978–98, 105 loans were extended to 12 member countries.

Automatic and compensatory loans are repayable within three years, while ordinary and extended loans are repayable within five and seven years respectively. Loans are granted at concessionary and uniform rates of interest which increase with the length of the period of the loan. In 1988 the Fund's executive directors agreed to modify their policy on lending, placing an emphasis on the correction of economic imbalances in recipient countries.

At the end of 1998 total approved loans amounted to AAD 733.8m., of which AAD 705.7m. had been disbursed and AAD 506.4m. repaid. During 1998 the Fund approved two loans, amounting to AAD 15.0m., under a new Structural Adjustment Facility established in 1996.

The Fund also provides technical assistance to its member countries. Such assistance is furnished through either the provision of experts to the country concerned or in the form of specialized training of officials of member countries. In view of the increased importance of this type of assistance, the Fund established, in 1988, the Economic Policy Institute (EPI) which offers regular training courses and specialized seminars for middle-level and senior staff, respectively, of financial and monetary institutions of the Arab countries. On 1 April 1999 the Fund signed a memorandum of understanding with the International Monetary Fund to establish a joint regional training programme.

LOANS APPROVED, 1998

Borrower	Type of loan	Amount (AAD million)
Jordan	Structural Adjustment Facility	3.910
Yemen	Structural Adjustment Facility	11.113

CO-OPERATION COUNCIL FOR THE ARAB STATES OF THE GULF

Address: POB 7153, Riyadh 11462, Saudi Arabia.

Telephone: (1) 482-7777; **telex:** 403635; **fax:** (1) 482-9089.

More generally known as the Gulf Co-operation Council (GCC), the organization was established on 25 May 1981 by six Arab states.

MEMBERS

Bahrain	Oman	Saudi Arabia
Kuwait	Qatar	United Arab Emirates

Organization

(August 1999)

SUPREME COUNCIL

The Supreme Council is the highest authority of the GCC, comprises the heads of member states and meets annually in ordinary session, and in emergency session if demanded by two or more members. The Presidency of the Council is undertaken by each state in turn, in alphabetical order. The Supreme Council draws up the overall policy of the organization; it discusses recommendations and laws presented to it by the Ministerial Council and the Secretariat General in preparation for endorsement. The GCC's charter provides for the creation of a commission for the settlement of disputes between member states, to be attached to and appointed by the Supreme Council. In December 1997 the Supreme Council authorized the establishment of a 30-member Consultative Council, appointed by member states, to act as an advisory body.

MINISTERIAL COUNCIL

The Ministerial Council consists of the foreign ministers of member states, meeting every three months, and in emergency session if demanded by two or more members. It prepares for the meetings of the Supreme Council, and draws up policies, recommendations, studies and projects aimed at developing co-operation and co-ordination among member states in various spheres.

SECRETARIAT GENERAL

The Secretariat assists member states in implementing recommendations by the Supreme and Ministerial Councils, and prepares reports and studies, budgets and accounts. The Secretary-General is appointed by the Supreme Council for a renewable three-year term. In March 1996 the Ministerial Council approved a proposal that, in future, the position of Secretary-General be rotated among member states, in order to ensure equal representation. Assistant Secretary-Generals are appointed by the Ministerial Council upon the recommendation of the Secretary General. All member states contribute in equal proportions towards the budget of the Secretariat.

Secretary-General: Sheikh JAMIL IBRAHIM ALHEJAILAN (Saudi Arabia).

Assistant Secretary-General for Political Affairs: Dr HAMAD ALI AS-SULAYTI (Bahrain).

Assistant Secretary-General for Economic Affairs: Dr ABDULLAH SALEH AL-KHULAYFI (Qatar).

Assistant Secretary-General for Military Affairs: Maj.-Gen. FALEH ABDULLAH ASH-SHATTI (Kuwait).

Activities

The GCC was set up following a series of meetings of foreign ministers of the states concerned, culminating in an agreement on the basic details of its charter on 10 March 1981. The Charter was signed by the six heads of state on 25 May. It describes the organization as providing 'the means for realizing co-ordination, integration and co-operation' in all economic, social and cultural affairs.

ECONOMIC CO-OPERATION

In November 1982 GCC ministers drew up a 'unified economic agreement' covering freedom of movement of people and capital, the abolition of customs duties, technical co-operation, harmonization of banking regulations and financial and monetary co-ordination. At the same time GCC heads of state approved the formation of a Gulf Investment Corporation, to be based in Kuwait (see below). Customs duties on domestic products of the Gulf states were abolished in March 1983, and new regulations allowing free movement of workers and vehicles between member states were also introduced. A common minimum customs levy (of between 4% and 20%) on foreign imports was imposed in 1986. In May 1992 GCC trade ministers announced the objective of establishing a GCC common market by 2000. In September 1992 GCC ministers reached agreement on the application of a unified system of tariffs by March 1993. A meeting of the Supreme Council, held in December 1992, however, decided to mandate GCC officials to formulate a plan for the introduction of common external tariffs, to be presented to the Council in December 1993. Only the tax on tobacco products was to be standardized from March 1993, at a rate of 50% (later increased to 70%). In April 1994 ministers of finance agreed to pursue a gradual approach to unifying tariffs, which was to be achieved according to a schedule over two to three years. A technical committee, established to consider aspects of establishing a customs union, met for the first time in June 1998. At that time member states had reached agreement on the classification of more than 90% of goods for the purposes of a unified external customs tariff. In December the Supreme Council requested that ministers of finance conclude an agreement on a unified customs tariff before the end of 1999, and resolved that a customs union become effective in March 2001.

In February 1987 the governors of the member states' central banks agreed in principle to co-ordinate their rates of exchange, and this was approved by the Supreme Council in November. It was subsequently agreed to link the Gulf currencies to a 'basket' of other currencies. In April 1993 GCC central bank governors agreed to establish a joint banking supervisory committee, in order to devise rules for GCC banks to operate in other member states. They also decided to allow Kuwait's currency to become part of the GCC monetary system that was established following Iraq's invasion of Kuwait in order to defend the Gulf currencies. In December 1997 GCC heads of state authorized the guide-lines that had been formulated to enable national banks to establish operations in other GCC states. These were to apply only to banks established at least 10 years previously with a share capital of more than US $100m.

TRADE AND INDUSTRY

In 1982 a ministerial committee was formed to co-ordinate trade policies and development in the region. Technical subcommittees were established to oversee a strategic food reserve for the member states, and joint trade exhibitions (which were generally held every year until responsibility was transferred to the private sector in 1996). In November 1986 the Supreme Council approved a measure whereby citizens of GCC member states were enabled to undertake certain retail trade activities in any other member state, with effect from 1 March 1987. The ministerial committee in charge of trade also forms the board of directors of the GCC Authority for Standards and Metrology, which approves minimum standards for goods produced in or imported to the region.

In 1985 the Supreme Council endorsed a common industrial strategy for the GCC states. It approved regulations stipulating that priority should be given to imports of GCC industrial products, and permitting GCC investors to obtain loans from GCC industrial development banks. In November 1986 resolutions were adopted on the protection of industrial products, and on the co-ordination of industrial projects, in order to avoid duplication. In March 1989 the Ministerial Council approved the Unified GCC Foreign Capital Investment Regulations, which aimed to attract foreign investment and to co-ordinate investments amongst GCC countries. Further guide-lines to promote foreign investment in the region were formulated during 1997. In December 1992 the Supreme Council endorsed Patent Regulations for GCC member states to facilitate regional scientific and technological research. A GCC Patent Office for the protection of intellectual property in the region, was established in 1998.

In December 1998 the Supreme Council discussed the effect on members' economies of the decline in petroleum prices. The Council urged members to comply with the petroleum production cuts pledged earlier in the year (see OPEC, p. 272) and agreed to extend the reductions until June 1999 in an attempt to promote market stability. Other petroleum producing countries were requested to make similar production commitments.

AGRICULTURE

A unified agricultural policy for GCC countries was endorsed by the Supreme Council in November 1985. Between 1983 and 1990

ministers also approved proposals for harmonizing legislation relating to water conservation, veterinary vaccines, insecticides, fertilizers, fisheries and seeds. A permanent committee on fisheries aims to co-ordinate national fisheries policies, to establish designated fishing periods and to undertake surveys of the fishing potential in the Arabian (Persian) Gulf. Co-operation in the agricultural sector also extends to consideration of the water resources in the region.

TRANSPORT, COMMUNICATIONS AND INFORMATION

During 1985 feasibility studies were undertaken on new rail and road links between member states, and on the establishment of a joint coastal transport company. A scheme to build a 1,700-km railway to link all the member states and Iraq (and thereby the European railway network) was postponed, owing to its high cost (estimated at US $4,000m.). In November 1993 ministers agreed to request assistance from the International Telecommunication Union on the establishment of a joint telecommunications network, which had been approved by ministers in 1986. The region's telecommunications systems were to be integrated through underwater fibre-optic cables and a satellite-based mobile telephone network. In the mid-1990s GCC ministers of information began convening on a regular basis with a view to formulating a joint external information policy. In November 1997 GCC interior ministers approved a simplified passport system to facilitate travel between member countries.

ENERGY

In 1982 a ministerial committee was established to co-ordinate hydrocarbons policies and prices. Ministers adopted a petroleum security plan to safeguard individual members against a halt in their production, to form a stockpile of petroleum products, and to organize a boycott of any non-member country when appropriate. In December 1987 the Supreme Council adopted a plan whereby a member state whose petroleum production was disrupted could 'borrow' petroleum from other members, in order to fulfil its export obligations.

During the early 1990s proposals were formulated to integrate the electricity networks of the six member countries. In the first stage of the plan the networks of Saudi Arabia, Bahrain, Kuwait and Qatar would be integrated; those of the United Arab Emirates (UAE) and Oman would be interconnected and finally linked to the others in the second stage, to be completed by 2003. In December 1997 GCC heads of state declared that work should commence on the first stage of the plan, under the management of an independent authority. The estimated cost of the project was more than US $6,000m. However, it was agreed not to invite private developers to participate in construction of the grid, but that the first phase of the project be financed by member states (to contribute 35% of the estimated $2,000m. required), and by loans from commercial banking and international monetary institutions. The so-called Gulf Council Interconnection Authority was established in mid-1999, with its headquarters in Dammam, Saudi Arabia.

REGIONAL SECURITY

Although no mention of defence or security was made in the original charter, the summit meeting which ratified the charter also issued a statement rejecting any foreign military presence in the region. The Supreme Council meeting in November 1981 agreed to include defence co-operation in the activities of the organization: as a result, defence ministers met in January 1982 to discuss a common security policy, including a joint air defence system and standardization of weapons. In November 1984 member states agreed to form the Peninsula Shield Force for rapid deployment against external aggression, comprising units from the armed forces of each country under a central command to be based in Saudi Arabia.

In October 1987 (following an Iranian missile attack on Kuwait, which supported Iraq in its war against Iran) GCC ministers of foreign affairs issued a statement declaring that aggression against one member state was regarded as aggression against them all. In December the Supreme Council approved a joint pact on regional co-operation in matters of security. In August 1990 the Ministerial Council condemned Iraq's invasion of Kuwait as a violation of sovereignty, and demanded the withdrawal of all Iraqi troops from Kuwait. During the crisis and the ensuing war between Iraq and a multinational force which took place in January and February 1991, the GCC developed closer links with Egypt and Syria, which, together with Saudi Arabia, played the most active role among the Arab countries in the anti-Iraqi alliance. In March the six GCC nations, Egypt and Syria formulated the 'Declaration of Damascus', which announced plans to establish a regional peace-keeping force. The Declaration also urged the abolition of all weapons of mass destruction in the area, and recommended the resolution of the Palestinian question by an international conference. In June Egypt and Syria, whose troops were to have formed the largest proportion of the peace-keeping force, announced their withdrawal from the project, reportedly as a result of disagreements with the GCC concerning the composition of the proposed force and the remuneration involved. A meeting of ministers of foreign affairs of the eight countries took place in July, but agreed only to provide mutual military assistance when necessary. In September 1992 the signatories of the Damascus Declaration adopted a joint statement on regional questions, including the Middle East peace process and the dispute between the UAE and Iran (see below), but rejected an Egyptian proposal to establish a series of rapid deployment forces which could be called upon to defend the interests of any of the eight countries. A meeting of GCC ministers of defence in November agreed to maintain the Peninsula Shield Force. In November 1993 GCC ministers of defence approved a proposal to expand the force from 8,000 to 17,000 troops and incorporate air and naval units. Ministers also agreed to strengthen the defence of the region by developing joint surveillance and early warning systems. A GCC military committee was established, and convened for the first time in April 1994, to discuss the implementation of the proposals. Joint military training exercises were conducted by forces of five GCC states (excluding Qatar) in northern Kuwait in March 1996. In December 1997 the Supreme Council approved plans that had been authorized by defence ministers in November for linking the region's military telecommunications networks and establishing a common early warning system.

In 1992 Iran extended its authority over the island of Abu Musa, which it had administered under a joint arrangement with the UAE since 1971. In September 1992 the GCC Ministerial Council condemned Iran's continued occupation of the island and efforts to consolidate its presence, and reiterated support of UAE sovereignty over Abu Musa, as well as the largely uninhabited Greater and Lesser Tunb islands (also claimed by Iran). In December 1994 the GCC supported the UAE's request that the dispute be referred to the International Court of Justice.

In late September 1992 a rift within the GCC was caused by an incident on the disputed border between Saudi Arabia and Qatar. Qatar's threat to boycott a meeting of the Supreme Council in December was allayed at the last minute as a result of mediation efforts by the Egyptian President. At the meeting, which was held in UAE, Qatar and Saudi Arabia agreed to establish a joint commission to demarcate the disputed border. The resolution of border disputes was the principal concern of GCC heads of state when they convened for their annual meeting in December 1994, in Bahrain. The Kuwaiti leader proposed the establishment of a GCC framework for resolving border disputes, consisting of bilateral negotiations between the concerned parties, mediated by a third GCC state.

In November 1994 a security agreement, to counter regional crime and terrorism, was concluded by GCC states. The pact, however, was not signed by Kuwait, which claimed that a clause concerning the extradition of offenders was in contravention of its constitution; Qatar did not attend the meeting, held in Riyadh, owing to its ongoing dispute with Saudi Arabia (see above). At the summit meeting in December GCC heads of state expressed concern at the increasing incidence of Islamic extremist violence throughout the region. In April 1995 GCC interior ministers convened to discuss ongoing civil unrest in Bahrain; the ministers collectively supported measures adopted by the Bahraini Government to secure political and civil stability. The continuing unrest in Bahrain and the involvement of the Iranian Government in Bahraini domestic affairs remained issues of concern for the GCC throughout 1995 and 1996.

During 1995 the deterioration of relations between Qatar and other GCC states threatened to undermine the Council's solidarity. In December Qatar publicly displayed its dissatisfaction at the appointment, without a consensus agreement, of Saudi Arabia's nominee as the new Secretary-General by failing to attend the final session of the Supreme Council, held in Muscat, Oman. However, at a meeting of ministers of foreign affairs in March 1996, Qatar endorsed the new Secretary-General, following an agreement on future appointment procedures, and reasserted its commitment to the organization. In June Saudi Arabia and Qatar agreed to reactivate a joint technical committee in order to finalize the demarcation of their mutual border. In December Qatar hosted the annual GCC summit meeting; however, Bahrain refused to attend, owing to Qatar's 'unfriendly attitude' and the long-standing territorial dispute over the Hawar islands. The issue dominated the meeting, which agreed to establish a four-member committee to resolve the conflicting sovereignty claims. In January 1997 the ministers of foreign affairs of Kuwait, Oman, Saudi Arabia and the UAE, meeting in Riyadh, formulated a seven-point memorandum of understanding to ease tensions between Bahrain and Qatar. The two countries refused to sign the agreement; however, in March both sides announced their intention to establish diplomatic relations at ambassadorial level.

In May 1997 the Ministerial Council, meeting in Riyadh, expressed concern at Turkey's cross-border military operation in northern Iraq and urged a withdrawal of Turkish troops from Iraqi territory. In December the Supreme Council reaffirmed the need to ensure the sovereignty and territorial integrity of Iraq. At the same time, however, the Council expressed concern at the escalation of

tensions in the region, owing to Iraq's failure to co-operate with the UN Special Commission (UNSCOM). The Council also noted the opportunity to strengthen relations with Iran, in view of political developments in that country. In mid-February 1998 the US Defense Secretary visited each of the GCC countries in order to generate regional support for any punitive military action against Iraq, given that country's obstruction of UN weapons inspectors. Kuwait was the only country to declare its support for the use of force (and to permit the use of its bases in military operations against Iraq), while other member states urged a diplomatic solution to the crisis. Qatar pursued a diplomatic initiative to negotiate directly with the Iraqi authorities, and in mid-February the Qatari Minister of Foreign Affairs became the most senior GCC government official to visit Iraq since 1990. The GCC supported an agreement concluded between the UN Secretary-General and the Iraqi authorities at the end of February 1998, and urged Iraq to co-operate with UNSCOM in order to secure an end to the problem and a removal of the international embargo against the country. This position was reiterated at meetings of the Ministerial Council in March, and of the Supreme Council in December. In March 1999 the Ministerial Council expressed concern at Iraq's persistent refusal to co-operate with the UN. Other outstanding issues of concern in 1998 and 1999 continued to be the progress of the Middle East peace process and Iran's ongoing claim to sovereignty over Abu Musa and the Greater and Lesser Tunb islands. In March 1999 ministers condemned the military exercises being conducted by Iran in the waters around the islands as a threat to regional security and a violation of the UAE's sovereignty. Nevertheless, member countries continued to pursue efforts to strengthen relations with Iran, and in May President Khatami undertook a state visit to Qatar, Saudi Arabia and Syria, prompting concern on the part of the UAE that its support within the GCC and the solidarity of the grouping were being undermined. In June a meeting of GCC ministers of foreign affairs was adjourned, owing to reported disagreements between Saudi Arabia and the UAE. Diplomatic efforts secured commitments, issued by both countries later in that month, to co-operate fully within the GCC. In early July the Ministerial Council reasserted GCC support of the UAE's sovereignty claim over the disputed islands and determined to establish a committee, comprising the ministers of foreign affairs of Oman, Qatar and Saudi Arabia and the GCC Secretary-General, to pursue negotiations with Iran.

EXTERNAL RELATIONS

In June 1988 an agreement was signed by GCC and European Community (EC) ministers on economic co-operation (with effect from January 1990): the EC agreed to assist the GCC states in developing their agriculture and industry. In March 1990, at the first annual meeting of a Joint Co-operation Council, established under the accord, GCC and EC ministers of foreign affairs undertook to hold negotiations on a free-trade agreement. Discussions began in October, although any final accord would require the GCC to adopt a unified structure of customs duties. In early 1992 the agreement was jeopardized by the GCC's opposition to the EC's proposed tax on fossil fuels (in order to reduce pollution), which would have raised the price of a barrel of petroleum by an estimated US $10 by 2000. With the new US administration proposing a similar energy tax, in March 1993 GCC oil ministers threatened to restrict the supply of petroleum (the GCC countries control some 45% of the world's petroleum reserves) in retaliation. In October 1995 a conference was held in Muscat, Oman, which aimed to strengthen economic co-operation between European Union (EU, as the restructured EC was now known) and GCC member states, and to promote investment in both regions. In April 1996 the Joint Council advocated the conclusion of free-trade negotiations by 1998. In December 1997 GCC heads of state condemned statements issued by the European Parliament, as well as by other organizations, regarding human rights issues in member states and insisted they amounted to interference in GCC judicial systems. In October 1998 the Joint Council again resolved to accelerate discussions on the conclusion of a free-trade agreement, although no new deadline was set. It was agreed that the most contentious issue at that time, concerning the EU's imposition of duties on aluminium exports by Gulf states, was to be determined during the negotiations, in order to prevent further delays.

In December 1991 GCC ministers of finance and of foreign affairs approved the establishment of an Arab Development Fund, which aimed to create greater political and economic stability in the region, and in particular was intended to assist Egypt and Syria, as a reward for their active military part in the Gulf War and their major role in the security force envisaged by the Declaration of Damascus. A starting capital of US $10,000m. was originally envisaged for the Fund, although by mid-1992 only $6,500m. had been pledged, with reports that the project had been scaled down. In May 1993 ministers of finance from the GCC states, Egypt and Syria, meeting in Qatar, failed to agree on the level of contributions to the Fund.

In September 1994 GCC ministers of foreign affairs decided to end the secondary and tertiary embargo on trade with Israel. In February 1995 a ministerial meeting of signatories of the Damascus Declaration adopted a common stand, criticizing Israel for its refusal to renew the nuclear non-proliferation treaty. In December 1996 the foreign ministers of the Damascus Declaration states, convened in Cairo, requested the USA to exert financial pressure on Israel to halt the construction of settlements on occupied Arab territory.

In late June 1997 ministers of foreign affairs of the Damascus Declaration states agreed to pursue efforts to establish a free-trade zone throughout the region, which was to form the basis of a future Arab common market.

INVESTMENT CORPORATION

Gulf Investment Corporation (GIC): Joint Banking Center, Kuwait Real Estate Bldg, POB 3402, Safat 13035, Kuwait; tel. 2431911; telex 44002; fax 2448894; f. 1983 by the six member states of the GCC, each contributing US $350m. of the total capital of $2,100m.; total assets $10,245m., dep. $8,135m. (1995); investment chiefly in the Gulf region, financing industrial projects (including pharmaceuticals, chemicals, steel wire, aircraft engineering, aluminium, dairy produce and chicken-breeding). GIC provides merchant banking and financial advisory services, and in 1992 was appointed to advise the Kuwaiti Government on a programme of privatization. Chair. AHMAD BIN HUMAID AT-TAYER; Gen. Man. HISHAM A. RAZZUQI. Publ. *The GIC Gazetteer* (annually).

COUNCIL OF ARAB ECONOMIC UNITY

Address: 1191 Corniche en-Nil, 12th Floor, POB 1, Mohammed Fareed, Cairo, Egypt.

Telephone: (2) 5755321; **fax:** (2) 5754090.

Established in 1957 by the Economic Council of the Arab League. The first meeting of the Council was held in 1964.

MEMBERS

Egypt	Palestine
Iraq	Somalia
Jordan	Sudan
Kuwait	Syria
Libya	United Arab Emirates
Mauritania	Yemen

Organization

(August 1999)

COUNCIL

The Council consists of representatives of member states, usually ministers of economy, finance and trade. It meets twice a year; meetings are chaired by the representative of each country for one year.

GENERAL SECRETARIAT

Entrusted with the implementation of the Council's decisions and with proposing work plans, including efforts to encourage participation by member states in the Arab Economic Unity Agreement. The Secretariat also compiles statistics, conducts research and publishes

studies on Arab economic problems and on the effects of major world economic trends.

General Secretary: HASSAN IBRAHIM.

COMMITTEES

There are seven standing committees: preparatory, follow-up and Arab Common Market development; Permanent Delegates; budget; economic planning; fiscal and monetary matters; customs and trade planning and co-ordination; statistics. There are also seven *ad hoc* committees, including meetings of experts on tariffs, trade promotion and trade legislation.

Activities

The Council undertakes to co-ordinate measures leading to a customs union subject to a unified administration; conduct market and commodity studies; assist with the unification of statistical terminology and methods of data collection; conduct studies for the formation of new joint Arab companies and federations; and to formulate specific programmes for agricultural and industrial co-ordination and for improving road and railway networks.

ARAB COMMON MARKET

Members: Egypt, Iraq, Jordan, Libya, Mauritania, Syria and Yemen.

Based on a resolution passed by the Council in August 1964; its implementation is supervised by the Council and does not constitute a separate organization. Customs duties and other taxes on trade between the member countries were eliminated in annual stages, the process being completed in 1971. The second stage was to be the adoption of a full customs union, and ultimately all restrictions on trade between the member countries, including quotas, and restrictions on residence, employment and transport, were to be abolished. In practice, however, the trading of national products has not been freed from all monetary, quantitative and administrative restrictions.

Between 1978 and 1989, the following measures were undertaken by the Council for the development of the Arab Common Market: introduction of flexible membership conditions for the least developed Arab states (Mauritania, Somalia, Sudan and Yemen); approval in principle of a fund to compensate the least developed countries for financial losses incurred as a result of joining the Arab Common Market; approval of legal, technical and administrative preparations for unification of tariffs levied on products imported from non-member countries; formation of a committee of ministerial deputies to deal with problems in the application of market rulings and to promote the organization's activities and adoption of unified customs legislation and of an integrated programme aimed at enhancing trade between member states and expanding members' productive capacity.

MULTILATERAL AGREEMENTS

The Council has initiated the following multilateral agreements aimed at achieving economic unity:

Agreement on Basic Levels of Social Insurance.

Agreement on Reciprocity in Social Insurance Systems.

Agreement on Labour Mobility.

Agreement on Organization of Transit Trade.

Agreement on Avoidance of Double Taxation and Elimination of Tax Evasion.

Agreement on Co-operation in Collection of Taxes.

Agreement on Capital Investment and Mobility.

Agreement on Settlement of Investment Disputes between Host Arab Countries and Citizens of Other Countries.

JOINT VENTURES

A number of multilateral organizations in industry and agriculture have been formed on the principle that faster development and economies of scale may be achieved by combining the efforts of member states. In industries that are new to the member countries, Arab Joint Companies are formed, while existing industries are co-ordinated by the setting up of Arab Specialized Unions. The unions are for closer co-operation on problems of production and marketing, and to help companies deal as a group in international markets. The companies are intended to be self-supporting on a purely commercial basis; they may issue shares to citizens of the participating countries. The joint ventures are:

Arab Joint Companies (cap. = capital; figures in Kuwaiti dinars unless otherwise stated):

Arab Company for Drug Industries and Medical Appliances: POB 925161, Amman, Jordan; tel. (6) 5821618; fax (6) 5821649; e-mail acdima@go.com.jo; internet http://www.arabla.com.com/Acdima; f. 1976; cap. 60m.

Arab Company for Industrial Investment: POB 3385, Alwiyah, Baghdad, Iraq; tel. 718-9215; telex 212628; fax 718-0710; auth. cap. 150m.

Arab Company for Livestock Development: POB 5305, Damascus, Syria; tel. 666037; telex 11376; cap. 60m.

THE EUROPEAN UNION

The Mediterranean Policy of the European Union*

The European Community's scheme to negotiate a series of parallel trade and co-operation agreements encompassing almost all of the non-member states on the coast of the Mediterranean was formulated in 1972. Association agreements, intended to lead to customs union or the eventual full accession of the country concerned, had been signed with Greece in 1962, Turkey in 1964, and Malta in 1971, and a fourth agreement was signed with Cyprus in 1972. Simple trade agreements with Spain, Portugal and Yugoslavia were all effective by September 1973. (Greece became a member of the Community in 1981, and Portugal and Spain did so in 1986.) During the 1970s a series of agreements, covering trade and economic co-operation, were concluded with the Arab Mediterranean countries and Israel, all of which established free access to EC markets for most industrial products, either soon or immediately. Access for agricultural products was facilitated, although some tariffs remained. For refined petroleum, cotton and phosphate fertilizers the EC imposed quotas for a transitional period on some of the Mediterranean countries. The principle of reciprocity (the granting of preferences in return) was not applied immediately in all of the co-operation agreements; in the association agreements, and some others, there were provisions for its introduction in the medium- or long-term future, should the economic progress of the Mediterranean country concerned warrant this. In the event of a disturbance in a particular sector, or of economic decline in a particular region, the contracting party concerned was entitled to take protective action. Special organizations (Association or Co-operation Councils, comprising representatives of the Community and of the respective countries) were instituted to supervise the implementation of the agreements for each country.

Many of the agreements were accompanied by financial protocols stating the amount of each category of aid which the Mediterranean country would receive. Financial aid takes the form of direct grants, as well as loans from the European Investment Bank (EIB).

In 1982 the Commission formulated an integrated plan for the development of its own Mediterranean regions and recommended the adoption of a new policy towards the non-Community countries of the Mediterranean. This would include greater co-operation in helping to diversify agriculture, so as to avoid surpluses of items such as citrus fruits, olive oil and wine (which the Mediterranean countries all wished to export to the Community) and reduce the countries' dependence on imported food. The Commission also called for a return to the original principle of free access to the Community market for industrial goods from its Mediterranean neighbours, which had effectively been disregarded in the case of competitive imports of textiles, footwear and other goods, together with more efficient negotiating machinery to take action when problems arise.

In 1985 the Commission negotiated modifications in agreements with non-member Mediterranean countries to ensure that their exports of agricultural produce to the EC would not be adversely affected by the accession of Portugal and Spain to the Community at the beginning of 1986.

In December 1990, as part of the EC's new policy on the Mediterranean of providing greater financial assistance, the European Council approved ECU 2,075m. in loans and grants for the Maghreb and Mashreq countries and Israel, over the five-year period from November 1991. This amount was to include support for structural adjustment programmes, undertaken in conjunction with the IMF and the World Bank, and in particular to compensate for the adverse social effects of adjustment programmes. Particular emphasis was also to be placed on increasing production of food, promoting investment, the development of small and medium-sized businesses, and protection of the environment. From 1 January 1993 the majority of agricultural exports from Mediterranean non-Community countries were granted exemption from customs duties.

In June 1995 the European Council endorsed a programme to reform and strengthen the Mediterranean policy of the EU, on the basis of a strategic communication approved by the Commission in October 1994. The initiative envisaged the establishment of a Euro-Mediterranean Economic Area (EMEA) by the year 2010, preceded by a gradual liberalization of trade within the region through bilateral and other regional free trade arrangements. The so-called MEDA strategy also aimed to formulate common rules regarding intellectual property, company and banking laws and rules of origin, and to establish a fully-convertible currency. The Council agreed to allocate financial support amounting to ECU 4,685.5m. for the Maghreb and Mashreq agreement countries, as well as for Israel, Palestine, Cyprus, Malta, Turkey and Libya, for the period 1995–99. In November 1995 a ministerial conference of the EU member states, 11 Mediterranean non-member countries (excluding Libya) and the Palestine authorities, convened in Barcelona, Spain, endorsed the agreement on the EMEA and resolved to establish a permanent Euro-Mediterranean ministerial dialogue. In a final Declaration ministers also endorsed commitments to uphold democratic principles and to pursue greater co-operation in the control of international crime, drugs-trafficking and illegal migration. In July 1996 the European Council adopted a MEDA Regulation, which provided a legal basis for EU co-operation with its Mediterranean partners, in particular for financial and technical measures to support structural reforms in those countries. A second Euro-Mediterranean Conference of ministers of foreign affairs was held in April 1997, in Malta, in order to review implementation of the partnership strategy. Also during 1997, Euro-Mediterranean sectoral conferences were held on investment issues and on good governance, in March, and on the environment, in November, while the first Euro-Mediterranean Energy Forum was convened in May. A second Energy Forum was held in May 1998. During 1998 conferences were also convened of ministers of culture, held in September, and ministers of the interior, in October. The inaugural meeting of a Euro-Mediterranean Parliamentary Forum was convened in Brussels, in October.

* The European Union was formally established on 1 November 1993 under the Treaty on European Union; prior to this it was known as the European Community (EC).

Agreements with Countries in the Middle East and North Africa

THE MAGHREB COUNTRIES

A co-operation agreement between the EC and the Maghreb countries of Algeria, Morocco and Tunisia was signed in April 1976, enabling the trade provisions to enter into effect in July of that year. The full agreement, which included economic and technical co-operation, was signed in January 1979. Under the agreement, industrial products were granted immediate duty free entry to the EC, while customs preferences were awarded for certain agricultural products. Restrictive quotas were, however, subsequently imposed on textile exports from the Maghreb, in order to protect the EC's domestic industry. In addition, conditions for migrant workers from the Maghreb countries were slightly improved under the agreement.

In January 1992 the European Parliament blocked ECU 438m. of grants and loans to Morocco for 1991–96 (under the fourth financial protocol with that country) in protest at Morocco's activities in Western Sahara, although the aid was released in October. Algeria's aid of ECU 350m. was to be conditional on progress towards democracy. Financial assistance of ECU 284m. was approved for Tunisia for 1991–96.

In June 1992 the EC approved a proposal to conclude new bilateral agreements with the Maghreb countries, incorporating the following components: political dialogue; economic, technical and cultural co-operation; financial co-operation; and the eventual establishment of a free trade area. An association agreement with Tunisia was signed in July 1995, which aimed to eliminate duties and other trade barriers on most products over a transitional 12-year period, and provide greater access to European funds for investment and economic and industrial restructuring. The agreement was formally concluded in early 1998 and entered into force on 1 March; the first meeting of the EC-Tunisia Association Council was convened in July. In September 1996 the European Commission approved funding for Tunisia, under the MEDA Regulation (see above), totalling ECU 100m. for structural adjustment programmes and ECU 45m. for a professional development programme.

Morocco applied to join the EC in 1987; however, its application was rejected on the grounds that it is not a European country. In 1988 the EC reached an agreement with Morocco concerning fishing rights for the Spanish and Portuguese fleets in Moroccan waters (formerly subject to bilateral treaties). A new four-year fisheries agreement entered into effect in 1992. In October 1994 the EU and Morocco agreed to terminate the agreement one year early (i.e. with effect from 30 April 1995) as a result of a dispute concerning fishing licences and other incidents involving Moroccan and EU (mainly Spanish and Portuguese) fishing vessels. In November 1995, following extensive negotiations, the two sides concluded a new four-year fisheries accord, which established new levels of compensation to the Moroccan fishing industry and catch quotas to enable EU

fleets again to operate in Moroccan waters. At the same time the two sides concluded an association agreement, which aimed to eliminate trade barriers in the industrial and service sectors over a 12-year period. The agreement provided greater preferential access for certain agricultural products, including citrus fruits and tomatoes. However, full liberalization of trade in agricultural goods was not to be considered until 2000. The agreement was signed in February 1996 and ratified, in June, by the European Parliament, with a request that the human rights situation in Morocco be closely monitored by the EU. In March 1997 the EU granted assistance worth ECU 120m. to support structural adjustment measures in Morocco. In early 1999 the Moroccan Government declared that it would not renew the fisheries accord on its expiry on 30 November.

The Community's relations with Algeria have been affected by political and civil instability in that country and by concerns regarding the government's respect for human rights and democratic principles. In March 1997 negotiations were initiated between the European Commission and representatives of the Algerian Government to conclude an association agreement, which would incorporate political commitments relating to respect for democratic principles and human rights. In early 1998 a fact-finding mission, comprising senior EU officials, visited Algeria, in response to concerns of an escalation of violence and unlawful killings in that country. In October a group of three EU ministers of foreign affairs initiated a dialogue with their Algerian counterpart.

THE MASHREQ COUNTRIES

A co-operation agreement was signed by the EC with Egypt, Jordan and Syria in January 1977 and with Lebanon in April. Under the agreement, industrial products were granted tariff reductions of 80% until July, and afterwards exempted from tariffs by the EC. Quantitative restrictions were removed as from January 1977. A wide range of tariff reductions were also granted for agricultural produce, varying between products from 30% to 80%.

In order to further economic and technical development in the Mashreq countries the EC approved a total of ECU 622m. for Egypt, Jordan and Lebanon to cover the period 1987–91. In November 1986 the EC imposed limited sanctions against Syria, in response to Syria's alleged involvement in international terrorism, and the disbursement of aid was not resumed until September 1987. Negotiations on assistance for Syria for 1987–91 (totalling ECU 146m.) were not concluded until late 1990.

Following the Iraqi invasion of Kuwait in August 1990, additional financial aid amounting to ECU 500m. was provided to Egypt and Jordan, which, together with Turkey, were the two countries most directly affected by the regional crisis. A further ECU 58m. in emergency aid was approved for the repatriation of refugees living in Egypt and Jordan. For 1991–96 assistance approved amounted to ECU 568m. for Egypt, ECU 126m. for Jordan, ECU 69m. for Lebanon and ECU 126m. for Syria.

In November 1994 the EU-Syria Co-operation Council convened for the first time since the 1977 agreement was signed. At the same time the EU agreed to remove the embargo on the trade of armaments with Syria. Preliminary negotiations for the conclusion of an association agreement were initiated in July 1996, although formal authorization to the European Commission to conclude an association agreement was only granted by EU heads of government in December 1997.

Negotiations between representatives of the EU and Egypt on the establishment of an association agreement were initiated in January 1995. However, progress was subsequently affected by opposition on the part of the Egyptian authorities to EU protection of its farm and processed food products. During 1997 aid totalling ECU 255m. was awarded under the MEDA Regulation to support a social development fund in Egypt, which aimed to counter poverty and create employment, and to upgrade primary education. In 1998 progress on the conclusion of an association agreement was further undermined by a provisional decision of the European Commission, adopted in March, to impose duties on imports of unbleached cotton from six countries, including Egypt, pending a final decision on the issue to be taken later in the year. In 1998 EU aid to Egypt was expected to include ECU 250m. for a three-year programme to modernize local industry. A provisional agreement on the conclusion of a trade accord, which envisaged the removal of barriers to trade over a 12-year period, was reported to have been reached in June 1999.

Association agreement negotiations with Jordan commenced in July 1995 and with Lebanon in October. In September 1996 the European Commission approved ECU 100m. to support a structural adjustment programme in Jordan and ECU 38m. to help reform and strengthen administrative structures in Lebanon. An association agreement was formally concluded with Jordan in November 1997, providing for regular political dialogue, the gradual establishment of a free trade area and enhanced co-operation between the two parties. The agreement received assent by the European Parliament in July 1998.

ISRAEL

A co-operation agreement with Israel was signed in May 1975. In industrial sectors, according to the agreement, tariffs and related obstacles to free trade were to be removed on both sides. As regards agriculture, the EC reduced its tariffs substantially for products accounting for 85% of Israel's exports to the EC; these included products which the community had traditionally imported from Israel, for example some vegetables and fruit juices. An additional protocol on industrial, technical and financial co-operation was signed in February 1977.

In July 1991 additional aid of ECU 187.5m. was granted to Israel to alleviate the effects of the Gulf War that had followed Iraq's invasion of Kuwait. For 1991–96 loans to Israel amounting to ECU 82m. were approved.

In December 1993 the European Council authorized the Commission to commence negotiations for a new association agreement with Israel to replace that of 1975. The agreement, which aimed to strengthen trading relations and economic co-operation between the two sides and provided for more extensive political dialogue, was signed in November 1995 and approved by the European Parliament in February 1996. A separate agreement for further scientific and technical co-operation, enabling Israel's access to the Community's fourth framework programme (1994–98) on research and technological development, was signed in October 1995. A new agreement, extending associated country status to Israel within the fifth framework programme (1999–2002), was signed in March 1999.

During 1998 diplomatic relations between Israel and the EU deteriorated, owing partly to Israel's inappropriate application of EU preferential trading arrangements by exporting agricultural products from Jewish settlements in the West Bank and Gaza, East Jerusalem and the Golan Heights (not recognized by the EU as being part of Israel) under Israeli licence. In May the Israeli Prime Minister insisted that any EU role in the Middle East peace process would be unacceptable if the European Commission proceeded with a threat to ban the disputed products from being imported into the EU. Additionally, the European Commission was critical of Israel's perceived obstruction of Palestinian trade, which had impeded implementation of the interim agreement between the EU and the Palestinian National Authority (PNA).

YEMEN

The co-operation agreement with Yemen, covering commercial, economic and development co-operation, was signed in October 1984. The agreement entered into force in January 1985, initially for a five-year period. In May 1989 the EC decided to intensify and diversify its co-operation with the Yemen Arab Republic. In June 1992 the European Council agreed to extend the original co-operation agreement to include the whole of the new Republic of Yemen (formed by the unification of the Yemen Arab Republic with the People's Democratic Republic of Yemen in 1990). During 1994 food aid and other Community projects in Yemen were suspended owing to civil conflict in that country, although ECU 1.2m. of humanitarian aid was delivered. In March 1995 the EU-Yemen Joint Co-operation Council convened for the first time since early 1993. A new co-operation agreement incorporating a political element (i.e. commitments to democratic principles and respect for human rights) and providing for 'most favoured nation' treatment was initialled by both sides in April 1997, and the draft agreement was signed in November. The agreement entered into force in 1 July 1998. In April 1997 the European Commission provided substantial technical and financial support to assist the electoral process in Yemen.

CO-OPERATION COUNCIL FOR THE ARAB STATES OF THE GULF—GCC

A co-operation agreement with the GCC was signed in June 1988 and entered into force in January 1990. Negotiations on a full free-trade pact began in October, but it was expected that any agreement would involve transition periods of some 12 years for the reduction of European tariffs on 'sensitive products' (i.e. petrochemicals). In 1992–93 the agreement was jeopardized as a result of the GCC's opposition to an EC proposal to introduce a supplementary tax on petroleum, in order to reduce the use of pollutant-releasing fossil fuels as well as the failure of the GCC to adopt a unified tariff structure (see p. 255). While these issues continued to obstruct the conclusion of a new accord, in July 1995 an EU-GCC ministerial meeting, convened in Granada, Spain, agreed to establish a committee to facilitate dialogue between the two sides and to promote co-operation in other areas, such as cultural and scientific activities. In October 1998 the EU-GCC Joint Council convened for its eighth formal meeting and continued to pursue free trade negotiations.

IRAN

In April 1992 the EC held talks with Iran aimed at eventually concluding a co-operation agreement with that country. In December the Council of Ministers advocated that a 'critical dialogue' be

pursued with Iran, owing to that country's importance to regional security. The two sides have subsequently held regular meetings; however, more extensive relations were prevented, owing to the EU's concerns regarding Iran's stance on the Middle East peace process, international terrorism, and human rights, in particular the situation of minorities in Iran and the death warrant imposed on a British author in 1989. In April 1997 the EU suspended its 'critical dialogue' with Iran, following a ruling by a German court that identified the Iranian authorities as responsible for ordering the assassination of four Kurdish dissidents in Berlin in 1992. The German and Dutch Governments withdrew their ambassadors from Iran and urged other EU countries to do the same. At the end of April a meeting of ministers of foreign affairs of EU countries confirmed the suspension of the dialogue but resolved that all diplomatic relations with Iran be upheld, in order to maintain the strong trading relationship between the two sides. This decision, however, was reversed when the Iranian Government refused to permit the German and Dutch ambassadors to return to their posts in Teheran. In November, following the election of a new President in Iran, Iran agreed to readmit all EU ambassadors, and in February 1998 EU ministers of foreign affairs removed the ban on high-level contacts with Iran, in order to strengthen dialogue between the two sides. Foreign ministry officials conducted talks with the Iranian authorities in July, on the basis of a ministerial decision in June to initiate a 'comprehensive' dialogue with Iran.

CYPRUS

An association agreement with Cyprus came into effect in June 1973. Immediate tariff reductions were made by the EC of 70% in the industrial sector, 40% for citrus fruit and 100% for carob beans. From July 1977 onwards the EC granted duty-free entry to industrial goods from Cyprus, limited by tariff quotas in respect of man-made textiles and some garments. From 1978 specific tariff reductions were granted on fruit and vegetables, while Cyprus applied 35% tariff reductions on most Community products. In December 1987 the European Council adopted a protocol providing for the establishment of a full customs union, to be completed in two phases.

In July 1990 Cyprus made a formal application to join the EC. In June 1993 the European Commission approved the eligibility of Cyprus to join the Community. In December 1994 the European Council confirmed that Cyprus, together with Malta, were to be the next countries to be admitted to the EU. In accordance with an agreement concluded in March 1995, accession negotiations were to commence six months after the conclusion of the 1996 EU intergovernmental conference. In June 1995 the EU-Cyprus Association Council agreed to pursue a 'structured dialogue' as part of the pre-accession negotiations, and approved a new financial protocol, amounting to ECU 74m., for the period 1996–98. The first joint ministerial meeting was held in September 1995. During 1996 and 1997 the EU, together with the USA, undertook intensive diplomatic activities to broker a peace settlement, in order to facilitate Cyprus's accession to the EU as a single entity. In December 1997 the European Council adopted a framework for EU enlargement, which incorporated agreement on proceeding with Cyprus's application. Accession negotiations commenced on 31 March 1998; however, despite a compromise agreement between EU member states which enabled the talks to proceed as previously scheduled, incorporating a provision that the talks could be suspended, the Turkish Cypriot authorities refused an invitation to participate in the talks unless the EU extended full diplomatic recognition to the 'Turkish Republic of Northern Cyprus' ('TRNC').

TURKEY

An association agreement with Turkey was signed in September 1963. The preparatory phase of the agreement lasted from 1964 to 1973, during which preferences were given on agricultural products accounting for 40% of Turkey's exports to the EC: unmanufactured tobacco, dried raisins and figs, and nuts.

The transitional phase began in 1973, aiming to introduce a customs union by gradual stages over 12 to 22 years, depending on the product. The EC granted immediate duty and quota free access for industrial products, but placed restrictions on refined petroleum products and three textile products. The fourth financial protocol to the association agreement was to make available ECU 600m. for the period 1981–86 but, following the 1980 coup in Turkey, EC aid was suspended. A ministerial meeting was held in September 1986 to reactivate the association agreement.

In April 1987 Turkey applied for full membership of the EC. In 1989, however, the Commission stated that formal negotiations on Turkish membership could not take place until 1993, and that it would first be necessary for Turkey to restructure its economy, improve its observance of human rights, and harmonize its relations with Greece. The Commission undertook, however, to increase the EC's financial assistance for Turkey. In 1990 and 1991 additional assistance was provided for Turkey, as one of the countries directly affected by the crisis that followed the Iraqi invasion of Kuwait in August 1990, and to support Kurdish refugees who had fled from Iraq to Turkey.

In June 1992 the European Council agreed that relations with Turkey should be upgraded and in November a framework programme was adopted for the conclusion of a customs union. Discussions on the issue were pursued in 1993–94, and the Turkish Government undertook domestic economic reforms, to ensure that the customs union could enter into effect on 1 January 1995. In December 1994 the EU-Turkey Association Council agreed to postpone the customs union, owing to persisting concerns regarding the Turkish Government's record on human rights, democracy and the rule of law. Negotiations to conclude the agreement in early 1995 were blocked by Greek opposition. Greece removed its veto on the customs union, having received assurance on the accession of Cyprus to the EU, and the agreement was signed at a meeting of the EU-Turkey Association Council in March. The customs union was ratified by the European Parliament in December, with a proviso that the human rights situation in Turkey, in particular the treatment of its Kurdish population, continue to be monitored, and entered into effect on 1 January 1996. Under the accord commercial barriers were to be eliminated and Turkey was to harmonize its laws to facilitate the flow of trade and investment between the two sides. A free trade agreement between the European Coal and Steel Community (ECSC—an integral part of the EU) and Turkey on products covered by the ECSC Treaty was signed in July and entered into force on 1 August. In April 1997 Turkey was assured that it would be considered on equal terms with any other country applying for membership of the EU, in spite of persisting concerns regarding human rights, the strength of influence of Islamic fundamentalism in the country and the situation in Cyprus. This policy was confirmed by a report of the European Commission, 'Agenda 2000', published in July, and by the European Council meeting, held in Luxembourg, in December. However, while the Luxembourg meeting confirmed Turkey's eligibility to join the EU, it failed to nominate that country as a candidate for admission (a status granted to 11 other countries). The Turkish Government declared the decision to be discriminatory and resolved to end all further political dialogue with the EU until Turkey's status, equal to all other aspirant members, had been restored. In March 1998 Turkey declined to attend the inaugural conference of heads of governments of EU and candidate countries, which was intended as a permanent forum to be convened regularly throughout the enlargement process, and in May refused to participate in a scheduled meeting of the EU-Turkey Association Council. Ongoing efforts by the EU to improve relations with Turkey were hindered by the Greek Government's refusal to endorse a release of ECU 375m. in aid under the customs union agreement (which had been blocked since 1996).

Euro-Arab Dialogue

The 'Euro-Arab Dialogue' was begun in 1973, initially to provide a forum for discussion of economic issues: the principal organ was a General Committee, and about 30 working groups were set up to discuss specific issues and prepare projects, such as the creation of a Euro-Arab Centre for the Transfer of Technology. After the Egypt-Israel peace agreement in 1979 all activity was suspended at the request of the Arab League.

In December 1989 a meeting of ministers of foreign affairs of Arab and EC countries agreed to reactivate the Dialogue, entrusting political discussions to an annual ministerial meeting, and economic, technical, social and cultural matters to the General Committee of the Dialogue. However, meetings were suspended as a result of Iraq's invasion of Kuwait in August 1990; senior officials from the EC and Arab countries agreed in April 1992 to resume the Dialogue.

In 1992 the EC was involved in the Middle East peace negotiations, and participated in and chaired working groups on specific issues that formed part of the process. In September 1993, following the signing of an Israeli-PLO peace agreement, the EC committed ECU 33m. in immediate humanitarian assitance for the provision of housing, education and the development of small businesses in Jericho and the Gaza Strip. In addition, a five-year assistance programme for the period 1994–98 was proposed, which was to consist of ECU 500m. in grants and loans to improve the economic and social infrastructure in the Occupied Territories. The programme was to promote the Commission's declared commitment to support regional co-operation and development in order to consolidate the peace process. In May 1994 the Commission awarded ECU 10m. to support the establishment of a Palestinian police force in the Occupied Territories. In 1995 the EU granted additional aid amounting to ECU 10m. and dispatched a team of observers to support the electoral process in the Gaza Strip and the West Bank. Further aid totalling ECU 90m. was announced by the EU at an international conference of donors in January 1996. In October EU ministers of foreign affairs expressed concern at the adverse effect

on the peace process resulting from Israeli activities in East Jerusalem and agreed to appoint a special envoy to the Middle East in order to strengthen EU involvement in promoting a peaceful settlement. In the following month ministers endorsed the appointment of Miguel Angel Moratinos, at that time Spain's ambassador to Israel, to the position. In July 1997 Moratinos successfully negotiated a meeting of the PLO leader, Yasser Arafat, and the Israeli Minister of Foreign Affairs, David Levy, who agreed to revive the peace talks, which had been suspended earlier in the year. In early 1998 the EU continued to attempt to facilitate the peace process, alongside the USA, the principal mediator in the region; however, its efforts were undermined by a deterioration in diplomatic relations with Israel. In March a mission by the British Secretary of State for Foreign and Commonwealth Affairs, representing the EU, provoked controversy when the Israeli Government objected to his meeting with senior Palestinian officials during a visit to the disputed Har Homa settlement in East Jerusalem. In addition, relations were adversely affected by the Israeli Government's failure to secure the opening of an international airport at Gaza (constructed largely with EU funds), and its trading activities (see above). An Interim Euro-Mediterranean Agreement on Trade and Co-operation was signed with the Palestinian authorities in January 1997 and entered into force on 1 July. The Agreement confirmed existing trade concessions, reduced further tariff levels for Palestinian exports to the EU and provided for the implementation of an association agreement within five years. A joint statement establishing regular political dialogue between the EU and PLO was concluded at the same time. In April 1998 the EU and the PNA signed a security co-operation agreement, which provided for regular meetings to promote joint efforts on security issues, in particular in combating terrorism. In March 1999 EU heads of state and government urged Israel and the PNA to conclude an agreement on the status of Palestine within one year, and reiterated Palestinians' right to self-determination.

In July 1994 representatives of the European Commission and the Arab League met to promote co-operation and good relations. During 1995 the Commission supported a Euro-Arab project to establish a central management training institute for business leaders in Granada, Spain. During 1997 the Commission undertook several co-operation projects with the Arab League and its specialized agencies in areas such as the environment, civil aviation, telecommunications, finance and management.

ISLAMIC DEVELOPMENT BANK

Address: POB 5925, Jeddah 21432, Saudi Arabia.

Telephone: (2) 6361400; **telex:** 601137; **fax:** (2) 6366871; **e-mail:** archives@isdb.org.sa; **internet:** http://www.isdb.org.

The Bank is an international financial institution that was established following a conference of Ministers of Finance of member countries of the Organization of the Islamic Conference (OIC, q.v.), held in Jeddah in December 1973. Its aim is to encourage the economic development and social progress of member countries and of Muslim communities in non-member countries, in accordance with the principles of the Islamic *Shari'a* (sacred law). The Bank formally opened in October 1975.

MEMBERS

There are 53 members.

Organization

(August 1999)

BOARD OF GOVERNORS

Each member country is represented by a governor, usually its Minister of Finance, and an alternate. The Board of Governors is the supreme authority of the Bank, and meets annually.

BOARD OF EXECUTIVE DIRECTORS

The Board consists of 11 members, five of whom are appointed by the five largest subscribers to the capital stock of the Bank; the remaining six are elected by Governors representing the other subscribers. Members of the Board of Executive Directors are elected for three-year terms. The Board is responsible for the direction of the general operations of the Bank.

President of the Bank and Chairman of the Board of Executive Directors: Dr AHMAD MUHAMMAD ALI.

Bank Secretary: Dr ABD AR-RAHIM OMRANA.

REGIONAL OFFICES

Kazakhstan: c/o Director, External Aid Co-ordination Dept, 93–95 Ablay-Khan Ave, 480091 Almaty; tel. (3272) 62-18-68; fax (3272) 69-61-52; Dir ZHANKYN KAKIMZKANOVA.

Malaysia: Level 11, Front Wing, Bank Industri, Jalan Sultan Ismail, POB 13671, 50818 Kuala Lumpur; tel. (3) 2946627; fax (3) 2946626; Dir Dr MUHAMMAD SIDDIK.

Morocco: 177 Ave John Kennedy, Souissi 10105, POB 5003, Rabat; tel. (7) 757191; fax (7) 775726; Dir Dr MARWAN SEIFUDDIN.

FINANCIAL STRUCTURE

The authorized capital of the Bank is 6,000m. Islamic Dinars (divided into 600,000 shares, having a value of 10,000 Islamic Dinars each). The Islamic Dinar (ID) is the Bank's unit of account and is equivalent to the value of one Special Drawing Right of the IMF (SDR 1 = US $1.3512 at 30 April 1999).

Subscribed capital amounts to ID 4,000m.

Activities

The Bank adheres to the Islamic principle forbidding usury, and does not grant loans or credits for interest. Instead, its methods of

project financing are: provision of interest-free loans (with a service fee), mainly for infrastructural projects which are expected to have a marked impact on long-term socio-economic development; provision of technical assistance (e.g. for feasibility studies); equity participation in industrial and agricultural projects; leasing operations, involving the leasing of equipment such as ships, and instalment sale financing; and profit-sharing operations. Funds not immediately needed for projects are used for foreign trade financing. Under the Import Trade Financing Operations (ITFO) scheme, funds are used for importing commodities for development purposes (i.e. raw materials and intermediate industrial goods, rather than consumer goods), with priority given to the import of goods from other member countries (see table). The Longer-term Trade Financing Scheme (LTTFS) was introduced in 1987/88 to provide financing for the export of non-traditional and capital goods. During AH 1419 the LTTFS was renamed the Export Financing Scheme (EFS). In addition, the Special Assistance Waqf Fund (which was established with effect from 7 May 1997, formally the Special Assistance Account) provides emergency aid and other assistance, with particular emphasis on education in Islamic communities in non-member countries. A Special Account for developed member countries aims to assist these countries by providing loans on concessionary terms. Loans financed by this Account are charged an annual service fee of 0.75%, compared with 2.5% for ordinary loans, and have a repayment period of 25–30 years, compared with 15–25 years.

By 27 April 1998 the Bank had approved a total of ID 3,781.32m. for project financing and technical assistance, a total of ID 9,854.62m. for foreign trade financing, and ID 381.27m. for special assistance operations, excluding amounts for cancelled operations. During the Islamic year 1418 (7 May 1997 to 27 April 1998) the Bank approved a total of ID 1,147.12m., for 189 operations.

The Bank approved 31 loans in the year ending 27 April 1998, amounting to ID 133.90m. (compared with 33 loans, totalling ID 131.44m., in the previous year). These loans supported projects concerned with infrastructural improvements, for example of roads, canals, water-supply and rural electrification, the construction of schools and health centres, and agricultural developments.

During AH 1418 the Bank approved 12 technical assistance operations for 17 countries (as well as four regional projects) in the form of grants and loans, amounting to ID 8.49m.

Import trade financing approved during the Islamic year 1418 amounted to ID 457.39m. for 42 operations in 12 member countries. By the end of that year cumulative import trade financing amounted to ID 8,335.07m., of which 38.7% was for imports of crude petroleum, 28.7% for intermediate industrial goods, 8.0% for vegetable oil and 6.1% for refined petroleum products. Financing approved under the Export Financing Scheme amounted to ID 27.25m. for eight operations in five countries in AH 1418. In the same year the Bank's Portfolio for Investment and Development, established in AH 1407 (1986–87), approved 25 operations amounting to US $287m. (or approximately ID 212.40m.). Since its introduction, the Portfolio has approved 125 net financing operations in 18 member countries, amounting to $1,714m.

During AH 1418 the Bank approved 30 special assistance operations, amounting to ID 7.90m., providing assistance primarily in the education sector, as well as emergency relief; of the total financing, 23 operations provided for Muslim communities in 15 non-member countries.

The Bank's scholarships programme sponsored 430 students from six member and 30 non-member countries during the year to 27 April 1998. The Merit Scholarship Programme, initiated in AH 1412 (1991–92), aims to develop scientific, technological and research capacities in member countries through advanced studies and/or research. Since the beginning of the programme 134 scholars from 38 member countries have been placed in academic centres of excellence in Australia, Europe and the USA. In December 1997 the Board of Executive Directors approved a new scholarship programme designed specifically to assist scholars from least developed member countries to study for a masters degree in science and technology. An estimated 190 scholarships were expected to be awarded over a five-year period. The Bank's Programme for Technical Co-operation aims to mobilize technical capabilities among member countries and to promote the exchange of expertise, experience and skills through expert missions, training, seminars and workshops. During AH 1418 71 projects were implemented under the programme. The Bank also undertakes the distribution of meat sacrificed by Muslim pilgrims: during the year meat from approximately 500,000 animals was distributed to the needy in 26 countries.

Disbursements during the year ending 27 April 1998 totalled ID 526m., bringing the total cumulative disbursements since the Bank began operations to ID 9,604m.

The Bank's Unit Investment Fund became operational in 1990, with the aim of mobilizing additional resources and providing a profitable channel for investments conforming to *Shari'a*. The initial issue of the Fund was US $100m., which has subsequently been increased to $325m. The Fund finances mainly private-sector industrial projects in middle-income countries. In October 1998 the Bank announced the establishment of a new fund to invest in infrastructure projects in member states. The Bank committed $250m. to the fund, which was to comprise $1,000m. equity capital and a $500m. Islamic financing facility.

LEAGUE OF ARAB STATES

Address: POB 11642, Arab League Bldg, Tahrir Square, Cairo, Egypt.

Telephone: (2) 5750511; **telex:** 92111; **fax:** (2) 5775626.

The League of Arab States (more generally known as the Arab League) is a voluntary association of sovereign Arab states, designed to strengthen the close ties linking them and to co-ordinate their policies and activities and direct them towards the common good of all the Arab countries. It was founded in March 1945.

MEMBERS

Iraq	Palestine*	Yemen
Jordan	Qatar	
Kuwait	Saudi Arabia	

* Palestine is considered an independent state, and therefore a full member of the League.

Organization

(August 1999)

COUNCIL

The supreme organ of the Arab League, the Council consists of representatives of the member states, each of which has one vote, and a representative for Palestine. Unanimous decisions of the Council shall be binding upon all member states of the League; majority decisions shall be binding only on those states which have accepted them.

The Council may, if necessary, hold an extraordinary session at the request of two member states. Invitations to all sessions are extended by the Secretary-General. The ordinary sessions are presided over by representatives of the member states in turn.

The Council is supported by technical and specialized committees which advise on financial and administrative affairs, information affairs and legal affairs. In addition, specialized ministerial councils have been established to formulate common policies for the regulation and the advancement of co-operation in the following areas: information; home affairs; legal affairs; health; housing; social affairs; transport; the youth and sports sectors; environmental affairs; and telecommunications.

GENERAL SECRETARIAT

The administrative and financial offices of the League. The Secretariat carries out the decisions of the Council, and provides financial and administrative services for the personnel of the League. General departments comprise: the Bureau of the Secretary-General, Arab Affairs, Economic Affairs, International Affairs, Palestine Affairs, Legal Affairs, Military Affairs, Social and Cultural Affairs, Information Affairs and Financial and Administrative Affairs. In addition, there are Units for Internal Auditing and Institutional Development, a Documentation and Information Centre, Arab League Centres in Tunis and, for Legal and Judicial Research, in Beirut, and a Principal Bureau for the Boycott of Israel, based in Damascus, Syria (see below).

The Secretary-General is appointed by the League Council by a two-thirds' majority of the member states, for a five-year, renewable term. He appoints the Assistant Secretaries-General and principal officials, with the approval of the Council. He has the rank of ambassador, and the Assistant Secretaries-General have the rank of ministers plenipotentiary.

Secretary-General: Dr Ahmad Esmat Abd al-Meguid (Egypt).

DEFENCE AND ECONOMIC CO-OPERATION

Groups established under the Treaty of Joint Defence and Economic Co-operation, concluded in 1950 to complement the Charter of the League.

Arab Unified Military Command: f. 1964 to co-ordinate military policies for the liberation of Palestine.

Economic and Social Council: to compare and co-ordinate the economic policies of the member states; supervises the activities of the Arab League's specialized agencies. The Council is composed of ministers of economic affairs or their deputies; decisions are taken by majority vote. The first meeting was held in 1953.

Joint Defence Council: supervises implementation of those aspects of the treaty concerned with common defence. Composed of foreign and defence ministers; decisions by a two-thirds' majority vote of members are binding on all.

Permanent Military Commission: established 1950; composed of representatives of army general staffs; main purpose: to draw up plans of joint defence for submission to the Joint Defence Council.

ARAB DETERRENT FORCE

Created in June 1976 by the Arab League Council to supervise successive attempts to cease hostilities in Lebanon, and afterwards to maintain the peace. The mandate of the Force has been successively renewed. The Arab League Summit Conference in October 1976 agreed that costs were to be paid in the following percentage contributions: Saudi Arabia and Kuwait 20% each, the United Arab Emirates 15%, Qatar 10% and other Arab states 35%.

OTHER INSTITUTIONS OF THE LEAGUE

Other bodies established by resolutions adopted by the Council of the League:

Administrative Tribunal of the Arab League: f. 1964; began operations 1966.

Arab Fund for Technical Assistance to African Countries: f. 1975 to provide technical assistance for development projects by providing African and Arab experts, grants for scholarships and training, and finance for technical studies.

Higher Auditing Board: comprises representatives of seven member states, elected every three years; undertakes financial and administrative auditing duties.

Investment Arbitration Board: examines disputes between member states relating to capital investments.

Special Bureau for Boycotting Israel: POB 437, Damascus, Syria; f. 1951 to prevent trade between Arab countries and Israel, and to enforce a boycott by Arab countries of companies outside the region that conduct trade with Israel.

SPECIALIZED AGENCIES

All member states of the Arab League are also members of the Specialized Agencies, which constitute an integral part of the Arab League. (See also entries on the Arab Fund for Economic and Social Development, the Arab Monetary Fund, the Council of Arab Economic Unity and the Organization of Arab Petroleum Exporting Countries.)

Arab Academy for Science, Technology and Maritime Transport: POB 1029, Alexandria, Egypt; tel. Record of Events

1945 Pact of the Arab League signed, March.

1946 Cultural Treaty signed.

1950 Joint Defence and Economic Co-operation Treaty.

1952 Agreements on extradition, writs and letters of request, nationality of Arabs outside their country of origin.

1953 Formation of Economic and Social Council.
Convention on the privileges and immunities of the League.

1954 Nationality Agreement.

1956 Agreement on the adoption of a Common Tariff Nomenclature.

1962 Arab Economic Unity Agreement.

1964 First Summit Conference of Arab kings and presidents, Cairo, January.
First meeting of Arab Economic Unity Council, June. Arab Common Market Agreement endorsed by the Council, August.
Second Summit Conference welcomed establishment of Palestine Liberation Organization (PLO), September.

1965 Arab Common Market established, January.

1969 Fifth Summit Conference, Rabat. Call for mobilization of all Arab nations against Israel.

1977 Tripoli Declaration, December. Decision of Algeria, Iraq, Libya and Yemen PDR to boycott League meetings in Egypt in response to President Sadat's visit to Israel.

1979 Council meeting in Baghdad, March: resolved to withdraw Arab ambassadors from Egypt; to recommend severance of political and diplomatic relations with Egypt; to suspend Egypt's membership of the League on the date of the signing of the peace treaty with Israel; to transfer the headquarters of the League to Tunis; to condemn US policy regarding its role in concluding the Camp David agreements and the peace treaty; to halt all bank loans, deposits, guarantees or facilities, as well as all financial or technical contributions and aid to Egypt; to prohibit trade exchanges with the Egyptian state and with private establishments dealing with Israel.

1981 In November the 12th Summit Conference, held in Fez, Morocco, was suspended after a few hours, following disagreement over a Saudi Arabian proposal known as the Fahd Plan, which included not only the Arab demands on behalf of the Palestinians, as approved by the UN General Assembly, but also an implied *de facto* recognition of Israel.

1982 The 12th Summit Conference was reconvened in September. It adopted a peace plan, which demanded Israel's withdrawal from territories occupied in 1967, and removal of Israeli settlements in these areas; freedom of worship for all religions

in the sacred places; the right of the Palestinian people to self-determination, under the leadership of the PLO; temporary supervision for the west bank and the gaza strip; the creation of an independent Palestinian state, with Jerusalem as its capital; and a guarantee of peace for all the states of the region by the UN Security Council.

1983 The summit meeting due to be held in November was postponed owing to members' differences of opinion concerning Syria's opposition to Yasser Arafat's chairmanship of the PLO, and Syrian support of Iran in the war against Iraq.

1984 In March an emergency meeting established an Arab League committee to encourage international efforts to bring about a negotiated settlement of the Iran–Iraq war. In May ministers of foreign affairs adopted a resolution urging Iran to stop attacking non-belligerent ships and installations in the Gulf region: similar attacks by Iraq were not mentioned.

1985 In August an emergency Summit Conference was boycotted by Algeria, Lebanon, Libya, Syria and Yemen PDR, while of the other 16 members only nine were represented by their heads of state. Two commissions were set up to mediate in disagreements between Arab states (between Jordan and Syria, Iraq and Syria, Iraq and Libya, and Libya and the PLO).

1986 In July King Hassan of Morocco announced that he was resigning as chairman of the next League Summit Conference, after criticism by several Arab leaders of his meeting with the Israeli Prime Minister earlier that month. A ministerial meeting, held in October, condemned any attempt at direct negotiation with Israel.

1987 An extraordinary Summit Conference was held in November, mainly to discuss the war between Iran and Iraq. Contrary to expectations, the participants unanimously agreed on a statement expressing support for Iraq in its defence of its legitimate rights, and criticizing Iran for its procrastination in accepting the UN Security Council resolution 598 of July 1987, which had recommended a cease-fire and negotiations on a settlement of the conflict. The meeting also stated that the resumption of diplomatic relations with Egypt was a matter to be decided by individual states.

1988 In June a Summit Conference agreed to provide finance for the PLO to continue the Palestinian uprising in Israeli-occupied territories. It reiterated a demand for the convening of an international conference, attended by the PLO, to seek to bring about a peaceful settlement in the Middle East (thereby implicitly rejecting recent proposals by the US Government for a conference that would exclude the PLO).

1989 In January an Arab League mediation group, comprising six ministers of foreign affairs, began discussions with the two rival Lebanese governments on the possibility of a political settlement in Lebanon. At a Summit Conference, held in May, Egypt was readmitted to the League. The Conference expressed support for the chairman of the PLO, Yasser Arafat, in his recent peace proposals made before the UN General Assembly, and reiterated the League's support for proposals that an international conference should be convened to discuss the rights of Palestinians: in so doing, it accepted UN Security Council resolutions 242 and 338 on a peaceful settlement in the Middle East and thus gave tacit recognition to the State of Israel. The meeting also supported Arafat in rejecting Israeli proposals for elections in the Israeli-occupied territories of the West Bank and the Gaza Strip. A new mediation committee was established, with a six-month mandate to negotiate a cease-fire in Lebanon, and to reconvene the Lebanese legislature with the aim of holding a presidential election and restoring constitutional government in Lebanon. In September the principal factions in Lebanon agreed to observe a cease-fire, and the surviving members of the Lebanese legislature (originally elected in 1972) met at Ta'if, in Saudi Arabia, in October, and approved the League's proposed 'charter of national reconciliation'.

1990 In May a Summit Conference, held in Baghdad, Iraq (which was boycotted by Syria and Lebanon), criticized recent efforts by Western governments to prevent the development of advanced weapons technology in Iraq. In August an emergency Summit Conference was held to discuss the invasion and annexation of Kuwait by Iraq. Twelve members (Bahrain, Djibouti, Egypt, Kuwait, Lebanon, Morocco, Oman, Qatar, Saudi Arabia, Somalia, Syria and the United Arab Emirates) approved a resolution condemning Iraq's action, and demanding the withdrawal of Iraqi forces from Kuwait and the reinstatement of the Government. The 12 states expressed support for the Saudi Arabian Government's invitation to the USA to send forces to defend Saudi Arabia; they also agreed to impose economic sanctions on Iraq, and to provide troops for an Arab defensive force in Saudi Arabia. The remaining member states, however, condemned the presence of foreign troops in Saudi Arabia, and their ministers of foreign affairs refused to attend a meeting, held at the end of August, to discuss possible solutions to the crisis. The dissenting countries also rejected the decision, taken earlier in the year, to return the League's headquarters from Tunis to Cairo. None the less, the official transfer of the League's headquarters to Cairo took place on 31 October. In November King Hassan of Morocco urged the convening of an Arab Summit Conference, in an attempt to find an 'Arab solution' to Iraq's annexation of Kuwait. However, the divisions in the Arab world over the issue meant that conditions for such a meeting could not be agreed.

1991 The first meeting of the Arab League since August 1990 took place in March, attended by representatives of all 21 member nations, including Iraq. Discussion of the recently-ended war against Iraq was avoided, in an attempt to re-establish the unity of the League. In September, despite deep divisions between member states, it was agreed that a committee should be formed to co-ordinate Arab positions in preparation for the US-sponsored peace talks between Arab countries and Israel. (In the event, an *ad hoc* meeting, attended by Egypt, Jordan, Syria, the PLO, Saudi Arabia—representing the Gulf Co-operation Council (GCC), and Morocco—representing the Union of the Arab Maghreb, was held in October, prior to the start of the talks.) In December the League expressed solidarity with Libya, which was under international pressure to extradite two Libyan government agents who were suspected of involvement in the explosion which destroyed a US passenger aircraft over Lockerbie, United Kingdom, in December 1988.

1992 The League attempted to mediate between the warring factions in Somalia to bring about a cease-fire. In March the League appointed a committee to seek to resolve the disputes betwen Libya and the USA, the United Kingdom and France over the Lockerbie explosion and the explosion which destroyed a French passenger aircraft over Niger in September 1989. The League condemned the UN's decision, at the end of March, to impose sanctions against Libya, and appealed for a negotiated solution. In September the League's Council issued a condemnation of Iran's alleged occupation of three islands in the Persian (Arabian) Gulf that were claimed by the United Arab Emirates, and decided to refer the issue to the UN.

1993 In April the Council approved the creation of a committee to consider the political and security aspects of water supply in Arab countries. In the same month the League pledged its commitment to the Middle East peace talks, but warned that Israel's continued refusal to repatriate the Palestinians who were stranded in Lebanon remained a major obstacle to the process. The League sent an official observer to the independence referendum in Eritrea, held in April. In September the Council admitted the Comoros as the 22nd member of the League. Following the signing of the Israeli-PLO peace accord in September the Council convened in emergency session, at which it approved the agreement, despite opposition from some members, notably Syria. In November it was announced that the League's boycott of commercial activity with Israel was to be maintained.

1994 The League condemned a decision of the GCC, announced in late September, to end the secondary and tertiary trade embargo against Israel, by which member states refuse to trade with international companies which have investments in Israel. Earlier in September the Council endorsed a recommendation that the UN conduct a census of Palestinian refugees, in the absence of any such action taken by the League. A statement issued by the League insisted that the embargo could be removed only on the decision of the Council.

1995 In January the League's Secretary-General advocated the creation of a free-trade area among Arab states in order, partly, to counter proposals for a regional market that would include Israel. In March Arab ministers of foreign affairs approved a resolution urging Israel to renew the Nuclear Non-Proliferation Treaty (NPT). The resolution stipulated that failure by Israel to do so would cause Arab states to seek to protect legitimate Arab interests by alternative means. In May an extraordinary session of the Council condemned a decision by Israel to confiscate Arab-owned land in East Jerusalem for resettlement. Arab heads of state and government were scheduled to convene in emergency session later in that month to formulate a collective response to the action. However, the meeting was postponed, following an announcement by the Israeli Government that it was suspending its expropriation plans. In September the Council discussed

plans for a regional court of justice and for an Arab Code of Honour to prevent the use of force in disputes between Arab states. The Council expressed its support for the Algerian Government in its efforts to combat Muslim separatist violence. In October the League was reported to be in financial difficulties, owing to the non-payment of contributions by seven member states. At that time undisputed arrears amounted to US $80.5m. In November the Arab League dispatched 44 observers to oversee elections in Algeria as part of an international monitoring team.

1996 In March, following protests by Syria and Iraq that extensive construction work in southern Turkey was restricting water supply in the region, the Council determined that the waters of the Euphrates and Tigris rivers be shared equitably between the three countries. In April an emergency meeting of the Council issued a further endorsement of Syria's position in the dispute with Turkey. The main objective of the meeting, which was convened at the request of Palestine, was to attract international attention to the problem of radiation from an Israeli nuclear reactor. The Council requested an immediate technical inspection of the site by the UN, and further demanded that Israel be obliged to sign the NPT to ensure the eradication of its nuclear weaponry. In June a Summit Conference was convened, the first since 1990, in order to formulate a united Arab response to the election, in May, of a new government in Israel and to the prospects for peace in the Middle East. At the Conference, which was attended by heads of state of 13 countries and senior representatives of seven others (Iraq was excluded from the meeting in order to ensure the attendance of the Gulf member states), Israel was urged to honour its undertaking to withdraw from the Occupied Territories, including Jerusalem, and to respect the establishment of an independent Palestinian state, in order to ensure the success of the peace process. A final communiqué of the meeting warned that Israeli co-operation was essential to prevent Arab states' reconsidering their participation in the peace process and the re-emergence of regional tensions. Meanwhile, there were concerns over increasing inter-Arab hostility, in particular between Syria and Jordan, owing to the latter's relations with Israel and allegations of Syrian involvement in recent terrorist attacks against Jordanian targets. In early September the League condemned US missile attacks against Iraq as an infringement of that country's sovereignty. In addition, it expressed concern at the impact on Iraqi territorial integrity of Turkish intervention in the north of Iraq. Later in September the League met in emergency session, following an escalation of civil unrest in Jerusalem and the Occupied Territories. The League urged the UN Security Council to prevent further alleged Israeli aggression against the Palestinians. In November the League criticized Israel's settlement policy, and at the beginning of December convened in emergency session to consider measures to end any expansion of the Jewish population in the West Bank and Gaza.

1997 In March the Council met in emergency session, in response to the Israeli Government's decision to proceed with construction of a new settlement at Har Homa (Jabal Abu-Ghunaim) in East Jerusalem. The Council pledged its commitment to seeking a reversal of the decision and urged the international community to support this aim. At the end of March ministers of foreign affairs of Arab League states agreed to end all efforts to secure normal diplomatic relations with Israel (although binding agreements already in force with Egypt, Jordan and Palestine were exempt) and to close diplomatic offices and missions while construction work continued in East Jerusalem. In addition, ministers recommended reactivating the economic boycott against Israel until comprehensive peace was achieved in the region and suspending Arab participation in the multilateral talks that were initiated in 1991 to further the peace process. Earlier in the year, in February, the Economic and Social Council ratified a programme to facilitate and develop inter-Arab trade through the reduction and eventual elimination of customs duties over a 10-year period, with effect from 1 January 1998. The Council agreed to supervise the process of establishing an Arab free-trade area (AFTA) and formally to review implementation of the programme twice a year. In June a 60-member delegation from the Arab League participated in an international mission to monitor legislative elections in Algeria. In the same month the League condemned Turkey's military incursion into northern Iraq and demanded a withdrawal of Turkish troops from Iraqi territory. In September ministers of foreign affairs of member states advocated a gradual removal of international sanctions against Libya, and agreed that member countries should permit international flights to leave Libya for specific humanitarian and religious purposes and when used for the purposes of transporting foreign nationals. Ministers also voted to pursue the decision, adopted in March, not to strengthen relations with Israel. Several countries urged a formal boycott of the forthcoming Middle East and North Africa economic conference, in protest at the lack of progress in the peace process (for which the League blamed Israel, which was due to participate in the conference). However, the meeting upheld a request by the Qatari Government, the host of the conference, that each member should decide individually whether to attend. In the event, only seven Arab League countries participated in the conference, which was held in Doha in mid-November, while the Secretary-General of the League decided not to attend as the organization's official representative. In November the League criticized the decision of the US Government to impose economic sanctions against Sudan. The League also expressed concern at the tensions arising from Iraq's decision not to co-operate fully with UN weapons inspectors, and held several meetings with representatives of the Iraqi administration in an effort to secure a peaceful conclusion to the impasse.

1998 In early 1998 the Secretary-General of the League condemned the use or threat of force against Iraq and continued to undertake diplomatic efforts to secure Iraq's compliance with UN Security Council resolutions. The League endorsed the agreement concluded between the UN Secretary-General and the Iraqi authorities in late February, and reaffirmed its commitment to facilitating the eventual removal of the international embargo against Iraq. A meeting of the Council in March, attended by ministers of foreign affairs of 16 member states, rejected Israel's proposal to withdraw from southern Lebanon, which was conditional on the deployment by the Lebanese Government of extra troops to secure Israeli territory from attack, and, additionally, urged international support to secure Israel's withdrawal from the Golan Heights. In April Arab League ministers of the interior and of justice signed an agreement to strengthen Arab co-operation in the prevention of terrorism, incorporating security and judicial measures, such as extradition arrangements and the exchange of evidence. The agreement was to enter into effect 30 days after being ratified by at least seven member countries. In August the League denounced terrorist bomb attacks against the US embassies in Kenya and Tanzania. Nevertheless, it condemned US retaliatory military action, a few days later, against suspected terrorist targets in Afghanistan and Sudan, and endorsed a request by the Sudanese Government that the Security Council investigate the incident. In the same month the USA and United Kingdom accepted a proposal of the Libyan Government, supported by the Arab League, that the suspects in the Lockerbie case be tried in The Hague, Netherlands, under Scottish law. In September the Council determined to remove sanctions against Libya as soon as an agreement was concluded on the terms of bringing the suspects to trial; all punitive measures were then to be cancelled on the commencement of the trial proceedings. Other items concluded by the Council were condemnation of Turkey's military co-operation with Israel, support for efforts to maintain unity in the Comoros, rejection of further Israeli construction in the Golan Heights, and a request that the UN dispatch a fact-finding mission to examine conditions in the Israeli-occupied territories and alleged violations of Palestinian property rights. In November, following an escalation of tensions between the Iraqi authorities and UN weapons inspectors, the Secretary-General reiterated the League's opposition to the use of force against Iraq, but urged Iraq to maintain a flexible approach in its relations with the UN. The League condemned the subsequent bombing of strategic targets in Iraq, conducted by US and British military aircraft in mid-December, and offered immediate medical assistance to victims of the attacks. An emergency summit meeting of the League was scheduled to be held at the end of December, further to a request by the Yemeni Government to formulate a unified Arab response to the bombings; however, it was postponed, reportedly at the request of Gulf Arab states.

1999 The postponed emergency meeting of ministers of foreign affairs was held in late January, attended by representatives of 18 member states. The meeting expressed concern at the military response to the stand-off between Iraq and the UN. However, the Iraqi delegation withdrew from the meeting in protest at the final statement, which included a request that Iraq recognize Kuwait's territorial integrity and comply with UN Security Council resolutions before sanctions may be removed. The meeting agreed to establish an *ad hoc* committee to consider the removal of punitive measures against Iraq within the framework of UN resolutions. In March the Council determined that member states would remove sanctions imposed against Libya, once arrangements for the

trial of the suspects in the Lockerbie case had been finalized. (The suspects were transferred to a detention centre in the Netherlands in early April.) The meeting also expressed support for a UN resolution convening an international conference to facilitate the implementation of agreements applying to Israel and the Occupied Territories, condemned Israel's refusal to withdraw from the Occupied Territories without a majority vote in favour from its legislature, as well as its refusal to resume the peace negotiations with Lebanon and Syria that had ended in 1996, and advocated the publication of evidence of Israeli violence against Palestinians. The Council considered a range of issues, including the need to prevent further Israeli expansion in Jerusalem and the problem of Palestinian refugees, and reiterated demands for international support to secure Israel's withdrawal from the Golan Heights. In addition, the meeting expressed support for reconciliation in Somalia and the territorial integrity of the Comoros, condemned foreign interference in Sudan, and urged the initiation of talks between Iraq, Syria and Turkey, concerning their rights to the Euphrates and Tigris rivers. In July the League reported that it was experiencing severe financial difficulties, with member countries having contributed just US $12m. of the annual budget of $27.6m.

ORGANIZATION OF ARAB PETROLEUM EXPORTING COUNTRIES—OAPEC

Address: POB 20501, Safat 13066, Kuwait.

Telephone: 4844500; **telex:** 22166; **fax:** 4815747; **e-mail:** oapec@kuwait.net; **internet:** http://www.kuwait.net/~oapec.

OAPEC was established in 1968 to safeguard the interests of members and to determine ways and means for their co-operation in various forms of economic activity in the petroleum industry. In 1997 member states accounted for 25.95% of total world petroleum production.

Algeria	Kuwait	Saudi Arabia
Bahrain	Libya	Syria
Egypt	Qatar	United Arab Emirates
Iraq		

Organization

(August 1999)

MINISTERIAL COUNCIL

The Council consists normally of the ministers of petroleum of the member states, and forms the supreme authority of the Organization, responsible for drawing up its general policy, directing its activities and laying down its governing rules. It meets twice yearly, and may hold extraordinary sessions. Chairmanship is on an annual rotation basis.

EXECUTIVE BUREAU

Assists the Council to direct the management of the Organization, approves staff regulations, reviews the budget, and refers it to the Council, considers matters relating to the Organization's agreements and activities and draws up the agenda for the Council. The Bureau comprises one senior official from each member state. Chairmanship is by rotation. The Bureau convenes at least three times a year.

GENERAL SECRETARIAT

Secretary-General: ABD AL-AZIZ AT-TURKI (Saudi Arabia).

Besides the Office of the Secretary-General, there are four departments: Finance and Administrative Affairs, Information and Library, Technical Affairs and Economics. The last two form the Arab Centre for Energy Studies (which was established in 1983). At the end of 1997 there were 21 professional staff members and 30 general personnel at the General Secretariat.

JUDICIAL TRIBUNAL

The Tribunal comprises seven judges from Arab countries. Its task is to settle differences in interpretation and application of the OAPEC Agreement, arising between members and also between OAPEC and its affiliates; disputes among member countries on petroleum activities falling within OAPEC's jurisdiction and not under the sovereignty of member countries; and disputes that the Ministerial Council decides to submit to the Tribunal.

President: FARIS AL-WAGAYAN.

Registrar: Dr RIAD AD-DAOUDI.

Activities

OAPEC co-ordinates different aspects of the Arab petroleum industry through the joint undertakings described below. It co-operates with the League of Arab States and other Arab organizations, and attempts to link petroleum research institutes in the Arab states. It organizes or participates in conferences and seminars, many of which are held jointly with non-Arab organizations in order to enhance Arab and international co-operation.

OAPEC provides training in technical matters and in documentation and information. The General Secretariat also conducts technical and feasibility studies and carries out market reviews. It provides information through a library, 'databank' and the publications listed below.

The invasion of Kuwait by Iraq in August 1990, and the subsequent international embargo on petroleum exports from Iraq and Kuwait, severely disrupted OAPEC's activities. In December the OAPEC Council decided to establish temporary headquarters in Cairo while Kuwait was under occupation. The Council resolved to reschedule overdue payments by Iraq and Syria over a 15-year period, and to postpone the Fifth Arab Energy Conference from mid-1992 to mid-1994. The Conference was held in Cairo, Egypt, in May 1994, attended by OAPEC ministers of petroleum and energy, senior officials from nine other Arab states and representatives of regional and international organizations. In June OAPEC returned to its permanent headquarters in Kuwait. The Sixth Conference was held in Damascus, Syria, in May 1998, with the theme of 'Energy and Arab Co-operation'.

During 1995 the General Secretariat organized the 14th training programme relating to the fundamentals of the petroleum and gas industry, held in April, a workshop on the application of new technologies to the production of hydrocarbons, held in the Netherlands, in September, and a seminar on pipeline transportation of hydrocarbons in Arab countries, held in November. The Secretariat also convened a meeting of energy information specialists from the Arab countries, as part of its efforts to develop an integrated resource base, or 'databank', to serve the information needs of the sector throughout the region.

Finance

The 1998 budget, approved by the Council in December 1997, amounted to 1,447,000 Kuwaiti dinars (KD). In addition, a budget of 118,800 KD was approved for the Judicial Tribunal.

Arab Well Logging Company—AWLCO: POB 6225, Baghdad, Iraq; tel. (1) 541-8259; telex 213688; f. 1983; provides well-logging services and data interpretation; auth. cap. 7m. Iraqi dinars.

Arab Petroleum Training Institute—APTI: POB 6037, Al-Tajeyat, Baghdad, Iraq; tel. (1) 523-4100; telex 212728; fax (1) 521-0526; f. 1978 to provide instruction in many technical and managerial aspects of the oil industry. Since Dec. 1994 the Institute has been placed under the trusteeship of the Iraqi Government; the arrangement was scheduled to come to an end in Dec. 1998. Dir HAZIM A. AS-SULTAN.

Arab Shipbuilding and Repair Yard Company—ASRY: POB 50110, Hidd, Bahrain; tel. 671111; telex 8455; fax 670236; e-mail asry@batelco.com.bh; internet http://www.asry.net; f. 1974 to undertake repairs and servicing of vessels; operates a 500,000 dwt dry dock in Bahrain; two floating docks operational since 1992. Cap. (auth. and subs.) US $340m. Chair. Sheikh DAIJ BIN KHALIFA AL-KHALIFA; Chief Exec. MUHAMMAD M. AL-KHATEEB.

ORGANIZATION OF THE ISLAMIC CONFERENCE—OIC

Address: Kilo 6, Mecca Rd, POB 178, Jeddah 21411, Saudi Arabia.

Telephone: (2) 680-0800; **telex:** 601366; **fax:** (2) 687-3568.

The Organization was formally established in May 1971, when its Secretariat became operational, following a summit meeting of Muslim heads of state at Rabat, Morocco, in September 1969, and the Islamic Foreign Ministers' Conference in Jeddah in March 1970, and in Karachi, Pakistan, in December 1970.

* Nigeria renounced its membership of the OIC in May 1991; however, the OIC has not formally recognized this decision.

Note: Observer status has been granted to Bosnia and Herzegovina, the Central African Republic, Côte d'Ivoire, Thailand, the Muslim community of the 'Turkish Republic of Northern Cyprus', the Moro National Liberation Front (MNLF) of the southern Philippines, the United Nations, the Non-Aligned Movement, the League of Arab States, the Organization of African Unity, the Economic Co-operation Organization, the Union of the Arab Maghreb and the Co-operation Council for the Arab States of the Gulf.

Organization

(August 1999)

SUMMIT CONFERENCES

The supreme body of the Organization is the Conference of Heads of State, which met in 1969 at Rabat, Morocco, in 1974 at Lahore, Pakistan, and in January 1981 at Mecca, Saudi Arabia, when it was decided that summit conferences would be held every three years in future. Eighth Conference: Teheran, Iran, December 1997. The ninth Conference was to be held in Doha, Qatar, in 2000.

CONFERENCE OF MINISTERS OF FOREIGN AFFAIRS

Conferences take place annually, to consider the means for implementing the general policy of the Organization, although they may also be convened for extraordinary sessions.

SECRETARIAT

The executive organ of the Organization, headed by a Secretary-General (who is elected by the Conference of Ministers of Foreign Affairs for a four-year term, renewable only once) and four Assistant Secretaries-General (similarly appointed).

Secretary-General: AZEDDINE LARAKI (Morocco).

At the summit conference in January 1981 it was decided that an International Islamic Court of Justice should be established to adjudicate in disputes between Muslim countries. Experts met in January 1983 to draw up a constitution for the court, however, by 1999 it was not yet in operation.

SPECIALIZED COMMITTEES

Al-Quds Committee: f. 1975 to implement the resolutions of the Islamic Conference on the status of Jerusalem (Al-Quds); it meets at the level of foreign ministers; maintains the Al-Quds Fund; Chair. King MUHAMMAD VI of Morocco.

Standing Committee for Economic and Commercial Co-operation (COMCEC): f. 1981; Chair. SULEYMAN DEMIREL (Pres. of Turkey).

Standing Committee for Information and Cultural Affairs (COMIAC): f. 1981; Chair. ABDOU DIOUF (Pres. of Senegal).

Standing Committee for Scientific and Technological Co-operation (COMSTECH): f. 1981; Chair. MOHAMMAD RAFIQ TARAR (Pres. of Pakistan).

Islamic Commission for Economic, Cultural and Social Affairs: f. 1976.

Permanent Finance Committee.

Other committees comprise the Committee of Islamic Solidarity with the Peoples of the Sahel, the Six-Member Committee on the Situation of Muslims in the Philippines, the Six-Member Committee on Palestine, the *ad hoc* Committee on Afghanistan, the OIC contact group on Bosnia and Herzegovina (with an expanded mandate to include Kosovo, Yugoslavia), and the OIC contact group on Jammu and Kashmir.

Activities

The Organization's aims, as proclaimed in the Charter that was adopted in 1972, are:

(i) To promote Islamic solidarity among member states;

(ii) To consolidate co-operation among member states in the economic, social, cultural, scientific and other vital fields, and to arrange consultations among member states belonging to international organizations;

(iii) To endeavour to eliminate racial segregation and discrimination and to eradicate colonialism in all its forms;

(iv) To take necessary measures to support international peace and security founded on justice;

(v) To co-ordinate all efforts for the safeguard of the Holy Places and support of the struggle of the people of Palestine, and help them to regain their rights and liberate their land;

(vi) To strengthen the struggle of all Muslim people with a view to safeguarding their dignity, independence and national rights; and

(vii) To create a suitable atmosphere for the promotion of co-operation and understanding among member states and other countries.

The first summit conference of Islamic leaders (representing 24 states) took place in 1969 following the burning of the Al Aqsa Mosque in Jerusalem. At this conference it was decided that Islamic governments should 'consult together with a view to promoting close co-operation and mutual assistance in the economic, scientific, cultural and spiritual fields, inspired by the immortal teachings of Islam'. Thereafter the foreign ministers of the countries concerned met annually, and adopted the Charter of the Organization of the Islamic Conference in 1972.

At the second Islamic summit conference (Lahore, Pakistan, 1974), the Islamic Solidarity Fund was established, together with a committee of representatives which later evolved into the Islamic Commission for Economic, Cultural and Social Affairs. Subsequently, numerous other subsidiary bodies have been set up (see below).

ECONOMIC CO-OPERATION

A general agreement for economic, technical and commercial co-operation came into force in 1981, providing for the establishment of joint investment projects and trade co-ordination. This was followed by an agreement on promotion, protection and guarantee of investments among member states. A plan of action to strengthen economic co-operation was adopted at the third Islamic summit conference in 1981, aiming to promote collective self-reliance and the development of joint ventures in all sectors. In May 1993 the OIC committee for economic and commercial co-operation, meeting in Istanbul, agreed to review and update the 1981 plan of action.

A meeting of ministers of industry was held in February 1982, and agreed to promote industrial co-operation, including joint ventures in agricultural machinery, engineering and other basic industries. The fifth summit conference, held in 1987, approved proposals for joint development of modern technology, and for improving scientific and technical skills in the less developed Islamic countries. In December 1988 it was announced that a committee of experts, established by the OIC, was to draw up a 10-year programme of assistance to developing countries (mainly in Africa) in science and technology.

CULTURAL CO-OPERATION

The Organization supports education in Muslim communities throughout the world, and was instrumental in the establishment of Islamic universities in Niger and Uganda (see below). It organizes seminars on various aspects of Islam, and encourages dialogue with the other monotheistic religions. Support is given to publications on Islam both in Muslim and Western countries.

HUMANITARIAN ASSISTANCE

Assistance is given to Muslim communities affected by wars and natural disasters, in co-operation with UN organizations, particularly UNHCR. The countries of the Sahel region (Burkina Faso, Cape Verde, Chad, The Gambia, Guinea, Guinea-Bissau, Mali, Mauritania, Niger and Senegal) receive particular attention as victims of drought. In April 1993 member states pledged US $80m. in emergency assistance for Muslims affected by the war in Bosnia and Herzegovina (see below for details of subsequent assistance). In April 1999 the OIC resolved to send humanitarian aid to assist the displaced ethnic Albanian population of Kosovo, in southern Serbia.

POLITICAL CO-OPERATION

Since its inception the OIC has called for vacation of Arab territories by Israel, recognition of the rights of Palestinians and of the Palestine Liberation Organization (PLO) as their sole legitimate representative, and the restoration of Jerusalem to Arab rule. The 1981 summit conference called for a *jihad* (holy war—though not necessarily in a military sense) 'for the liberation of Jerusalem and the occupied territories'; this was to include an Islamic economic boycott of Israel. In 1982 Islamic ministers of foreign affairs decided to establish Islamic offices for boycotting Israel and for military co-operation with the PLO. The 1984 summit conference agreed to reinstate Egypt (suspended following the peace treaty signed with Israel in 1979) as a member of the OIC, although the resolution was opposed by seven states.

The fifth summit conference, held in January 1987, discussed the continuing Iran–Iraq war, and agreed that the Islamic Peace Committee should attempt to prevent the sale of military equipment to the parties in the conflict. The conference also discussed the conflicts in Chad and Lebanon, and requested the holding of a United Nations conference to define international terrorism, as opposed to legitimate fighting for freedom.

In August 1990 a majority of ministers of foreign affairs condemned Iraq's recent invasion of Kuwait, and demanded the withdrawal of Iraqi forces. In August 1991 the Conference of Ministers of Foreign Affairs obstructed Iraq's attempt to propose a resolution demanding the repeal of economic sanctions against the country. The sixth summit conference, held in Senegal in December 1991, reflected the divisions in the Arab world that resulted from Iraq's invasion of Kuwait and the ensuing war. Twelve heads of state did not attend, reportedly to register protest at the presence of Jordan and the PLO at the conference, both of which had given support to Iraq. Disagreement also arose between the PLO and the majority of other OIC members when a proposal was adopted to cease the OIC's support for the PLO's *jihad* in the Arab territories occupied by Israel, in an attempt to further the Middle East peace negotiations.

In August 1992 the UN General Assembly approved a non-binding resolution, introduced by the OIC, that requested the UN Security Council to take increased action, including the use of force, in order to defend the non-Serbian population of Bosnia and Herzegovina (some 43% of Bosnians being Muslims) from Serbian aggression, and to restore its 'territorial integrity'. The OIC Conference of Ministers of Foreign Affairs, which was held in Jeddah, Saudi Arabia, in December, demanded anew that the UN Security Council take all necessary measures against Serbia and Montenegro, including military intervention, in accordance with Article 42 of the UN Charter, in order to protect the Bosnian Muslims. In February 1993 the OIC appealed to the Security Council to remove the embargo on armaments to Bosnia and Herzegovina with regard to the Bosnian Muslims, to allow them to defend themselves from the Bosnian Serbs, who were far better armed.

A report by an OIC fact-finding mission, which in February 1993 visited Azad Kashmir while investigating allegations of repression of the largely Muslim population of the Indian state of Jammu and Kashmir by the Indian armed forces, was presented to the 1993 Conference. The meeting urged member states to take the necessary measures to persuade India to cease the 'massive human rights violations' in Jammu and Kashmir and to allow the Indian Kashmiris to 'exercise their inalienable right to self-determination'. In September 1994 ministers of foreign affairs, meeting in Islamabad, Pakistan, urged the Indian Government to grant permission for an OIC fact-finding mission, and for other human rights groups, to visit Jammu and Kashmir (which it had continually refused to do) and to refrain from human rights violations of the Kashmiri people. The ministers agreed to establish a contact group on Jammu and Kashmir, which was to provide a mechanism for promoting international awareness of the situation in that region and for seeking a peaceful solution to the dispute. In December OIC heads of state approved a resolution condemning reported human rights abuses by Indian security forces in Kashmir.

In July 1994 the OIC Secretary-General visited Afghanistan and proposed the establishment of a preparatory mechanism to promote national reconciliation in that country. In mid-1995 Saudi Arabia, acting as a representative of the OIC, pursued a peace initiative for Afghanistan and issued an invitation for leaders of the different factions to hold negotiations in Jeddah.

A special ministerial meeting on Bosnia and Herzegovina was held in July 1993, at which seven OIC countries committed themselves to making available up to 17,000 troops to serve in the UN Protection Force in the former Yugoslavia (UNPROFOR). The meeting also decided to dispatch immediately a ministerial mission to persuade influential governments to support the OIC's demands for the removal of the arms embargo on Bosnian Muslims and the convening of a restructured international conference to bring about a political solution to the conflict. At the end of September 1994 ministers of foreign affairs of nine countries constituting the OIC contact group on Bosnia and Herzegovina, meeting in New York, resolved to prepare an assessment document on the issue, and to establish an alliance with its Western counterpart (comprising France, Germany, Russia, the United Kingdom and the USA). The two groups met in Geneva, Switzerland, in January 1995. In December 1994 OIC heads of state, convened in Morocco, proclaimed that the UN arms

embargo on Bosnia and Herzegovina could not be applied to the Muslim authorities of that Republic. The Conference also resolved to review economic relations between OIC member states and any country that supported Serbian activities. An aid fund was established, to which member states were requested to contribute between US $500,000 and $5m., in order to provide further humanitarian and economic assistance to Bosnian Muslims. In relation to wider concerns the conference adopted a Code of Conduct for Combating International Terrorism, in an attempt to control Muslim extremist groups. The code commits states to ensuring that militant groups do not use their territory for planning or executing terrorist activity against other states, in addition to states refraining from direct support or participation in acts of terrorism. In a further resolution the OIC supported the decision by Iraq to recognize Kuwait, but advocated that Iraq comply with all UN Security Council decisions.

In July 1995 the OIC contact group on Bosnia and Herzegovina (at that time comprising Egypt, Iran, Malaysia, Morocco, Pakistan, Saudi Arabia, Senegal and Turkey), meeting in Geneva, declared the UN arms embargo against Bosnia and Herzegovina to be 'invalid'. Several Governments subsequently announced their willingness officially to supply weapons and other military assistance to the Bosnian Muslim forces. In September a meeting of all OIC ministers of defence and foreign affairs endorsed the establishment of an 'assistance mobilization group' which was to supply military, economic, legal and other assistance to Bosnia and Herzegovina. In a joint declaration the ministers also demanded the return of all territory seized by Bosnian Serb forces, the continued NATO bombing of Serb military targets, and that the city of Sarajevo be preserved under a Muslim-led Bosnian Government. In November the OIC Secretary-General endorsed the peace accord for the former Yugoslavia, which was concluded, in Dayton, USA, by leaders of all the conflicting factions, and reaffirmed the commitment of Islamic states to participate in efforts to implement the accord. In the following month the OIC Conference of Ministers of Foreign Affairs, convened in Conakry, Guinea, requested the full support of the international community to reconstruct Bosnia and Herzegovina through humanitarian aid as well as economic and technical co-operation. Ministers declared that Palestine and the establishment of fully-autonomous Palestinian control of Jerusalem were issues of central importance for the Muslim world. The Conference urged the removal of all aspects of occupation and the cessation of the construction of Israeli settlements in the occupied territories. In addition, the final statement of the meeting condemned Armenian aggression against Azerbaijan, registered concern at the persisting civil conflict in Afghanistan, demanded the elimination of all weapons of mass destruction and pledged support for Libya (affected by the US trade embargo).

In December 1996 OIC ministers of foreign affairs, meeting in Jakarta, Indonesia, urged the international community to apply pressure on Israel in order to ensure its implementation of the terms of the Middle East peace process. The ministers reaffirmed the importance of ensuring that the provisions of the Dayton Peace Agreement for the former Yugoslavia were fully implemented, called for a peaceful settlement of the Kashmir issue, demanded that Iraq fulfil its obligations for the establishment of security, peace and stability in the region and proposed that an international conference on peace and national reconciliation in Somalia be convened. The ministers elected a new Secretary-General, Azeddine Laraki, who confirmed that the organization would continue to develop its role as an international mediator. In March 1997, at an extraordinary summit held in Pakistan, OIC heads of state and of government reiterated the organization's objective of increasing international pressure on Israel to ensure the full implementation of the terms of the Middle East peace process. An 'Islamabad Declaration' was also adopted, which pledged to increase co-operation between members of the OIC. In June the OIC condemned the decision by the US House of Representatives to recognize Jerusalem as the Israeli capital. The Secretary-General of the OIC issued a statement rejecting the US decision as counter to the role of the USA as sponsor of the Middle East peace plan. In December OIC heads of state attended the eighth summit conference, held in Iran. The Teheran Declaration, issued at the end of the conference, demanded the 'liberation' of the Israeli-occupied territories and the creation of an autonomous Palestinian state. The conference also appealed for a cessation of the conflicts in Afghanistan, and between Armenia and Azerbaijan. It was requested that the UN sanctions against Libya be removed and that the US legislation threatening sanctions against foreign companies investing in certain countries (including Iran and Libya), introduced in July 1996, be dismissed as invalid. In addition, the Declaration encouraged the increased participation of women in OIC activities.

In early 1998 the OIC appealed for an end to the threat of US-led military action against Iraq arising from a dispute regarding access granted to international weapons inspectors. The crisis was averted by an agreement concluded between the Iraqi authorities and the UN Secretary-General in February. In March OIC ministers of foreign affairs, meeting in Doha, Qatar, requested an end to the international sanctions against Iraq. Additionally, the ministers urged all states to end the process of restoring normal trading and diplomatic relations with Israel until that country withdraws from the occupied territories and permits the establishment of an independent Palestinian state.

In April 1998 the OIC, jointly with the UN, sponsored new peace negotiations between the main disputing factions in Afghanistan, which were conducted in Islamabad, Pakistan. In early May, however, the talks collapsed and were postponed indefinitely. In September the Secretaries-General of the OIC and UN agreed to establish a joint mission to counter the deteriorating security situation along the Afghan–Iranian border, following the large-scale deployment of Taliban troops in the region and consequent military manoeuvres by the Iranian authorities. They also reiterated the need to proceed with negotiations to conclude a peaceful settlement in Afghanistan.

In December 1998 the OIC appealed for a diplomatic solution to the tensions arising from Iraq's withdrawal of co-operation with UN weapons inspectors, and criticized subsequent military air strikes, led by the USA, as having been conducted without renewed UN authority.

In early April 1999 ministers of foreign affairs of the countries comprising OIC's contact group on Bosnia and Herzegovina met to consider the crisis in the southern Serbian province of Kosovo. The meeting condemned Serbian atrocities being committed against the local Albanian population and urged the provision of international assistance for the thousands of people displaced by the conflict. The group resolved to establish a committee to co-ordinate relief aid provided by member states. The ministers also expressed their willingness to help to formulate a peaceful settlement and to participate in any subsequent implementation force.

ORGANIZATION OF THE PETROLEUM EXPORTING COUNTRIES—OPEC

Address: Obere Donaustrasse 93, 1020 Vienna, Austria.

Telephone: (1) 211-12-0; **telex:** 134474; **fax:** (1) 214-98-27; **e-mail:** prid@opec.org; **internet:** http://www.opec.org.

OPEC was established in 1960 to link countries whose main source of export earnings is petroleum; it aims to unify and co-ordinate members' petroleum policies and to safeguard their interests generally. The OPEC Fund for International Development is described on p. 276.

OPEC's share of world petroleum production was 40.2% in 1996 (compared with 44.6% in 1980 and 54.7% in 1974). It is estimated that OPEC members possess more than 75% of the world's known reserves of crude petroleum, of which about two-thirds are in the Middle East. In 1996 OPEC members possessed about 42.3% of known reserves of natural gas.

MEMBERS

Algeria	Kuwait	Saudi Arabia
Indonesia	Libya	United Arab Emirates
Iran	Nigeria	Venezuela
Iraq	Qatar	

Organization

(August 1999)

CONFERENCE

The Conference is the supreme authority of the Organization, responsible for the formulation of its general policy. It consists of representatives of member countries, who examine reports and recommendations submitted by the Board of Governors. It approves the appointment of Governors from each country and elects the Chairman of the Board of Governors. It works on the unanimity principle, and meets at least twice a year.

BOARD OF GOVERNORS

The Board directs the management of the Organization; it implements resolutions of the Conference and draws up an annual budget. It consists of one governor for each member country, and meets at least twice a year.

MINISTERIAL MONITORING COMMITTEE

The Committee (f. 1988) is responsible for monitoring price evolution and ensuring the stability of the world petroleum market. As such, it is charged with the preparation of long-term strategies, including the allocation of quotas to be presented to the Conference. The Committee consists of all national representatives, and is normally convened four times a year. A Ministerial Monitoring Sub-committee, reporting to the Committee on production and supply figures, was established in 1993.

ECONOMIC COMMISSION

A specialized body operating within the framework of the Secretariat, with a view to assisting the Organization in promoting stability in international prices for petroleum at equitable levels; consists of a Board, national representatives and a commission staff; meets at least twice a year.

SECRETARIAT

Secretary-General: Dr RILWANU LUKMAN (Nigeria).

Research Division: comprises three departments:

Data Services Department: Maintains and expands information services to support the research activities of the Secretariat and those of member countries; collects, collates and analyses statistical information and provides essential data for forecasts and estimates necessary for OPEC medium- and long-term strategies.

Energy Studies Department: Energy Section monitors, forecasts and analyses developments in the energy and petrochemical industries and their implications for OPEC, and prepares forecasts of demands for OPEC petroleum and gas. Petroleum Section assists the Board of the Economic Commission in determining the relative values of OPEC crude petroleum and gases and in developing alternative methodologies for this purpose.

Economics and Finance Department: Comprises the Economics Section and a Finance Section. Analyses and reports on economic and financial developments relevant to the world energy market and the deliberations of the Economic Commission Board and the Conference, including world trade, international monetary movements, Third World debt, the financial performance of petroleum companies and oil revenues of member states.

Division Director: Dr SHOKRI M. GHANEM (Libya).

Administration and Human Resources Department: Responsible for all organization methods, provision of administrative services for all meetings, personnel matters, budgets, accounting and internal control; reviews general administrative policies and industrial relations practised throughout the oil industry; **Head:** Dr TALAL DEHRAB (Kuwait) (acting).

Public Relations and Information Department: Concerned with communicating OPEC objectives, decisions and actions; produces and distributes a number of publications, films, slides and tapes; and disseminates news of general interest regarding the Organization and member countries on energy and other related issues. Operates a daily on-line news service, the OPEC News Agency (OPECNA). An OPEC Library contains an extensive collection of energy-related publications; **Head:** FAROUK U. MUHAMMED (Nigeria) (acting).

Legal Office: Provides legal advice, supervises the Secretariat's legal commitments, evaluates legal issues of concern to the Organization and member countries, and recommends appropriate action; **Legal Officer:** DOLORES DOBARRO DE TORRES (Venezuela).

Office of the Secretary-General: Provides the Secretary-General with executive assistance in maintaining contacts with governments, organizations and delegations, in matters of protocol and in the preparation for and co-ordination of meetings; **Officer-in-Charge:** Dr DEYAA L. ALKHATEER.

Record of Events

1960 The first OPEC Conference was held in Baghdad in September, attended by representatives from Iran, Iraq, Kuwait, Saudi Arabia and Venezuela.

1961 Second Conference, Caracas, January. Qatar was admitted to membership; a Board of Governors was formed and statutes agreed.

1962 Fourth Conference, Geneva, April and June. Protests were addressed to petroleum companies against price cuts introduced in August 1960. Indonesia and Libya were admitted to membership.

1965 In July the Conference reached agreement on a two-year joint production programme, implemented from 1965 to 1967, to limit annual growth in output to secure adequate prices.

1967 Abu Dhabi was admitted to membership.

1969 Algeria was admitted to membership.

1970 Twenty-first Conference, Caracas, December. Tax on income of petroleum companies was raised to 55%.

1971 A five-year agreement was concluded in February between the six producing countries in the Gulf and 23 international petroleum companies (Teheran Agreement). Nigeria was admitted to membership.

1972 In January petroleum companies agreed to adjust petroleum revenues of the largest producers after changes in currency exchange rates (Geneva Agreement).

1973 OPEC and petroleum companies concluded an agreement whereby posted prices of crude petroleum were raised by 11.9% and a mechanism was installed to make monthly adjustments to prices in future (Second Geneva Agreement). Negotiations with petroleum companies on revision of the Teheran Agreement collapsed in October, and the Gulf states unilaterally declared 70% increases in posted prices, from US $3.01 to $5.11 per barrel. In December the Conference resolved to increase the posted price by nearly 130%, to $11.65 per barrel, from 1 January 1974. Ecuador was admitted to full membership and Gabon became an associate member.

1974 As a result of Saudi opposition to the December price increase, prices were held at current level for first quarter (and subsequently for the remainder of 1974). Abu Dhabi's membership was transferred to the United Arab Emirates (UAE). A meeting in June increased royalties charged to petroleum companies from 12.5% to 14.5% in all member states except Saudi Arabia. A meeting in September increased governmental take by about 3.5% through further increases in royalties on equity crude to 16.67% and in taxes to 65.65%, except in Saudi Arabia.

1975 OPEC's first summit conference was held in Algiers in March. Gabon was admitted to full membership.
A ministerial meeting in September agreed to raise prices by 10% for the period until June 1976.

1976 The OPEC Fund for International Development was created in May.
In December 11 member states endorsed a rise in basic prices of 10% as of 1 January 1977, and a further 5% rise as of 1 July 1977. However, Saudi Arabia and the UAE decided to raise their prices by 5% only.

1977 Following an earlier waiver by nine members of the 5% second stage of the price increase, Saudi Arabia and the UAE announced in July that they would both raise their prices by 5%. As a result, a single level of prices throughout the organization was restored. Because of continued disagreements between the 'moderates', led by Saudi Arabia and Iran, and the 'radicals', led by Algeria, Libya and Iraq, the Conference, held in December, was unable to settle on an increase in prices.

1978 The June Conference agreed that price levels should remain stable until the end of the year. In December it was decided to raise prices in four instalments, in order to compensate for the effects of the depreciation of the US dollar. These would bring a rise of 14.5% over nine months, but an average increase of 10% for 1979.

1979 At an extraordinary meeting in March members decided to raise prices by 9%. In June the Conference agreed minimum and maximum prices which seemed likely to add between 15% and 20% to import bills of consumer countries. The December Conference agreed in principle to convert the OPEC Fund into a development agency with its own legal personality.

1980 In June the Conference decided to set the price for a marker crude at US $32 per barrel, and that the value differentials which could be added above this ceiling (on account of quality and geographical location) should not exceed $5 per barrel. The planned OPEC summit meeting in Baghdad in November was postponed indefinitely because of the Iran–Iraq war, but the scheduled ministerial meeting went ahead in Bali in December, with both Iranians and Iraqis present. A ceiling price of $41 per barrel was fixed for premium crudes.

1981 In May attempts to achieve price reunification were made, but Saudi Arabia refused to increase its US $32 per barrel price unless the higher prices charged by other countries were lowered. Most of the other OPEC countries agreed to cut production by 10% so as to reduce the surplus. An emergency meeting in Geneva in August again failed to unify prices, although Saudi Arabia agreed to reduce production by 1m. barrels per day (b/d). In October OPEC countries agreed to increase the Saudi marker price to $34 per barrel, with a ceiling price of $38 per barrel.

1982 In March an emergency meeting of petroleum ministers was held in Vienna and agreed (for the first time in OPEC's history) to defend the Organization's price structure by imposing an overall production ceiling of 18m. b/d. At the same time Saudi Arabia announced a reduction in its own production to 7m. b/d. In December the Conference agreed to limit OPEC production to 18.5m. b/d in 1983 but postponed the allocation of national quotas pending consultations among the respective governments.

1983 In January an emergency meeting of petroleum ministers, fearing a collapse in world petroleum prices, decided to reduce the production ceiling to 17.5m. b/d, but failed to agree on individual production quotas or on adjustments to the differentials in prices charged for the high-quality crude petroleum produced by Algeria, Libya and Nigeria compared with that produced by the Gulf States. In February Nigeria cut its prices to US $30 per barrel, following a collapse in its production. To avoid a 'price war' OPEC set the official price of marker crude at $29 per barrel, and agreed to maintain existing price differentials at the level agreed on in March 1982, with the temporary exception that the differentials for Nigerian crudes should be $1 more than the price of the marker crude. It also agreed to maintain the production ceiling of 17.5m. b/d and allocated quotas for each member country except Saudi Arabia, which was to act as a 'swing producer' to supply the balancing quantities to meet market requirements.

1984 In October the production ceiling was lowered to 16m. b/d. In December price differentials for light (more expensive) and heavy (cheaper) crudes were slightly altered in an attempt to counteract price-cutting by non-OPEC producers, particularly Norway and the United Kingdom.

1985 In January members (except Algeria, Iran and Libya) effectively abandoned the marker price system. During the year production in excess of quotas by OPEC members, unofficial discounts and barter deals by members, and price cuts by non-members (such as Mexico, which had hitherto kept its prices in line with those of OPEC) contributed to a weakening of the market.

1986 During the first half of the year petroleum prices dropped to below US $10 per barrel. In April ministers agreed to set OPEC production at 16.7m. b/d for the third quarter of 1986 and at 17.3m. b/d for the fourth quarter. Algeria, Iran and Libya dissented. Discussions were also held with non-member countries (Angola, Egypt, Malaysia, Mexico and Oman), which agreed to co-operate in limiting production, although the United Kingdom declined. In August all members, with the exception of Iraq (which demanded to be allowed the same quota as Iran and, when this was denied it, refused to be a party to the agreement), agreed upon a return to production

quotas, with the aim of cutting production to 14.8m. b/d (about 16.8m. b/d including Iraq's production) for the ensuing two months. This measure resulted in an increase in prices to about $15 per barrel, and was extended until the end of the year. In December members (with the exception of Iraq) agreed to return to a fixed pricing system at a level of $18 per barrel as the OPEC reference price, with effect from 1 February 1987. OPEC's total production for the first half 1987 was not to exceed 15.8m. b/d.

1987 In June, with prices having stabilized, the Conference decided that production during the third and fourth quarters of the year should be limited to 16.6m. b/d (including Iraq's production). However, total production continued to exceed the agreed levels. In December ministers decided to extend the existing agreement for the first half of 1988, although Iraq, once more, refused to participate.

1988 By March prices had fallen below US $15 per barrel. In April non-OPEC producers offered to reduce the volume of their petroleum exports by 5% if OPEC members would do the same. Saudi Arabia, however, refused to accept further reductions in production, insisting that existing quotas should first be more strictly enforced. In June the previous production limit (15.06m. b/d, excluding Iraq's production) was again renewed for six months, in the hope that increasing demand would be sufficient to raise prices. By October, however, petroleum prices were below $12 per barrel. In November a new agreement was reached, limiting total production (including that of Iraq) to 18.5m. b/d, with effect from 1 January 1989. Iran and Iraq finally agreed to accept identical quotas.

1989 In June (when prices had returned to about US $18 per barrel) ministers agreed to increase the production limit to 19.5m. b/d for the second half of 1989. However, Kuwait and the UAE indicated that they would not feel bound to observe this limit. In September the production limit was again increased, to 20.5m. b/d, and in November the limit for the first half of 1990 was increased to 22m. b/d.

1990 In May members resolved to adhere more strictly to the agreed production quotas, in response to a sharp decline in prices. By late June, however, it was reported that total production had decreased by only 400,000 b/d, and prices remained at about US $14 per barrel. In July Iraq threatened to take military action against Kuwait unless it reduced its petroleum production. In the same month OPEC members agreed to limit output to 22.5m. b/d. In August Iraq invaded Kuwait, and petroleum exports by the two countries were halted by an international embargo. Petroleum prices immediately increased to exceed $25 per barrel. Later in the month an informal consultative meeting of OPEC ministers placed the July agreement in abeyance, and permitted a temporary increase in production of petroleum, of between 3m. and 3.5m. b/d (mostly by Saudi Arabia, the UAE and Venezuela). In September and October prices fluctuated in response to political developments in the Gulf region, reaching a point in excess of $40 per barrel in early October, but falling to about $25 per barrel by the end of the month. In December a meeting of OPEC members voted to maintain the high levels of production and to reinstate the quotas that had been agreed in July, once the Gulf crisis was over. During the period August 1990–February 1991 Saudi Arabia increased its petroleum output from 5.4m. to 8.5m. b/d. Seven of the other OPEC states also produced in excess of their agreed quotas.

1991 In March, in an attempt to reach the target of a minimum reference price of US $21 per barrel, ministers agreed to reduce production from 23m. b/d to 22.3m. b/d, although Saudi Arabia refused to return to its pre-August 1990 quota. In June ministers decided to maintain the ceiling of 22.3m. b/d into the third quarter of the year, since Iraq and Kuwait were still unable to export their petroleum. In September it was agreed that OPEC members' production for the last quarter of 1991 should be raised to 23.65m. b/d, and in November the OPEC Conference decided to maintain the increased production ceiling during the first quarter of 1992. From early November, however, the price of petroleum declined sharply, with demand less than anticipated as a result of continuing world recession and a mild winter in the northern hemisphere.

1992 The Ministerial Monitoring Committee, meeting in February, decided to impose a production ceiling of 22.98m. b/d with immediate effect. The agreement was, however, repudiated by both Saudi Arabia, which stated that it would not abide by its allocated quota of 7.9m. b/d, and Iran, unhappy that the production ceiling had not been set lower. In May it was agreed to continue the production restriction of 22.98m. b/d during the third quarter of 1992. Kuwait, which was resuming production in the wake of the extensive damage inflicted on its oil-wells by Iraq during the Gulf War, was granted a special dispensation to produce without a fixed quota. During the first half of 1992 member states' petroleum output consistently exceeded agreed levels, with Saudi Arabia and Iran (despite its stance on reducing production) the principal over-producers. In June, at the UN Conference on Environment and Development, OPEC's Secretary-General expressed its member countries' strong objections to the tax on fossil fuels (designed to reduce pollution) proposed by the EC. In September negotiations between OPEC ministers in Geneva were complicated by Iran's alleged annexation of Abu Musa and two other islands in the territorial waters of the UAE. However, agreement was reached on a production ceiling of 24.2m. b/d for the final quarter of 1992, in an attempt to raise the price of crude petroleum to the OPEC target of US $21 per barrel. At the Conference, held in late November, Ecuador formally resigned from OPEC, the first country ever to do so, citing as reasons the high membership fee and OPEC's refusal to increase Ecuador's quota. The meeting agreed to restrict production to 24.58m. b/d for the first quarter of 1993 (24.46m. b/d, excluding Ecuador).

1993 In mid-February a quota was set for Kuwait for the first time since the onset of the Gulf crisis. Kuwait agreed to produce 1.6m. b/d (400,000 less than current output) from 1 March, on the understanding that this would be substantially increased in the third quarter of the year. The quota for overall production from 1 March was set at 23.58m. b/d. A Ministerial Monitoring Sub-committee was established to supervise compliance with quotas. In June OPEC ministers decided to 'roll over' the overall quota of 23.58m. b/d into the third quarter of the year. However, Kuwait rejected its new allocation of 1.76m. b/d, demanding a quota of at least 2m. In July discussions between Iraq and the UN on the possible supervised sale of Iraqi petroleum depressed petroleum prices to below US $16 per barrel. The Monitoring Sub-committee urged member states to adhere to their production quotas (which were exceeded by a total of 1m. b/d in July). At the end of September an extraordinary meeting of the Conference agreed on a raised production ceiling of 24.52m. b/d, to be effective for six months from 1 October. Kuwait accepted a quota of 2m. b/d, which brought the country back into the production ceiling mechanism. Iran agreed on an allocation of 3.6m. b/d, while Saudi Arabia consented to freeze production at current levels, in order to support petroleum prices which remained persistently low. In November the Conference rejected any further reduction in production. Prices subsequently fell below $14, owing partly to a decision by Iraq to allow the UN to monitor its weapons programme (a move that would consequently lead to a repeal of the UN embargo on Iraqi petroleum exports).

1994 Prices remained depressed during the first quarter of the year. In March ministers opted to maintain the output quotas, agreed in September 1993, until the end of the year, and urged non-OPEC producers to freeze their production levels. (Iraq failed to endorse the agreement, since it recognizes only the production agreement adopted in July 1990.) At the meeting Saudi Arabia resisted a proposal from Iran and Nigeria, both severely affected by declines in petroleum revenue, to reduce its production by 1m. b/d in order to boost prices. In June the Conference endorsed the decision to maintain the existing production ceiling, and attempted to reassure commodity markets by implying that the production agreement would remain in effect until the end of 1994. Ministers acknowledged that there had been a gradual increase in petroleum prices in the second quarter of the year, with an average basket price of US $15.6 per barrel for that period. Political disruption in Nigeria, including a strike by petroleum workers, was considered to be the principal factor contributing to the price per barrel rising above $19 in August. In November OPEC ministers endorsed a proposal by Saudi Arabia to maintain the existing production quota, of 24.52m. b/d, until the end of 1995.

1995 In January it was reported that Gabon was reconsidering its membership of OPEC, owing to difficulties in meeting its budget contribution. During the first half of the year Gabon consistently exceeded its quota of 287,000 b/d, by 48,000 b/d, and the country failed to send a delegate to the ministerial Conference in June. At the Conference ministers expressed concern at OPEC's falling share of the world petroleum

market. The Conference criticized the high level of North Sea production, by Norway and the United Kingdom, and urged collective production restraint in order to stimulate prices. In November the Conference agreed to extend the existing production quota, of 24.52m. b/d, for a further six months, in order to stabilize prices. During the year, however, output remained in excess of the production quotas, some 25.58m. b/d.

1996 The possibility of a UN-Iraqi agreement permitting limited petroleum sales dominated OPEC concerns in the first half of the year and contributed to price fluctuations in the world markets. By early 1996 output by OPEC countries was estimated to be substantially in excess of quota levels; however, the price per barrel remained relatively buoyant (the average basket price reaching US $21 in March), owing largely to unseasonal cold weather in the northern hemisphere. In May a memorandum of understanding was signed between Iraq and the UN to allow the export of petroleum, up to a value of $2,000m. over a six-month period, in order to fund humanitarian relief efforts within that country. In June the Conference agreed to increase the overall output ceiling by 800,000 b/d, i.e. the anticipated level of exports from Iraq in the first six months of the agreement. A proposal, endorsed by Iran, to raise the individual country quotas failed to win support, while a comprehensive reduction in output, in order to accommodate the Iraqi quota without adjusting the existing production ceiling, was also rejected, notably by Saudi Arabia and Venezuela. At the meeting Gabon's withdrawal from the Organization was confirmed. As a result of these developments, the new ceiling was set at 25.03m. b/d. It was agreed that, under the Monitoring Sub-committee, stricter efforts would be made to endorse the production agreement and to act against countries that persistently exceed their quotas. Independent market observers expressed concern that, without any formal agreement to reduce overall production and given the actual widespread violation of the quota system, the renewed export of Iraqi petroleum would substantially depress petroleum prices. However, the markets remained stable as implementation of the UN-Iraqi agreement was delayed. In September the monitoring group acknowledged that members were exceeding their production quotas, but declined to impose any punitive measures (owing to the steady increase in petroleum prices). In late November the Conference agreed to maintain the existing production quota for a further six months. Also in November, Iraq accepted certain disputed technical terms of the UN agreement, enabling the export of petroleum to commence in December.

1997 During the first half of the year petroleum prices declined, reaching a low of US $16.7 per barrel in early April, owing to the Iraqi exports, depressed world demand and persistent overproduction. In June the Conference agreed to extend the existing production ceiling, of 25.03m. b/d, for a further six-month period. Member states resolved to adhere to their individual quotas in order to reduce the cumulative excess production of an estimated 2m. b/d; however, Venezuela, which (some sources claimed) was producing almost 800,000 b/d over its quota of 2.4m. b/d, declined to co-operate. An escalation in political tensions in the Gulf region in October, in particular Iraq's reluctance to co-operate with UN inspectors, prompted an increase in the price of crude petroleum to some $21.2 per barrel. Price fluctuations ensued, although there was a general downward trend. In November the OPEC Conference, meeting in Jakarta, approved a proposal by Saudi Arabia, to increase the overall production ceiling by some 10%, with effect from 1 January 1998, in order to meet the perceived stable world demand and to reflect more accurately current output levels. At the same time the Iranian Government announced its intention to increase its production capacity and maintain its share of the quota by permitting foreign companies to conduct petroleum exploration in Iran.

1998 A decline in petroleum prices at the start of the year caused widespread concern, and speculation that this had resulted from the decision to increase production to 27.5m. b/d, coinciding with the prospect of a decline in demand from Asian economies that had been undermined by extreme financial difficulties and of a new Iraqi agreement with the UN with provision for increased petroleum exports. A meeting of the Monitoring Sub-committee, in late January, urged members to implement production restraint and resolved to send a monitoring team to member states to encourage compliance with the agreed quotas. In February the UN Security Council approved a new agreement permitting Iraq to export petroleum valued at up to US $5,200m. over a six-month period, although the Iraqi Government insisted that its production and export capacity was limited to $4,000m. Indonesia requested an emergency meeting of ministers to discuss this development and the ongoing decline in petroleum prices. Saudi Arabia rejected the proposal unless member states agreed to adhere to their quotas, with particular reference to Venezuela, which was still OPEC's largest over-producer. In March Saudi Arabia, Venezuela and Mexico announced a joint agreement to reduce domestic production by 300,000 b/d, 200,000 b/d and 100,000 b/d respectively, with effect from 1 April, and agreed to co-operate in persuading other petroleum producing countries to commit to similar reductions. At the end of March an emergency ministerial meeting ratified the reduction proposals (the so-called 'Riyadh Pact'), which amounted to 1.245m. b/d pledged by OPEC members and 270,000 b/d by non-member states. Nevertheless, prices remained low, with over-production, together with lack of market confidence in member states' willingness to comply with the restricted quotas, an outstanding concern. In June Saudi Arabia, Venezuela and Mexico reached agreement on further reductions in output of some 450,000 b/d. Later in that month the Conference, having reviewed the market situation, agreed to implement a new reduction in total output of some 1.36m b/d, with effect from 1 July, reducing the total production target for OPEC members to 24.387m. b/d. Iran, which had been criticized for not adhering to the reductions agreed in March, confirmed that it would reduce output by 305,000 b/d. At the meeting, which was also attended by senior officials from Mexico, Oman and Russia, Saudi Arabia proposed the establishment of a new *ad hoc* grouping of the world's largest petroleum producers, in order to monitor output and support price initiatives. In early August petroleum prices fell below $12 per barrel. In September the Kuwaiti authorities, which advocated further production cuts, arranged meetings with Saudi Arabia and Qatar, and later with the petroleum ministers of Algeria, Iran, Oman and the UAE, to discuss the situation in the petroleum markets, and to co-ordinate efforts to stabilize and uphold petroleum prices. In that month Iraq's petroleum production reached an estimated 2.4m. b/d, contributing to concerns of over-supply in the world market. In early November OPEC members attending a conference of parties to the UN Framework Convention on Climate Change, held in Buenos Aires, Argentina, warned that they would claim compensation for any lost revenue resulting from initiatives to limit the emission of 'greenhouse gases' and reduce the consumption of petroleum. Later in November OPEC ministers, meeting in Vienna, resolved to maintain the existing production levels, but improve compliance. Subsequently, despite the escalation of tensions between the UN and Iraqi authorities, prices remained consistently around the level of $11 per barrel. Air strikes conducted by the USA and United Kingdom against strategic targets in Iraq in mid-December were not considered to have interrupted petroleum supplies and therefore had little impact on prices. Lost export earnings by OPEC member states as a result of the depressed oil prices amounted to some $50,000m. in 1998.

1999 In March ministers from Algeria, Iran, Mexico, Saudi Arabia and Venezuela, meeting in The Hague, the Netherlands, agreed further to reduce petroleum production, owing to the continued weakness of the global market. Subsequently, petroleum prices rose by nearly 40%, after reaching the lowest price of US $9.9 per barrel in mid-February. Later in March OPEC confirmed a new reduction in output of 2.104m. b/d from 1 April, including commitments from non-OPEC members Mexico, Norway, Oman and Russia to decrease production by a total of 388,000 b/d. The agreement envisaged a total production target for OPEC member countries of 22.976m. b/d. Actual output in April was estimated at 26.38m. b/d (compared with 27.72m. in March), which contributed to prices reaching $17 per barrel. Prices continued to fluctuate, however, owing to concern at Iraq's potential production capacity. By June total production by OPEC member states (excluding Iraq) had declined to a reported 23.25m. b/d. The evidence of almost 90% compliance with the new production quotas contributed to market confidence that stockpiles of petroleum would be reduced, and resulted in sustained price increases. At the end of July a meeting of the Ministerial Monitoring Sub-committee confirmed that adherence to the production quotas in the period April to June had been strong, but reiterated the need to maintain the total production level

at least until March 2000 given that the year's average basket price was under $14 per barrel and markets remained volatile. By mid-August 1999 the reference price for petroleum reached $21.19, its highest level since October 1997. In late August 1999 Saudi Arabia, Mexico and Venezuela agreed to extend production reductions until March 2000.

Finance

Total expenditure in 1997 amounted to 178.9m. Austrian Schillings.

OPEC FUND FOR INTERNATIONAL DEVELOPMENT

Address: POB 995, 1011 Vienna, Austria.

Telephone: (1) 515-64-0; **telex:** 131734; **fax:** (1) 513-92-38.

The Fund was established by OPEC member countries in 1976.

MEMBERS

Member countries of OPEC (q.v.).

Organization

(August 1999)

ADMINISTRATION

The Fund is administered by a Ministerial Council and a Governing Board. Each member country is represented on the Council by its minister of finance. The Board consists of one representative and one alternate for each member country.

Chairman, Ministerial Council: Dr BAMBANG SUBIANTO (Indonesia).

Chairman, Governing Board: Dr SALEH AL-OMAIR (Saudi Arabia).

Director-General of the Fund: Dr YESUFU SEYYID ABDULAI (Nigeria).

FINANCIAL STRUCTURE

The resources of the Fund, whose unit of account is the US dollar, consist of contributions by OPEC member countries, and income received from operations or otherwise accruing to the Fund.

The initial endowment of the Fund amounted to US $800m. Its resources have been replenished three times, and have been further increased by the profits accruing to seven OPEC member countries through the sales of gold held by the International Monetary Fund. The pledged contributions to the OPEC Fund amounted to $3,435.0m. at the end of 1998, and paid-in contributions totalled $2,870.1m.

Activities

The OPEC Fund for International Development is a multilateral agency for financial co-operation and assistance. Its objective is to reinforce financial co-operation between OPEC member countries and other developing countries through the provision of financial support to the latter on appropriate terms, to assist them in their economic and social development. The Fund was conceived as a collective financial facility which would consolidate the assistance extended by its member countries; its resources are additional to those already made available through other bilateral and multilateral aid agencies of OPEC members. It is empowered to:

(*i*) Provide concessional loans for balance-of-payments support;

(*ii*) Provide concessional loans for the implementation of development projects and programmes;

(*iii*) Make contributions and/or provide loans to eligible international agencies; and

(*iv*) Finance technical assistance and research through grants.

The eligible beneficiaries of the Fund's assistance are the governments of developing countries other than OPEC member countries, and international development agencies whose beneficiaries are developing countries. The Fund gives priority to the countries with the lowest income.

The Fund may undertake technical, economic and financial appraisal of a project submitted to it, or entrust such an appraisal to an appropriate international development agency, the executing national agency of a member country, or any other qualified agency.

Most projects financed by the Fund have been co-financed by other development finance agencies. In each such case, one of the co-financing agencies may be appointed to administer the Fund's loan in association with its own. This practice has enabled the Fund to extend its lending activities to 105 countries over a short period of time and in a simple way, with the aim of avoiding duplication and complications. As its experience grew, the Fund increasingly resorted to parallel, rather than joint financing, taking up separate project components to be financed according to its rules and policies. In addition, it started to finance some projects completely on its own. These trends necessitated the issuance in 1982 of guide-lines for the procurement of goods and services under the Fund's loans, allowing for a margin of preference for goods and services of local origin or originating in other developing countries: the general principle of competitive bidding is, however, followed by the Fund. The loans are not tied to procurement from Fund member countries or from any other countries. The margin of preference for goods and services obtainable in developing countries is allowed on the request of the borrower and within defined limits. Fund assistance in the form of programme loans has a broader coverage than project lending. Programme loans are used to stimulate an economic sector or sub-sector, and assist recipient countries in obtaining inputs, equipment and spare parts. Besides extending loans for project and programme financing and balance of payments support, the Fund also undertakes other operations, including grants in support of technical assistance and other activities (mainly research), and financial contributions to other international institutions.

OPEC FUND COMMITMENTS AND DISBURSEMENTS IN 1998 (US $ million)

	Commitments	Disbursements
Lending operations:	155.65	129.23
Project financing	143.65	111.01
Programme financing	12.00	18.23
Grant Programme:	4.48	4.13
Technical assistance	2.71	2.30
Research and other activities	0.22	0.11
Emergency aid	1.55	1.59
Common Fund for Commodities	–	0.14
Total	160.12	133.37

The Fund's thirteenth lending programme, covering a two-year period effective from 1 January 1998, aimed, in particular, to target 71 developing countries. By the end of December 1998 the Fund had extended 778 loans since operations began in 1976, totalling US $3,982.7m., of which $2,953.1m. (or 74.1%) was for project financing, $724.2m. (18.2%) was for balance-of-payments support and $305.3m. (7.7%) was for programme financing.

Direct loans are supplemented by grants to support technical assistance, food aid and research. By the end of December 1998 478 grants, amounting to US $240.9m., had been extended, including $83.6m. to the Common Fund for Commodities (established by UNCTAD), $40.9m. in support of emergency relief operations and a special contribution of $20m. to the International Fund for Agricultural Development (IFAD). In addition, the OPEC Fund had committed $971.9m. to other international institutions by the end of 1998, comprising OPEC members' contributions to the resources of IFAD, and irrevocable transfers in the name of its members to the IMF Trust Fund. By the end of 1998 69.7% of total commitments had been disbursed.

During the year ending 31 December 1998 the Fund's total commitments amounted to US $160.1m. (compared with $240.4m. in 1997). These commitments included 24 project loans, amounting to

Project loans approved in 1998 (US $ million)

Region and country	Sector	Loans approved
Africa		60.15
Benin	Transportation	4.38

Nicaragua	Agriculture and agro-industry	5.00
Total		143.65

$143.6m., and two loans to finance commodity import programmes in Burundi and Rwanda, totalling $12.0m. The largest proportion of project loans (44.4%) was to support improvements in the transportation sector in 12 countries and included rural road improvements in Bangladesh, the restoration of primary roads in Cambodia, improvements to the international airport in the Maldives, and construction of a highway in Mali and Mauritania. The education sector received 17.4% of loans, financing improved teaching programmes and access to basic education in Haiti, improvements at late primary and secondary school levels in Tripura State, India, and the rehabilitation of schools damaged by cyclones in Madagascar. Agriculture and agro-industry loans, amounting to 9.3%, supported intensified crop production in Guinea, an irrigation scheme in Mali and smallholder farmers in Nicaragua. A loan of US $10m. (7.0%) was awarded to Viet Nam, under the national development banks sector, to provide income-generating activities among the rural poor. Other loans, including multisector loans, amounting to 22.0% of the total, supported a range of projects in Bolivia, Honduras, Kyrgyzstan, the Philippines and the West Bank and Gaza.

During 1998 the Fund approved US $4.48m. for 32 grants, of which $2.7m. was for technical assistance activities, $215,000 for research, and $1.6m. to provide emergency assistance to Afghanistan, Bangladesh, Bolivia, Guatemala, Honduras, Nicaragua, Papua New Guinea and Sudan (for victims of natural disasters), to Tanzania (urgent sanitation and drainage improvements in Zanzibar) and to refugees and other people displaced by the conflict in Kosovo, the Federal Republic of Yugoslavia.

Developing Eight—D-8: Atik Ali Paşa Yalısı, Cırağan Cad. 80, Beşiktaş, İstanbul, Turkey; tel. (212) 2275610; fax (212) 2275613; inaugurated at a meeting of heads of state in June 1997; aims to foster economic co-operation between member states and to strengthen the role of developing countries in the global economy; project areas include trade and industry, agriculture, human resources, telecommunications, rural development, finance (incl. privatizations and banking), energy, environment and health. Second summit meeting was convened in Dhaka, Bangladesh, in March 1999. Mems: Bangladesh, Egypt, Iran, Indonesia, Malaysia, Nigeria, Pakistan, Turkey. Exec. Dir AYHAN KAMEL.

Economic Co-operation Organization—ECO: 1 Golbou Alley, Kamranieh St, POB 14155-6176, Teheran, Iran; tel. (21) 283-1731; fax (21) 283-1732; e-mail eco.org@neda.net; f. 1985 (as successor to Regional Co-operation for Development, f. 1964); originally a tripartite arrangement (between Iran, Pakistan and Turkey) aiming to promote regional economic co-operation between member states; seven new members admitted in Nov. 1992; main areas of co-operation are transport (including the building of road and rail lines), telecommunications and post, trade and investment, energy (including the interconnection of power grids in the region), minerals and environmental issues, industry and agriculture, with long-term priorities defined in terms of action plans: the Quetta Plan of Action, the İstanbul Declaration, the Almaty Outline Plan and the Economic Co-operation Strategy. A joint Chamber of Commerce and Industry was established in 1990. The first summit meeting of heads of state of member countries was held in February 1992. The third ECO summit meeting held in Islamabad, Pakistan, in March 1995, endorsed decisions to establish an ECO Trade and Development Bank in İstanbul, a joint shipping company and airline in Iran and an ECO Reinsurance Company in Pakistan. The meeting also approved the establishment of an ECO Cultural Institute in Iran and an ECO Science Foundation in Pakistan, and agreed to strengthen co-operation among member states in the following areas: transport and communications; facilitating trade and investment; energy and ecology; and protection of the environment. The establishment of an ECO eminent persons group was endorsed by the meeting. An extraordinary meeting of the ECO Council of Ministers was held in Izmir, Turkey, in September 1996, at which member countries signed a revised Treaty of Izmir, the Organization's fundamental charter. An extraordinary summit meeting, held in Ashgabat, Turkmenistan, in May 1997, emphasized the importance of the development of the transport and communications infrastructure and the network of transnational pipelines in the ECO region. In May 1998, at the fifth summit meeting, held in Almaty, Kazakhstan, ECO heads of state signed a Transit Transport Framework Agreement and a memorandum of understanding to help counter cross-border trafficking of illegal goods. The meeting also agreed to establish an ECO Educational Institute in Ankara, Turkey. ECO works with several UN agencies and other international organizations in development-related activities and has been granted observer status at the UN and the OIC. Mems: Afghanistan, Azerbaijan, Iran, Kazakhstan, Kyrgyzstan, Pakistan, Tajikistan, Turkey, Turkmenistan, Uzbekistan; the 'Turkish Republic of Northern Cyprus' has been granted special guest status in the organization. Sec.-Gen. ONDER OZAR (Turkey).

Union of the Arab Maghreb (Union du Maghreb arabe—UMA): 26–27 rue Okba, Agdal, Rabat, Morocco; tel. (7) 772668; telex 36488; fax (7) 772693; f. 1989; aims to encourage joint ventures and to create a single market; structure comprises a council of heads of

state (meeting annually), a council of ministers of foreign affairs, a follow-up committee, composed of ministers responsible for Maghreb affairs, a consultative council of 30 delegates from each country, a UMA judicial court, and four specialized ministerial commissions. Chairmanship rotates annually between heads of state. The UMA represents member countries' interests in negotiations with the EU, Arab and African regional organizations, as well as other international organizations. In November 1992 member countries adopted a Maghreb charter on the protection of the environment. By late 1994 joint projects that had been approved or were under consideration included: establishment of the Maghreb Investment and Foreign Trade Bank to fund joint agricultural and industrial projects (with a capital of US $500m.); free movement of citizens within the region; joint transport undertakings, including railway improvements and a Maghreb highway; the creation of a customs union; and the establishment of a 'North African Common Market'. Activities were subsequently suspended. In May 1999 the follow-up committee convened to formulate a programme to reactivate the Union; the council of ministers of foreign affairs was scheduled to meet in October. Mems: Algeria, Libya, Mauritania, Morocco, Tunisia. Sec.-Gen. MOHAMED AMAMOU (Tunisia).

SOCIAL SCIENCES AND SOCIAL WELFARE

Arab Towns Organization—ATO: POB 68160, Kaifan, 71962, Kuwait; tel. 4849705; fax 4849322; e-mail ato@ato.net; f. 1967; aims to promote co-operation and the exchange of expertise with regard to urban administration; to improve the standard of municipal services and utilities in Arab towns; and to preserve the character and heritage of Arab towns. Administers an Institute for Urban Development (AUDI), based in Riyadh, Saudi Arabia, which provides training and research for municipal officers; the Arab Towns Development Fund, to provide financial assistance to help member towns implement projects; and the ATO Award, to encourage the preservation of Arab architecture. Mems: 413 towns. Dir-Gen. MUHAMMAD ABD AL-HAMID AS-SAQR; Sec.-Gen. ABD AL-AZIZ Y. AL-ADSANI. Publ. *Al-Madinah Al-Arabiyah* (every 2 months).

Centre for Social Science Research and Documentation for the Arab Region: Zamalek PO, Cairo, Egypt; tel. (2) 3472099; fax (2) 3470019; f. 1978 to encourage co-operation between regional research bodies; Mems: Egypt, Iraq, Kuwait, Saudi Arabia, Tunisia; Dir-Gen. Dr AHMAD M. KHALIFA. Publs *Newsletter* (3 a year), *Arab Comnet* (3 a year).

International Planned Parenthood Federation: Regional Office for the Arab World, 2 place Virgile, Notre Dame 1082, Tunis, Tunisia; tel. (1) 787743; telex 18106; fax (1) 789934; aims to advance education in family planning, to promote the use of family planning services through local voluntary associations, and to organize the training of service delivery providers. Member associations in Algeria, Bahrain, Egypt, Iraq, Jordan, Lebanon, Mauritania, Morocco, Palestine, Somalia, Sudan, Syria, Tunisia, Yemen. Regional Dir Dr MOHAMED BOUZIDI.

International Union for Oriental and Asian Studies: Közraktar u. 12A 11/2, 1093 Budapest, Hungary; f. 1951 by the 22nd International Congress of Orientalists under the auspices of UNESCO, to promote contacts between orientalists throughout the world, and to organize congresses, research and publications. Mems: in 24 countries. Sec.-Gen. Prof. GEORG HAZAL. Publs *Philologiae Turcicae Fundamenta, Materalien zum Sumerischen Lexikon, Sanskrit Dic-*

tionary, Corpus Inscriptionum Iranicarum, Linguistic Atlas of Iran, Matériels des parlers iraniens, Turcology Annual, Bibliographieegyptologique.

Third World Forum: 39 Dokki St, POB 43, Orman, Cairo, Egypt; f. 1973 to link social scientists and others from the developing countries, to discuss alternative development policies and encourage research. Regional offices in Egypt, Mexico, Senegal and Sri Lanka. Mems: individuals in 52 countries. Chair. ISMAIL-SABRI ABDALLA.

TRADE AND INDUSTRY

Arab Iron and Steel Union—AISU: BP 4, route de Chéraga, Algiers, Algeria; tel. (2) 37-27-05; telex 71158; fax (2) 37-19-75; f. 1972 to develop commercial and technical aspects of Arab steel production by helping member associations to commercialize their production in Arab markets, guaranteeing them high quality materials and intermediary products, informing them of recent developments in the industry and organizing training sessions. Mems: 43 companies in 12 Arab countries. Gen.-Sec. MUHAMMAD LAID LACHGAR Publs *AISU Annual Statistical Bulletin, Arab Steel Review* (monthly).

General Union of Chambers of Commerce, Industry and Agriculture for Arab Countries: POB 11-2837, Beirut, Lebanon; tel. (1) 814269; fax (1) 862841; e-mail gucciaac@destination.com.lb; internet http://www.gucciaac.org.lb; f. 1951 to foster Arab economic collaboration, to increase and improve production and to facilitate the exchange of technical information in Arab countries. Mems: chambers of commerce, industry and agriculture in 21 countries. Gen.-Sec. BURHAN DAJANI. Publs *Al-Omran al-Arabi* (every 2 months), *Arab Economic Report* (in Arabic and English), economic papers, proceedings of conferences and seminars.

Gulf Organization for Industrial Consulting—GOIC: POB 5114, Doha, Qatar; tel. 858888; telex 4619; fax 831465; f. 1976 by the Gulf Arab states to co-ordinate industrial development and encourage joint regional projects; undertakes feasibility studies, market diagnosis, assistance in policy-making, legal consultancies, project promotion, promotion of small and medium industrial investment profiles and technical training. Mems: member states of the Gulf Co-operation Council (q.v.). Sec.-Gen. Dr IHSAN ALI BU-HULAIGA (Saudi Arabia); Asst Sec.-Gen. Dr LULWA ABDULLA AL-MISNED (Qatar). Publs *GOIC Monthly Bulletin* (Arabic and English), *Al Ta' Awon al-Sinaie* (quarterly, in Arabic and English), *Annual Report.*

TRANSPORT

Arab Air Carriers' Organization—AACO: POB 13-5468, Beirut, Lebanon; tel. (1) 861297; fax (1) 603140; e-mail aaco@dn.net.lb; f. 1965 to co-ordinate and promote co-operation in the activities of Arab airline companies. Mems: 18 Arab air carriers. Pres. MUHAMMAD FAHIM RAYAN (Egypt); Sec.-Gen. ABD AL-WAHAB TEFFAHA. Publs monthly statistical bulletins and research documents on aviation in the Arab world.

Arab Union of Railways: POB 6599, Aleppo, Syria; tel. (21) 220302; telex 331009; f. 1979 to stimulate and co-ordinate the development of Arab railways, particularly regional and international railway links. Mems: railway companies and organizations in Algeria, Egypt, Iraq, Jordan, Lebanon, Morocco, Palestine, Syria and Tunisia. Eighth symyposium: Beirut, Lebanon, 1997. Sec.-Gen. MOURHAF SABOUNI. Publs *As-Sikak al-Arabiye* (Arab Railways, quarterly), *Statistics of Arab Railways* (annually), glossary of railway terms in Arabic, French, English and German.

PART THREE

Country Surveys

ALGERIA

Physical and Social Geography

Algeria is the largest of the three countries in north-west Africa that comprise the Maghreb, as the region of mountains, valleys and plateaux that lies between the sea and the Sahara desert is known. It is situated between Morocco and Tunisia, with a Mediterranean coastline of nearly 1,000 km and a total area of some 2,381,741 sq km, over four-fifths of which lies south of the Maghreb proper and within the western Sahara. Its extent, both from north to south and west to east, exceeds 2,000 km. The Arabic name for the country, el-Djezaïr (the Islands), is said to derive from the rocky islands along the coastline.

The total population of Algeria increased from 23,038,942 in April 1987 to 29,276,767 (according to provisional figures) at the census of June 1998. The great majority of the inhabitants reside in the northern part of the country, particularly along the Mediterranean coast where both the capital, Algiers or el-Djezaïr (population, not including suburbs, 1,483,000 in April 1987), and the second largest town, Oran or Ouahran (590,000), are located. Many settlements reverted to their Arabic names in 1981 (for the principal changes, see Statistical Survey, p. 332). The population is almost wholly Muslim. A majority speak Arabic and the remainder Berber, the language of the original inhabitants of the Maghreb. Many Algerians also speak French.

PHYSICAL FEATURES

The major contrast in the physical geography of Algeria is between the mountainous, relatively humid terrain of the north, which forms part of the Atlas mountain system, and the vast expanse of desert to the south, which is part of the Saharan tableland. The Atlas Mountains extend from south-west to north-east across the whole of the Maghreb. Structurally they resemble the 'Alpine' mountain chains of Europe and, like them, they came into existence during the Tertiary era. They remain unstable and liable to severe earthquakes, such as those which devastated el-Asnam in 1954 and 1980. The mountains consist of rocks, now uplifted, folded and fractured, that once accumulated beneath an ancestral Mediterranean sea. Limestone and sandstone are particularly extensive and they often present a barren appearance in areas where the topsoil and vegetation is thin or absent altogether.

In Algeria the Atlas mountain system comprises three broad zones running parallel to the coast: the Tell Atlas, the High Plateaux and the Saharan Atlas. In the north, and separated from the Mediterranean only by a narrow and discontinuous coastal plain, is the complex series of mountains and valleys that encompass the Tell Atlas. Here individual ranges, plateaux and massifs vary in height from about 500 m to 2,500 m above sea-level and are frequently separated from one another by deep valleys and gorges which divide the country into self-contained topographic and economic units. Most distinctive of these are the massifs of the Great and Little Kabyle between Algiers and the Tunisian frontier, which have acted as mountain retreats where Berber ways of village life persist.

South of the Tell Atlas lies a zone of featureless plains known as the High Plateaux of the Shotts. To the west, near the Moroccan frontier, they form a broad, monotonous expanse of level terrain about 160 km across and more than 1,000 m above sea-level. They gradually narrow and descend eastward to end in the Hodna basin, a huge enclosed depression, the bottom of which is only 420 m above sea-level. The surface of the plateaux consists of alluvial debris from erosion of the mountains to the north and south. The plateaux owe their name to the presence of several vast basins of internal drainage, known as shotts, the largest of which is the Hodna basin. During rainy periods water accumulates in the shotts to form extensive shallow lakes which give way, as the water is absorbed and evaporated, to saline mud flats and swamps.

The southern margin of the High Plateaux is marked by a series of mountain chains and massifs that form the Saharan Atlas. They are more interrupted than the Tell Atlas and present no serious barrier to communication between the High Plateaux and the Sahara. From west to east the chief mountain chains are the Ksour, Amour, Ouled Naïl, Ziban and Aurès. The latter is the most impressive massif in the whole Algerian Atlas system and includes the highest peak: Djebel Chelia, 2,328 m (7,638 ft). The relief of the Aurès is very bold, with narrow gorges cut between sheer cliffs surmounted by steep bare slopes, and to the east and north of the Hodna basin its ridges merge with the southernmost folds of the Tell Atlas. North-eastern Algeria forms, therefore, a compact block of high relief in which the two Atlas mountain systems cease to be clearly separated. Here there are a number of high plains studded with salt flats but their size is insignificant compared with the enormous shotts to the west.

CLIMATE AND VEGETATION

The climate of northernmost Algeria, including the narrow coastal plain and the Tell Atlas southward to the margin of the High Plateaux, is of 'Mediterranean' type with warm, wet winters and hot, dry summers. Rainfall varies from over 1,000 mm annually on some coastal mountains to less than 130 mm in sheltered, lee situations, and occurs mostly during the winter. Complete drought lasts for three to four months during the summer, when the notorious sirocco (known locally as the Chehili) also occurs. It is a scorching, dry and dusty southerly wind blowing from the Sahara, prevailing for some 40 days a year over the High Plateaux but nearer the coast its duration is closer to 20 days. With the arrival of the sirocco, shade temperatures often rise rapidly to more than 40°C (104°F), while vegetation and crops, unable to withstand the intensity of evaporation, may die within a few hours. As a result of low and uneven rainfall combined with high rates of evaporation, the rivers of the Tell tend to be short and to suffer large seasonal variations in flow. Many run completely dry during the summer and are full only for brief periods following heavy winter rains. The longest perennially flowing river is the Oued Chélif, which rises in the High Plateaux and crosses the Tell to reach the Mediterranean Sea east of Oran.

Along the northern margin of the High Plateaux 'Mediterranean' conditions give way to a semi-arid or steppe climate in which summer drought lasts from five to six months and winters are colder and drier. Rainfall is limited to 200 mm–400 mm annually and tends to occur in spring and autumn rather than in winter. It is, moreover, variable from year to year, and under these conditions the cultivation of cereal crops without irrigation becomes unreliable. South of the Saharan Atlas annual rainfall decreases to below 200 mm and any regular cultivation without irrigation becomes impossible. There are no permanent rivers south of the Tell Atlas and any surface run-off following rain is carried by temporary watercourses towards local depressions, such as the shotts.

The soils and vegetation of northern Algeria reflect the climatic contrast between the humid Tell and the semi-arid lands farther south, but they have also suffered widely from the destructive effects of over-cultivation, over-grazing and deforestation. In the higher, wetter and more isolated parts of the Tell Atlas relatively thick soils support forests of Aleppo pine, cork-oak and evergreen oak, while the lower, drier, and more accessible slopes tend to be bare or covered only with thin soils and a scrub growth of thuya, juniper and various drought-resistant shrubs. Only a few remnants survive of the once extensive forests of Atlas cedar which have been exploited for timber and fuel since classical times. They are found chiefly above 1,500 m

in the eastern Tell Atlas. South of the Tell there is very little woodland except in the higher and wetter parts of the Saharan Atlas. The surface of the High Plateaux is bare or covered only with scattered bushes and clumps of esparto and other coarse grasses.

SAHARAN ALGERIA

South of the Saharan Atlas, Algeria extends for over 1,500 km into the heart of the desert. Structurally, this huge area consists of a resistant platform of geologically ancient rocks against which the Atlas Mountains were folded. Over most of the area relief is slight, with occasional plateaux, such as those of Eglab, Tademaït and Tassili-n-Ajjer, rising above vast spreads of gravel, such as the Tanezrouft plain, and huge sand accumulations, such as the Great Western and Eastern Ergs. In the south-east, however, the great massif of Ahaggar rises to a height of 2,918 m (9,573 ft). Here, erosion of volcanic and crystalline rocks has produced a lunar landscape of extreme ruggedness. Southward from the Ahaggar the massifs of Adrar des Iforas and Aïr extend across the Algerian frontier into the neighbouring countries of Mali and Niger.

The climate of Saharan Algeria is characterized by extremes of temperature, wind and aridity. Daily temperature ranges reach 32°C, and maximum shade temperatures of over 55°C have been recorded. Sometimes very high temperatures are associated with violent dust storms. Mean average rainfall, although extremely irregular, is everywhere less than 130 mm, and in some of the central parts of the desert it falls to less than 10 mm. These rigorous conditions are reflected in the extreme sparseness of the vegetation and in a division of the population into settled cultivators, who occupy oases dependent on permanent supplies of underground water, and nomadic pastoralists who make use of temporary pastures which appear after rain.

History

Revised for this edition by Richard I. Lawless

EARLY HISTORY

The Berber people have comprised the majority of the population of this part of Africa since the earliest times. From 208 to 148 BC Numidia occupied most of present-day Algeria north of the Sahara. After the destruction of Carthage in 146 BC, Numidia, greatly reduced in extent, was transformed into a Roman vassal-state, while the rest of the area formed a loose confederacy of tribes, which maintained their independence by frequent revolt. After a brief period of Vandal dominance, Roman rule was restored in the provinces of Africa (modern Tunisia) and Numidia, and parts of the coast. Elsewhere, the Berber confederacies, centred in the Aurès and the Kabyle, maintained their independence.

The rise of Islam in Arabia was soon followed by its penetration of North Africa, the first Arab raids taking place about the middle of the seventh century. Qairawan (in present-day Tunisia) was founded by the Arabs in 670 as a base; the other towns remained under Byzantine control, and the Berber tribes set up a state centred on the eastern Maghreb. Increasing Arab immigration towards the end of the seventh century finally overcame Berber and Byzantine resistance, the Berbers gradually converted to Islam, and the whole of the area was incorporated into the Ummayad Empire. In 756 the Berbers freed themselves from the control of the recently established Abbasid Caliphate, and for the next three centuries power was disputed between various Arab dynasties and Berber tribes. After the invasion in c. 1050 of the Banu Hilal, a confederation of nomadic Arab tribes dislodged from Egypt, a period of anarchy ensued, but the Berber dynasty of the Almoravids, from Morocco, temporarily restored order in the area of modern Algiers and Oran. In c. 1147 the Almoravids were succeeded by the Almohads, who unified the whole of the Maghreb and Muslim Spain, bringing cultural and economic prosperity to North Africa. From the middle of the 13th century, however, the region entered a period of decline, both economic and in terms of its political influence, which persisted for more than two centuries.

In the closing years of the 15th century, the Spanish monarchy carried its crusade against Muslim power to North Africa, the fragmented political state of that area offering little resistance. On the death of Ferdinand of Castile in 1516, the Algerines sought the assistance of the Turkish corsair Aruj, who took possession of Algiers and several other towns and proclaimed himself Sultan. In 1518 he was succeeded by his brother Khayr ad-Din (Barbarossa), who placed all his territories under the nominal protection of the Ottoman Sultan. This decisive act may be said to mark the emergence of Algiers as a political entity. After numerous efforts to re-establish their position, the Spanish finally withdrew in 1541 and Algeria was left for three centuries to the Muslims. Power in Algiers lay in the hands of the dey and there was a rapid succession of deys, often due to assassinations. Each dey established his relationship with the Sultan by sending him tribute. Real power in Algiers was held by two bodies—the janissary corps and the guild of corsair captains. The Regency of Algiers reached its peak in the 17th century, the profitable trade of piracy bringing great wealth. Despite Turkish attempts to control the interior, several Berber tribes most distant from Algiers retained their independence. During the 18th century the growth of European sea power in the Mediterranean brought a period of decline to the littoral, while in the interior a period of relative economic prosperity ensued.

THE FRENCH CONQUEST

On 5 July 1830 Algiers fell to a French expedition, and the dey and most of the Turkish officials were sent into exile. The pretext for intervention was an insult offered by the dey to the French consul in 1827: the real cause was the pressing need of Polignac, the chief minister under Charles X, to secure some credit for his administration from the French public and to provide employment for the Napoleonic veterans. However, the Bourbon dynasty and its government were subsequently overthrown by revolution and Polignac's plan to hand over the rest of the country, and the decision on its future, to a European congress was abandoned. In Algeria the absence of any central authority increased the prestige of the tribal chiefs. In 1834, however, the French decided upon the further conquest and annexation of Algeria, and a governor-general was appointed.

Over the next quarter of a century, France pursued its conquest of Algeria, despite bitter opposition. Constantine, the last Turkish stronghold, was captured in 1837, and by 1841 French rule had been consolidated in most of the ports and their immediate environs. By 1844 most of the eastern part of Algeria was under French control, but in the west the conquerors encountered the formidable Abd al-Kadir, who claimed descent from the Prophet Muhammad. A skilful diplomat and military commander, he at first concluded treaties with the French, consolidating his position as leader of the Berber confederacies in the west. In 1839, however, he declared war on France and united Berbers and Arabs against the invaders. Resistance was maintained until 1847, when Abd al-Kadir was defeated by Gen. Bugeaud, the real architect of French rule in Algeria. During the late 1840s and 1850s, the tribes on the edge of the Sahara were pacified, while the conquest was effectively completed by the submission of the hitherto independent Berber confederacies of the Kabyle in 1857. Notwithstanding, further rebellions were to occur, however, throughout the 19th century.

Meanwhile, a policy of colonization, with widespread confiscation of land and its transference to settler groups, had been adopted. Bugeaud at first encouraged colonization in the coastal plains; after 1848 the influx of colonists accelerated, especially

following the annexation of Alsace-Lorraine by Germany in 1871; further stimulus to colonization was provided by the widespread confiscation of lands after an unsuccessful Muslim rebellion in the same year. By that time the French settlers had become the dominant power in Algeria, owning much of the best land and initiating extensive agricultural development.

After the revolt of 1871, the situation was regularized by a new French administration under Thiers. A civil administration with the status of a French *département* was established for much of Algeria, while the amount of territory under military rule steadily declined. From 1871 to 1900 there was considerable economic development in Algeria and increasing European immigration, notably from Italy. A feature of this period was the growth of large-scale agricultural and industrial enterprises, which further concentrated power in the leaders of the settler groups. In 1900 Algeria secured administrative and financial autonomy, to be exercised through the so-called 'Financial Delegations', composed of two-thirds European and one-third Muslim members, which were empowered to set the annual budget and to raise loans for economic development.

Within 70 years the Muslim people of Algeria had been reduced from relative prosperity to economic, social and cultural subordination. Some 3m. inhabitants had died, tribes had been disbanded and the traditional economy altered during the prolonged 'civilizing' campaigns. In particular, the production of wine for export had replaced the growing of cereals for domestic consumption. By contrast, the settlers enjoyed a high level of prosperity in the years before the First World War.

BIRTH OF NATIONALISM

The spirit of nationalism, which was spreading throughout the Middle East, emerged among Algerian Muslims after the First World War. Nationalist aspirations began to be voiced not only by Algerian veterans of the war in Europe but also by Algerians who had gone to France to study or work. In 1924 one of these students, Messali Hadj, in collaboration with the French Communist Party, founded in Paris the first Algerian nationalist newspaper; the link with the Communists was, however, severed in 1927. Messali Hadj and his movement were forced into hiding by the French Government, but reappeared in 1933 to sponsor a congress on the future of Algeria, which demanded full independence, the recall of French troops, the establishment of a revolutionary government, large-scale reforms in land ownership and the nationalization of industrial enterprises.

More moderate doctrines were advanced in the post-war years by an influential body of French-educated Muslims, formalized in 1930 as the Federation of Muslim Councillors. Under the leadership of Ferhat Abbas, this group urged integration with France on a basis of complete equality. The victory of the Popular Front in the French elections of 1936 gave rise to the hope that at least some of these aspirations might be peaceably achieved. However, the Blum-Viollet Plan, which would have granted full rights of citizenship to an increasing number of Algerian Muslims, was abandoned by the French Government as it was fiercely opposed by French settlers and the Algerian civil service.

The years immediately prior to the Second World War were characterized by growing nationalist discontent, in which Messali Hadj played a significant part with the formation of the Party of the Algerian People (PPA). The outbreak of war in 1939 suspended the nationalists' activities, but the war greatly strengthened their position. Although the Vichy administration in Algeria, strongly supported by the French settlers, was antipathetic to nationalist sentiment, the Allied landings in North Africa in 1942 provided an opportunity for the Algerian nationalists to present constitutional demands. In December a group led by Ferhat Abbas submitted to the French authorities and the Allied military command a memorandum demanding the post-war establishment of an Algerian constituent assembly, to be elected by universal suffrage. However, no demand was made for Algerian independence outside the French framework.

These proposals, to which the French authorities remained unresponsive, were followed early in 1943 by the 'Manifesto of the Algerian People', which demanded immediate reforms, including the introduction of Arabic as an official language and the end of colonization. Further proposals, submitted in May, envisaged the post-war creation of an Algerian state with a constitution to be determined by a constituent assembly, and anticipated an eventual North African Union, comprising Tunisia, Algeria and Morocco. The newly-established Free French administration in Algiers categorically rejected the Manifesto and the subsequent proposals.

Confronted by growing Muslim discontent, and following a visit to Algiers by Gen. Charles de Gaulle, a new statute for Algeria came into effect in March 1944. Membership of the French electoral college was opened to 60,000 Muslims, but there were still 450,000 European voters, and in the event only 32,000 Muslims registered to vote. The Muslim share of the seats in the *communes mixtes* was restricted to 40%. All further discussion of Algeria's future relationship with France was rejected.

Shortly afterwards, Ferhat Abbas founded the Friends of the Manifesto of Freedom (AML), which aimed to establish an autonomous Algerian republic linked federally with France. The movement was based mainly on the support of middle-class Muslims, and also gained a certain following among the masses, who comprised the main support of the PPA during 1944–45.

FRENCH INTRANSIGENCE

All possibility of a gradually negotiated settlement was destroyed by blunders of post-war French policy and the opposition of the French settlers to any concessions to Muslim aspirations. Riots at Sétif in May 1945 were ruthlessly suppressed; it was estimated that 8,000–40,000 Muslims were killed. This suppression, the subsequent arrest of Ferhat Abbas and the dissolution of the AML convinced many nationalist leaders that force was the only means of gaining their objective.

Nevertheless, attempts to reach a compromise continued. In March 1946 Ferhat Abbas, released under an amnesty, launched the Democratic Union of the Algerian Manifesto (UDMA), with a programme providing for the creation of an autonomous, secular Algerian state within the French Union. Colonists were invited to join, but few did so. Despite successes in elections to the French Assembly, the UDMA failed to achieve its objectives. It withdrew from the Assembly in September and refused to participate in the next elections. The breach was filled by the more radical Movement for the Triumph of Democratic Liberties (MTLD), formed by Messali Hadj at the end of the war, which demanded the creation of a sovereign constituent assembly and the withdrawal of French troops.

In another attempt at compromise, the French Government introduced a new Constitution, adopted on 20 September 1947, granting French citizenship, and therefore the right to vote, to all Algerian citizens, both men and women, and recognizing Arabic as equal in status to French. The proposed new Algerian Assembly, however, was to be divided into two colleges, each of 60 members, one to represent the 1.5m. resident Europeans, the other the 9m. Algerian Muslims. Other provisions excluded any legislation contrary to the interest of the colonists.

The new Constitution was never brought fully into operation. Following MTLD successes in the municipal elections of October 1947, the elections to the Algerian Assembly were openly interfered with, many candidates being arrested, election meetings forbidden and polling stations improperly operated. As a result only one-quarter of the members returned to the second college in April 1948 belonged to the MTLD or the UDMA; the remainder, known as the 'Beni Oui Oui', were nominally independent, but easy to manipulate. Such methods continued to be employed in local and national elections during the next six years, as well as in the Algerian elections to the French National Assembly in June 1951. Some of the improvements that the 1947 Constitution envisaged were never put into effect. The aim was to destroy, or at least render harmless, opposition to French rule; the result was to compel the main forces of nationalism to operate clandestinely.

As early as 1947 several of the younger members of the MTLD had formed the 'Secret Organization' (OS), which collected arms and money and organized a network of cells throughout Algeria in preparation for armed insurrection and the establishment of a revolutionary government. Two years later the OS felt itself strong enough to launch a terrorist attack in Oran. The movement was discovered subsequently and most of its leaders were arrested. A nucleus survived, however, in the Kabyle region

(ever a stronghold for dissident groups) and the organizer of the attack, Ahmed Ben Bella, escaped to Cairo in 1952.

A decisive split was opening in the ranks of the MTLD, and the veteran Messali Hadj, who now embraced nebulous doctrines of Pan-Arabism, was gradually losing control of the party organization to more activist members. In March 1954 nine former members of the OS formed the Revolutionary Council for Unity and Action (CRUA) to prepare for an immediate revolt against French rule.

WAR OF INDEPENDENCE

Plans for the insurrection were formulated at a series of CRUA meetings in Switzerland during March–October 1954. Algeria was divided into six *wilaya* (administrative districts) and a military commander was appointed for each. When the revolt was launched on 1 November the CRUA changed its name to the National Liberation Front (Front de libération nationale—FLN), its armed forces being known as the National Liberation Army (Armée de libération nationale—ALN). Beginning in the Aurès, by early 1955 the revolt had spread to the Constantine area, the Kabyle and the Moroccan frontier, west of Oran. By the end of 1956 the ALN was active throughout the settled areas of Algeria.

Ferhat Abbas and Ahmad Francis of the more moderate UDMA and the religious leaders of the *ulema* (Muslim scholar/lawyers) joined the FLN in April 1956, thereby integrating all sectors of Algerian nationalist feeling with the exception of Messali Hadj's Algerian National Movement (MNA). In August a secret congress of the FLN, convened at Soummam in the Kabyle, established a central committee and formed the National Council of the Algerian Revolution. A socialist programme for the future Algerian republic and plans for a terrorist offensive in Algiers were also approved.

Between September 1956 and June 1957 bomb explosions engineered by the FLN caused great loss of life. This terrorism was halted only by severe French repression of the Muslim population, including the use of torture and internment. Guerrilla activities continued but electrified barriers were erected along the Tunisian and Moroccan borders and ALN bands attempting to cross into Algeria suffered heavy losses.

In June 1957 the new Bourgès-Manoury administration in France introduced legislation to link Algeria indissolubly with France, but the measure was not approved. Following the Soummam conference, a joint Moroccan-Tunisian plan had been announced for the establishment of a North African federation linked with France. FLN leaders began negotiations in Morocco in October 1957. However, Ben Bella and his companions were kidnapped *en route* from Morocco to Tunisia, when the French pilot of their aircraft landed at Algiers. The French authorities could hardly ignore this *fait accompli*, and the hijacked leaders were arrested and interned in France. Neither the internment of FLN leaders nor the bombing by French aircraft, in February 1958, of the Tunisian border village of Sakhiet Sidi Youssif, in which 79 villagers were killed, weakened the resolve or the capacity of the FLN to continue fighting, and the failure of these desperate measures only made the possibility of French negotiations with the FLN more likely. This, in turn, provoked a violent reaction from the Europeans in Algeria (only about one-half of whom were of French origin).

In May 1958 the colonists rebelled and installed committees of public safety in the major Algerian towns. Supported by the army and exploiting the widespread fear of civil war, the colonists prompted the overthrow of the discredited Fourth French Republic and celebrated Gen. de Gaulle's return to power, in the belief that he would further their aim of complete integration of Algeria with France. Although de Gaulle intensified military action against the FLN, this was achieved only at the cost of increased terrorism in Algiers and of growing tension on the Tunisian and Moroccan borders. The FLN responded in August by establishing in Tunis the Provisional Government of the Algerian Republic (GPRA), headed by Ferhat Abbas, and including Ben Bella and the other leaders who had been interned in France. De Gaulle was already beginning to recognize the strength of Algerian nationalism and was moving cautiously towards accepting FLN demands.

NEGOTIATIONS AND THE COLONISTS' OPPOSITION

Initially de Gaulle's public statements on Algeria were vague. When he did make an unequivocal pronouncement in September 1959, which upheld the right of Algerians to determine their own future, the colonists reacted swiftly. In January 1960 they rebelled again, this time against de Gaulle, and erected barricades in Algiers. However, without the support of the army the insurrection collapsed within nine days. Provisional talks between French and FLN delegates took place in secret near Paris in mid-1960 but were inconclusive.

In November 1960 de Gaulle announced that a referendum was to be held on the organization of government in Algeria, pending self-determination, and in December he visited Algeria to prepare the way. In the referendum the electorate was asked to approve a draft law providing for self-determination and immediate reforms to give Algerians the opportunity to participate in government. There were mass abstentions from voting in Algeria, however, and in February 1961 new French approaches to the FLN were made through the President of Tunisia. Secret talks led to direct negotiations between French and FLN representatives at Évian, on the Franco-Swiss border. These began in May but foundered in August over the question of the Sahara and because of a French attack on the blockaded French naval base at Bizerta (Tunisia), which resulted in the deaths of 800–1,300 Tunisians.

Europeans in Algeria and sections of the French army, meanwhile, had formed the Secret Army Organization (OAS) to resist a negotiated settlement and the transfer of power from European hands. In April 1961 four generals, Challe, Zeller, Jouhaud and Salan, organized the seizure of Algiers, but this attempt at an army coup proved abortive, most regular officers remaining loyal to de Gaulle. Offensive operations against the Algerian rebels, which had been suspended when the Évian talks began, were resumed by the French Government, and fighting continued, although on a reduced scale. At the same time, the OAS initiated a campaign of indiscriminate terrorist violence against native Algerians. The Mayor of Évian had already been killed by an OAS bomb, and attacks were now also mounted in Paris.

Secret contacts between the French Government and the FLN were re-established in October 1961. Negotiations resumed in December and in January 1962 in Geneva and Rome, the five members of the GPRA interned in France taking part through a representative of the King of Morocco. Ministerial-level meetings were held in strict secrecy in Paris in February and the negotiations were concluded at Évian in March with the signing of a cease-fire agreement and a declaration of future policy, which provided for the establishment of an independent Algerian state after a transitional period, and for the safeguarding of individual rights and liberties. Other declarations issued subsequently dealt with the rights of French citizens in Algeria and with future Franco-Algerian co-operation. In the military sphere, France was to retain the naval base at Mers el-Kebir for 15 years and the nuclear testing site in the Sahara, together with various landing rights, for five years.

In accordance with the Évian agreements, a provisional Government was formed on 28 March 1962, with Abderrahman Farès as President and an executive composed of FLN members, other Muslims and Europeans. The USSR and many East European, African and Asian countries quickly gave *de jure* recognition to the GPRA.

The signing of the Évian agreements provoked renewed opposition by the OAS. A National Council of French Resistance in Algeria was formed, with Gen. Salan as Commander-in-Chief, and OAS commando units launched attacks on the Muslim population and on public buildings in an attempt to prompt a general breach of the cease-fire. After the failure of the OAS to establish an 'insurrectional zone' in the Orléansville (El-Asnam) area and Salan's capture in April 1962, and with a renewal of FLN terrorist activity and reprisals, increasing numbers of Europeans began to leave Algeria for France. Secret negotiations between OAS leaders and the FLN, aimed at securing guarantees for the European population, revealed a division in the OAS, heralding the virtual end of European terrorist activity. By late June more than one-half of the European population of Algeria had left the country.

The final steps towards Algerian independence were taken at a referendum on 1 July 1962 at which 91% of the electorate voted for independence. Algerian independence was proclaimed by Gen. de Gaulle on 3 July.

THE INDEPENDENT STATE

The achievement of power by the FLN revealed serious tensions within the Government, while the problems facing the new state after eight years of civil war were formidable.

The dominant position in the GPRA of the 'centralist' group, headed by Ben Khedda and comprising former members of the MTLD, was threatened by the release in March 1962 of the five GPRA members who had been detained in France—Ben Bella, Muhammad Khider, Muhammad Boudiaf, Hocine Aït Ahmed and Rabah Bitat. Boudiaf and Aït Ahmed rallied temporarily to the support of Ben Khedda, while the others formed yet another opposition faction besides that of Ferhat Abbas, who had been removed from the GPRA leadership in 1961.

The ALN leadership was also split, with the commanders of the main armed forces in Tunisia and Morocco opposing the politicians of the GPRA, and the commanders of the internal guerrilla groups hostile to all external and military factions.

Serious differences emerged when the National Council of the Algerian Revolution met in Tripoli in May 1962 to consider policies for the new state. A commission headed by Ben Bella produced a programme which included large-scale agrarian reform, involving expropriation and the establishment of peasant co-operatives and state farms; a state monopoly of external trade; and a foreign policy aimed towards Maghreb unity, neutrality and anti-colonialism, especially in Africa. Despite the opposition of Ben Khedda's group, the Tripoli programme became the official FLN policy.

After independence, the GPRA Cabinet, with the exception of Ben Bella, flew to Algiers, where they installed themselves alongside the official Provisional Executive. Ben Khedda attempted to reassert control over the ALN by dismissing the Commander-in-Chief, Col Houari Boumedienne. Ben Bella, however, flew to Morocco to join Boumedienne, and in July 1962 they crossed into Algeria and established headquarters in Tlemcen, where Ben Bella instituted the Political Bureau as the chief executive organ of the FLN and a rival to the GPRA. After negotiations, he was joined by some of the GPRA leaders, leaving Ben Khedda isolated in Algiers, with Boudiaf and Aït Ahmed in opposition.

Several *wilaya* leaders, however, felt that, having provided the internal resistance, they represented the true current of the revolution, and they were opposed to the Political Bureau and Boumedienne. While ALN forces loyal to the Bureau occupied Constantine and Bône (Annaba) in the east in July 1962, Algiers remained in the hands of the leadership of *wilaya* IV, who refused the Bureau entry. When Boumedienne's forces marched on Algiers from Oran in September there were serious clashes with *wilaya* IV troops. Total civil war was averted, partly because of mass demonstrations against the fighting which were organized by the Algerian General Workers' Union (UGTA).

The struggle for power proved costly for Ben Khedda. Before the elections were held on 20 September 1962, one-third of the 180 candidates on the single list drafted in August had been purged (including Ben Khedda himself) and replaced with lesser-known figures. Although the elections failed to arouse much public enthusiasm, some 99% of the electorate were declared to have voted in favour of the proposed powers of the Constituent Assembly. The functions of the GPRA were transferred to the Assembly when it convened on 25 September, and Ferhat Abbas was elected its President. The Algerian Republic was proclaimed, and on the following day Ben Bella was elected Prime Minister. He subsequently appointed a Cabinet comprising his personal associates and former ALN officers.

BEN BELLA IN POWER

The new Government immediately acted to consolidate its position. Messali Hadj's PPA (formerly the MNA), the Algerian Communist Party, and Boudiaf's Party of the Socialist Revolution were all banned in November 1962; the *wilaya* system was abolished the following month, and, apart from the UGTA, all organizations affiliated to the FLN were brought firmly under control.

The economic plight of the country was severe. Some 90% (1m.) of the Europeans, representing virtually all the entrepreneurs, technicians, administrators, teachers, doctors and skilled workers, had left the country. Factories, farms and shops had closed, leaving 70% of the population unemployed. Public buildings and records had been destroyed by the OAS. At the end of the war, in which more than 1m. people had died, there had been 2m. in internment camps and 500,000 refugees in Tunisia and Morocco. An austerity plan was formulated in December 1962, and large loans and technical assistance from France, plus other emergency foreign aid, enabled the Government to remain in power.

By packing the first UGTA congress with FLN militants and unemployed, the FLN managed in January 1963 to gain control of the UGTA executive, which had been opposed to the dictatorial nature of the new Government. Decrees published in March legalized the workers' committees which, aided by the UGTA, had taken over the operation of many of the abandoned European estates in mid-1962; the remaining estates were nationalized in 1963. The system of workers' management, known as *autogestion*, under which the workers elected their own management board to work alongside a state-appointed director, became the basis of 'Algerian socialism'.

In April 1963 Ben Bella assumed the post of Secretary-General of the FLN. In August he secured the adoption by the Assembly of a draft constitution providing for a presidential regime, with the FLN as the sole political party. The new Constitution was approved by referendum and on 13 September Ben Bella was elected President for a five-year period, taking the title of Commander-in-Chief of the Armed Forces as well as becoming Head of State and head of government. These moves towards dictatorial government aroused opposition. Ferhat Abbas, the leading proponent of a more liberal policy, resigned from the presidency of the Assembly and was subsequently expelled from the FLN. In the Kabyle, where discontent was accentuated by Berber regionalism, revolts were suppressed in 1963 and 1964.

BOUMEDIENNE TAKES OVER

On 19 June 1965 Ben Bella was deposed and arrested in a swift and bloodless military *coup d'état*, led by the Minister of Defence, Col Boumedienne, whose army had brought Ben Bella to power in 1962. In view of Algeria's economic plight and Ben Bella's dictatorial tendencies, many administrators and politicians did not oppose the coup. Moreover, Ben Bella's elimination of most of the traditional leaders, his repeated attacks on the UGTA and his failure to make the FLN a representative party left him without organized support when the army turned against him. Bereft of its leader, the FLN accepted the coup, and the UGTA, while expressing no real support for Boumedienne, did not oppose it.

Supreme political authority in Algeria passed to the Council of the Revolution, consisting mostly of military figures and presided over by Boumedienne. Under the Council's authority a 20-member Government was formed in July 1965, with Boumedienne as Prime Minister and Minister of Defence. Nine members of the Government, which included technocrats and members of the radical wing of the FLN, had held office under Ben Bella. To ensure a satisfactory relationship between the Government and the FLN, a five-man party secretariat under Cherif Belkacem was established shortly afterwards.

The aims of the new regime, as described by Boumedienne, were to remedy the abuses of personal power associated with Ben Bella, to end internal divisions, and to create an 'authentic socialist society' based on a sound economy. In international relations a policy of non-alignment was to be pursued.

Apart from preparations for municipal elections, the regime made no attempt to secure a popular mandate, and the Algerian National Assembly remained in abeyance. New penal and civil legal codes were promulgated in 1966, the judiciary was 'Algerianized' and tribunals to try 'economic crimes', with powers to impose the death penalty, were created. In accordance with its socialist policies, the regime increased state participation in concerns previously left to private enterprise, particularly in the mining and insurance sectors. A National Bank of Algeria, specializing in short-term credit for the nationalized sector of the economy, was inaugurated in July. However, industrial

activity continued at a low level and the country remained heavily dependent on foreign aid for industrial development. A new investment code was promulgated in September, designed to attract domestic and foreign capital, and containing assurances of indemnification in the event of nationalization.

CAUTION IN FOREIGN POLICY

The relationship with France, Algeria's main customer and the source of substantial assistance, remained of paramount importance. In 1966 agreements were signed which provided for French technical and educational assistance for 20 years, cancelled Algeria's pre-independence debts and reduced indebtedness to France. France was disturbed by the growing Soviet influence in Algeria. Soviet advisers played a leading role in the development of mining and industry, and the Algerian army received training and equipment from the USSR. However, French fears that the Soviet navy might be allowed to use the Mers el-Kebir base, handed over by France in January 1968, proved groundless. The French cultural influence remained: there were still French teachers, although the teaching of Arabic was extended in schools; large numbers of Algerians worked in France; there was a preference for imported French consumer goods; and France continued to give assistance, including training and equipment, to Algeria's armed forces.

Algerian involvement in the 'Six-Day War' between Israel and neighbouring Arab states in June 1967 was minimal, although following the cease-fire there were demonstrations against Nasser's 'treason' and also against the USSR's lack of support for Arab countries. At the Khartoum conference Algerian delegates advocated a people's war, and detachments of Algerian troops were maintained in the Suez Canal area until mid-1970.

A highly critical, often openly hostile, attitude to the USA was maintained, and diplomatic relations were severed in 1967. Nevertheless, US petroleum technology was welcomed, as was investment in Algeria's oil industry; a contract to sell liquefied natural gas (LNG) to the USA was signed in 1969.

In Africa the Boumedienne Government adopted a consistently anti-colonial line, severing relations with the United Kingdom over Rhodesia in 1965 (but restoring them in 1968), and providing training and facilities for the liberation movements of southern Africa, as well as for the Eritrean Liberation Front and the National Liberation Front of Chad. A determined effort was made to improve relations with neighbouring countries in the Maghreb. In January 1969 President Boumedienne made his first official visit to Morocco, and in June frontier posts were reopened for the first time since 1963. In May 1970 the Algerian and Moroccan Governments signed an agreement to settle a long-standing border dispute and to co-operate on the question of the Spanish presence in North Africa. In mid-1972 further agreements were signed: one demarcating the Algerian–Moroccan border (ratified by Algeria in May 1973, but not by Morocco until 1989), the other providing for joint exploitation of the Gara-Djebilet mines in the border regions. An agreement with Mauritania was signed in December 1969, and a friendship treaty with Tunisia, agreeing on common borders, in January 1970. While Algeria welcomed the Libyan revolution in 1969, the subsequent orientation of the Libyan leaders towards Egypt and Sudan, rather than the Maghreb, was not conducive to close relations between the two regimes.

INTERNAL OPPOSITION OVERCOME

The new Government was opposed by certain left-wing ministers, such as Ali Yahia Abdennour and Abdelaziz Zerdani, the UGTA, students, and sections of the army, notably the former *wilaya* leaders, all of whom feared the imposition of a technocratic and centralized socialism, different from the syndicalist concepts embodied in *autogestion*. Various members of the UGTA and of the Boumedienne administration were arrested following the suppression of an armed uprising in the Mitidja in December 1967. Boumedienne announced a series of selective dismissals in the FLN and the army, and appointed well-known supporters to vacant ministerial offices.

Opposition to Boumedienne, however, was by no means crushed. FLN attempts in February 1968 to impose a new loyal student committee at Algiers University provoked a strike by students and teachers, and there were numerous reports of guerrilla activity in the Aurès and the Kabyle. The Organization of Popular Resistance appeared to be active both in these areas and among students. In April Boumedienne escaped an assassination attempt in Algiers with minor injuries. However, some observers argued that the pardoning of as many as 100 political prisoners in November 1969 was indicative of the weakness of opposition to Boumedienne.

The second stage of the reform of governmental institutions (the first being the 1967 communal elections) was put into operation in May 1969, when elections were held for the 15 *wilaya* (administrative districts) and 72% of the electorate voted for candidates on a single FLN list.

RELATIONS WITH FRANCE

The consolidation of President Boumedienne's position in Algeria enabled him to adopt a more militant attitude towards France. Demands for increased revenues from Algerian petroleum resulted in dispute over the price to be paid by the French oil companies, and culminated in the decision to nationalize them. The two companies concerned, the Compagnie Française des Pétroles (CFP) and the Entreprise de Recherches et d'Activités Pétrolières (ERAP), were responsible for some two-thirds of Algeria's total production. In February 1971, following fruitless discussions with the French Government, Boumedienne announced the acquisition by the Algerian Government of a 51% holding in CFP and ERAP and the complete nationalization of the companies' gas and pipeline interests.

The French Government regarded this move as a breach of the 1965 agreement but could only ask for fair compensation. The subsequent Algerian offer was found unacceptable and in April 1971 France discontinued negotiations. It was announced that many French technicians and teachers were to leave Algeria, and attacks were made on some of the 700,000 Algerians in France. The French Government imposed a boycott against Algerian petroleum and tried to persuade other major consumers to do the same. Talks between the two French companies and SONATRACH, the Algerian state oil concern, were resumed, however, and agreements were reached in June and September under which the role of CFP and ERAP became that of minority partners of the Algerian state in return for guaranteed oil supplies. After approval by the two Governments an agreement, which also provided for compensation and reduced retrospective tax claims, was signed in December.

In April 1975 Valéry Giscard d'Estaing became the first French President to visit Algeria since independence. However, the goodwill that was generated by the visit quickly dissipated. French economic policies were resented by the Boumedienne Government, as they maintained an imbalance in trade between the two countries, and French support for, and provision of large quantities of arms to, Morocco, Algeria's potential enemy, during the Western Sahara dispute (see below) were regarded as a betrayal.

PALESTINE AND WESTERN SAHARA

The Boumedienne Government's stand on the Palestine question remained uncompromisingly militant. Algeria accepted neither the 1967 UN Resolution nor the cease-fire. When a further cease-fire was agreed in August 1970, Algerian troops were withdrawn from the Suez Canal. Radio stations of Palestine liberation movements expelled from Cairo in July 1970 were allowed to broadcast from Algiers and relations with Jordan were severed in June 1971 after the final destruction of Palestinian guerrilla bases in Jordan by King Hussein's forces. During the October War in 1973 Algeria actively encouraged African countries to sever relations with Israel. It participated fully with other Arab petroleum-producing states in reducing production and boycotting countries regarded as hostile to the Arab cause. Relations with Jordan were restored after the dispatch of Jordanian troops to the Syrian front, but Algeria continued to support the Palestinians against any Jordanian territorial claims. In December 1977 Algeria was one of the signatories of the Declaration of Tripoli, opposing President Sadat's attempts to negotiate with Israel, and in 1978 Algeria severed diplomatic relations with Egypt.

Despite the Government's policy towards Palestine and its support of almost any exiled foreign opposition group, Algeria was prepared to co-operate in the economic field with any state willing to do so. Fears that Algeria might fall under Soviet

dominance proved groundless, although the USSR was a major source of military equipment. Despite disagreements with the USA over Viet Nam and the Palestinian question, full diplomatic relations were restored at the end of 1974 and trade between the two countries increased dramatically—by the end of 1977 the USA had replaced France as Algeria's leading trade partner.

From early 1975 a major confrontation developed with Morocco over the future of the Spanish Sahara. Algeria opposed Morocco's claim to the territory, advocating the founding of an independent Saharan state after decolonization. In May, at the International Court of Justice, Algeria appealed for genuine self-determination for the Saharans and denied any self-interest in the matter. When, in November, Spain agreed to hand over the territory to Morocco and Mauritania, Boumedienne protested vehemently and promised full support for the Polisario Front, the Saharan liberation movement. As Moroccan troops entered the territory, now known as Western Sahara, Algeria mobilized part of its armed forces, and in early 1976 there were heavy clashes between units of the two armies in the territory, far from the Algerian border. In March Algeria recognized the Sahrawi Arab Democratic Republic, proclaimed by the Polisario Front; Morocco and Mauritania subsequently severed diplomatic relations with Algeria. The prospect of a full-scale war in Western Sahara quickly receded, especially as there was little enthusiasm for war among the Algerian population, but the Government continued to provide support and refuge for displaced persons and Polisario troops. Morocco and Mauritania refused to recognize the Polisario Front and interpreted all armed incursions into Western Sahara as Algerian attacks against their national territory. French bombing raids on Polisario troops, beginning in December 1977, were condemned by Algeria, although the French Government declared that its intervention was solely for the protection of its citizens working in the area.

HOME AFFAIRS

In 1971 the Boumedienne Government initiated a programme of agrarian reform, known as the Agrarian Revolution, which was to proceed in three phases: the reallocation of state-owned and foreign land, the redistribution of private estates, and the transformation of the lives of the pastoral nomads. At the same time, the Government resolved to develop workers' control in industry and to reanimate the FLN as a radical force. Elected workers' councils slowly spread through nationalized industries, but the reorganization of the FLN was a failure, prompting the resignation of Kaid Ahmad, the party leader, in 1972. The initiative in promoting the Agrarian Revolution passed to a student *volontariat*. Boumedienne's determination to build a socialist society was resisted by conservative elements of the population, especially after the redistribution of private estates and the nationalization of food distribution. Conflict erupted in mid-1975 when there were clashes at Algiers University between students, supporting the Agrarian Revolution, and others, who wished to give priority to 'Arabization'.

The personal authority of Boumedienne increased in the 1970s. Following the death of Ahmad Medeghri in 1974 and Belkacem's dismissal from the Cabinet in 1975, Abdelaziz Bouteflika (the Minister of Foreign Affairs) was the only figure of comparable stature in the Government. Encouraged by the success of local and provincial elections since 1967 and 1969 respectively, Boumedienne announced in June 1975 that elections for a National Assembly and a President were to be held, and that a national charter would be drafted to provide the state with a new constitution.

Boumedienne's decision to consolidate the regime and his personal power provoked a resurgence of opposition, including the circulation, in March 1976, of a manifesto signed by, among others, Ferhat Abbas and Ben Khedda, both former presidents of the Algerian government-in-exile during the war of liberation. The manifesto criticized Boumedienne for his totalitarian rule and his fostering of a personality cult. The signatories were reportedly placed under house arrest.

In April 1976 the Algerian press began publication of the national charter, which, after public discussion, received the approval of 98.5% of the voters at a referendum in June. The essence of the charter was the irreversible commitment of Algeria to socialism, albeit a socialism specifically adapted to Third World conditions. The dominant role of the FLN was reasserted, but, as a concession to the conservatives, Islam was recognized as the state religion. In November a new Constitution, embodying the principles of the charter, was also approved by referendum, and in December Boumedienne was elected unopposed as President, with 99% of votes cast. To complete the new formal structure of power, the National People's Assembly of 261 members was elected in February 1977 from among 783 candidates selected by a committee of the FLN. Attempts were made to strengthen and enlarge the FLN: FLN officials were installed alongside local administrative officials to form the basis of a full party apparatus at all levels, and the mass organizations affiliated to the FLN (the unions of workers, peasants, war veterans, women and youth) held a series of congresses which was to culminate in a national FLN Congress (the first since 1964) in early 1979 (see below).

THE DEATH OF BOUMEDIENNE

Following a short illness, President Boumedienne died on 27 December 1978. During his illness there was speculation as to his successor, particularly since he had nominated neither a Vice-President nor a Prime Minister and was himself Minister of Defence (a post which had included, from 1977 onwards, direct supervision of the police and secret service) and Chief of Staff of the Armed Forces. As an interim measure, government was assumed by the Council of the Revolution, which by now consisted of only eight members. Although it had been given no official status in the 1976 Constitution, the Council declared that it would maintain continuity and protect existing institutions, and succeeded in effecting a smooth transfer of power.

After Boumedienne's death, Rabah Bitat, the President of the National People's Assembly, was automatically sworn in as Head of State for a 45-day period. In late January 1979 the delayed FLN Congress was convened, with the double task of revitalizing the party and of choosing a presidential candidate. New statutes on party structure were adopted, whereby a Central Committee of 120–160 members and 30–40 advisory members, meeting at least twice a year, was to be elected by Congress and form the highest policy-making body not only of the party but of the country as a whole. The Committee was to select a party secretary-general who would automatically become the FLN presidential candidate, and therefore the sole presidential candidate. A political bureau of 17–21 members, nominated by the Secretary-General, would be elected by the Central Committee and be responsible to it. These structures superseded the Council of the Revolution, which was formally disbanded on 27 January.

CHADLI IN POWER

It was expected that the presidential candidate would be a member of the former Council, and the most likely choice appeared to be either Bouteflika or Muhammad Salah Yahiaoui, the administrative head of the FLN. The eventual choice, Col Ben Djedid Chadli, the commander of the Oran military district, was regarded as a compromise nominee. He was inaugurated as President on 9 February 1979, after his candidature had been approved by 94% of the electorate. He declared that he would uphold the policies of Boumedienne, the 'irreversible option' of socialism and 'national independence' in both political and economic spheres. It soon became clear that Chadli did not intend to monopolize power to the extent that Boumedienne had. For the first time since independence, a Prime Minister was named: Col Muhammad ben Ahmad Abd al-Ghani, who also kept his post as Minister of the Interior until January 1980. This nomination preceded constitutional changes, adopted by the National People's Assembly in June 1979, which made the appointment of a Prime Minister obligatory, and also reduced the President's term of office from six to five years, to coincide with five-yearly party congresses.

Within the first few months of his presidency, Chadli appeared to reject many of Boumedienne's doctrinaire policies. A new Government was formed, and Bouteflika was relieved of the foreign affairs portfolio, which he had held for 15 years. Some of Boumedienne's political opponents were released from prison and it was announced that Ben Bella had been freed, although it later transpired that he had merely been placed under a less stringent form of house arrest; he was finally freed from

restrictions in October 1980. Exit visas for Algerians, compulsory since 1967, were abolished; income tax was reduced and restrictions on owning property were eased. In September 1979, however, a 'clean-up' campaign was mounted in Algiers and other cities. It was initially intended to improve the appearance of the streets in preparation for the 25th anniversary of the revolution, but was expanded to include the arrest and imprisonment of hundreds of 'social parasites' and a campaign against inefficiency and corruption. During 1980–81 the campaign was extended to the highest levels of state organizations, and numerous senior officials were arrested and tried by the Cour des Comptes for financial mismanagement.

In late 1979 the FLN Central Committee announced that Algeria would reduce its dependence on foreign financial and technical assistance, diversify its economic partners, and decrease its hydrocarbon exports in order to conserve these resources. The massive industrialization programme was to be reduced in scale and large state companies were to be reorganized. Details of these changes were presented in a five-year plan adopted in mid-1980.

FOREIGN POLICY UNDER CHADLI

During Chadli's presidency, Algerian foreign policy became more pragmatic and less determined by ideological considerations. Boumedienne's aim to present Algeria as one of the leaders of the Third World was abandoned, as was the policy of distracting attention from domestic problems by stridency abroad. He sought good relations with states of every political ideology and forged close links with conservatives without alienating radicals. Algeria, therefore, earned high regard as a mediator, and in October 1987 the country was elected to the UN Security Council for a two-year term beginning in January 1988.

Relations with other Arab states

Algeria under Chadli had no aspirations to leadership of the Arab world but worked for Arab unity and made attempts to mediate in disputes. The prestige that Chadli had gained was illustrated by his selection, together with that of King Hassan II of Morocco and King Fahd of Saudi Arabia, to form a Tripartite Arab Committee on Lebanon to pursue the decisions of the May 1989 Casablanca Arab summit meeting.

Diplomatic relations were restored with Egypt after a nine-year break in November 1988; three months later Dr Esmat Abd al-Meguid became the first Egyptian minister to visit Algeria for 11 years. Algeria remained a staunch supporter of the Palestinian cause, and in mid-1988 Chadli convened a special summit meeting to rally support for the *intifada* and provided a venue for the declaration of Palestinian statehood. Algeria strongly opposed the settlement of Soviet Jews in the West Bank region of Jordan, but Chadli declined to attend the Baghdad Arab summit meeting in person in May 1990 on the grounds that, without the participation of Syria, the meeting would be pointless.

Algeria, despite suspicions that it was covertly supporting its local Islamist fundamentalists, enjoyed friendly relations with the conservative Arab monarchies and co-operated with them in financial matters. Algeria also developed friendly diplomatic and commercial ties with Iran.

Relations with the 'superpowers'

Whereas former President Boumedienne had restored diplomatic links with the USA while maintaining relations at a commercial level, Chadli sought to improve relations, with the aims of gaining higher levels of US investment and of promoting regional stability. Algeria played an important part in the negotiations over US hostages being detained in Iran, leading to their release in January 1981. However, relations with the USA became strained shortly afterwards when the US Government announced its decision to sell tanks to Algeria's then hostile neighbour, Morocco, and refused to agree to Algerian demands that the price of LNG (a major Algerian export) should be increased to a level of parity with the price of petroleum.

By 1985 relations with the USA had improved, and in April the two countries held a summit meeting in Washington, DC. This was the first official visit to the USA by an Algerian Head of State since independence. Chadli succeeded in having Algeria removed from the list of countries that the US Government had declared 'ineligible' to purchase US military equipment. In order to balance this *rapprochement* with the USA, Chadli made an official visit to Moscow in March 1986. In October 1987 the USA expressed alarm when it was revealed that Algeria had agreed, in principle, to establish a political union with Libya. This agreement directly contravened the US policy of 'isolating' that country, and, after diplomatic pressure from the USA (in addition to opposition from within the Algerian Government), Chadli postponed the announcement of a treaty of political union with Libya.

Relations with France

After Chadli took office as President, relations with France began to improve. In September 1980 Algeria and France signed an agreement whereby the French Government provided incentives for the repatriation of some 800,000 Algerian workers and their dependants living in France, while Algeria released French bank assets which had been 'frozen' since independence. Following the election of a socialist government in France in 1981, relations became more cordial still. The French Minister of the Interior visited Algeria to discuss the problem of illegal immigration, and, shortly afterwards, President Mitterrand made an official visit. In February 1982 a dispute over the price of Algerian gas exports to France was settled, and in December Chadli made the first official visit to France by an Algerian Head of State since independence.

After the election of a right-wing French government in 1986, co-operation between France and Algeria was maintained. In September the French Prime Minister, Jacques Chirac, visited Algiers to discuss bilateral trade and foreign policy, although the positive aspects of his visit were vitiated by the announcement of proposals to introduce visa requirements for visitors from non-European Community (EC) countries to France, following a series of bombings in Paris. In October Algeria retaliated by introducing similar requirements for French visitors to Algeria. In the same month, however, France expelled 13 members of the Mouvement pour la démocratie en Algérie (MDA—founded by Ben Bella in 1984) and banned its newspaper, *Al-Badil,* after Algerian security forces co-operated with France over the Paris bombings. In April 1987 the Algerian Government agreed to release the assets of former French settlers, which had been 'frozen' since independence, and subsequently allowed former French property-owners to sell their land in Algeria to the Algerian state, and French workers in Algeria to transfer their income to France. In return, the French Government agreed to provide financial assistance to Algeria for three years.

Relations deteriorated during riots in Algiers in October 1988 (q.v.), as Algerian state-controlled newspapers accused the French media of exaggerating the unrest, and the Algerian Government criticized the French Minister of Co-operation for objecting to the severe measures taken against the rioters. However, in March 1989, during a visit to Algeria, President Mitterrand demonstrated his firm support for Chadli and his reforms. In June the Association for Franco-Algerian Friendship was founded, with the aim of strengthening bilateral links.

In December 1990 relations between Algeria and France were subjected to renewed strain after Algeria issued a decree which designated Arabic as the country's official language, and which appeared to penalize the official use of French. By May 1991 tensions appeared to have eased: France and Algeria concluded four petroleum agreements and French oil companies were granted two new concessions in the Sahara.

Co-operation with Spain

Until 1986 Algeria's relations with Spain had been circumspect, owing to Algerian suspicion of Spain's pro-Moroccan position in the Western Sahara conflict. In October 1986 the Spanish Government claimed that 'Txomin', the leader of the military wing of ETA (the Basque separatist movement), and a number of ETA supporters were living in Algeria, with the tacit approval of the Algerian Government. Algeria hastily denied any involvement with ETA and assured Spain that it would not allow the ETA members to engage in 'terrorist' activities. In December the Spanish Deputy Prime Minister visited Algeria and was reported to have met representatives of the Polisario Front. In the following month, Spain announced that it would incorporate Algeria into its programme of overseas military co-operation.

The death of 'Txomin' in a road accident near Algiers in early 1987 increased Spanish suspicions of the Algerian Government's stance regarding ETA. However, the tension was resolved by a bilateral pact, signed in August, which allowed an Algerian security official to be stationed in Spain to monitor the activities of Algerian dissidents, in exchange for closer supervision of ETA members in Algeria. In December an MDA activist was arrested by the Spanish authorities and expelled to Algeria. In April and May 1989 16 ETA members were expelled from Algeria, following the collapse of peace talks with the Spanish Government and a resumption of ETA violence in Spain. In December a Spanish company signed a gas exploration and production agreement with the Algerian state monopoly SONATRACH. The reconciliation with Morocco removed political obstacles to the construction of a gas pipeline between Algeria and Spain.

Algeria and the 1990–91 Gulf crisis

Algeria condemned both the invasion of Kuwait by Iraq in August 1990, and the subsequent deployment of US and other Western armed forces in the Arabian peninsula. The Algerian Minister of Foreign Affairs, Sid-Ahmad Ghozali, advocated an 'Arab solution' to the conflict in the Persian (Arabian) Gulf region and deplored the UN's imposition of economic sanctions against Iraq. At the August 1990 meeting of Arab leaders, held in Cairo, President Chadli abstained in a vote to decide whether to deploy Arab forces alongside Western forces in Saudi Arabia.

President Chadli, both in a personal capacity and as the incumbent Chairman of the Union of the Arab Maghreb (UAM), made strenuous efforts to avert war in the Gulf region, embarking on an extensive tour of the Middle East in December 1990. At the conclusion of the hostilities between Iraq and the multinational force, the Algerian Minister of Foreign Affairs commended the resistance mounted by the Iraqi forces.

Moves towards Maghrebin unity

Although Algeria continued to support the Polisario Front in the Western Sahara conflict, Chadli was more interested in creating a 'Great Arab Maghreb', which would unify the five Maghrebin states politically and economically. In order to achieve this long-term goal, Chadli was prepared to display a greater flexibility than his predecessor with regard to Algeria's relations with Morocco and the Polisario Front.

Algeria's relations with other Maghrebin states improved considerably in the early 1980s. In 1979 Algeria assisted in negotiations with Mauritania over the withdrawal of its claim to Western Sahara. Mauritania signed a peace treaty in August, and Algeria resumed diplomatic relations. However, owing to the impasse in Western Sahara, Algeria's relations with Morocco remained tense until 1983. In February of that year, as the culmination of a series of secret negotiations held since the death of Boumedienne, President Chadli and King Hassan of Morocco held a meeting on the Moroccan-Algerian border. Restrictions on movements across the frontier were withdrawn later.

In March 1983 Algeria and Tunisia signed the Maghreb Fraternity and Co-operation Treaty, providing a framework for the creation of the Great Arab Maghreb. Unlike previous agreements made in the region, this treaty was not directed against neighbouring countries but was explicitly open to them to sign if they accepted the terms. At the same time, Algeria signed a treaty which delineated its borders with Tunisia, thus settling a 20-year old dispute between the two countries. At a meeting in April between representatives from Algeria, Morocco and Tunisia, it was agreed that further conferences would be held on Maghrebin unity, which Libya and Mauritania would be particularly welcome to attend. In December Mauritania signed the Maghreb Fraternity and Co-operation Treaty, and in April 1985 it signed a border agreement with Algeria.

In the mid-1980s, however, Maghrebin unity became an increasingly remote ideal, owing to the deterioration of relations between the five nations. Algeria's relations with Libya became strained after Libya signed the Treaty of Oujda with Morocco in August 1984 and expelled Tunisian workers in 1985. Meanwhile, *rapprochement* with Morocco was hindered by Algeria's continuing support for the Polisario Front, and in July 1985 the Moroccan Minister of the Interior accused Algeria of training 'Moroccan terrorists' for operations against his Government.

After Morocco had completed the construction of a new defensive wall on the borders of Western Sahara and Mauritania in April 1987, the Algerian Government expressed its concern that Mauritania might become involved in fighting between Moroccan troops and the Polisario Front.

In May 1987, however, President Chadli met King Hassan on the Moroccan-Algerian border, under the auspices of King Fahd of Saudi Arabia. The two leaders issued a joint communiqué, which stated that consultations to resolve bilateral differences would continue. Later in the month, the Algerian Government released 150 Moroccan soldiers, in exchange for 102 Algerian prisoners being held in Morocco.

Relations with Libya improved, following Chadli's meetings with the Libyan Secretary for Foreign Liaison in November 1985, and with Col Qaddafi in January 1986. Both Libya and Algeria reiterated their commitment to Maghreb unity and deplored the conflict over Western Sahara, demanding self-determination for the Sahrawi people. Following the US attack on Libya in April, Algeria unsuccessfully appealed for the convening of an emergency meeting of Arab nations. In an attempt to consolidate its good relations with Algeria, Libya advocated a union with Algeria in March and June. A year later, in June 1987, a proposal for political union between Libya and Algeria was submitted to Chadli by Col Qaddafi's deputy, Maj. Abd as-Salam Jalloud, during his visit to Algiers. After the visit, however, Algeria suggested that the Maghreb Fraternity and Co-operation Treaty already provided a framework for a new Algerian-Libyan relationship.

During late 1987 and early 1988 the process of achieving Maghrebin unity gathered momentum. In November 1987 Chadli received the Moroccan Minister of Foreign Affairs, and they discussed means of accelerating the development of the Great Arab Maghreb and of resolving the Western Sahara conflict. Maghreb unity also formed the agenda of a meeting between the Algerian, Mauritanian and Tunisian Ministers of Foreign Affairs in December, when hopes were again expressed that Libya might sign the Maghreb Fraternity and Co-operation Treaty. The restoration of diplomatic relations between Tunisia and Libya in the same month was viewed as a triumph of Algerian diplomacy. In January 1988, during a meeting in Tunis, Chadli and the new Tunisian President, Zine al-Abidine Ben Ali, issued directives to intensify bilateral co-operation, demanded a just resolution of the Western Sahara conflict, and pledged to work for regional stability and to hasten the creation of the Great Arab Maghreb. Chadli then visited Col Qaddafi, in an apparent attempt to persuade him to sign the Maghreb Fraternity and Co-operation Treaty. At a tripartite meeting in Tunis in February, Chadli, President Ben Ali and Col Qaddafi all expressed their determination to encourage co-operation between Maghreb countries and to work towards the creation of the Great Arab Maghreb.

In the hope that Libya would sign the Maghreb Fraternity and Co-operation Treaty (and with a view to the subsequent creation of a four-nation Great Arab Maghreb), Chadli aimed to isolate Morocco and thus force it to reach a settlement in the Western Sahara conflict. This would be a prelude to the eventual establishment of a complete five-nation Great Arab Maghreb. Faced with the collapse of this strategy (owing to Libya's failure to sign the treaty in March), and wishing to present a unified Maghreb front and to increase the number of 'moderate' Arab countries represented at the special Arab League summit which he had convened for June 1988 (see above), Chadli sought to restore diplomatic relations with Morocco. Algerian officials made overtures towards Morocco, and in May the two countries announced the re-establishment of diplomatic relations at ambassadorial level. The Moroccan-Algerian border was opened in June, before the Arab League summit. It was reported that Algeria had offered to restore diplomatic relations if King Hassan agreed to attend the Arab League summit, and had withdrawn its insistence that Morocco should hold direct talks with the Polisario Front. At the summit King Hassan withdrew his former claim to Tindouf, and it became clear that Chadli was preparing to abandon the Western Sahara.

The creation of the Great Arab Maghreb became a reality in June 1988, when the first meeting of the five Heads of State of the Maghrebin countries was held in Algiers, following the conclusion of the Arab League summit. The five leaders issued

a joint communiqué, which announced the creation of a Maghreb commission, comprising a delegation from each of the five countries, whose responsibility was to focus on the establishment of a semi-legislative, semi-consultative council to align legislation in the region, and to prepare joint economic projects. In late June Algeria and Libya agreed to hold referendums on a proposed union of the two countries. Unlike the proposals issued by Col Qaddafi in 1987 (envisaging total merger), this revised proposal aimed merely to establish a federation between the two countries. President Chadli later announced that the Algerian referendum on the union would be held in 1989. In July 1988 Algeria and Morocco signed a co-operation agreement, and the two countries announced plans to harmonize their railway, postal and telecommunications systems. Later that month, the Maghreb commission met in Algiers and formed five working groups to examine areas of regional integration.

In August 1988 Morocco and the Polisario Front accepted a UN peace plan to settle the Western Sahara conflict. During the negotiations, it became apparent that Algeria's restoration of diplomatic relations with Morocco had forced Polisario, which was heavily dependent on Algerian support, to make concessions. (For a more detailed account of the Western Sahara conflict, see the chapter on Morocco.)

On 17 February 1989 the treaty creating the UAM was signed in Marrakesh, Morocco, by the leaders of Algeria, Libya, Mauritania, Morocco and Tunisia. Modelled on the EC, the UAM was formed principally to enable its members to negotiate with that body when it declared a single European market at the end of 1992. It was also intended to encourage trade and economic co-operation by allowing freedom of movement across frontiers. The treaty created a policy-making council of Heads of State, to meet every six months under an annually rotating chairman, and other administrative bodies, including a 10-member court, to consider disputes between member states. In June 1989 the five nations formed a joint parliament, and a defence clause prohibited aggression between the states.

During late 1989 and early 1990 Algeria became preoccupied with domestic and economic affairs and devoted little time to affairs in the Maghreb. Although in no way obstructive, it did not show the leadership that its strength and central position should have enabled it to extend and left much of the administration to Tunisia. At the same time, as was evident at the Tunis summit meeting in January 1990, its partners were increasingly concerned at its tolerance of an avowedly radical Islamist political party, the Front islamique du salut (FIS) and at the pace of its liberal reforms. In May Algeria hosted a meeting at which the UAM Ministers of Transport approved a draft agreement to create a joint airline and to expand rail links to provide a continuous track from Tobruk (Libya) to Nouakchott (Mauritania).

Chadli earned the gratitude of Col Qaddafi in August 1989 by mediating an acceptable settlement of the dispute between Chad and Libya over the Aozou strip and also by attempting to allay US concerns about an alleged chemical weapons factory at Rabta in Libya. Relations with Morocco were complicated by deadlock in Western Sahara: Chadli continued to urge King Hassan to hold direct talks with the Polisario Front. Moroccan co-operation was vital for perhaps the most important of all Algeria's development projects, the gas pipeline to Western Europe. In February 1990 the Ministers of the Interior of the two countries signed agreements to co-operate in facilitating the movement of people and goods and in combating drugs-smuggling.

In July 1990 the chairmanship of the UAM passed to Algeria. Later that month, at the third meeting of the UAM Heads of State, President Chadli outlined proposals to unify tariffs by 1992 and to create a full customs union by 1995. Six agreements were signed, providing for exchanges of agricultural products, the creation of a joint airline to operate initially alongside the national carriers, procedures to stop the spread of agricultural diseases, measures to encourage and guarantee investment, the ending of double taxation and the freedom of movement for goods and people. No agreement was reached on the choice of a Secretary-General for the UAM, nor on the location of its headquarters. The meeting issued a declaration of support for the Palestinian *intifada* and condemned the mass emigration of Soviet Jews to Israel.

CHANGES WITHIN THE FLN

During 1980 a general streamlining of the FLN took place, and the President's control over it was strengthened. In June, at an extraordinary congress of nearly 4,000 delegates, important changes in the party structure were initiated. The Political Bureau was now to consist of between seven and 11 members (having previously numbered between 17 and 21), and was to meet monthly instead of weekly. The President, as Secretary-General of the FLN, was empowered to select the members of the Political Bureau rather than merely to 'propose' them, although the choice would still be subject to the Central Committee's approval; he was also given freedom to make other changes in the party which he considered necessary. The reforms reinforced the President's position, and reduced the role of the Political Bureau to that of an advisory body. Chadli immediately reduced its membership to seven. The Prime Minister, Col Abd al-Ghani, and several other ministers were removed from the Bureau, although it still represented a wide range of opinion. In addition, the number of FLN committees was reduced from 12 to five. Changes were also made in the wider membership of the FLN. The congress agreed that all officials of the UGTA and the other mass organizations must be members of the FLN. In this way members of 'unofficial' parties, such as the communist Parti d'avant-garde socialiste (PAGS—renamed Ettahaddi in 1993), would be excluded from official positions.

Further changes were made to the composition of the FLN's Political Bureau in mid-1981, when its membership was increased to 10. Col Abd al-Ghani was reappointed, but Yahiaoui and Bouteflika, Chadli's rivals for the presidency in 1979, were removed, although they retained their membership of the Central Committee. In December Bouteflika was dismissed from the FLN Central Committee, as were three other senior members who had held important portfolios under Boumedienne. Legislative elections were held on 5 March 1982, when 72.7% of the electorate voted for FLN candidates. The membership of the National People's Assembly was increased to 281, of whom 55 were permanent members of the FLN.

At the fifth congress of the FLN, held in December 1983, Chadli was re-elected to the post of Secretary-General of the party, and became the sole candidate for the presidential elections, held on 12 January 1984. His candidature was endorsed by 95.4% of the electorate, and he was returned to office for another five years. Chadli effected a major government reshuffle, and appointed a new Prime Minister, Abd al-Hamid Brahimi, formerly Minister of Planning.

MOVES TOWARDS LIBERALIZATION

Following public consultations and debate initiated by Chadli in February 1985, a new national charter was adopted at a special congress of the FLN, held in December. The charter's programme encouraged private enterprise and proposed a balance between socialism and Islam as the state ideology. In a referendum held in January 1986, in which 95.9% of the eligible population took part, 98.4% of the votes were cast in favour of the adoption of the new charter.

At a general election for the National People's Assembly on 26 February 1987, a record 87.9% of the electorate voted for FLN candidates. The number of seats was increased to 295, owing to demographic changes. The newly-elected Assembly notably comprised a larger number of younger, liberal deputies.

In June 1987, in response to an increase in social unrest, a new Minister of the Interior was appointed and changes were made in the military hierarchy. In July, as part of its liberalization policy, the Government introduced legislation which permitted the formation of local organizations without prior consent from the authorities except where these were deemed to threaten Algeria's security or the policies of the revised national charter. 'National' organizations continued to require government approval. Even this relatively moderate measure aroused misgivings among 'conservative' deputies in the National People's Assembly, who feared that it might lead to the creation of alternative political organizations.

Meanwhile, Chadli accelerated the implementation of his policy to restructure and liberalize the economy. In July 1987 the National People's Assembly began to consider proposals that aimed to remove various state controls from agricultural co-operatives and public enterprises, in contrast to the collectiv-

ization of the 1970s, which was being increasingly criticized as inefficient. In accordance with this forthcoming legislation, during an extensive cabinet reshuffle in November, Chadli abolished the Ministry of Planning, which had previously supervised every aspect of Algeria's economy. The remaining functions of the ministry were assumed by a national Council of Planning, directly accountable to the Prime Minister, Brahimi. Chadli also took the opportunity to create a Ministry of Education and Training, in response to the growth in demand for employment and educational opportunities for young people.

However, the implementation of the new economic legislation, scheduled for 1988, was hindered by Algeria's complex bureaucratic procedures. In December 1987 Chadli announced a series of reforms intended to improve the efficiency of the country's administrative structures. Two measures to take immediate effect were the abolition of certain documents hitherto required by every citizen for each administrative procedure, and the instant application of legal decisions. In the short term, the Government was to introduce a single identity card, with a multiplicity of uses, and to appoint a national mediator to facilitate relations between the public and civil servants. In the medium term, measures were to be introduced in order to effect a complete reorganization of the administrative structure.

In February 1988, in preparation for the sixth FLN congress, Chadli appointed a national commission to evaluate Algeria's second Five-Year Development Plan, and to assist with the drafting of an appropriate economic plan for the 1990s. Later in February, Chadli announced several government changes whereby 'technocrat' ministers were appointed to preside over the more problematic sectors of the economy.

INTERNAL UNREST

In 1979 the Government encountered criticism from students, who boycotted classes to protest at the slow implementation of the policy of replacing French with Arabic. The students' demands were partly met by measures intended to accelerate the process of 'Arabization' in education, and 600 Arabic-speaking trainee magistrates were appointed. In May 1980 the FLN Central Committee announced that a co-ordinating body was to be established to encourage the use of Arabic, and that official newspapers should be printed in Arabic only. By the following year, many settlements had reverted to their Arabic names.

Protests against the suppression of the Berber language and culture continued in the early 1980s. These generally centred on the Kabyle, a region regarded for many years as having dangerously separatist intentions. Although some concessions were made (including the creation of chairs in Berber languages at the Universities of Tizi-Ouzou and Algiers and the provision of Berber radio programmes), President Chadli made it clear that he viewed the Berber demands as a threat to national unity. In 1981 a 'cultural charter' was proposed, which made provisions for the Berber culture as part of Algeria's national heritage. However, the charter received little approval; the discussions were accompanied by outbreaks of violence and had to be abandoned. Later, in September, the tension in the Kabyle was alleviated by the announcement that departments of popular literature and dialect were to be opened in Algiers, Constantine, Oran and Annaba (although not in Tizi-Ouzou).

Throughout 1985 there was increased activity among opposition groups. In June Yahia Abdennour, the President of the unauthorized Algerian League of Human Rights (ALHR), was arrested and imprisoned for 11 months for forming an illegal organization. In July and August further members of the ALHR and the Association of the Sons of Chouhada, another unauthorized organization, were arrested. Clashes occurred in November in Tizi-Ouzou between public order forces and members of the Association of the Sons of Chouhada who were protesting against the arrests of fellow members. Following the theft of weapons and ammunition from an army barracks at Souma in August, several Islamist activists were arrested. In December 19 of Ben Bella's alleged supporters were imprisoned on charges of threatening state security.

In November 1986 four people were reportedly killed and 186 people arrested during three days of rioting in Constantine, which followed student protests against poor living conditions and inadequate tuition. In other parts of Algeria students and secondary school pupils held demonstrations against government attempts to reform the *baccalauréat* examination. Amid criticism, the 186 detainees were swiftly brought to trial and given severe sentences, ranging from two to eight years' imprisonment. Following the riots, the Chief of Staff of the Army, Gen. Mustafa ben Loucif, was discharged from his duties, and lost his deputy membership of the FLN. The ALHR became affiliated to the International League for Human Rights (ILHR) in December, but the leaders of the ALHR were later arrested and exiled to southern Algeria.

In 1987 the Government issued amnesties as part of its liberalization policy. In March 22 people were released from internal exile, including the leaders of the ALHR, and a branch of Amnesty International, a prominent human rights organization, was established in Algeria. The Algerian League for the Defence of Human Rights (ALDHR) was formed with government authorization in April, as a rival to the illegal ALHR. Following discussions between the Government and the ALDHR, the authorities released 186 people, imprisoned after the Constantine riots, and six members of the ALHR and two members of the Association of the Sons of Chouhada, imprisoned in 1985.

Nevertheless, the authorities continued to act vigorously against any signs of organized opposition which they considered to constitute a threat to the state. In January 1987 security forces shot dead Mustafa Bouiali, the leader, and three other members of the Islamist group responsible for the theft of weapons at Souma in 1985, who had been in hiding for 18 months. In June 12 people received prison sentences ranging from two to 10 years for distributing subversive literature and receiving funds from abroad, particularly from Libya and the MDA. The authorities also banned the leaders of the ALHR from leaving the country to attend a meeting of the ILHR. At the end of a trial in July, involving 202 defendants accused of involvement in the activities of Bouiali's Islamist group, four people received death sentences for plotting against the state, murder, armed attacks and robbery. Other defendants received sentences ranging from life to one year's imprisonment, while 15 people were acquitted. However, during a series of amnesties to commemorate the 25th anniversary of Algerian independence in August, the four death sentences were commuted to life imprisonment, and life sentences were reduced to 20 years in detention.

THE OCTOBER 1988 RIOTS

Boumedienne had insisted upon rigid state socialism controlled by an increasingly ponderous and corrupt bureaucracy and after his death his appointees fought to maintain their grip upon the state and the economy. The FLN had, however, abandoned any pretence to ideology or purpose beyond that of staying in power. In December 1987 President Chadli felt secure enough to introduce limited liberalization, giving more freedom to private enterprise and allowing managers in the public sector to make some decisions without reference to the bureaucracy. In June 1988 he reorganized the public sector by creating state-sponsored Trust Companies (Fonds de Participation) to which managers were to be accountable. The private sector was also allowed some access to foreign exchange. This economic restructuring was not extended to the political sphere, where the FLN continued to exercise complete control. In his speeches Chadli urged reform but seemed unable or unwilling to implement it.

Algeria had amassed a debt of some US $24,000m. and found the annual interest of $6,000m. an almost impossible burden, owing to the depressed price of oil and gas which traditionally accounted for 97% of the country's foreign exchange. The Government, for reasons of prestige and its unwillingness to accept the intervention of the World Bank, refused to reschedule the debt and instead reduced imports, 70% of which were foodstuffs. These became extremely scarce and expensive. The exposure of the economy to market forces while trying to service the huge debt precipitated an economic crisis and produced a series of strikes from July.

On the evening of 4 October 1988 as many as 5,000 youths destroyed shops selling luxury goods, and on the following day widespread looting occurred. Government buildings in Algiers were also targets for attack. On 6 October a state of emergency was declared, and a curfew was imposed in Algiers. The army, equipped with tanks, was deployed ruthlessly to suppress the

disturbances, making no attempt to avoid civilian casualties. Special military courts were also established to punish the rioters. On 10 October Chadli, who had hitherto remained silent, promised to present a programme of reforms for debate when the violence, which had spread to Oran, Annaba and other towns, subsided. On 12 October the tanks were withdrawn. Officials stated that 159 people had been killed during the disturbances, but unofficial estimates indicated at least 500 deaths, while more than 3,500 had been arrested, some of whom were reported to have been tortured. The rioters, including a number expressing support for Ben Bella, had called themselves the Movement for Algerian Renewal. They were not Islamist activists, although fundamentalists did later participate in the disturbances; nor were they Berbers, who had their own grievances. On 15 October schools reopened; on the following day 500 minors, who had been detained, were freed, and the special courts were suspended. Stocks of food were released from warehouses to be sold, often at less than half the previous prices.

CONSTITUTIONAL REFORM

Young people were at the forefront of this uprising against the FLN. One-half of the Algerian people in their early twenties were unemployed, and there was widespread anger at the move towards an élitist education system. Little hostility was shown towards President Chadli himself; observers noted that the young people recognized his attempts to introduce reforms, despite the opposition of uncompromising elements within the FLN. Chadli exploited this sentiment by attempting to overcome vested interests and achieve reform. In late October 1988 he proposed that the identification of the state with the FLN be ended by allowing non-party candidates to contest elections. Furthermore, the Prime Minister would no longer be responsible to the President, who would stand above party politics, but to the National People's Assembly. To show that these measures would not be merely superficial, five days later Chadli dismissed his official FLN deputy, Muhammad Cherif Messaadia (a resolute opponent of reform), replacing him with the more liberal Abd al-Hamid Mehiri, who had been the Algerian Ambassador to France and Morocco. The head of internal security was also replaced. On 3 November the proposed reforms were approved at a referendum by 92.3% of the votes cast (by 83.1% of those eligible to vote).

In November 1988 Chadli dismissed the Prime Minister, Brahimi, replacing him with Col Kasdi Merbah, who had been a chief of police under Boumedienne but had become a liberal Minister of Agriculture, and a reforming Minister of Health. Merbah declared that he would form a cabinet of men of 'integrity, competence and efficiency' answerable to the National People's Assembly, and announced proposals which, *inter alia,* laid emphasis on helping young people, increasing expenditure on education, initiating a building programme, and raising taxes for the wealthy. Merbah's programme of reforms was submitted to the Assembly and, for the first time, the ensuing debate was broadcast live on television. The actions of 21 members of the Assembly in voting against the programme marked an even greater departure from precedent.

In late November 1988 a special two-day congress of the FLN accepted further reforms. Chadli was endorsed as the sole candidate for the presidency but he divorced himself from the party by relinquishing his post of Secretary-General to Mehiri. It was decided that the FLN should revert to its former role as a forum for competing views, instead of the monolith that it had become under Boumedienne. It was agreed that independent candidates could contest elections, but the formation of other parties was forbidden, in order to exclude Islamist activists. In early December Chadli reorganized the army, which had been widely criticized for its violent suppression of the October riots, replacing six military commanders. On 22 December Chadli was elected President for a third term of office, receiving 81% of the votes cast.

In February 1989 a new draft Constitution was published. It completed the separation of the state from the FLN and permitted the 'creation of associations of a political nature', with certain restrictions. The 'irreversible commitment to socialism' of the previous Constitution was abandoned, while the army was entrusted with the sole task of defending the country and not of 'participating in the building of socialism'. The draft emphasized individual and collective rights rather than those of 'the People' as a whole, and gave public-sector workers the right to strike. Executive, legislative and judicial functions were separated and no longer controlled by the party, but supervised by a Constitutional Council. The new draft was regarded as a complete break with the past, shifting Algeria from the socialist into the Western capitalist group of nations, and it was approved by referendum on 23 February by 73.4% of votes cast by 79% of the total electorate.

In March 1989 another significant reform of the political system was implemented. Senior army officers asked to be relieved of their duties as members of the FLN Central Committee, claiming that the army should be concerned exclusively with the defence of 'the superior interests of the nation and the free choice of the people'. After the turbulence of the past year, Chadli's task was to maintain control of the process of reform, but the Algerian people took advantage of a loosening of control and started to react against the inadequacy of their living conditions. In April there were demonstrations against sharp rises in food prices, and in May there were strikes and riots in protest against the slow pace of reform and the corrupt practices of local officials. The construction of just one-third of 90,000 projected dwellings, and the allocation of those through favouritism, led to an outbreak of violence in Souk Ahras in May. Army units were dispatched to the area to control the unrest, but poor housing conditions also prompted the blocking of roads and the seizure of the town hall in Didouche Mourad in September. In October more than 1,000 people deprived of drinking water for several days rioted in Sidi Aissa. Later in the month, after an earthquake devastated Nador, road blocks were mounted as a protest against the tardiness of government relief efforts.

TOWARDS MULTI-PARTY ELECTIONS

In July 1989 the National People's Assembly approved a law on associations, revoking the ban on the formation of political parties. New parties were obliged to be licensed by the Ministry of the Interior, and were not to be externally financed or based exclusively on religious, professional or regional interest. At the same time, the Assembly adopted legislation reducing the role of the state in controlling the economy, thus increasing its exposure to market forces. Later in the same month, the Assembly adopted an electoral law permitting opposition political parties to contest future elections and to occupy seats in the Assembly. Elections to the Assembly were to be held every five years, with one round of voting, after which the winning list of candidates in each multi-member constituency would take all the seats. For local and municipal elections the new law stipulated that any party obtaining at least 50% of the votes in a multi-member constituency should take all the seats. If no party received 50% of the votes, the party with the largest share was to take one-half of the seats, while the remainder were to be divided proportionally among all the other parties that obtained more than 10% of the total vote. Other legislation adopted in July allowed greater investment in the economy by foreign companies and ended the state monopoly of the press while, controversially, leaving the principal newspapers under FLN control.

In September 1989 President Chadli dismissed the Prime Minister, Merbah, whom he regarded as insufficiently committed to the process of reform. Merbah was replaced by Mouloud Hamrouche (hitherto a senior official in the presidential office), who immediately declared his determination to end the identification of the party (i.e. the FLN) with the state, and to transform the country by means of dialogue with other political parties, trade unions and the public. In his new Council of Ministers Hamrouche retained only eight of his predecessor's appointees, replacing FLN officials and retired military officers with progressive politicians. Hamrouche abolished the Ministry of Information, which he regarded as incompatible with democracy. His programme, incorporating proposals for defending living standards while 'freeing public and private industry from all forms of obstacles', anti-inflation measures, educational reform, the introduction of free wage-bargaining and the encouragement of investment, was approved in the National People's Assembly, and endorsed by President Chadli, who declared the process of reform to be irreversible.

In response to complaints by newly-licensed political parties of insufficient opportunity for preparation, local and municipal elections, which had been scheduled to take place in December 1989, were postponed until June 1990. President Chadli welcomed the formation of parties representing diverse political persuasions, and by early 1990 more than 20 parties had been formally registered, including the Parti social-démocrate (PSD), the PAGS, the FIS, the Berber Rassemblement pour la culture et la démocratie (RCD), the Front des forces socialistes (FFS—founded in 1963) and the Islamist MDA.

In November 1989 some 5,000 FLN members attended an extraordinary party congress, at which widespread anxiety at the sudden onset of political pluralism was apparent. Many of the speeches made at the conference expressed nostalgia for the uncompromising leadership of Boumedienne, many of whose former lieutenants were elected to a new, enlarged central committee. The congress also revealed the strong Islamist sentiments of many party members. However, President Chadli and his Council of Ministers were not marginalized in their enthusiastic espousal of political reform: the majority of a new politburo, elected in December, were likewise in favour of change.

The amended Constitution of February 1989 gave public-sector workers the right to strike and they took such advantage of this provision that the number of strikes rose by 25% in the following 12 months, averaging 250 per month. In early 1990 students demonstrated against police brutality. Hundreds of thousands of women demonstrated in favour of the traditional Islamic role of women, after thousands of others had demonstrated against any reversion to such a role. There were reports of assaults on women wearing Western-style clothes, while an estimated 10,000 people in Oran demonstrated in support of the closure of brothels and of establishments selling alcohol. About 50,000 Berbers demonstrated in support of demands for an increase in the teaching of the Berber language.

Meanwhile, the Minister of the Economy, Ghazi Hidouci, expressed pessimism about the country's economic situation, indicating the difficulties of reform. In order to stimulate the economy, he announced the ending of the distinction between the public and private sectors—both were to be open to investment. In March 1990 a joint-venture law was announced, foreign banks were permitted to open branches and a powerful Conseil de Monnaie et de Crédit was created to regulate the inflow and repatriation of capital.

Following a meeting of its central committee in March 1990, the FLN declared itself united. President Chadli even hinted that elections to the National People's Assembly might be brought forward from 1992, as the FIS demanded, and that he might consider 'coexisting' as President with an opposition government. However, the FLN was adversely affected by a statement from the former Prime Minister, Brahimi, in which he alleged that government officials had received $26,000m. ($2,000m. more than the entire national debt) in bribes during the previous 10 years. The situation was not alleviated by Prime Minister Hamrouche's objection that the sum could not possibly have exceeded $2,000m. The FLN was further damaged by the allegation of a former government minister that mismanagement of gas development in the 1980s had cost the country $40,000m. in lost revenues; and by the demand of the FLN-affiliated trade union, the UGTA, for the abrogation of the law that permitted the establishment of rival unions. Meanwhile, rank-and-file members of the UGTA demonstrated against their leaders, accusing them of corruption, inactivity and subservience to the FLN.

In March 1990 the National People's Assembly approved amendments to the electoral law that had been introduced in July 1989. Under the amended law, a party gaining 50% or more of the votes in a multi-member constituency would no longer take all of the seats, which were to be divided proportionally instead. If no party gained a majority, the party gaining the most votes was to take one-half of the seats. Parties would need to gain only 7% of the total votes cast to achieve representation, rather than 10% as previously. The amendments to the electoral law were regarded as having been introduced to counter the perceived strength of the FIS in the approach to the municipal and local elections. The demands of opposition parties for a further postponement of the elections, so that they would have more time to prepare, were rejected, even though it was apparent that only the FLN and the FIS would be able to present candidates in all of Algeria's 48 *wilayat*. Even the FLN appeared unlikely to be able to contest all 1,539 council seats because in some localities conflicting elements within the party had been unable to agree on a candidate.

In April 1990 thousands of FIS supporters demonstrated in Algiers, demanding the dissolution of the National People's Assembly within three months and the introduction of *Shari'a* (Islamic) law. Out of concern that the strength of the FIS constituted a threat to democracy, the RCD organized a pro-democracy demonstration in May, in which tens of thousands were estimated to have participated. The election campaign began officially later in the month. On the final day of the campaign, in early June, the FIS rallied more than 100,000 of its supporters, in front of whom its leader, Abbasi Madani, warned the Algerian army not to attempt a military coup.

At the local elections held on 12 June 1990 the FIS received some 55% of the total votes cast and obtained a majority of seats in 853 municipalities and 32 *wilayat*, while the FLN, which obtained about 32% of the votes, retained control of 487 municipalities and 14 *wilayat*. Independent candidates won 11.7% of the votes in the municipal elections, the RCD 2.1% and the Parti national pour la solidarité et le développement (PNSD) 1.6%. In the elections to the *wilayat* the RCD gained control in 87 localities, and the PNSD in two.

While the success of the FIS was, to some extent, vitiated by a high rate of voter abstention—estimated at between 35% and 40%—and by a boycott of the elections by two main opposition parties, the MDA and the FFS—on the grounds that the Government should first have held elections to the National People's Assembly—the scale of the victory that the FIS had achieved was remarkable, even unique, in the Arab world. Some Western observers claimed that it was the first occasion on which any Arab country had been allowed freely to express itself in a multi-party election. It was certainly the first time that an Islamist party had won a majority of the votes in such an election, and this achievement was particularly remarkable in Algeria, which had been widely regarded as one of the most secular, westernized countries in the Arab world.

THE AFTERMATH OF THE MUNICIPAL ELECTIONS OF JUNE 1990

Following its successes in the municipal elections of June 1990, the FIS demanded the dissolution of the National People's Assembly, to be followed by a general election contested by all political parties. At the same time, the FIS denied any aspiration to establish an Iranian-style Islamic republic in Algeria, or desire to oust President Chadli. Madani, the FIS leader, issued a warning to the army not to attempt to cheat the party of its victory. Another senior figure in the FIS, Ali Belhadj, claimed that democracy was not an Islamic concept and demanded the introduction of *Shari'a* law in Algeria. From exile, the MDA leader, Ben Bella, claimed that the results of the municipal elections were 'an undeniable step forward'. Some observers believed that Chadli had deliberately given the FIS an opportunity to exercise limited local power so that it could discredit itself through dogmatism and inefficiency and destroy its chances of success in legislative elections.

It was uncertain, indeed, whether the inexperienced administrators of the FIS could implement large, expensive projects to provide housing and jobs and thus make Islamic municipal socialism succeed. There was no reduction in unemployment, and riots erupted in protest at the allegedly unfair distribution of food and subsequent shortages. In November 1990 some 5,000 FIS mayors and councillors marched on the presidential palace to demonstrate against 'politically-motivated' obstruction by government officials.

In the immediate aftermath of its poor performance in the municipal elections, the FLN denounced the use of religion for political ends and sought the co-operation of other political parties to safeguard democracy. Prime Minister Hamrouche rejected demands for his resignation and for the dissolution of the National People's Assembly, and promised to continue the process of reform. However, by July 1990 it was clear that the FLN was too divided to implement further reforms. Hamrouche and four other government ministers, including the Minister of

Foreign Affairs and the Minister of the Economy resigned from the FLN politburo in order to concentrate on affairs of state, distancing themselves from the party, which, Hamrouche believed, should renew itself free of governmental responsibilities. They were replaced in the politburo by young, university-educated professional men, rather than by veterans of the war of independence against France. One such veteran, Ben Khedda, founded a moderate Islamist party, El-Oumma (The Community), with the aim of gradually introducing *Shari'a* law into Algeria, without coercion. Another, Lakhdar Bentobbal, became honorary president of a new National Democratic Conference, in which the RCD, the PAGS and the PSD agreed to collaborate to contest the forthcoming elections to the National People's Assembly. In late July, in a cabinet reshuffle, President Chadli appointed Maj.-Gen. Khaled Nezzar, hitherto the Chief of Staff of the Armed Forces, as Minister of Defence. It was the first time since Boumedienne's seizure of power that the office had not been held by the President. Chadli also announced that elections to the National People's Assembly, which were not due to take place until 1992, would be held during early 1991. While the President declared that he was confident that Algeria's political parties would 'respect the rules of democracy', the newly-appointed Minister of Defence warned that the army might intervene in the event of unrest. Thousands of political prisoners, most of whom had been incarcerated after the riots of October 1988, were released.

Ben Bella returned to Algeria in September 1990 to a less enthusiastic welcome than had been anticipated. There was no response to his demands for the Government to resign, for the creation of a 'united front', for a reduction in the number of opposition political parties and for unreserved support for Iraq in the Gulf crisis. The Government continued to implement its programme of economic reforms, which included plans to establish a stock market, liberalize imports and make the Algerian dinar fully convertible. The economic reform programme created further, more serious divisions within the FLN. One of the party's founders, the President of the National People's Assembly, Rabah Bitat, resigned, accusing Prime Minister Hamrouche of dismantling the public sector. Former Prime Minister Brahimi also resigned from the FLN, complaining of a lack of democracy within the party.

In December 1990 the National People's Assembly passed a vote of confidence in favour of Prime Minister Hamrouche, the first such vote for 20 years. At the end of the month the Assembly approved a law stipulating that, after 1997, Arabic would become Algeria's official language and that the use of the French and Berber languages by private companies and by political parties would thereafter be subject to heavy fines. The new law was regarded as an attack on Algeria's Western-educated élite and the Berber people. In response, some 500,000 people demonstrated in Algiers against religious and political intolerance. The FIS regarded the adoption of the 'Arabization' law as a political triumph, but it no longer enjoyed a monopoly on 'Islamist activism'. There were now two new political parties which aimed to recruit people who were dissatisfied with the intolerance of the FIS and those who saw no incompatibility between Islam and liberal economics. Sheikh Abdallah Djaballah founded the Islamic Renaissance Movement (Nahdah), while Sheikh Mahfoud Nahnah founded Hamas. The FIS, which was also losing support to the MDA, claimed that these new parties had been sponsored by the Government. The FIS itself appeared to be suffering from divisions between Madani and Belhadj. While the latter urged his supporters to prepare to give military support to Iraq, Madani argued that military training should be restricted to the army and that the FIS should achieve power through electoral means.

By early 1991 increases in prices and the rate of unemployment were widely perceived to be the result of Hamrouche's economic policies. In March the UGTA organized a general strike, the first since independence, which was reported to have been extremely well supported. In response, Prime Minister Hamrouche announced a wide-ranging programme to improve economic efficiency and to satisfy the demands of the trades unions: child benefits, which had remained frozen for 29 years, were increased by 300% and it was announced that more than $1,500m. (14.5% of the national budget) was to be spent on subsidizing essential commodities in the current financial year.

In April 1991 the Government announced that elections to the National People's Assembly would be held on 27 June and, at the same time, some major revisions to the country's electoral law were proposed. In constituencies where no candidate achieved an absolute majority in the first round of voting, second ballots were to be allowed. Campaigning in mosques and proxy voting were to be restricted. The number of constituencies was increased from 290 to 542. The FIS regarded the changes to the electoral law as a deliberate ploy to reduce its chances of victory in the forthcoming elections. It also demanded that a presidential election should be held at the same time as the legislative elections.

It appeared that some 40 political parties, including the first 'Green Party' in the Arab world, would contest the elections. However, the PAGS stated that there was insufficient preparation time and declined to present candidates. Hamrouche, meanwhile, sought allies among secular opposition parties and moderate Muslims, letting it be known that, even in the event of an outright victory by the FLN, he would incorporate opposition leaders into the Government in the interest of national unity. Some 80% of the FLN's deputies in the National People's Assembly were omitted from the party's new lists of candidates.

The leaders of Algeria's Islamist political parties conferred and decided not to oppose each other's candidates. It was also agreed that the FIS should provide two-thirds of the Islamist candidates in the elections. However, Madani subsequently renounced this agreement and campaigned for changes to the electoral law, while other Islamist parties attempted to avoid confrontation. When the electoral campaign began in May 1991, the founder of El-Oumma, Khedda, announced that his party would not present candidates, in order to avoid further division among Muslims. Conversely, Hamas presented 366 candidates, and the MDA 367. Altogether 5,000 candidates were nominated.

In mid-1991 Madani appealed for an indefinite general strike in protest at the new electoral law, and demanded President Chadli's resignation. In response, about 40,000 people demonstrated in Algiers, and violence erupted when the police used tear-gas to disperse the crowds. Chadli warned that it might be necessary to use force to maintain public order so that the elections could be held. On 4 June the police opened fire on militant Islamist activists, allegedly killing at least five of them, while some 700 demonstrators were admitted to hospital, suffering from the effects of tear-gas. Other observers estimated that as many as 50 people died in unrest around the country. On 5 June, after further violent incidents, Chadli declared a 'state of siege' and suspended the elections indefinitely. Tanks were deployed in Algiers, and a curfew was imposed. The army was authorized to ban strikes and 'subversive' literature, and to search buildings and control the distribution of food. In response to the intervention of the army, Madani announced that the FIS had reached an agreement with the Government and, claiming victory, abandoned the general strike.

The agreement between the FIS and the Government seemed to involve the removal of Hamrouche, whose resignation had been announced earlier on 5 June 1991, and his replacement, as Prime Minister, by the Minister of Foreign Affairs, Sid-Ahmad Ghozali, who was a practising Muslim and a liberal. Ghozali promised that presidential and legislative elections would be held before the end of 1991. In mid-June, after having consulted opposition parties, Ghozali announced his Council of Ministers, which Madani welcomed for its political neutrality. It included two women, 21 newcomers to politics and the first Arab Minister for Human Rights. The new Minister of the Interior, Abd al-Latif Rahal, was a former diplomat with no known political links. Maj.-Gen. Nezzar retained the defence portfolio, and the army, rather than the Government, remained responsible for security, although its presence on the streets was quickly reduced. Ghozali's ambitious programme of reforms, which included the establishment of a Ministry of Small Business, was approved by a large majority in the National People's Assembly. On 28 June President Chadli announced his resignation from the FLN, in order to demonstrate the end of one-party rule, and Ben Bella declared that he would contest the forthcoming presidential election.

Tension nevertheless remained high, and there were further outbreaks of violence as the army began to remove FIS symbols which had replaced national insignia on municipal buildings.

Caches of weapons were found, and later in June 1991 more than 40 people were killed, and over 350 wounded, in violent unrest. Belhadj seemed to be provoking the security forces, demanding their exclusion from parts of Algiers. On the night of 26–27 June tanks were redeployed in Algiers, and on 28 June, in his Friday sermon, Madani threatened to declare a *jihad* (holy war) if they were not withdrawn. On 30 June Madani, Belhadj and some 2,500 of their supporters (8,000, according to opponents of the Government) were arrested, and more weapons were seized. There were clashes in several places, but by mid-July the army had begun to reduce its presence on the streets and more than one-half of those arrested had been provisionally released.

Despite pressure from the army, Chadli refused to proscribe the FIS, but during 30 June–2 July 1991 military personnel occupied its headquarters, thereby paralysing the party's communication network throughout the country. The Prime Minister announced that Madani and Belhadj would stand trial for 'fomenting, organizing, launching and leading an armed conspiracy against the security of the state', accusing them of seeking to establish a dictatorship. He added that legislative and presidential elections would be held as soon as possible and announced a series of economic liberalization measures to combat 'poverty and misery' and to attract foreign investment. Muhammad Said, the acting leader of the FIS, was arrested in early July, and there were signs of divisions within the party when moderates informed the Prime Minister that they wished to operate within the law. Fewer than 5% of FIS supporters responded to an appeal for a political strike, but a delegate conference re-elected Madani as leader of the FIS, and Belhadj as deputy leader.

In July 1991 Ghozali reorganized the Council of Ministers, distancing it still further from the FLN by dismissing the Minister of Justice, who had complained of the excessive power of the army. President Chadli severed his own formal connections with the party, and for the rest of the year maintained a low profile while Ghozali took the lead, declaring his readiness to meet representatives of the 51 political parties which by now existed, and to amend the electoral law. At a meeting between the Prime Minister and the political parties—boycotted by the FLN, the FIS, the PAGS and some others—no agreement on electoral reform was reached in three days of discussions, but Ghozali expressed hopes that it might still be possible to hold elections by the end of November. The meeting was adjourned for three weeks, during which the FLN elected a new politburo, which included former Prime Minister Hamrouche, and eight parties, including the MDA and Hamas, presented a joint plan to reduce the number of deputies in the National People's Assembly and to redraw constituency boundaries. When the meeting was reconvened, Ghozali agreed to these changes in the electoral law. Regarding an election as imminent, the FLN-dominated Assembly rejected a government proposal to reduce food subsidies, thus imperilling negotiations with the IMF. The Assembly also complained that there would be insufficient time to consider new electoral laws, and criticized individual ministers. On 29 September the 'state of siege', declared on 5 June, was repealed. At the same time, Abdelkader Hachani, the last prominent member of the Madani wing of the FIS, was arrested. The Minister of Human Rights stated that there were 357 political detainees awaiting trial in civilian prisons, and 99 held by the armed forces. A national conference of FIS representatives, held in October, declared its aim to establish an Islamic state and its support for the imprisoned FIS leaders.

In October 1991 the National People's Assembly approved amendments to the electoral law, establishing the number of single-member parliamentary constituencies at 430. (Changes to the electoral law that were adopted in April 1991 had never been implemented.) Other amendments concerned independent candidates, who would in future need to obtain only 300 (rather than 500) supporters of the candidacy, and the minimum age of parliamentary candidates, which was lowered from 35 to 28 years. President Chadli announced that the first round of voting in the general election would take place on 26 December, and that a second round of voting would be held on 16 January 1992 in constituencies where there had been no outright winner in the first round. Prime Minister Ghozali reshuffled the Council of Ministers, taking personal charge of the economy portfolio.

THE GENERAL ELECTION OF DECEMBER 1991

In October 1991 an estimated 60,000 people took part in an anti-FLN march, organized by the RCD, and 100,000–300,000 supporters of the FIS demonstrated for the establishment of an Islamic state without the formality of an election. The FIS threatened to boycott the election unless its leaders were released, but the threat was withdrawn and the party subsequently campaigned on extreme free-market policies, stating that it would end subsidies and state monopolies and allow the dinar to 'float' on foreign exchange markets.

The 430 seats in the National People's Assembly were contested by 5,712 candidates representing 49 political parties and more than 1,000 independents. It was forecast that the FIS would obtain more than one-third of the votes (its leaders predicted at least 70%), and the FLN rather less, with the remaining one-third shared among the other parties. In the first round of voting, in which some 59% of the electorate participated, the FIS took an unassailable lead, winning 188 seats outright, although it had obtained just 3.2m. votes (1.5m. fewer than in the municipal elections) from an electorate of 13.3m. The FFS, led by Aït Ahmed, gained 25 seats, the FLN was humiliated with only 15 seats (although it won about half as many votes as the FIS), and independent candidates gained three seats. The FLN complained of intimidation and malpractice in 340 constituencies in which officials of FIS-controlled municipalities had distributed the voting slips. A second round of voting was required in 199 seats and the FIS needed to win only 20 to gain an absolute majority in the Assembly. Nahdah, Hamas and El-Oumma instructed their supporters to vote for the FIS against the FLN in the second round. However, the secular parties failed to declare their support for the FLN. President Chadli, faced with the choice of cancelling the elections or allowing them to proceed, indicated his willingness to 'cohabit' with an FIS government, but the FIS excluded the possibility of any sharing of power and demanded the appointment of Madani as Prime Minister and the holding of a presidential election. There were demonstrations urging the defence of democracy against an Iranian-style regime, and reports that mass emigration of intellectuals and women would follow an FIS victory.

THE MILITARY TAKE-OVER

On 4 January 1992 the National People's Assembly was dissolved by presidential decree. On 11 January, five days before the second round of the election was due to be held, President Chadli, apparently under intense pressure from military leaders, resigned in order 'to safeguard the interests of the country'. He had failed to persuade either the unemployed to desert the FIS and trust him to implement reforms or the armed forces to accept the inevitable result of the election. According to the Constitution, the President of the National People's Assembly, Abd al-Aziz Belkhadem, should have replaced Chadli for a 45-day period while a presidential election was held, but, as the Assembly had been dissolved, his status was uncertain. On 12 January the High Security Council, which comprised the Prime Minister, three senior generals and the Ministers of Justice and Foreign Affairs, appointed Abd al-Malek Benhabiles, the Chairman of the Constitutional Council, as acting Head of State (he was apparently unwilling to accept the position on a permanent basis), announced a 'state of exception' and cancelled the second round of the elections. Only a few tanks appeared on the streets, and for two days the FIS leaders refrained from comment.

On 14 January 1992 a five-member High Council of State (HCS) was appointed to operate as a collegiate presidency until the expiry of Chadli's term of office in December 1993. The leading figure in the Council was clearly Maj.-Gen. Nezzar, the Minister of Defence, but its Chairman was Muhammad Boudiaf, one of the leaders of the independence movement, who had been in exile in Morocco since quarrelling with Ben Bella in 1964. Although Boudiaf was untainted by the accusations of corruption against the old regime, his return was greeted without enthusiasm by the 75% of the population born after he had left the country. The other members of the HCS were the Minister of Human Rights, Ali Haroun, Sheikh Tejini Haddam, the Rector of the Paris Mosque, and Ali Kafi, the president of the war veterans' association and a member of the FLN establishment.

Ghozali, although he remained premier, was not included. The constitutional legality of the Council was challenged by all the political parties, including the FLN. Both Boudiaf and Ghozali promised to hold elections within two years.

On the first Friday after the resignation of Chadli, police turned worshippers away from mosques, but, amid claims that there had been 500 arrests, Hachani appealed to his followers not to give the authorities any excuse for more violent intervention. He gathered the 188 FIS deputies who had been elected in December 1991 as a 'shadow' Assembly, which demanded a return to legality.

Violence erupted in January 1992, when a soldier was killed, and two gendarmes were wounded, in a machine-gun attack on a police post 20 km from the capital; subsequent attacks at other checkpoints were also reported. The HCS took measures to undermine the municipalities, newspapers and mosques controlled by the FIS, banned political speeches and assemblies and rearrested Hachani on a charge of inciting soldiers to desert. The remaining leaders again appealed for dialogue with the HCS, as the police fired on crowds gathering for prayer and hunted dissident prayer-leaders.

On 3 February 1992 the security forces took control of the FIS offices and those of the Islamic Labour Union, arresting 122 people, including moderates. In running battles in Batna, 14 people were killed as the army fired on demonstrators, and within three days the national total of those killed in clashes with the army exceeded 50. Tejini Haddam withdrew from the HCS, which, on the evening of 9 February, declared a 12-month state of emergency. The Minister of the Interior was empowered to open detention centres in the Sahara (which, within weeks, were holding 8,000 people), order house searches, ban marches, close public places, dissolve local authorities and order trial by military courts. On the following day Boudiaf, justifying these measures in the name of democracy, announced an economic programme including plans for the provision of jobs and housing, improved supplies of food and medicines and a campaign against corruption. Opponents of the new regime retaliated by killing eight policemen, two of them inside a mosque. University students rioted, but the FIS abandoned a protest march when confronted by a huge deployment of troops. Three men who were rumoured to be members of Hezbollah, operating on the fringe of the FIS, were sentenced to death for murder, and in Batna 82 activists were sentenced to up to 20 years' imprisonment. The FIS, which claimed that 150 people had been killed and 30,000 detained since 'the junta' took over, and feared formal dissolution, made another appeal for talks. The FLN, meanwhile, showed signs of moderating its opposition to the new regime.

In mid-February 1992 Ghozali again reorganized the Council of Ministers. Maj.-Gen. Nezzar and the Minister of the Interior, Gen. Belkheir, retained their places, but several portfolios were eliminated, in favour of 'super-ministries'. One notable newcomer was Saeed Guechi, a founder member of the FIS who had left the party in June, while two other new ministers came from Islamic backgrounds. Ghozali announced that Algeria had obtained a loan of nearly $1,500m. from a consortium of 240 banks to refinance the foreign debt. He produced a 100-page action plan to address the country's economic problems: Algeria, which had once exported food, now had to import $2,000m.-worth per year; Algerian industry was operating at about one-half of full capacity because of lack of materials and spare parts; and about 1.5m. people were unemployed. The economy, Ghozali admitted, was in a disastrous state.

In March 1992, at the request of Belkheir, a court ruled that the Government was entitled to dissolve the FIS for 'pursuing by subversive means goals that endanger public order'. Boudiaf promised radical reform, but this could not be introduced hastily. Further discontent followed considerable increases in the price of food; the cost of some items more than doubled in the first days of Ramadan (early March). It was estimated that about 14m. people (out of a population of slightly more than 25m.) were living in conditions of poverty. Bombs were found, local 'incidents' occurred daily, and the universities were closed. Arrests impaired local administration, as the FIS had controlled 32 regional and 853 local authorities, more than 400 of which were dissolved in late March. Belkheir announced the official number of dead since January as 103 (31 had been members of the security forces), and estimated the number of arrests at 9,000. Amnesty International expressed concern at reported cases of torture. The FIS threatened that violence would not stop until a general election was held. The trials of Madani, Belhadj and Hachani were postponed until June, but Muhammad Said was sentenced to 10 years' imprisonment *in absentia*.

THE ASSASSINATION OF BOUDIAF

The constitutional position of Boudiaf was anomalous. Widely respected as a man of integrity but apparently appointed as a figurehead by a junta which had seized power, he began to give indications of a personal political agenda.

In April 1992 the HCS announced the creation of a National Human Rights Monitoring Centre, under the presidency of Abd ar-Razzek Barra, to replace the former Ministry of Human Rights; its 26 members were to report directly to Boudiaf. A 60-member National Consultative Council (NCC) was also appointed. Under the chairmanship of Redha Malek, it was to meet in the building of the former National People's Assembly and included women, journalists and intellectuals, but failed to find favour with opposition parties. A reference to combating corruption in Boudiaf's first speech was censored, but in April he again demonstrated political determination when Maj.-Gen. Mustafa Beloucif, a former senior defence ministry official, was charged before a military tribunal with the theft of millions of dinars. The HCS also ordered the FIS to surrender its headquarters and other buildings, as well as its newspapers, to the Government. After the loss of an appeal against the dissolution of the party, elements within the FIS advocated armed rebellion. Amid mounting violence, military courts in Ouargla and Blida condemned 16 FIS members to death.

In early June 1992, after dismissing an appeal by Hamrouche for the formation of a national government, Boudiaf attempted to address the people directly, disregarding politicians, by appealing for the establishment of a National Patriotic Rally, with committees in every village and workplace, to prepare the way for a genuine multi-party democracy. Aït Ahmed and other opposition leaders denounced the proposal as a ruse to dragoon the masses into participation. Boudiaf also promised a constitutional review, the dissolution of the FLN and a presidential election. Moreover, he ordered the release of more than 2,000 FIS detainees, although operations against several hundred Islamist radicals in the mountains threatened to provoke civil war, with 700 people, including some 100 police personnel, having been killed in four months. Maj.-Gen. Nezzar promised 'implacable war', and there were accusations of a 'shoot-to-kill' policy against suspected opponents of the regime. Dissidents threatened to launch a *jihad* and to kill 1,000 policemen and magistrates from the end of June. On 27 June Madani and Belhadj were brought before a military court in Blida, accused of aggression and conspiracy against the state. Defence lawyers withdrew from the court, and the trial was adjourned until July.

On 29 June 1992, while opening a cultural centre in Annaba, Boudiaf was assassinated. Although the event was televised, it was by no means clear whether the assassination was the action of a lone killer or part of a conspiracy. The HCS declared seven days of mourning and cancelled planned celebrations to commemorate the 30th anniversary of independence on 5 July. It also ordered a commission of inquiry into the assassination, which was to announce its findings by the end of July. Islamist extremists applauded the killing but did not claim credit for it. Although the assassin had been seized on the spot, the motive for the killing remained a mystery. In December the commission's report was made available to the media with 76 of its 111 pages missing. The conclusion was that the killer had not acted alone but on behalf of an unspecified organization that was increasingly identified with the FLN. One of the demands of those taking part in a demonstration in March 1993, the first permitted for over a year, was for the truth about the murder of Boudiaf to be published. It was not until June 1995 that Lt Lembarek Boumâarafi was sentenced to death for Boudiaf's murder. Little new information was revealed at the trial, and the authorities maintained that Boumâarafi had acted alone.

'WAR AGAINST THE ALGERIAN PEOPLE'

The shock of the assassination of Boudiaf did not reduce the violence which had begun within days of the military take-over. Documents found in Oran revealed that the police were a deliberate target of the militants. Senior officers were ambushed with their drivers and sometimes their families. It was estimated that by the end of December 1992 some 200 security officers had been killed since the imposition of the state of emergency: the number of members of the Mouvement islamique armé (MIA) who were killed in action seems to have been higher.

Whereas in the towns the MIA worked in small groups, in the mountainous countryside and on the borders of the Sahara they operated at considerable strength, co-ordinated by means of a clandestine radio station and fax machines. An FIS leaflet advocated a campaign of 'sabotage and fire', and power cables were destroyed and government buildings attacked. Some of the guerrillas who took part in these attacks were known to have fought as *Mujahidin* in Afghanistan and others were believed to have received training in Hezbollah camps in Lebanon. In June 1992 the Government denied that there had been mass desertions from the army, but admitted that a small number of soldiers had taken refuge in the mountains, where they were hunted by helicopters.

Forts and police stations were ransacked for arms, and the Government was particularly worried about disaffection in the armed forces as it became obvious that military supporters of the MIA remained at their posts to participate in the attacks. In December 1992 79 officers, privates and civilians were charged before a military court in Béchar with attempting subversion in the barracks of Oran and Sidi-Bel-Abbès, and in January 1993 19 of them were sentenced to death. The military court at Béchar sentenced a further seven soldiers to death in February. The death toll increased in March when sympathizers allowed guerrillas to enter the fort at Boughzoul, where they murdered 18 soldiers; after a hunt lasting a week, the alleged attackers were caught and 23 of them were killed.

The authorities had already shown themselves sensitive to press coverage of such incidents when, in January 1993, they closed the newspaper *El Watan* and arrested six journalists for 'premature reporting' of the murder of five gendarmes at Laghouat. They stated that security news could only be reported with the 'stamp of the competent services'. Since the announcement of an enabling decree in August, 10 newspapers had already been closed.

The activities of the MIA were not directed solely against state employees. There were also deliberate attempts to damage the economy by deterring potential foreign investors. The most notorious of these was a bomb attack at Algiers airport in August 1992, in which nine people died and 120 were wounded. The Government denounced the attack as 'war against the Algerian people', promising to respond with 'draconian security'. At the same time, bombs were exploded near airline offices in Algiers and others, later, in Constantine. In September there were more bomb attacks at airline offices, and on the eve of the independence celebration a bomb was found near its centrepiece, the Martyrs' Memorial. The British and US Governments advised their nationals against visiting Algeria. In October two men were arrested in connection with the bombing at Algiers airport and in May 1993 54 defendants (26 *in absentia*) went on trial, 38 of whom were condemned to death, bringing the number of death sentences pronounced since the beginning of the state of emergency to about 80.

Before the bomb explosion at Algiers airport, the HCS had offered to close the Saharan detention camps, from which 5,000 of the original 8,000 detainees had been released before October. Instead, new security laws now came into force. In order to try 'terrorism and subversion', which were very loosely defined, three special courts, which recognized no right of appeal, were established. Membership of a terrorist organization was punishable by a sentence of up to 20 years' imprisonment, as was the sale of a firearm. Printing or copying a subversive document could result in a five-year sentence, as could identifying the judges or other officials of the special courts. The age of penal responsibility was lowered from 18 to 16. Reduced sentences were offered to those who surrendered during the following two months; about 100 took advantage of this partial amnesty.

The number of arrests increased. There were 460 in one fortnight in October 1992 and 60 during one day in November. Prime Minister Belaid Abd es-Salam, who had replaced Ghozali and appointed a new Council of Ministers in July, declared 'total war' on terrorism. A new offence of justifying terrorism was created, punishable by a minimum of five years' imprisonment. Amnesty International was to report a dramatic increase in the use of torture in subsequent months.

In December 1992 new measures were introduced, including the dissolution of local authorities still controlled by the FIS and the appointment of administrators chosen by the Government. Similarly, mosques were forced to accept government-appointed preachers or risk closure. A curfew was imposed in Algiers and the six surrounding districts, where 60% of the country's population lived. In January 1993 three state security courts were established with authority to impose harsh sentences including the death penalty. Later that month the first two Islamist terrorists were executed. Both of them were soldiers, and there was speculation about the extent of support for the Islamist cause within the lower ranks of the military. According to one report 500–800 junior and non-commissioned officers deserted in the early part of the year. More executions followed, including that of Hocine Abderramane, a close associate of Madani. In February the HCS renewed indefinitely the state of emergency, and in May the curfew was extended to 10 further provinces. In April 1993 the HCS announced that since December 1992 some 200 terrorists had been killed, 3,800 arrested and a further 1,100 were being pursued. By mid-1993 some 400 Islamist militants had been killed and another 150 sentenced to death. Yet despite an intense assault by the authorities on militant Islam, the violence escalated. Terrorists targeted not just members of the security forces, but prominent public figures, local government officials, members of the judiciary, intellectuals, journalists, foreign nationals and ordinary civilians. The exiled FIS leadership continued to advocate armed struggle and the elimination of the junta in power.

In February 1993 the Minister of Defence, Maj.-Gen. Nezzar, narrowly escaped death when a car-bomb exploded, and in March the former Minister of Education and two members of the NCC were killed by gunmen. In August former Prime Minister Merbah, together with his son, brother, driver and one of his bodyguards was assassinated. The Groupe islamique armé (GIA), a more radical rival of the MIA, claimed responsibility for the killing but an FIS statement denied any role in the assassination. Merbah had many enemies inside and outside the ruling establishment and there was intense speculation about the true identity of his assassins. During March–June 1993 six leading intellectuals were murdered; many others were forced into hiding fearing for their lives. There were reports that Islamist militants were increasingly attacking economic targets such as the transport system, gas pipelines and factories, and carrying out arson attacks against schools. In September Islamist militants began to target foreign nationals. Two French surveyors kidnapped by an armed gang near Tiaret, a GIA stronghold, were found dead in late September. The FIS again denied responsibility for these killings. The kidnapping of three French consular officials in October was reported to have provoked an exodus of some 3,000 foreign residents, including about 2,000 French nationals. The three officials were later released. The GIA claimed responsibility for the deaths of several foreign nationals, and warned all foreigners to leave the country by 30 November. By the end of December at least 24 foreigners had been killed and both France and the USA began withdrawing their nationals. In September the German Government had refused to extradite Rabah Kebir, the main spokesman for the FIS in Europe, and Ossama Madani, son of the imprisoned FIS leader, who had both been sentenced to death *in absentia* for their part in the bomb attack on Algiers airport in August 1992. In a statement made in December Kebir denied that the FIS was responsible for the attacks on foreigners, and declared that all those responsible for the killings in Algeria should be prosecuted.

The mass arrests and other repressive policies seriously disrupted command structures within the FIS and new hierarchies emerged and attempted to gain control of the Islamist resistance within Algeria. Organizations such as the MIA of Abdelkader Chebouti and the GIA, well established in the Mitidja behind

Algiers, and at Tiaret and Sidi-Bel-Abbès in the west of the country, recruited their guerrillas from the ranks of FIS militants but their leaders were unable to impose supreme authority on the armed opposition movement. In an attempt to overcome the disruption of the FIS caused by the arrest of its leaders, and to improve co-ordination between FIS militants in exile and those inside Algeria, in September 1993 a reorganization of the FIS leadership in exile was announced. The new executive was believed to include Kebir, Ossama Madani, Khareddin Kheraban, Anwar Haddam and Boujenaa Bounoua, representing different factions of the movement. Kebir, having escaped house arrest and taken refuge in Germany, had served for some time as official spokesman for the FIS outside Algeria, but his role had been questioned by some FIS members. This new unified leadership was reported to have ordered an intensification of military operations in Algeria, but also to have demanded direct negotiations with the HCS.

Strict controls made it difficult to gauge the attitude of the ordinary population, but in May 1993 demonstrations were officially sanctioned in Algiers, Oran and Constantine. In the capital a crowd estimated by the organizers at 1.5m. and by others at 100,000 demanded, in what was regarded as a genuine expression of opinion, that there should be no negotiation with terrorists. More than 500 councillors, members of the secularist RCD, resigned in protest at rumours that an amnesty would be granted to Islamist militants. In June the HCS urged a 'general mobilization against terrorism', but later in the month Abd es-Salam stated that he favoured dialogue with activists if they were not tainted with 'the cancer of terrorism': the 3m. Algerians who had voted for the FIS, he maintained, were not enemies, but citizens who had voted in good faith.

POLITICS AFTER BOUDIAF

There was speculation that Maj.-Gen. Nezzar would succeed Boudiaf as Chairman of the HCS, but he was not in good health and was apparently unwilling to make too obvious the military's control of the state. After conferring with party leaders (including Ben Bella, Aït Ahmed, Mehiri of the FLN and Sheikh Nahnah of Hamas), another member of the HCS, Kafi, was nominated for the chairmanship on 2 July 1992. An experienced diplomat, Kafi was regarded as a figure-head, a man who enjoyed good relations with the army and who was a political foe of Chadli and Hamrouche. He pledged adherence to Boudiaf's programme, but showed no signs of enacting it. The NCC Chairman, Malek, also became a member of the HCS. One of the first actions of the new regime was to promote five senior officers to the rank of general.

Ghozali resigned on 8 July 1992 in order to enable Kafi to appoint his own Prime Minister. He was succeeded by Abd es-Salam, who, for nearly 20 years after independence, had directed Algeria's petroleum and industrial policy. Abd es-Salam appointed a new Council of Ministers, retaining seven of Ghozali's ministers, but replacing Gen. Belkheir (whose management of the aftermath of the Boudiaf assassination had been much criticized) as Minister of the Interior by Muhammad Hardi, a former Secretary-General of the Ministry of Information, who was believed to have close links with the security services. Many of the new appointees were unknown technocrats, some of whom had previously served under Abd es-Salam. In October a reshuffle introduced three women and the first private businessman to serve in an Algerian Council of Ministers. In February 1993, in a more significant reshuffle, the professional diplomat Lakhdar Brahimi was replaced by Malek—who had previously been engaged in negotiations with the non-Islamist opposition—as Minister of Foreign Affairs. After a year in office the Prime Minister was deemed unpopular and was accused of being authoritarian and of seeking a return to the rigidities of the Boumedienne era; his long-term position was considered to be insecure.

The trial of Abbasi Madani, Belhadj and other FIS leaders was held in July 1992, although the defendants boycotted the proceedings in protest at the exclusion of foreign observers. After two former Prime Ministers, Hamrouche and Ghozali, had testified, the court pronounced sentences of 12 years' imprisonment. The verdict was greeted with immediate protest demonstrations and henceforward all government hints of readiness to negotiate with the FIS were met with the demand that the prisoners first be released.

The struggle to maintain itself in the face of armed resistance and the parlous state of the economy gave the HCS little opportunity to concentrate on other major problems—ending corruption and securing popular support. Many feared the influence of a corrupt 'mafia' of past and present officials. In November 1992 the Minister of Justice, Abd el-Hamed Mahi-Bahi, suspended several senior officials including the Prosecutor-General, the President of the court of Mostaganem (who was Chairman of the Judges' Syndicate) and other officials appointed under the Chadli regime. There were rumours that Mahi-Bahi had been obstructed in his attempt to investigate official embezzlement as well as the murder of Boudiaf. The dismissed officials were also believed to have helped the military against the FIS, and a fortnight later, despite the reported support of Kafi and Abd es-Salam, Mahi-Bahi was dismissed and the suspended officials reinstated. However, in December 10 special magistrates were appointed to address corruption and in February 1993 Gen. Beloucif was sentenced to 15 years' imprisonment (and suffered the confiscation of property) for the theft of \$6.4m.

In his first public statement as Prime Minister Abd es-Salam had refused to set a deadline for new elections, citing the need to revise the electoral rolls and to devise a procedure to eliminate the possibility of another victory for the FIS. Kafi, in his first public address, stated that he was aiming for a democratic system based on consensus; he subsequently promised to rebuild a modern, efficient state based on social justice. He blamed mismanagement in the Chadli era, referred to in the official press as 'the black decade', for poverty and inflation. At about the same time Abd es-Salam said that there was no possibility of elections taking place until the economy had recovered, and that such a recovery would take at least three years. On the anniversary of the military take-over, Kafi promised that a new Constitution would be drafted after consultation with groups not pledged to violence and that it would be pluralist and allow genuinely democratic elections. There would be a referendum on the balance of power between the President and the Government. Regarded as a further pretext for postponing elections, this proposal was greeted with scepticism as the largest political party, the FIS, was still banned and the second largest, the FFS, refused to have any contact with the regime, accusing it of using instability as an excuse for retaining absolute power. Hamas hesitated, advocating involvement of the less extreme members of the FIS, while the RCD refused to commit itself. In March 1993, however, talks began, with Kafi meeting representatives of the war veterans' association (of which he was still President), and of the FLN. A presidential communiqué stated that the talks had focused on enlarging and strengthening the NCC, on possible formulae for a 'transition' period, on the amendment of the Constitution to establish a better balance between the authorities and on the rationalization of institutions. In May Kafi promised a referendum before the end of the year on how a return to democracy should be managed. In June the HCS announced that it would dissolve itself in December, as originally proposed, and that there would follow a period of not more than three years by the end of which modern democracy with a free market economy would have been created.

In July 1993 Maj.-Gen. Nezzar, who had been reported to be suffering from poor health, was replaced as Minister of Defence by Gen. Liamine Zéroual, although Nezzar remained a member of the HCS, and Gen. Muhammad Lamari, who had been responsible for organizing anti-terrorist units, was appointed Chief of Staff. These changes were preceded by a series of promotions of officers close to the HCS leadership.

On 21 August 1993 the HCS appointed the Minister of Foreign Affairs, Malek, as Prime Minister in place of Abd es-Salam. Malek remained a member of the HCS. It was reported that both the French and the US Governments had favoured his appointment. It was not until 4 September that the new Prime Minister announced his Government, and the delay was thought to reflect the deep divisions within the ruling establishment. Unlike his two predecessors, who had both assumed simultaneous responsibility for the economy portfolio, Malek, a former career diplomat, had no experience of economic affairs. He appointed Mourad Benachenhou, a former Algerian representa-

tive at the World Bank, as Minister of the Economy, signalling a return to the reform programme. During a speech as his Government was inaugurated, Malek declared 'We will go to a free market economy with pragmatism, taking into account the particular needs of our society'. He also made it clear that he would not tolerate Islamist militancy. The Minister of Defence and Chief of Staff appointed in July retained their posts, and a senior army officer, Col Sélim Saadi, a former regional military commander who had held a number of ministerial posts in the early 1980s, was appointed as Minister of the Interior. It was thought that the military had instigated the replacement of the outgoing Minister of the Interior, Hardi, a civilian, by a senior army officer. His appointment accelerated the reorganization of the security forces and the creation of a unified command between the military and police forces in order to combat Islamist violence. A diplomat, Muhammad Saleh Dembri, was appointed Minister of Foreign Affairs, and Ahmed Benbitour was promoted to Minister of Energy. Twelve ministers remained from the Abd es-Salam Government. There were rumours of contacts between the HCS and exiled leaders of the FIS through intermediaries such as former President Ben Bella, who was reported to have met Kebir and Haddam in Spain in September.

LIAMINE ZÉROUAL BECOMES HEAD OF STATE

The mandate of the HCS was scheduled to expire on 31 December 1993, and in October the formation of an eight-member National Dialogue Commission (NDC) was announced, which was to organize a gradual transition to an elected government. Three generals were appointed to the commission, Muhammad Touati, a councillor at the Ministry of Defence, Maj.-Gen. Tayeb Derradji, Inspector-General of Land Forces, and Gen. Ahmed Senhadji, Director-General of Military Infrastructure, bringing the military openly into the political process for the first time. But little progress was made by the NDC in its negotiations with opposition parties about the creation of a transitional regime. Leading opposition figures such as Aït Ahmed of the FFS and Ben Bella of the MDA withdrew from the negotiations, and both military and political leaders in the ruling establishment remained divided about overtures to the banned FIS. In mid-December the HCS issued a statement indicating that it would not disband itself until a new presidential body had been inaugurated. It proposed to hold a national dialogue conference in January 1994 to choose a new collective leadership. The NDC recommended that FIS members who renounced violence and criminal activities should be allowed to participate, although the proscription of the party itself would remain in force. This approach appeared to have the support of some senior officers, while others, such as the Chief of Staff, Maj.-Gen. Lamari, were firmly opposed to it. Kebir declared that there could only be dialogue if all political prisoners were released and the decrees imposing a state of emergency were revoked; Belhadj had ordered that the FIS should have no contacts with the military-backed regime.

A draft document, circulated by the HCS to parties before the national dialogue conference, recommended a three-man presidency to replace the HCS and rule during a transitional period from 1994–96. The document suggested the creation of a new consultative assembly of some 180 members, who would be appointed rather than elected. In January 1994 the Government announced the release of almost 800 political prisoners. Kebir welcomed the decision, but again demanded the release of all political prisoners, beginning with the FIS leadership.

In the event none of the main political parties, with the exception of Hamas, participated in the national dialogue conference in late January 1994. Efforts to persuade FIS members to participate failed and even the FLN and the RCD boycotted the meetings. There were threats of violence from the GIA against anyone participating in the conference. The two-day meeting, which it had been hoped would end the violence, was an abject failure. The possibility of a boycott by the leading political parties led the HCS to select Bouteflika, Boumedienne's Minister of Foreign Affairs, as their first choice for the new Head of State, hoping that an internationally-known leader would command widespread support in the country. Bouteflika, however, declined the offer and reportedly returned to Europe before the conference ended. Subsequently the HCS named the Minister of Defence, Zéroual (now retired from the military), as Head of State and he was inaugurated on 31 January. An eight-man Higher Security Committee, mainly composed of senior army officers, was believed to have played an important part in Zéroual's selection. There was speculation that the Higher Security Committee would remain in existence to 'advise' on security matters. The NDC endorsed plans for a three-year transitional period leading to a presidential election and the appointment of a 180-member National Transition Council (NTC) to promote political consensus. Zéroual, one of the most respected members of the senior officer corps, was believed to share the views of those in the ruling élite who argued for dialogue with the Islamists to resolve the political crisis.

DIALOGUE FAILS

On his appointment as Head of State, Zéroual retained the defence portfolio, and the Council of Ministers under Malek remained unchanged. In his first public statement the new President appealed for 'serious dialogue' to find a solution to the country's crisis and emphasized that the role of the army was to build 'national consensus'. In February 1994 he declared that Algeria's problems could not be overcome only by addressing security issues, but that solutions had to be found to the country's economic and political difficulties. In response to Zéroual's appointment, the FIS leadership issued statements urging militants to limit their targets to members of the security forces rather than foreign nationals and Algerian civilians. Youcef Khatib, President of the NDC, admitted that it had contacts with FIS members inside the country and that these took place with the approval of the imprisoned leadership. The release in late February of Ali Djeddi and Abdelkader Boukhamkham, who represented the second tier in the FIS leadership below Madani, Belhadj and Hachani, was interpreted as an attempt to conciliate the FIS; but the FIS reaction remained contradictory. (In March it was declared that Djeddi and Boukhamkham had been released 'against their will'.) Earlier in the year Haddam, one of the exiled FIS leaders based in the USA, described the radical GIA as 'the principal armed branch of the FIS'. In the past the FIS had tried to avoid overt support for the violent attacks perpetrated by armed Islamist groups. In late March Mihoub Mihoubi, the presidential spokesman, told the official Algérie Presse Service that Zéroual had met imprisoned Islamist leaders and obtained their assurance that the campaign of violence would end. According to the FIS, Zéroual had initiated contact with their movement at the end of 1993 before he became Head of State.

In March 1994 there were rumours of divisions within the military over Zéroual's efforts to establish dialogue with the Islamist opposition. After reports that dialogue with the FIS could endanger the unity of the armed forces and that a growing number of army officers were unhappy with Zéroual's overtures to the Islamist opposition, Gen. Lamari felt it necessary to issue a statement reaffirming the army's confidence in Zéroual and 'his delicate mission'. It was also reported that Lamari had been given new powers confirming his position as number two in the regime, and that a number of senior officers believed to have opposed Lamari's appointment as Minister of Defence in January had been removed from their posts.

On 11 April 1994 Malek resigned and Zéroual appointed Mokdad Sifi, the Minister of Equipment, as Prime Minister. Malek was known to be opposed to any compromise with the Islamist militants. He resigned the day after the Government agreed a new accord with the IMF opening the way for debt rescheduling, a move that was certain to renew tensions within the ruling establishment. The appointment of Sifi, a civil servant and technocrat, as Prime Minister, was interpreted by some observers as an attempt by Zéroual to increase his own direct involvement in government. When Sifi announced his new Government in April only 12 ministers retained their portfolios and the majority of those appointed were technocrats or senior civil servants. Changes included the departure of Saadi, a resolute opponent of the Islamist militants and a close associate of Malek, and the return of Sassi Lamouri to the highly sensitive Ministry of Religious Affairs. Saadi's replacement as Minister of the Interior was Abderrahmane Meziane Cherif, a former Governor of Algiers. Ministers with responsibility for implementing the Government's economic programme demanded by the IMF accord were allocated new portfolios.

In May 1994, in what was regarded as an initiative of the President to strengthen his authority, Zéroual effected some major changes to senior posts in the military. Maj.-Gen. Khalifa Rahim was replaced as Commander of the Land Force by Maj.-Gen. Ahmed Gaïd, believed to be a close associate of Zéroual. A new head of the air force was appointed and there were changes to five out of the six *wilayat* or regional commanders. In the same month Zéroual inaugurated the NTC, an interim legislature of 200 appointed members, which was supposed to provide a forum for debate until legislative elections were held. Of the main political parties, only Hamas agreed to participate and was allocated five seats. Most of the 21 parties that agreed to take part were virtually unknown. Some 22 seats were set aside for the major parties, a gesture which seemed unlikely to encourage their participation in the new body which became the target of ridicule in the media.

Also in May 1994, in a move to promote dialogue with the Islamist militants and with other opposition groups, Zéroual appointed a group of six 'independent national figures'. They included former President Ben Bella, Col Tahar Zbiri, the leader of a failed coup against Boumedienne in 1967, Col Yahiaoui, a contender for the presidency after the death of Boumedienne, Haji Ben Alla, the former Speaker of the National People's Assembly, and two well-known socialists from the Boumedienne period, Muhammad Said Mazouzi and Ahmed Mahsas. The group was reported to have made contact with the two FIS leaders released earlier in the year, Djeddi and Boukhamkham, but little progress appeared to have been made.

In August 1994 members of the FLN, the Parti du renouveau algérien (PRA), the MDA, Nahdah and Hamas participated in national dialogue with the Government; the FFS, Ettahaddi and the RCD boycotted the meetings. A further meeting held in September focused on two letters sent to the President by Abbasi Madani, in which he agreed to respect the 1989 Constitution and the principle of the alternation of power and, while not explicitly renouncing violence, referred to the possibility of a 'truce'. In mid-September Zéroual announced the release of both Abbasi Madani and Belhadj from prison and their transfer to house arrest in Algiers; three other leading Islamists were also freed. A government spokeswoman, Leila Aslaoui, a feminist and resolute opponent of dialogue with the Islamists, resigned in protest at their release; her husband was killed by Islamist gunmen in the following month. A general strike was staged in September in the Kabyle as Berber activists protested at the prospect of national talks with 'Islamic fundamentalists', and demanded the official recognition of Tamazight, the Berber language.

Several factors were believed to have prompted the change in the intransigent stance of the FIS towards the military-backed regime, but the most important was presumed to have been its fear of marginalization by the extremist GIA. It was argued that the appalling acts of violence perpetrated by GIA guerrillas alarmed at least some of the FIS leaders who felt that it was not in their interest for the extremists to gain the dominant position. According to one source, Boukhamkham and Djeddi had produced a report in mid-1994 which highlighted the disarray existing throughout the rank and file of the organization, and the inability of those armed groups linked to the FIS to compete with the GIA in the scale and effectiveness of its military operations. The report concluded that unless major political initiatives were taken by the FIS leadership, the organization would be marginalized. Moreover, it was claimed that the MIA, renamed the Armée islamique du salut (AIS) in mid-1994, might not be under the control of the civilian wing of the FIS, frequently co-operated with the GIA, and had committed its share of nihilistic attacks and assassinations. After the transfer to house arrest of the two FIS leaders, the GIA reiterated its rejection of any cease-fire, reconciliation or dialogue, and threatened to kill Islamist leaders who participated in talks with the 'renegade' regime. However, two months earlier Haddam had issued a statement claiming that an agreement had been reached in May to merge the armed forces of the FIS with those of the GIA. A communiqué from Kebir in Germany, the most senior FIS spokesman in exile, immediately denied that any such merger had taken place. There was further confusion in August when the GIA announced that it was creating a 'provisional government' known as the 'caliphate' and named Haddam as Minister of Foreign Affairs, even though he had denied joining the GIA shortly after his statement. In September, after the official media claimed that GIA leader Abu-Abdallah Ahmad had been killed in clashes with the security forces, it was reported that Muhammad Said, a former university professor and senior FIS official who had apparently defected to the GIA, had been chosen as his successor, prompting speculation that the GIA might adopt a more moderate stance. However, other reports stated that Said would remain with the FIS and named Abu-Khalil Mahfouz as the new GIA leader.

The transfer of Abbasi Madani and Belhadj to house arrest failed to break the impasse between the regime and the FIS. In October 1994 Zéroual announced that neither Madani nor Belhadj were willing to renounce violence or participate in negotiations. Before his release, Madani had stated that he was willing to consider terminating the military campaign if certain conditions were met. Zéroual was unable to concede on a number of these points, namely rescinding the ruling which outlawed the FIS in order to restore the party to legality, and releasing all imprisoned FIS members and allowing its armed wing to participate in talks. In a speech on 31 October marking the 40th anniversary of the start of the War of Independence, Zéroual spoke of the failure of dialogue with the FIS and his decision to hold a presidential election in 1995, before the end of his mandate. He also used the occasion to announce the promotion of Gen. Lamari, a leading opponent of dialogue with the Islamists, to Lt-Gen. and to the newly-created rank of General of the Army Corps, the highest position in the Algerian military.

THE SANT' EGIDIO PACT

The plan to hold a presidential election towards the end of 1995, announced by Zéroual in October 1994, was rejected by several leading legalized opposition parties and condemned by the exiled FIS leadership. In a surprise move the opposition parties seized the initiative and, after talks in Rome under the aegis of the Sant' Egidio Roman Catholic community in November 1994 and again in early January 1995, the main Algerian opposition parties agreed a 'platform for a national contract' presenting the basis for a negotiated end to the conflict and a return to democracy. The document was signed by representatives of the FIS, the FLN and the FFS, together with the MDA, Nahdah, the Parti des travailleurs (PT) and the ALDHR. (Hamas and the PRA sent representatives to the meeting in November.)

The Sant' Egidio pact made an urgent appeal to both parties in the conflict to end their hostilities and allow the restoration of civil peace. It recommended the establishment of a transitional government in which both the regime and the political parties would be represented, which would prepare the way for free multi-party elections. All parties were asked to guarantee to respect the results of the elections. Before any negotiations, the participants appealed for the release of the FIS leadership and of all political detainees, the restoration of the FIS to legality, and an immediate end to the use of torture and of attacks on civilians, foreigners and public property. The participants also agreed certain general principles including the renunciation of violence to achieve or retain power, respect for human rights, popular legitimacy, multi-party democracy and the alternation of power, and the guarantee of fundamental liberties. They recognized the importance of Islamic, Arab and Berber culture in Algeria and demanded that both the Arab and Berber languages be recognized as national languages. Finally they appealed for the withdrawal of the army from politics. Belhadj and Madani endorsed the Sant' Egidio pact, whereas the GIA condemned it and reaffirmed its commitment to the establishment of a 'caliphate' by armed struggle.

Zéroual's regime condemned the Sant' Egidio meeting even before it had begun, claiming foreign interference in its national affairs. Some days after the pact was announced a government spokesman categorically rejected its proposals. The French Minister of Foreign Affairs, Alain Juppé, expressed his disappointment, prompting some observers to detect a shift in the French Government's position from strong backing for the regime in Algeria to support for the process of dialogue. The Italian, Spanish and US Governments expressed support for the Rome talks. Whereas some analysts argued that the Sant' Egidio pact confirmed that the FIS was distancing itself from the Islamist

radicals, anti-Islamist organizations in Algeria saw the pact as no more than a ploy by the Islamists to take power; with the army neutralized they would abandon all pretence at democracy and impose their intolerant rule. There was also criticism of the FLN and the FFS for their participation in the Rome meeting.

In the months following the Rome meeting there were efforts to consolidate the Sant' Egidio pact. These included a meeting organized in London, United Kingdom, in March 1995 by former Prime Minister Brahimi, attended by most of the signatories of the pact. In late March Djeddi, believed to be a moderate member of the FIS consultative council, pledged to persuade Islamist militants to surrender their arms, and in April Madani Merzak, a leading member of the AIS, published an open letter addressed to all those involved in the conflict appealing for peace. A prominent figure in the FLN establishment, former Minister of Foreign Affairs Ahmad Taleb Ibrahimi, urged President Zéroual not to reject the pact but to make a 'historic concession' to resolve the conflict. In early March, in an interview with a Spanish newspaper, the Minister of Foreign Affairs, Muhammad Dembri, admitted that the Sant' Egidio pact contained potentially constructive proposals; however, in the following month he insisted that any proposal about dialogue should be presented in Algeria, and condemned the transfer of the debate abroad.

Meanwhile, President Zéroual continued to prepare for a presidential election. In April 1995 he attempted to regain the initiative by resuming talks with the legalized opposition parties (this time individually). Separate meetings were held between the President and the leaders of the FLN and the FFS, and Ben Bella of the MDA also responded positively to Zéroual's invitation, prompting speculation that the unity achieved at the Sant' Egidio meeting might prove short-lived. The FFS had previously refused to take part in any dialogue with the regime. Talks with the FLN and the FFS quickly collapsed, however, when Zéroual again refused to include the FIS in any dialogue. The FLN and the FFS agreed to take part in the presidential election only if the FIS was allowed to participate. The Government reiterated its demand that the FIS would have to renounce violence and accept the Constitution before it could participate in the election. In mid-April it was announced that the President would limit dialogue to the nine opposition parties that had agreed to participate in the presidential election on the Government's terms. In May the Government issued an electoral law decree prepared by the NTC stipulating that any candidate wishing to stand in the presidential election would first have to obtain 75,000 signatures, collected from at least 25 provinces, with a minimum of 1,500 signatures per province. Candidates would be obliged to sign a declaration stating that they respected the Constitution, rejected violence and agreed not to use Islam for partisan aims. (The decree was promulgated by the NTC in July.) It was announced that in preparation for the election Zéroual would continue bilateral meetings with six opposition parties: the FLN, the FFS, Hamas, Nahdah, the MDA, and the PNSD. There was speculation that unofficial talks were continuing between the Government and the FIS leadership. After being returned to prison in February, Madani and Belhadj were reported to have been placed under house arrest at the end of March. The two men were said to be held in separate residences west of Algiers, and were refused permission to meet with FIS supporters. However, in early June the Minister of the Interior, Cherif, stated that the two men had been returned once again to prison. In late June, in an interview with a French newspaper, Cherif expressed optimism that the violence would soon cease and that if the majority of Algerian people 'were for the FIS' in the forthcoming presidential election the Government would 'respect their decision'. In early July, following a series of bomb explosions across Algeria, Cherif was dismissed from his post and replaced by a technocrat, Mustapha Benmansour, a former Governor of Annaba *wilaya*. Some observers interpreted Cherif's dismissal as a gesture of goodwill towards the FIS, others as a concession to those in the regime who had been angered by the minister's comments in the French press. In his independence day speech in July the President reiterated his pledge to eradicate Islamist terrorism and violence by military force. Shortly afterwards Sheikh Sahraoui, a co-founder of the FIS and leading spokesman in France for the Algerian opposition, was assassinated in Paris. Claims that the Algerian regime was responsible for the murder were strongly denied: most analysts believed the assassination to have been perpetrated by the GIA, as Sahraoui was reported to have been on a GIA list of FIS leaders condemned to death. In mid-July Zéroual issued a statement confirming the collapse of dialogue with the FIS.

In April 1995 the Government made concessions to the Berberist movement when it concluded an agreement with the RCD, one branch of the Mouvement culturel berbère (MCB), to establish a government body to oversee the teaching of Tamazight in schools and universities and to promote its use in the official media. However the agreement failed to satisfy the MCB's original demand for Tamazight to be recognized as an official language alongside Arabic. The MCB remained divided in its response to the Government's offer and appealed for the continuation of its eight-month boycott of schools. According to official reports only one-half of the 800,000 school children and students on strike returned to their classes in April.

THE DIRTY WAR

Despite the speculation about dialogue, the first months of Zéroual's presidency were marked by escalating violence in which the barbarous acts reported recalled the worst days of the struggle for independence. Certain towns such as Blida, Médéa, Tiaret and Chlef and entire neighbourhoods in some cities were virtually controlled by Islamist militants. Islamist attacks on government officials, judges, politicians, intellectuals, journalists and teachers continued while the murder of more foreign nationals led several countries to advise their citizens to leave. In February 1994 Muhammad Touali, a member of Ettahaddi, was killed, and in May Laïd Grine, a founder member of the Rassemblement arabe-islamique (a small moderate Islamist party), was murdered by unidentified assassins. A new underground group, the Force islamique du djihad armé emerged in February and claimed responsibility for the deaths of two people in February and March. Between March and May nine foreign nationals were killed, including a French nun and priest. In March France advised all its citizens whose presence was not essential to leave Algeria. The USA, the United Kingdom and Spain had already advised their nationals to leave. France subsequently closed almost all French schools and cultural centres in Algeria. Japan also advised its nationals in Algiers to leave. Attacks by armed Islamist groups on the security forces included an assault on the high security Tazoult prison near Batna in March, which resulted in the release of more than 1,000 political prisoners. There were reports in the French press that armed Islamist groups had become heavily involved in drugs-trafficking, the proceeds of which helped to finance much of their activities.

The security forces intensified their campaign against armed Islamist groups and resorted to air attacks, using napalm, punitive raids, torture and psychological warfare in their efforts to eradicate the militants. According to figures compiled by Agence France Presse, more than 600 alleged terrorists were killed between mid-March and mid-May 1994. In February the security forces claimed a major success when they killed Djafar al-Afghani, the leader of the GIA. The GIA's *majlis ash-shura*, or leadership council, immediately declared Abu-Abdallah Ahmad to be the group's new leader. In January the US human rights organization Middle East Watch condemned both the Government and the Islamist militants for human rights abuses. Their report claimed that during 1993 Algeria had carried out the highest number of judicial executions for politically motivated offences of any Arab state except Iraq.

In June 1994 64 people were injured when the GIA exploded two bombs in Algiers during a march organized by the RCD. On the eve of the G-7 summit in Naples (Italy) in early June, seven Italian sailors had their throats cut by suspected Islamist guerrillas while they slept on board a ship at the Algerian port of Djen-Djen. Exiled FIS leader Kebir publicly denounced the murders and expressed his condolences to the Italian Prime Minister. In July the ambassadors of Oman and Yemen in Algiers were kidnapped by members of the GIA—the first time Islamist guerrillas had targeted senior diplomats—but were subsequently released unharmed. According to Yemen's ambassador, the GIA had given them a letter in which the group stated that it was prepared to stop its terror campaign against

foreign nationals if the regime released the imprisoned GIA leader Abd al-Hak Layada. Some 14 foreign nationals were killed in a single week in July, and, after three French gendarmes and two diplomats were shot by Islamists outside the French embassy in Algiers in August, the exodus of foreigners accelerated, and some countries closed their embassies in Algiers. After the transfer of Madani and Belhadj from prison to house arrest in September, the GIA intensified its military operations in an attempt to sabotage any political deal; 16 civilians were decapitated the following day in Tiaret and Médéa, and at the end of the month Cheb Hasni, one of Algeria's most popular singers, was killed in Oran. In the Kabyle, a region traditionally alienated from the regime but strongly opposed to the Islamist militants, Berber villagers began organizing their own armed patrols. In July, when a group of Islamists demanded weapons and food from the villagers of Igoujdal near Béjaia, they met with violent resistance, which resulted in the deaths of six guerrillas. The event was given prominence in the official media.

The Government admitted in September 1994 that 10,000 people had died in the conflict since early 1992. Amnesty International estimated the death toll at 20,000, one-half of them ordinary civilians. These figures almost certainly underestimated the actual number of fatalities as daily killings were not reported in the heavily-censored media. In addition to their campaign of assassinations, Islamist activists burnt down schools and colleges—the GIA has fiercely opposed coeducation—and instituted a reign of terror in areas under their control; anyone who violated Islamist decrees risked mutilation or murder. Women who refused to comply with the Islamists' 'code of behaviour' were especially vulnerable. However, army repression was harsh, particularly in popular quarters of Algiers and other large cities where many young men suspected of Islamist sympathies were tortured by the security forces and summarily executed. Death squads were reported to have emerged, which were responsible for conducting revenge killings of victims selected at random. It was also argued that the security forces might have penetrated the GIA sufficiently to be able to manipulate the group so that some of their operations served the interests of the regime.

Following the failure of dialogue with the Islamist opposition, the army embarked on the most extensive military operations of the conflict and appeared to have abandoned all restraint in its efforts to uncover suspected Islamist sympathizers and guerrilla units. In December 1994 President Zéroual told local officials that the state was determined to stem the violence by all available means. As evidence of the need for tougher measures, it was believed that the army had presented a report to the President in October, which stated that 283 military personnel had been killed between July and October, and that on average 25 members of the security forces were being killed every day. Some analysts argued that the main reason for the regime's new intransigence was that it could depend on the undivided support of France, fearful of the consequences of an Islamist victory in its former colony. Charles Pasqua, the French Minister of the Interior, enjoyed close links with the Algerian generals, and France was believed to be the main supplier of sophisticated military equipment to the regime for use in anti-guerrilla warfare (see below). In response to the regime's strategy of maximum force, the Islamist militants intensified their campaign of violence. In December GIA guerrillas hijacked an Air France airbus at Algiers airport and murdered three passengers before forcing the aircraft to fly to Marseilles, France, where it was stormed by French counter-terrorist police and the hijackers were killed. In retaliation, four Catholic priests (three French, one Belgian) were murdered by the GIA in the Kabyle. In January 1995 a car-bomb exploded in the centre of Algiers, killing 42 people and injuring more than 280. Both the AIS and the GIA claimed responsibility for the attack, which was the biggest terrorist operation since the conflict began. Also in January there were reports that German and Swiss intelligence services were concerned that FIS supporters in Europe were not just engaging in propaganda but were purchasing weapons, ammunition and explosives to ship to Algeria. In March several people were arrested in Belgium for preparing to ship arms to Algeria, probably to the GIA. The Islamists were believed to have imposed a 'war tax' on businesses in the Algerian community in Europe to raise funds for arms purchases.

In February 1995 the authorities announced that almost 100 prisoners, 81 of whom were Islamists, had been killed by the security forces during what was described as an attempted mass escape from Serkadji prison in Algiers. According to Islamist sources, however, the men were deliberately killed in an incident similar to one that took place at Berrouaghia prison in November 1994 when the authorities claimed that 60 prisoners had been killed while trying to escape. There were reports that many of those killed at Serkadji had been held in solitary confinement, casting doubts on the official version of a mass escape. The authorities rejected demands for an independent inquiry into both incidents. In March 1995, in an apparent reprisal by the GIA, a large car-bomb exploded in Algiers, injuring more than 60 people, most of them policemen and their families.

In February 1995 it was reported that the three special courts established in 1992 to try cases involving terrorism and sabotage had been abolished; in future such cases were to be considered by ordinary criminal courts. The special courts had been criticized for human rights abuses. In early 1995 the Minister of the Interior announced that he was preparing a law authorizing the inhabitants of isolated regions to create self-defence groups, claiming that some 10,000 'communal guards' had been armed during the previous six months. Opposition groups, notably the FFS, criticized the arming of civilians and urged the Government to retain responsibility for security matters. In March a former police chief, Muhammad Ouadah, was appointed to a new senior security post responsible for co-ordinating the Government's campaign against the Islamist militants. Later that month the security forces claimed to have killed as many as 1,300 GIA guerrillas in operations mounted in the Ain Defla, Médéa and Jijel regions. The major operation took place in the mountainous Ain Defla region where, according to press reports, the police ambushed some 900 GIA supporters as they gathered for a congress. Other reports, including those from eye witnesses, stated that the police operation followed a mutiny at a large army barracks in the area. Although there seemed little doubt that the GIA suffered substantial losses in the operation, including some of its leaders, the security forces did not appear to have eliminated all Islamist groups from the Ain Defla region. Government statements that the Islamist militants had only 3,000–4,000 armed men in the whole country seriously underestimated their strength. The Islamist militants' ability to mount new operations was demonstrated in April when an armed group occupied a television relay station at Ain Nsour in western Algeria and broadcast a 40-minute Islamist video. Also in April sabotage of water-pumping equipment affected supplies to the greater Algiers region. There was speculation, none the less, that because of the high casualties among commanders of local guerrilla units, it was proving increasingly difficult for the central leadership to maintain contact with, let alone control the activities of, their militants in the field.

In April 1995 security measures were reinforced in the four 'exclusion zones' at Ouargla, Laghouat, El Oued and Illizi established to protect Saharan petroleum and gas fields, which provided 95% of Algeria's export revenues. Nevertheless, in May five foreign nationals were killed by the GIA at an industrial zone close to Ghardaia. The five men were employed by the Algerian subsidiary of a US company which was responsible for the construction of the Algerian section of the Maghreb–Europe gas pipeline. The murders, which received wide coverage in the international press, brought the number of foreign nationals killed since September 1993 to 82, of whom 29 were French. Prior to the incident the hydrocarbons sector had remained relatively free from guerrilla attacks—although damage to the country's infrastructure was estimated at $3,000m.—and the Saharan region as a whole had been less affected by the violence which had engulfed northern Algeria. In May 1995 police defused five bombs planted in an Algiers hotel where the leaders of Algeria's 48 provisional authorities were attending meetings about the forthcoming presidential election. In the months preceding the November election Algeria was witness to a series of car-bomb attacks across the country. Some 70 people were killed, and more than 450 were injured, between July and late October. The security forces, meanwhile, claimed to have killed more than 150 armed Islamists in July alone, and in the fol-

lowing months intensified their operations to 'eliminate' suspected Islamist militants. In September a former Minister of the Interior, Boubaker Belkaïd, was killed by Islamist activists. This was the third assassination of a high-ranking civil servant since early 1992.

IS THE FUTURE ISLAMIST?

Some observers predicted that the future of Algeria would be Islamist and that most people would accept this. It had been argued that the FIS leadership, unable to exert control over the armed extremists, might be content to let the army eradicate the GIA by force. According to this scenario, such a military victory would only be achieved at enormous human cost, and popular rage against state terrorism would force the army to negotiate a deal with the FIS. An FIS-led government would be inevitable and the army would be forced to return to its barracks. Whether the FIS would then seek to impose its model on all of Algerian society or make concessions to its opponents remained in doubt. The existence of the FFS, with strong support among the Berbers of the Kabyle determined to win recognition for their cultural and linguistic rights, was regarded as the best hope that the interests of democrats would not be ignored by the FIS or the army. The inevitability of Islamist rule was contested by others who were convinced that the Algerian people, horrified by the outrages committed by Islamist militants, had rejected the FIS and believed that Islamism could be eradicated by military force. The anti-Islamist tendency, which included professional associations, trade unions and feminist groups, stressed the profound changes that Algeria had undergone since December 1991, when the FIS won almost one-half of the votes cast in the first round of the general elections. They indicated that there had been a reduction in the level of support for Islamist guerrilla groups in both social and geographical terms. Islamist militants were certainly younger and were almost all recruited from among the unemployed urban youth. Although some observers believed that the army had forced the Islamist guerrillas to fall back to the major cities where they could wage their campaign only by assassinations, they still appeared to have access to an almost inexhaustible supply of recruits. The size of the guerrilla forces was difficult to determine: Western diplomatic sources in Algiers estimated them to number 10,000–15,000; other sources suggested that the GIA alone had more than 10,000 armed men, organized into 40 groups. The GIA appeared to be dominant in Algiers and central Algeria, and the AIS in the rest of the country. Some of the guerrillas operated in groups of around 15 men, others in bands of 150–200 men; their leadership changed every few months as leaders were killed in clashes with the security forces. For its part, the army, even though it numbered some 165,000 armed men, could only mobilize around 60,000 of these for anti-terrorist operations, which might explain why, despite their successes, the security forces had been unable to consolidate their control over areas won from the guerrillas. It was argued that success in rescheduling the country's foreign debt would enable the regime to open new lines of credit to purchase anti-terrorist equipment and increase its military capacity.

THE PRESIDENTIAL ELECTION, NOVEMBER 1995

In August 1995 President Zéroual announced that the first round of the presidential election would be held on 16 November. Observers from the UN, the Organization of African Unity (OAU) and the Arab League were to monitor the electoral process. By October four candidates had qualified for the election: Zéroual; the staunchly anti-Islamist Saïd Saadi, Secretary-General of the RCD; Nourreddine Boukrouh, leader of the PRA; and Sheikh Nahnah, leader of Hamas, which had taken a pro-Government stance since the 1992 military take-over. Former premier Malek, who had been regarded as Zéroual's most serious rival for the presidency, failed to obtain the necessary number of signatures to qualify as a candidate. The three leading political parties, the FIS, the FLN and the FFS, urged voters to boycott the election. Notwithstanding their appeal, and threats by Islamist militants to turn the ballot-boxes into coffins, 75.7% of the electorate voted (according to official figures) at the election, which was held amidst tight security involving the deployment of some 300,000 soldiers, gendarmes, police and self-defence groups. An unexplained cessation in the violence had occurred during the two weeks immediately preceding the election, which could account in part for the high level of voter participation. The result of Algeria's first multi-party presidential election since independence was a clear victory for incumbent President Zéroual, who, according to official figures, gained 61.0% of the votes cast. In his electoral campaign he had promised peace, security and national reconciliation. Sheikh Nahnah came second with 25.6% of the votes polled, followed by Saadi (9.6%), and Boukrouh (3.8%).

The main legal opposition parties, together with the banned FIS, were forced to acknowledge the political implications of the election, and there were appeals for a renewal of dialogue. At his inauguration on 27 November 1995, Zéroual reiterated his commitment to national dialogue and pledged to hold pluralist legislative and municipal elections; however, he offered no precise timetable. In January 1996 the FFS, weakened by the long absence of its leader, Aït Ahmed, and anxious to re-establish dominance in its Kabyle heartland, announced that it would end its boycott of the electoral process and was ready to participate in legislative elections. The party held its second national congress in March at which certain organizational changes were agreed. Aït Ahmed attended the congress and was given the title of president of the party. Seddik Debaili was appointed first secretary and Mustafa Bouhadef, who had led the party within Algeria since the military coup in 1992, became national secretary responsible for organization. But at the end of the congress Aït Ahmed returned to his base in Switzerland (where he had been residing for security reasons), and rumours of in-fighting within the party persisted. At the FLN's central committee meeting in January Abdelhamid Mehri, a strong supporter of the 'national pact' who had led the party in its firm opposition to the Government, was forced to resign as Secretary-General and was replaced by Boualem Benhamouda, a minister under both Boumedienne and Chadli who narrowly defeated former premier Hamrouche, the leader of the party's reformist wing. Benhamouda immediately sought to distance the party from the 'Rome group'. The FLN also indicated that it was prepared to contest elections. For their part, the RCD and Hamas hoped to take the place of their more powerful rivals, the FFS and the FIS. Some observers argued that the Government was actively manipulating the FLN and the FFS by exploiting their internal divisions in order to 'domesticate' them, and enable the FLN to assume the role of 'presidential party' in forthcoming legislative elections. The FLN, though greatly weakened, still retained many of its structures which could be used to mobilize a loyalist vote when parliamentary elections took place. These predictions appeared to be confirmed when the FLN leadership was publicly reconciled with Zéroual in February. In that month the FLN elected a new political bureau, which was believed to be sympathetic to the President.

Immediately after the presidential election, Kebir, the senior FIS spokesman in exile, acknowledged Zéroual's victory and appealed for new negotiations with the regime. These overtures were immediately condemned by Haddam.

In April 1996 President Zéroual began three weeks of talks with more than 70 leaders of opposition parties, trade unions and social organizations, together with other influential personalities, in preparation for parliamentary elections. The FIS were excluded but other Islamists such as Sheikh Nahnah of Hamas and Sheikh Djaballah of Nahdah were invited to the talks which also involved surviving leaders from the War of Independence, opponents of the late President Boumedienne, former Presidents Ben Bella and Kafi, and former Prime Ministers Abd es-Salam, Malek and Hamrouche. Former President Chadli was a notable exception and apparently was not invited to the talks.

In June 1996 President Zéroual announced that he would hold a referendum later in the year to seek approval for constitutional reforms in preparation for parliamentary elections which he reaffirmed would take place in 1997. The proposed constitutional reforms were presented in a memorandum sent to leading political figures and included the creation of a bicameral parliament in which some members of the upper chamber would be appointed rather than elected, a ban on political parties based on religion or language, and the introduction of voting by proportional representation. In July Zéroual embarked on a new round of talks with the main opposition parties and other associations, including the UGTA, culminating in a national conference in

September to ratify his political reform programme. Both the FIS and the Islamist militias were excluded from the talks. The secret contacts that had been maintained for some years between the presidency and Abbasi Madani appeared to have come to an end.

The main legal political parties indicated that they were in favour of parliamentary elections being held at the earliest possible opportunity. There was also widespread support for voting by proportional representation, which appeared likely to give parties such as the FFS, the FLN, Hamas and the RCD useful blocs of seats in the elected lower chamber, although no single party seemed likely to command a majority. However, considerable concern was expressed about the proposed upper house, to be called the Council of the Nation, composed of members appointed either directly or indirectly by the President. A presidential spokesman argued that it would widen the scope of national parliamentary representation, although to many its function appeared to be to control the elected chamber, thereby increasing the President's power and strengthening his position should a hostile lower house be elected. At that time a 'presidential majority' in the lower house seemed unlikely. The FLN, under its new leadership, had rallied to the President, but the party was deeply divided; Zéroual's only other allies were the newly-formed Alliance nationale républicaine, led by Malek, and the PRA, although it was assumed that they would also be joined by Hamas and possibly Nahdah. The FFS, the RCD, the MDA, Ettahaddi and the PT, together with prominent individuals such as Mehiri, the former FLN leader, Hamrouche, the leader of the reformist wing of the FLN, and Yahia Abdennour, President of the ALHR, argued that parliamentary elections should take place before the holding of a referendum in order to allow the elected assembly to draft the Constitution. Both the FFS, which had withdrawn from talks with the President in August 1996, and the RCD, angry at the Government's decision not to give official recognition to the Berber language, decided to boycott the referendum and refused to attend the Government-sponsored conference on national concord, held in September 1996. The conference, which was attended by some 1,000 delegates, endorsed a 'platforme de l'entente nationale', incorporating the President's proposals for reform. Delegates were given little opportunity to amend the proposals.

In October 1996 President Zéroual announced that the referendum to amend the 1989 Constitution would be held on 28 November, followed by general and local elections in 1997. In the weeks preceding the referendum, the Government launched a massive media campaign and during the voting more than 300,000 troops were deployed across the country. According to official sources, some 79.8% of the electorate participated in the referendum, of whom 85.8% voted in favour of the constitutional changes. A number of opposition parties claimed that the results had been manipulated by the Government. Opposition to the proposed reforms was particularly strong in the Kabyle, where residents staged protests against the designation of Arabic as the only 'national language'.

On 31 December 1995 Sifi was replaced as Prime Minister by Ahmed Ouyahia, a former diplomat who had served as President Zéroual's *chef du cabinet* since 1994. Ouyahia, aged 43, became the youngest premier since Algeria's independence. In the new Council of Ministers announced in January 1996 the main economic portfolios remained unchanged, while Hamas and the PRA were offered several portfolios. The cabinet also included, for the first time, a former member of the FIS, Ahmed Merani, who was appointed Minister of Religious Affairs. Merani was a founder member of the FIS but defected from the party after it was banned in 1992. Dembri was replaced as Minister of Foreign Affairs by Ahmed Attaf, a junior minister and spokesman for the Sifi Government. Ouyahia announced that 'rigour and austerity' were the main characteristics of the Government's economic programme, and stated his commitment to eliminate corruption. In August Zéroual issued a decree promoting the Governor of Algiers to the rank of minister in order to address the urgent problems facing the capital. In a further cabinet reshuffle in September, Benbitour, the Minister of Finance, and Benachenhou, the Minister of Industrial Restructuring and Participation, were replaced by the premier's allies. In October Ouyahia promised a further round of privatizations and public-sector reforms.

THE GENERAL ELECTION OF JUNE 1997

In early 1997 a new political party, the Rassemblement national démocratique (RND), was created, with Abdelkader Bensalah, the President of the NTC, as its Chairman. The launch of the RND was delayed as the result of the assassination in late January of Abd al-Hak Benhamouda, the Secretary-General of the UGTA, who was to have been the new party's leader. Bensalah presented the RND as a centrist grouping with support throughout the country, and denied claims that it was a 'presidential' party. It brought together a range of anti-Islamist organizations, self-defence groups, trade unions and women's associations, and many of its leading members were drawn from the influential war veterans' association. The RND announced that it would present candidates in all constituencies; its lists included Prime Minister Ouyahia and numerous other ministers. The party was given permission to use official buildings for its electoral campaign and also benefited from other public facilities, drawing accusations of favouritism from opposition parties. In February the leaders of the opposition parties agreed to the creation of an independent commission to monitor the forthcoming general election. All political parties were given until May to restructure their organizations to take account of new legislation or be dissolved. In order to comply with the ban on the use of religious symbolism, Hamas reluctantly agreed to change its name to the Mouvement de la société pour la paix (MSP). In March the NTC adopted an electoral law providing for voting by proportional representation.

At a meeting in Madrid, Spain, in April 1997, representatives of the main opposition parties, including the FIS, appealed for the opening of a 'dialogue for peace'. Although divided over whether or not to participate in the general election, the signatories of the 1995 Sant' Egidio pact (see above) reaffirmed their belief that only a political solution would bring the violence to an end. The Government, however, refused to make any concessions. At the Madrid forum, the official FIS spokesman in exile, Abdelkrim Ould Adda, not only condemned the 'blind repression' of the regime, but also denounced the violence committed by the GIA against the civilian population. The Algerian Government ignored requests from the FIS that it enter into dialogue with the banned opposition. Shortly before the election, President Zéroual officially dissolved the NTC and paid homage to those deputies allegedly killed by Islamist extremists. In the period preceding the election several opposition parties complained that the authorities were undermining their campaigns; by early June the commission monitoring the election had received 600 complaints of alleged abuse. Both the PT and the FFS were refused permission to broadcast on state television. Many analysts argued that the election was designed to strengthen Zéroual's position, while an editorial in a French daily newspaper, *Le Monde*, referred to 'an election without true debate for an assembly without real power'. The constitutional changes that came into effect in late 1996 effectively reduced the power of the National People's Assembly as in future any bill adopted by the Assembly would have to receive the support of two-thirds of the members of the Council of the Nation in order to become law.

Some 39 political parties qualified to take part in the election and more than 7,000 candidates contested the 380 seats in the National People's Assembly. The pro-Government press in Algeria reported a high rate of participation in the electoral campaign and referred to the energetic campaigning of the candidates. Other newspapers, however, insisted that most Algerians had little interest in the election and were more concerned about their daily livelihood than official discourse. For the first time eight seats in the Assembly were reserved for Algerians living abroad; however, in France the Government placed restrictions on the activities of political parties campaigning among the Algerian community and only the RND was given permission to hold public meetings. In Algeria the period preceding the election was marred by continued violence; there were almost daily bombings in Algiers in the week before the election, leaving 22 people dead and 120 injured.

According to the final official results (as revised by the Constitutional Council in mid-June), at the election to the National People's Assembly on 5 June 1997 the RND won 156 of the 380 seats contested, the MSP 69, the FLN 62, Nahdah 34, the FFS 20, the RCD 19, the PT four, and the remainder were taken by

independent candidates and other small political groupings. The RND did not achieve an overall majority, although it was generally assumed that it could rely on the support of the FLN, which had allied itself more closely to the President since Boualem Benhamouda became its leader. The two Islamist parties, the MSP and Nahdah, won more than 100 seats in the Assembly and, according to official figures, received over 20% of all votes cast. In contrast, the centre-left parties, especially the FFS, failed to gain as many seats as they had in the previous election. According to the authorities the level of voter participation was 65.5%, although less than one-half of eligible voters in Algiers took part in the election. Opposition parties insisted that the rate of participation had been lower than the official figures indicated and complained of numerous and deliberate abuses during the election. Sheikh Nahnah of the MSP was particularly critical and told the media that he had expected to win another 20 seats. A team of UN observers expressed reservations about the fairness of the electoral process.

In mid-June 1997 President Zéroual asked Ouyahia (who had tendered his resignation following the general election) to form a new Government. Towards the end of the month Ouyahia announced the new Council of Ministers, comprising 30 ministers and ministers-delegate and eight secretaries of state; the FLN and the MSP each held seven portfolios, while the RND took the remainder. Meanwhile, the newly-elected National People's Assembly convened for the first time in mid-June. Also in June the Government formally dissolved seven political parties (including the MDA) for failing to comply with the new regulations concerning political associations. In July, following secret negotiations, Abbasi Madani and Hachani were released. It was rumoured that negotiations led to a power struggle among the military chiefs, between Zéroual's faction and that of Lt-Gen. Lamari; it was alleged that Zéroual would have been ousted in a *coup d'état* had he not received decisive support from the US Government. The power struggle was temporarily resolved, and negotiations with the FIS proved inconclusive. Madani was once again placed under house arrest, and in October Zéroual declared that the file on the FIS was 'closed permanently'.

FURTHER DEMOCRATIZATION?

Elections to institute elected regional and municipal councils, which had not existed since 1992, were held in October 1997: the RND won more than one-half of the seats contested. Seven other parties won seats in the regional councils and 33 in the municipal councils, notably the FLN and the MSP. According to official results, some 62.7% of the electorate participated in regional elections and 67.7% took part in municipal elections. The Government expressed satisfaction at the result and sought to portray the polls as the final stage in the re-establishment of the democratic process in Algeria. All major political parties, including the FLN and the MSP, complained of widespread electoral fraud, and in the weeks following the elections opposition parties organized massive demonstrations on a scale not seen for many years. President Zéroual refused to annul the results and street protests continued. In late December an electoral college selected two-thirds of the seats in the new 144-member upper chamber, the Council of the Nation, from members of the regional and municipal councils: of the 96 seats, the RND took 80, the FLN 10, the FFS four and the MSP two. The remaining 48 members were nominated by Zéroual. Thenceforth, legislation drafted by the lower house, the National People's Assembly, would not be promulgated unless approved by two-thirds of members in the Council of the Nation. In April 1998 a new Constitutional Council was installed.

At the RND's first congress, held in April 1998, Bensalah announced his resignation as the party's president. Muhammad Tahar Benbaibeche, a leading member of the conservative wing of the FLN, was subsequently appointed as the RND Secretary-General, while the election of the party's president was postponed. In May the UGTA confirmed Abdelmadjid Sidi Said as its new Secretary-General; he was expected to preside over preparations for the UGTA's forthcoming conference. Despite considerable discontent among the union's rank and file, the conference was expected to express continued support for the Government. Also in May the authorities disbanded some 30 political groupings (notably including Ettahaddi and the PSD) as they did not satisfy legislation regarding political parties. At the same time the Supreme Court upheld a decision taken in mid-1997 to disband the MDA.

In July 1998 controversial legislation on the compulsory use of the Arabic language in public life came into effect. Although the law was promulgated in 1991 it had been suspended in 1992 for practical reasons by the Chairman of the HCS, Boudiaf. In December 1996 the NTC revived the legislation and set the date for its implementation. Under the terms of the law, all documents produced by the administration, public enterprises, associations and the official media would have to be in Arabic. Thenceforth, anyone who signed a document in a language other than Arabic as part of their official duties would be subject to a fine. (Most ministries currently use French in their daily transactions.) In addition, all films and television programmes in a foreign language would have to be dubbed or translated into Arabic. Only institutions of higher education were given until 2000 to apply the law. The Berber-speaking Kabyle region remained fiercely opposed to the Government's 'arabization' policy. At a rally in Algiers organized by the RCD in July to remember the Kabyle singer Lounes Matoub, who had been assassinated in June, the legislation was denounced. More than 1,000 people took part in the demonstration. At the same time rumours circulated about the emergence of Kabyle extremist groups committed to violent protest and separatism. Aït Ahmed, leader of the largest Kabyle-based political party, the FFS, stated that as a result of the assassination of Matoub and the introduction of the Arabization law, the Kabyle was on the brink of an uprising.

THE PRESIDENTIAL ELECTION OF APRIL 1999

In a dramatic television address in September 1998, President Zéroual announced that he would stand down as Head of State after the holding of a presidential election in February 1999, nearly two years before the end of his five-year term of office. Subsequently the date of the election was postponed until April, officially to give political parties time to participate fully in the electoral process. Although suffering from poor health (the President had spent some days in a Swiss clinic in March), it was generally agreed that Zéroual was being forced out as a result of renewed infighting in the army high command. His announcement followed a series of vitriolic articles in sections of the press attacking Gen. Muhammad Betchine, Zéroual's closest political ally, and clearly aimed at the President himself. Betchine resigned as presidential adviser in October along with the Minister of Justice, Muhammad Adami, another of Zéroual's allies. Both strongly denied press allegations of corruption. The episode was regarded as a victory for the 'clan' led by Lt-Gen. Lamari and the head of military security, Gen. Muhammad Mediene.

In mid-December 1998 premier Ouyahia resigned. No reason was given for his resignation, but it followed strong criticism of politicians close to President Zéroual from opposition parties. At the time Ouyahia was also considered to be a possible presidential candidate. He was succeeded as Prime Minister by Smail Hamdani, a respected politician who had been *chef du cabinet* in the provisional Government following the 1962 Évian Accords (which paved the way for Algeria's independence) and later had enjoyed a long diplomatic career. A new, largely unaltered Council of Ministers was appointed subsequently.

Of 47 candidates who presented themselves for the presidential election, only seven made it to the final list: Bouteflika; Taleb Ibrahimi, now a leading member of the establishment's Arab/Islamic wing; Sheikh Djaballah; Aït Ahmed; Hamrouche, the leader of the FLN's liberal reformist wing; former premier Sifi; and Youcef Khateb, a hero of the war of independence reported to have close links with some of the 'patriot' militias. This time the senior generals decided not to present one of their own members for the post, as in the case of Zéroual, and decided that the new President should be a civilian. Bouteflika quickly emerged as the leading candidate during the electoral campaign and was dubbed the 'candidat privilégié' by sections of the country's largely hostile French-language press. He enjoyed the support of the leadership of the four main political parties, the executive committee of the UGTA, and several professional associations. Until mid-January 1999 the RND had been divided

over whether to support Bouteflika or a candidate from their own ranks, such as former premier Ouyahia. Towards the end of the month the majority of the RND's council decided to support Bouteflika, and when the party's Secretary-General, Benbaieche, refused to accept the decision, he was removed from office and replaced by Ouyahia; Benbaieche had alleged that the military had threatened RND members to force them to sign a document in support of Bouteflika. Earlier Benbaieche himself had been considered by some as a potential presidential candidate. Some leading members of Nahdah decided to support Bouteflika's candidature, and ousted Djaballah from the party leadership. Djaballah, himself a presidential candidate, formed a new party, the Mouvement de la réforme nationale, to promote his candidature. A week before the election the MSP pledged its support for Bouteflika, its leader having been excluded from standing as a candidate by the Constitutional Council, which claimed that he could not produce satisfactory evidence that he participated in the war of independence. His exclusion was widely regarded as political. Editorials in the army's journal *Al-Djeich* insisted that the military hierarchy remained 'neutral' in the contest and President Zéroual repeatedly stressed that the election would be 'an example of honesty and transparency'. However, serious doubts were raised about these assurances because of the public support expressed for Bouteflika by Maj.-Gen. (rtd) Nezzar, and by the presence of another retired senior General, Belkheir, on Bouteflika's campaign team. Reference was also made to the fact that Bouteflika had been the army's first choice for President in 1994. Five years later, despite his denials, Bouteflika was widely seen as the 'candidat du pouvoir'.

Two days before the first round of the presidential election (scheduled to be held on 15 April 1999), a crisis broke when four of the candidates, namely Aït Ahmed, Hamrouche, Ibrahimi and Djaballah, issued a communiqué accusing the authorities of initiating a 'massive fraud' in favour of Bouteflika. They claimed that a large number of additional voting papers in the name of Bouteflika (some 25% more than for other candidates) had been deposited in the *wilayat*, and that the security forces had been instructed to prevent representatives of the other candidates from being present at polling stations on the day of the first round of voting. The next day they were joined by Khateb and, unexpectedly, Sifi. Djamel Zenati of the FFS, speaking on behalf of all six candidates, declared that despite the assurances given by Zéroual and Lt-Gen. Lamari, they had evidence of fraudulent practices in itinerant polling stations provided for the nomadic populations of the Sahara, and, more importantly, in the special polling stations provided for the armed forces where voting had already begun. He appealed for voting at these stations to be annulled and demanded a meeting with Zéroual. The President, however, declined, and the Minister of the Interior rejected the allegations of fraud, accusing the six candidates of trying to discredit the administration and mislead public opinion. The president of the electoral commission stated that the accusations were exaggerated, claiming that the commission had received only 38 complaints, none of which was of a serious nature. The protesting candidates responded by withdrawing from the election. Bouteflika decided to continue as the sole candidate, but on the day of the election he announced that he would not assume the presidency unless he received substantial support from the electorate.

According to official results, Bouteflika won 73.8% of the votes cast at the presidential election of 15 April 1999, followed by Ibrahimi (12.5%), Djaballah (4.0%), Aït Ahmed (3.2%), Hamrouche (3.1%), Sifi (2.2%) and Khateb (1.2%). (Although six of the candidates had withdrawn, they did not make a formal appeal for a boycott and voting papers for all seven contestants were provided at polling stations.) The rate of voter participation was officially 60.9% of the electorate, but there were sharp regional disparities. Turn-out was less than 39% in Algiers, compared with 88% in Tindouf, and was only 6.6% and 5.7% respectively in the *wilayat* of Béjaia and Tizi-Ouzou in the Kabyle. On 16 April Bouteflika accepted the presidency. The opposition, which had already rejected the legitimacy of the results, immediately challenged the official rate of voter participation, with the FFS claiming that a mere 23.3% of the electorate had voted. The French daily newspaper *Le Monde,* quoting a military source, also estimated turn-out at 23%, with Bouteflika obtaining only 28% of the votes cast (little more than 1m.), Ibrahimi 20%, Aït Ahmed 13.3%, Djaballah 12.8% and Hamrouche 12.2%. The opposition candidates called for a peaceful protest march in Algiers against military dictatorship, but the rally was banned by the authorities. Nevertheless, there were clashes between demonstrators and the security forces in central Algiers and several arrests were made. Another protest march planned for late April was also banned and thousands of riot police were deployed in the capital to enforce the ruling. No street protests had been allowed in the weeks preceding the election.

Some observers argued that a part of the military hierarchy had favoured remaining neutral in the presidential contest and were prepared to accept Bouteflika, Ibrahimi or Hamrouche as President, while the powerful military security faction supported Bouteflika and had chosen to intervene decisively to secure his victory, fearing the loss of their political monopoly and its financial rewards should another candidate win the election. Evidence of substantial support for Ibrahimi, who was supported by some FIS elements, may have been a factor in the army's decision to intervene. Some insisted that the election of Bouteflika had deepened divisions within the army high command and, ironically, had prompted the emergence of a united political opposition. It was argued that by their vigorous campaigning Aït Ahmed, Ibrahimi and Hamrouche had succeeded in reawakening public opinion, and that the election campaign had been a rare moment of liberty for Algeria. Much, however, would depend on whether the three men could maintain a united front despite their political differences. Bouteflika, meanwhile, who was sworn in as President on 27 April 1999, was considered capable of negotiating with the Islamist opposition while maintaining good relations with senior generals. During his electoral campaign he had made numerous references to the importance of 'reconciliation' and had stated that he was in favour of 'un dialogue sans exclusive'. At the end of June the Minister of Communications and Culture, and Spokesman for the Government, Abdelaziz Rahabi, was relieved of his portfolios (reportedly for leaking details of the President's future policies to the local press), but retained a cabinet position as Minister-delegate to the Prime Minister. The Secretary of State in charge of the Algerian Community Abroad, Salaouandji Tedjini, assumed the communications and culture portfolio, in an acting capacity. In early July President Bouteflika announced plans to launch a national initiative for civil concord; measures including the release of some 5,000 imprisoned Islamist militants and the incorporation of Islamist groups into the political mainstream would be subject to popular approval at a national referendum. A first batch of prisoners was released on 5 July. In late August, seeking to consolidate public support for his reconciliation programme and efforts to eradicate corruption, Bouteflika dismissed 22 of the country's 47 provincial governors. On 16 September voters at a national referendum were asked to indicate support or opposition with regard to Bouteflika's attempts to restore peace; an estimated 98.6% of voters signalled their approval of the President's policies. Meanwhile, in May it was reported that Mouloud Hamrouche had established a new political party, the Mouvement pour la liberté.

POLITICAL VIOLENCE CONTINUES

The presidential election in November 1995 did not bring an end to political violence, which continued to claim an estimated 100 victims every week. Within hours of President Zéroual's acceptance speech, Gen. Muhammad Boutighane, second in command of the navy and a personal friend of the President, was assassinated, and in December Col Boumezrague was murdered in central Algiers; both killings were attributed to the GIA. December saw a spate of car-bombs including an explosion in an Algiers suburb, which resulted in 15 fatalities. The Government estimated that during 1995 acts of sabotage by armed Islamist groups inflicted damage of more than $2,000m. Nevertheless, military analysts argued that the new strategies introduced by the security forces were more efficient than in the past, that anti-terrorist intelligence was better co-ordinated and that the self-defence groups, numbering some 18,000 men, had become increasingly integrated into the regime's security apparatus. They claimed that the security forces had made it more difficult for Islamist guerrilla bands to regroup and obtain weapons and that they had fragmented into small groups unable to mount

operations against military convoys or major military targets. As a result, Islamist militants increasingly favoured the use of car-bombs—it was estimated that in the six weeks after the start of Ramadan in January 1996 some 80 car-bombs had exploded. After the presidential election the internment camp in the Sahara for alleged Islamist militants was closed and its 640 remaining inmates were released. None the less, some 17,000 Algerians remained imprisoned, the majority without trial, for alleged terrorist activities.

Local and international human rights organizations continued to condemn both the Islamist militants and the security forces for human rights abuses. Yahia Abdennour, a veteran human rights activist, for example, claimed that some of the atrocities attributed to the GIA were actually perpetrated by the military to maintain an atmosphere of crisis for their own political ends, a view widely supported in the country. In March 1996 Amnesty International accused the security forces of resorting to torture, disappearances and extrajudicial executions, alleging that many detainees were denied a fair trial. Concern was expressed at the lack of an independent, public investigation into alleged human rights abuses, including the killings at Serkadji prison in February 1995 (see above). Journalists continued to experience violence and intimidation from Islamist militants and harassment by the authorities, and several were killed in the wave of car-bomb attacks in early 1996. The regime regularly banned newspapers for printing articles about security-related incidents, and arrested journalists on charges of libel or divulging security secrets. In February 1996 the Government tightened controls over the media, notably concerning stories relating to the violence. In January the Mouvement des femmes démocrates was formed to campaign against the many abuses that Algerian women have suffered during the violence. The new party, led by Khalida Messaoudi, a well-known feminist, anti-Islamist and spokeswoman for Saïd Saadi, claimed that 343 women had been killed by Islamist militants since 1992. A pamphlet published by a group of women journalists in March 1996 to mark International Women's Day listed 600 'assassinations' of women. In May the GIA murdered seven elderly French monks who had been kidnapped earlier from their monastery near Médéa. There were reports that the Algerian secret services had refused to collaborate with their French counterparts during efforts to secure the monks' release. There were further reports of infighting among Islamist militias, including the death in July of Djamel Zitouni, a GIA leader, in clashes between rival factions. In the following month the French Roman Catholic Bishop of Oran, Pierre Claverie, was assassinated by Islamist militants. In September Merzak, the AIS leader, was reported to have condemned attacks against the civilian population and to have urged the Islamist guerrillas to unite under his command. The AIS repeatedly insisted that it only perpetrated attacks on military or paramilitary targets. A month later a communiqué from Harakat al-Bakoun al-Ahd, a group formerly part of the GIA, condemned members of another faction, Takfir wa Hijra, composed of veterans of the Afghanistan war, for carrying out attacks against the civilian population. In late October Prime Minister Ouyahia declared that the security forces were achieving considerable success in their campaign against the Islamist militias which he insisted received support from foreign organizations. Despite the determination of Algeria's security forces to eliminate the militants, and the deep divisions within the Islamist militias, Islamist groups continued to carry out car-bomb attacks, ambushes and offensives on infrastructure such as railway lines and power supplies. In December the GIA announced that its new leader was Slimane Maherzi, also known as Abou Djamil, a veteran of the war in Afghanistan. Government claims that the security situation was improving were undermined in January 1997 when there was a sharp upsurge in violence at the beginning of Ramadan; a series of bombs exploded in Algiers and other cities, and night attacks were launched on isolated villages. At least 180 people, most of them civilians, were killed in the first two weeks of Ramadan. The bombings in Algiers continued in the period preceding the general election, while reports emerged of attacks by GIA factions on villages, increasingly involving horrific ritualistic massacres. In April more than 90 people were slaughtered in one such massacre. Islamist militants continued to target the country's infrastructure; in late April more than 20 people were killed when a train was exploded on the Algiers–Blida railway line. The security forces claimed some successes, including the destruction of an important guerrilla base near Tizi-Ouzou during which more than 100 Islamist militants were killed. However, some argued that there were indications that the Government was prepared to accept a certain level of violence in the hope that internal divisions would weaken guerrilla groups and that the massacres of civilians attributed to Islamist extremists would alienate most Algerians. According to international sources, by mid-1997 at least 60,000 people had been killed since 1992, although analysts in Algeria indicated that the real figure could be double that number.

Meanwhile, the Government denied claims that many people arrested by the security forces were detained for long periods in secret detention centres. It was alleged that 15 such centres existed in Algiers alone. Several thousand people had simply disappeared, although not all of these 'disparitions' were attributed to the security forces. A report published in June 1997 by the Fédération international des ligues des droits de l'homme confirmed the systematic use of torture by the authorities against detainees suspected of membership of 'terrorist' groups, and arbitrary executions by the security forces of suspected Islamist militants. It alleged that many of these executions were perpetrated by self-defence groups, but that the regime invariably blamed them on the Islamists.

The cycle of violence intensified in mid-1997 when a series of massacres took place in villages to the south and west of Algiers in an area increasingly referred to as the 'triangle of death'. In some villages several hundred people—virtually the entire community—were slaughtered, including babies. Some victims had their throats cut or were burnt alive, and many were horribly mutilated. The security forces appeared unable or unwilling to prevent the bloodshed; on several occasions the military failed to assist the local population during attacks that took place in the vicinity of army barracks. Although the GIA was widely held responsible for the massacres, some claimed that most of the GIA factions had been infiltrated and some were controlled by military intelligence. It was also alleged that some massacres were perpetrated by army units disguised as Islamist guerrillas. Reports in the European press, based on allegations made by former members of the Algerian security services living in exile, claimed that the Algerian secret services were responsible for the bomb attacks in Paris in 1995 and the murder of the Italian sailors at Djen-Djen in 1994 (see above). The allegations may have been made by rival military factions to discredit the head of the secret services and his associates. In August 1997, following a night of slaughter in villages south of Algiers, Kofi Annan, the UN Secretary-General, angered the Algerian Government by suggesting that the UN might consider some form of intervention in Algeria in order to stem the violence. Abbasi Madani, who had recently been released from detention, responded by writing Annan an open letter offering to appeal for an immediate truce. Shortly afterwards Madani was once again confined to house arrest, and Annan did not repeat his suggestion of international intervention. Germany, the United Kingdom and Italy appealed for international action to be taken to resolve the conflict, but the Algerian authorities remained opposed to any form of international intervention or mediation in what it regarded as its internal affairs. In September the AIS announced a unilateral cease-fire, effective from 1 October, in an attempt to expose members of the GIA as the principal perpetrators of the recent civilian massacres.

Further massacres took place in December 1997 in the days preceding the start of Ramadan and continued during the holy month, during which more than 1,300 civilians were killed. As Ramadan began, independent reports claimed that more than 400 civilians were slaughtered in one night in villages near Relizane in the north-west of the country, where the AIS had been active before announcing a cease-fire. Massacres continued in the Relizane region and in one incident an entire village was razed to the ground: there were no survivors. Attacks also took place in other parts of the north-west, and in the Algiers region. International concern at the escalation of violence in Algeria led to the dispatch of a ministerial delegation of the European Union (EU) to Algiers in January 1998. Algerian officials continued to reject all offers of foreign mediation or assistance for the victims of the violence and firmly opposed any form of

independent inquiry into the massacres. The Government repeated its complaint that the European authorities were doing insufficient to contain the activities of Islamist networks operating in the EU. A delegation from the European Parliament visited Algiers in February but had limited success. Also in February the US-based Human Rights Watch announced that there was overwhelming evidence that the security forces were responsible for the disappearance of more than 1,000 people since 1992. In January Prime Minister Ouyahia declared that despite the recent massacres the authorities were close to defeating 'terrorism'. In answer to questions from leaders of parliamentary opposition parties, he stated that 26,536 people had been killed and 21,137 had been wounded in the conflict since the beginning of 1992. This was the first time that the authorities had released official figures for the death toll, which were considerably lower than those quoted by human rights organizations.

In February 1998 official sources claimed that the GIA had suffered heavy casualties in clashes with the security forces, and the local press reported renewed fighting between the GIA and the AIS. The AIS cease-fire continued and it was claimed that the AIS had persuaded several smaller armed groups to declare a truce and seek a political solution to the conflict. Although details of the deal made between the military and the AIS that led to the cease-fire were not revealed, there was speculation that it included the incorporation of some AIS fighters into regular units of the armed forces. The Islamist opposition remained deeply divided, and there were reports that the AIS had begun co-operating with the security forces against their GIA rivals. Several European countries began proceedings to arrest Algerians suspected of providing support for the GIA. In spite of claims by the Algerian authorities that the conflict was nearly over, and that GIA groups had incurred significant losses as a result of operations by the security forces, massacres, ambushes and bomb attacks continued during 1998 and in early 1999, although not on the scale experienced at the beginning of 1998.

In April 1998 more than 100 people, including policemen, leaders of self-defence groups and local government officials, among them two mayors and a member of the RND, were arrested in Relizane for alleged involvement in the massacres of civilians. Those arrested were said to have been involved not only in eliminating suspected Islamists but also in killings linked to criminal activities and tribal rivalries. While officials admitted that some abuses were committed by the security forces and their allies, they insisted that such incidents were rare. Human rights groups continued to insist that the security forces were responsible for numerous extrajudicial executions of both individuals and groups of people, while the fate of the many 'disparus' attracted growing international attention. In July a high-level UN 'fact-finding' mission, led by Mário Soares (a former President of Portugal), was dispatched to Algeria to hold consultations with government officials and representatives of political parties and civil society; it was also permitted access to several sites of recent massacres and to Serkadji prison. The mission's report stressed the need to reinforce civilian government in Algeria and to accelerate economic reforms, but it was strongly criticized by Amnesty International for failing to address the human rights 'crisis'.

FOREIGN RELATIONS AFTER THE 1992 COUP

The resignation of President Chadli and the blocking by the military of any advance towards a parliamentary system did not adversely affect Algeria's international relations. In those Arab countries that had their own problems with 'Islamic fundamentalists' it was generally welcomed. Soon after the coup the Minister of Foreign Affairs, Brahimi, visited the Persian (Arabian) Gulf to explain the motives behind it and to draw attention to his country's economic plight. Later Maj.-Gen. Nezzar went there to discuss co-operation on security matters. At a meeting of Arab Ministers of the Interior in Tunis in early 1993, Algeria, Egypt and Tunisia attempted to convince the other participants that terrorism resulting from extremism was a common concern. Egypt also took steps to ensure that Algeria was fully supportive of US peace initiatives. Only with Sudan did relations become strained as Algeria accused it of providing training for at least 500 Islamist militants: the Algerian ambassador was recalled from Khartoum in December 1992. In September 1994 President Zéroual met Sudanese President Omar al-Bashir in Tripoli, Libya, where they were both attending the 25th anniversary celebration of the Libyan revolution. The Sudanese President and Libyan leader Col Muammar al-Qaddafi gave assurances that they would not support the Islamist extremists in Algeria. Less than a year earlier, Qaddafi had declared that the Algerian Islamists were his 'friends'. In early 1995 Algeria protested vigorously to Yemen about a visit by FIS and GIA militants, who were believed to be receiving military training and indoctrination in camps operated by the Yemeni Islah Party (YIP), and, after an unsatisfactory response, recalled its ambassador from San'a. The inflammatory speeches of the YIP's leading ideologue, Sheikh Abd al-Majid Zindani, circulated on cassette in Algeria, where Zindani was considered to be the spiritual guide of the Islamists.

Iran had previously warned that force should not be used against the FIS, and declared the postponement of the second round of voting in the general election to be illegal. Prime Minister Ghozali claimed that he had evidence that Iran had given financial support to the FIS and that it had otherwise interfered in Algeria's internal affairs. As a protest, Algeria reduced its embassy staff in Teheran in late 1992 and severed relations completely in March 1993.

Algeria's North African neighbours did not disguise their relief that a possible fundamentalist take-over had been averted. Tunisia was quick to welcome the return to Algeria of Boudiaf, and frequent exchanges of visits and a ministerial declaration in April 1992 showed how closely the two Governments were co-operating.

Relations with Morocco fluctuated. Under Boudiaf, who had long been resident in that country, Algeria reduced still further its support for the Polisario Front, and collaborated in security matters, sending Gen. Belkheir to Marrakesh in March 1992. Subsequently, however, relations deteriorated to the extent that, in January 1993, King Hassan stated that it would have been better if the FIS had been allowed to take power in Algeria. There were angry press exchanges, and localized disputes over traffic temporarily closed the frontier. Later in the month, however, a long-overdue exchange of ambassadors took place and it was announced that work would start on the gas pipeline across Morocco to Spain, which was of prime economic importance to both countries. Border posts were reopened and aid to the Polisario Front, which had initially increased under Abd es-Salam, appeared to have been reduced again. Relations deteriorated again in 1994 during the trial in Algiers of Layada, believed to be the leader of the GIA. Layada, who had been extradited from Morocco in September 1993, stated that he had been contacted by senior Moroccan army officers and asked to eliminate certain members of the Moroccan opposition living in Algeria, together with the Secretary-General of the Polisario Front, Muhammad Abd al-Aziz. At a meeting of the OAU in August 1994 President Zéroual appeared to adopt a less flexible position on the Western Sahara and angered Morocco by referring to the disputed territory as 'an illegally occupied country'. In late August, after gunmen killed two Spanish tourists in Marrakesh, the Moroccan authorities alleged that two of the suspects sought were being paid by the Algerian secret services, which it accused of sponsoring terrorists to destabililize the country. Morocco imposed entry visas on Algerian nationals and others of Algerian origin, including French nationals, visiting Morocco. Two French nationals, one of Algerian origin, were arrested in Morocco in connection with the murders, and the Algerian community was targeted in the search for terrorists. In September the French police arrested alleged associates of the two men who were found in possession of FIS and GIA literature. The Algerian Government strongly denied that it was sponsoring terrorism against its neighbour, and in late August sealed its border with Morocco. By October the tension eased somewhat and, in a gesture of goodwill, Algeria appointed a permanent ambassador to Rabat. In the same month, the Moroccan Minister of Energy and Mines visited Algeria to attend the ceremony marking the formal start of work on the Maghreb–Europe gas pipeline (see Economy). The frontier remained closed, however, and visa requirements for Algerian nationals continued to be enforced. Tensions intensified during 1995 with the re-emergence of differences over the disputed

Western Sahara. In December King Hassan expressed his anger at Algeria's 'involvement' in the Western Sahara dispute. Although reports suggest that the Algerian regime was no longer providing material support to Polisario, it remained sympathetic to their demands for self-determination. Relations deteriorated sharply in early 1998 when Algeria accused Morocco of supporting Islamist groups which, it claimed, had launched attacks against Algeria from eastern Morocco. Tensions remained high, and in July the Moroccan press claimed that Algerian troops had opened fire in one of the frontier regions. A little-publicized meeting was held in August in Oran between premier Ouyahia and his Moroccan counterpart, Abd ar-Rahman el-Youssoufi, their first since Youssoufi took office in March, to try and resolve outstanding issues, but tensions persisted. In December the UN Secretary-General held talks with the Algerian authorities as part of a tour of the Maghreb to try and resolve the Western Sahara dispute.

President Zéroual attended the sixth UAM summit in Tunis in April 1994, at which Algeria assumed the UAM presidency for a 12-month period. At the meeting Zéroual declared Algeria's commitment to working towards Maghreb unity. However, the Libyan representative stated that unless the other UAM member states ceased to comply with UN sanctions against Libya, his country would leave the organization. In reply Zéroual expressed concern about 'the sufferings of the Libyan people' but carefully avoided any direct criticism of UN sanctions. Although Libya continued to attend UAM meetings, in January 1995 its representative stated that Qaddafi would not assume the presidency of the UAM and Algeria agreed to chair the organization for another six months. Rising tensions between Algeria and Morocco resulted in a demand from King Hassan in December for the suspension of UAM activities. A UAM summit meeting, scheduled for later that month, was subsequently postponed. The UAM remained moribund, but in early 1999 premier Hamdani stated that his Government was committed to reviving the organization, which he stated was essential to achieve peaceful solutions to issues such as the Western Sahara conflict.

In early 1995 security measures were increased along Algeria's border with Tunisia after an attack on a Tunisian border post by GIA guerrillas in February, during which six Tunisian border guards were killed.

In February 1995 the Algerian Minister of Foreign Affairs visited Libya shortly after the two countries had signed a co-operation agreement. In early 1996 the Algerian Minister of the Interior met the Libyan Secretary for Justice and Public Security to discuss co-operation in security issues, and there were reports that the Libyan administration had returned to the Algerian authorities some 500 Algerians, mainly members of the FIS, who had sought refuge in Libya after the 1992 coup.

Algeria has continued to maintain close relations with Mauritania. In April 1996 the two countries signed economic and social accords, and in July President Zéroual visited Nouakchott to hold talks with President Maawiya Ould Sid' Ahmed Taya.

During 1995 Algeria pursued a more active foreign policy aimed at strengthening its relations with the rest of Africa and the Arab world. In May Algeria signed co-operation agreements with Iraq and in June President Zéroual made official visits to Egypt and Abu Dhabi (UAE). Addressing the OAU summit in Addis Ababa (Ethiopia) in June, Zéroual spoke of Algeria's role in Africa and his country's success in occasioning the reconciliation of Tuareg and government forces in Mali. In June 1996 the Prime Minister of Jordan, Abdul-Karim Kabarati, visited Algiers to express King Hussein's support for President Zéroual's policies. The Iraqi Minister of Foreign Affairs also visited Algiers that month and held talks with Algerian ministers. There were reports that the two countries were discussing co-operation in hydrocarbons development. In October Zéroual visited China, Viet Nam and the Gulf states. During the first visit to Bahrain by an Algerian President, Zéroual expressed his full support for the Bahraini authorities in their struggle against 'terrorism'. Also in October, most Arab League members were represented at a security conference held in Algiers to formulate a common policy against Islamist militancy. In October 1997 Zéroual made an official visit to Saudi Arabia. There were unconfirmed reports that Saudi Arabia had been involved earlier in negotiations between the Algerian authorities and the FIS. On assuming office in December 1998, Prime Minister Hamdani stated that his Government's foreign policy objectives would include promoting Algeria's role in the Arab and sub-Saharan African regions. An OAU summit was due to be held in Algiers in July 1999.

The need for foreign investment dominated Algeria's relations with the developed world and brought some useful dividends. In October 1992 a 20-year contract to supply gas was signed with Italy, following the signing of a similar accord with Spain. Japan made two loans to SONATRACH and in February it signed a contract to develop Saharan gas. Contracts were also signed with Portugal, Belgium and the USA and diplomatic relations established with Croatia, a possible customer for gas carried via the pipeline across Italy. In January British Petroleum had obtained a concession to prospect for gas in the Tell Atlas and the company appeared to be making Algeria its principal base in the area. Fear of offending a Western government muted Algerian criticism of Germany's failure to extradite FIS leader Kebir. While there was a measure of agreement in principle among Western governments on providing Algeria with financial support, there was a reluctance to offer the regime political backing. After a series of massacres of civilians in Algeria during 1997, which received extensive coverage in the Western media, there were more vociferous appeals for the international community to take action in order to stem the violence. While questions were raised in the West about the role of the Algerian Government in the recent bloodshed, Algerian officials criticized Western governments for allowing Islamist groups in their countries to raise funds to support 'terrorism' in Algeria.

Despite rumours that France, worried about the possibility of a fundamentalist Algeria, had prior knowledge of the military coup, and that it had even promised asylum to its leaders should it fail, the French Government disapproved of the subsequent harsh repression and did not wish to be identified too closely with an anti-Islamist Government. It was not until January 1993 that a senior figure, Roland Dumas, French Minister of Foreign Affairs, went to Algiers, where he admitted that there had been a widening gap between the two countries. However, he held cordial talks with Kafi and, declaring that France wished to participate in the modernization of Algeria, he announced that it would grant commercial credits. In June, after a visit to Paris by Malek in the course of which he met both the French President and the Prime Minister, the French Government pledged to help Algeria to combat 'terrorism'.

After the right-wing Government of Edouard Balladur took office in early 1993, France became Algeria's leading supporter in the West and lent its political and economic backing to the military regime. The French police continued to prosecute FIS cells in France which were accused of providing funds and weapons for Islamist militants in Algeria. Following the killing of five French embassy employees by suspected Islamist guerrillas at an embasssy housing compound in Algiers in August 1994, some 20 Algerians were arrested in different parts of France, accused of being Islamist militants, and interned at Folembray before most of them were expelled to Burkina Faso on the orders of the French Minister of the Interior. Several Frenchmen of Algerian origin were arrested by the French police in September in the Paris region, accused of being associates of the two suspects arrested in Morocco for the murder of two Spanish tourists in Marrakesh (see above). By the end of 1994 most of the Islamist networks in France had been dismantled and despite attempts by the French media to link Muslims, Islamism and violence, the vast majority of Algerians in France, and those of Algerian parentage, did not support the FIS; young people in particular were often indifferent to events in Algeria. One of the leading researchers on Muslims in France stressed that the efforts of organizations such as the Fraternité algérienne en France had been directed towards collecting money and weapons, not mobilizing the youth of the urban slums to form a fifth column in a new 'Algerian war'. Nevertheless, the events in Algeria resulted in the formation of numerous non-political humanitarian associations by ordinary Algerians resident in France. In September 1994 the French embassy in Algiers announced that the issue of entry visas for France was provisionally suspended and that for security reasons applications previ-

ously dealt with by French consulates in Algeria would now be centralized in France.

During the approach to the 1995 French presidential election, there was considerable debate about differences within the French Government over policy on Algeria. Alain Juppé, the Minister of Foreign Affairs, insisted that the official policy on Algeria was to encourage democratic elections when conditions permitted. He expressed support for dialogue and for the Sant' Egidio pact. His powerful colleague, the Minister of the Interior, Charles Pasqua, was accused of using security issues in France to lead his own foreign policy, especially with regard to Algeria. Interviewed in October 1994 Pasqua condemned negotiations with the Islamist opposition, exploiting the media by suggesting that should an Islamist government emerge in Algeria it would result in hundreds of thousands of people fleeing the country, the majority of whom would seek refuge in France. In addition, there were reports, denied by the French Government, that France had approached Sudanese Islamist leader, Hassan at-Turabi, to assist in fostering *rapprochement* between the Algerian Government and the FIS.

In November 1994 the French press reported that 50 volunteer French military advisers were working in Algeria and that Prime Minister Balladur's inner cabinet had agreed to give the Algerian Government 'decisive help' in its struggle against Islamist violence. For some time there had been reports that France was supplying military equipment, especially helicopters, to the Zéroual regime, and providing training for helicopter pilots. However, the French Prime Minister, Juppé, denied that France was providing military aid to the Algerian Government. In January 1995, after the hijacking of an Air France aircraft by GIA guerrillas (see above), the GIA issued a statement declaring war on France because of its 'support to the oppressive regime, in addition to its military presence in Algeria'. In February relations between Algeria and France became strained when President Mitterrand proposed that the EU sponsor a peace conference on Algeria. Algeria denounced the proposal and recalled its ambassador from Paris. The French Government emphasized that the President's proposal was a personal one, not government policy, and within a week the ambassador returned to Paris. During July–October seven people were killed, and more than 160 injured, in a series of bomb attacks across France; the GIA later admitted responsibility for the offensives. In September French police named an Algerian-born French resident, Khaled Kelkal, as a prime suspect in the bombing campaign. At the end of the month, following a large-scale operation to arrest him, Kelkal was shot and killed by French security forces as he attempted to escape. A second suspect, the Algerian-born Abdelkrim Deneche (resident in Sweden), was arrested and later released; in October the Swedish authorities rejected a French judicial ruling demanding Deneche's extradition. In November the French police arrested numerous alleged 'Islamic extremists' in Paris, Lyons and Lille. Weapons and bomb-making equipment were seized and it was claimed that the police had averted an imminent bomb attack in Lille. Also in November the British police arrested two Algerians in London, Abdelkadir Benouif and Farouk Deneche, brother of Abdelkrim Deneche. Benouif, a long-term resident in the United Kingdom, was suspected of leading the GIA cell responsible for the bombing campaign in France. In October President Zéroual cancelled a widely-publicized meeting in New York with the newly-elected French President, Jacques Chirac, in protest at France's 'malevolent' attitude towards Algeria. It was reported that Zéroual was offended by Chirac's rejection of his request for the meeting to receive extensive coverage in the mass media. Franco–Algerian relations improved towards the end of the year, with visits by the President of the French National Assembly to Algiers in December, and by the new Algerian Minister of Foreign Affairs, Attaf, to Paris in January 1996, his first official overseas engagement. In February 1996 a reciprocal investment agreement, delayed for some three years, was finalized in Paris. But in May Juppé again urged all French nationals remaining in Algeria to leave the country after the murder of seven French Trappist monks by the GIA. As a result of the murders, Algeria's uneasy relations with France deteriorated. Nevertheless, the French Government concluded that its only option was to continue to offer discreet support to the Algerian authorities. In July Hervé de Charette, the French Minister of Foreign Affairs, made an official visit to Algeria, the first ministerial-level visit for three years. However, the success of the visit was marred by the assassination of Pierre Claverie, the French Roman Catholic Bishop of Oran, only hours after meeting de Charette. In December Algerian Islamists were blamed for a bomb explosion on a Paris passenger train which resulted in the deaths of four people. Shortly after the bomb attack, the GIA threatened to renew its campaign of violence if the French Government did not sever its links with the Algerian administration. Following the election of a socialist government in France in 1997 there was speculation that the French authorities might adopt a more critical approach towards the Algerian regime. The incoming French Prime Minister, Lionel Jospin, was known to be a friend of Aït Ahmed of the FFS. In October, when President Chirac announced his support for a peace initiative for Algeria devised by Romano Prodi, the Italian Prime Minister, Algeria's Minister of Foreign Affairs accused France of meddling in Algeria's internal affairs. Allegations in the media that members of the Algerian security services may have been responsible for the bomb attacks in Paris in mid-1995 further complicated bilateral relations. However, comments subsequently made by Hubert Védrine, the French Minister of Foreign Affairs, suggested that official policy towards Algeria remained unchanged. Following allegations of massive fraud in the April 1999 Algerian presidential election, the French authorities expressed concern about the circumstances of the elections and regretted that the electoral process was not as transparent and pluralist as promised. President-elect Bouteflika responded by accusing France of regarding his country as a 'protectorate' and concluded that it should abandon its 'fixation' with Algeria.

There was speculation, during 1994, that the Clinton administration in the USA was adjusting its policy towards Algeria and that, in order to avoid the mistakes made in Iran, it was preparing for a possible Islamist regime to assume power there in the future. The acting Secretary of State for Near Eastern Affairs, Mark Parris, admitted that US officials had held talks with exiled FIS officials and maintained that the FIS was not responsible for terrorist acts perpetrated by the GIA and other militant groups. In June President Bill Clinton confirmed that there had been low-level contacts between US officials and the FIS in the USA and Germany and stated that his administration was not opposed to some form of power sharing between the Zéroual regime and 'dissident groups who are not involved in terrorism'. However, during 1995 the US administration appeared to adopt a tougher policy on radical Islamists. It was reported that the National Security Council had taken over responsibility for US policy on Algeria and was influenced by analysts in the Pentagon who argued that Islamist forces could not win an overall victory over the Government. The US administration appeared to favour promoting links with legalized opposition parties in Algeria. Aït Ahmed of the FFS was received at the Department of State during a visit to the USA in June. In November Clinton congratulated President Zéroual on his election victory, describing the high turn-out as 'a significant development'. However, in March 1996 relations became strained when the US Department of State issued its annual report on human rights which alleged that the Algerian security forces were responsible for dozens of killings and employed the use of torture. Nevertheless, later that month Robert Pelletreau, US Assistant Secretary of State, visited Algiers, the first visit by a senior US official since 1992, and reaffirmed his country's support for Zéroual's policy of dialogue. It was also reported that the US Department of State had ended contacts with FIS spokesman Haddam. In December 1996 Haddam was taken into custody by US immigration officials pending his deportation. The Centre for Constitutional Rights based in New York also initiated legal proceedings against Haddam for alleged human rights violations. In late 1997 the US Government urged Algeria to allow UN investigators into the country after the series of massacres of civilians. In early 1998 a spokesman from the US Department of State announced that the US Government wanted the Algerian authorities to do more to protect its citizens while respecting the rule of law. After the April 1999 presidential election in Algeria, which was accompanied by allegations of massive fraud, the US Department of State expressed its 'disappointment' at the result and described the contest as a

'lost opportunity'. The US administration had made it known that it regarded free and fair elections as a key element in the process of political reform in Algeria.

In March 1996 Attaf, the Algerian Minister of Foreign Affairs, attended the US-sponsored 'Summit of Peace-makers' in Egypt, an anti-terrorist summit meeting hastily arranged after a wave of suicide bomb attacks were launched against Israel. There was speculation that Algeria might begin to take a more active role in the Middle East peace process. In May reports in the Israeli press claimed that Algeria was engaged in discreet contacts with Israel as part of its campaign against Islamist militancy. In early 1997 Algeria denied reports that it was normalizing relations with Israel.

Despite a visit to Rome by Algerian Prime Minister Sifi in mid-1994, emphasizing the close links between Italy and Algeria, the Berlusconi administration appeared to be reassessing its policy on Algeria. The Italian Minister of Foreign Affairs later stated that the Algerian Government could not survive on foreign aid when it lacked legitimacy, and declared that the Italian Government was in favour of dialogue to broaden the base of the regime; however, he admitted that Islamist militants in Algeria and elsewhere in the Arab countries of the Mediterranean posed a direct threat to Italy. On a visit to Algeria in October, the Spanish Minister of Industry stated that the Spanish Government continued to offer political and economic support to the regime, but at the same time it encouraged dialogue with the Islamist opposition. The US, Italian and Spanish Governments all supported the Sant' Egidio meeting held in Rome in January 1995 which was attended by leading Algerian opposition parties, including the FIS. Relations with Italy became strained in January 1997 when an official of the Italian Ministry of Foreign Affairs proposed that the EU launch an initiative to stop the violence in Algeria and restore democracy. The proposal for a peace initiative was adopted by the Italian Prime Minister, Romano Prodi, in late 1997 and supported by France, but was strongly opposed by the Algerian authorities. Reports that members of the Algerian security services may have been responsible for the deaths of seven Italian seamen at an Algerian port in 1994 further strained relations between Italy and Algeria. The Italian Minister of Foreign Affairs, Prof. Lamberto Dini, declared that, if the allegations were substantiated, there would be reprisals against Algeria. In July 1998 Dini visited Algiers to try and improve relations and explore new areas for bilateral co-operation. At the end of the visit he praised Algeria for its economic and political developments and its openness to international markets, and appealed for renewed dialogue with the EU on Algeria's admission to the Euro-Mediterranean free-trade zone.

In March 1996 Werner Hoyer, Germany's Secretary of State for Foreign Affairs, became the first senior German official to visit Algeria since 1989. The continued presence of FIS spokesman Kebir in Germany had strained bilateral relations and reports in the Algerian press had even alleged that German security officials were favourable to the Islamists' cause and helped to support their networks. In April, however, the German authorities arrested a number of Algerians, including two sons of FIS leader Abbasi Madani, and charged them with involvement in an organization smuggling arms and explosives from Germany to the GIA and AIS in Algeria. In June 1997 Madani's two sons were sentenced to 28 and 32 months' imprisonment respectively. In October 1996 the German federal authorities failed in their second attempt to reverse a decision by a lower court granting Kebir refugee status. In late 1997 Dr Klaus Kinkel, Germany's Vice-Chancellor and Minister of Foreign Affairs, pledged his country's support for international action to resolve the conflict in Algeria. Kinkel was also a leading exponent of the EU's mission to Algeria in January 1998. On a visit to Algiers in May 1996 the Belgian Minister of Foreign Affairs expressed support for President Zéroual's political reforms and for Algeria's efforts to seek admission to the Euro-Mediterranean free-trade zone.

In December 1996 the EU agreed to begin talks on Algeria's admission to the Euro-Mediterranean free-trade zone. Discussions continued during early 1997 but were limited to establishing general principles. Both sides indicated that they hoped to enter into more detailed negotiations after the Algerian general election in June. Officials from Algeria and the EU admitted that they expected the negotiations to be difficult, although Manuel Marín, the EU commissioner responsible for Mediterranean policy, indicated in April that he was hopeful that an agreement could be reached before the end of the year. In January 1998 the EU presidency expressed grave concern at the dramatic increase in violence in Algeria, and later that month sent an EU delegation of ministers from the United Kingdom, Luxembourg and Austria to Algiers. The Algerian authorities reluctantly agreed to receive the delegation, but continued to reject all forms of foreign intervention in the country's internal affairs. Despite growing unease in Europe at the escalating violence in Algeria, and concerns that the Algerian authorities might have been involved in the bloodshed, the EU appeared reluctant to antagonize the Algerian regime and risk jeopardizing member states' substantial economic interests in Algeria.

Economy

ALAN J. DAY

Revised for this edition by RICHARD I. LAWLESS

Algeria covers an area of 2,381,741 sq km (919,595 sq miles), of which a large part is desert. At the census of February 1977 the population (excluding Algerians abroad) was 16,948,000. At the census of April 1987 the population had reached 23,038,942, in addition to about 1m. Algerians living abroad (mainly in France). The overall population growth rate averaged 3.1% per annum during 1970–80 and 2.8% per annum in 1980–92. According to official estimates, the population grew by slightly less than 2% in 1996 to reach a total of 28.9m., the estimated populations of the main cities in 1996 being 3.1m. in the capital, Algiers (el-Djezaïr), 1.2m. in Oran (Ouahran), 1m. in Constantine (Qacentina) and 800,000 in Annaba. Provisional results of the June 1998 census gave a population of 29,276,767 and indicated a decline in the annual rate of population growth from 3.2% in 1987 to 2.2% in 1997. The proportion of the Algerian population living in urban areas increased from 40% in 1970 to 54% in 1992, the average urban growth rate having risen from 4.1% per annum during the 1970s to 4.9% per annum in 1980–92. Nearly 54% of Algerians were younger than 15 years of age in 1992. The estimated average life expectancy at birth in 1990–95 was 67.1 years. The country is divided into 48 *wilayat* (departments) for administrative purposes.

Algeria has varied natural resources. In the coastal region are fertile plains and valleys, where profitable returns are made from cereals, wine, olives and fruit. The remainder of the country supports little agriculture, though in the mountains grazing and forestry produce a small income, and dates are cultivated in the oases of the Sahara. Mineral resources, in particular petroleum and natural gas, are abundant and dominate Algeria's export trade.

GOVERNMENT STRATEGY

After independence in 1962, Algerian governments sought to promote economic growth as a foundation for a future socialist

society. They acquired either a complete or a controlling interest in most foreign-owned companies. In 1966 the Government nationalized foreign-owned mines, land which had been abandoned by Europeans at independence, and insurance companies. In 1971 it assumed control of the hydrocarbons sector. The hydrocarbons sector accounted for 32.8% of Algeria's gross domestic product (GDP) in 1997. In that year, according to estimates by the World Bank, Algeria's gross national product, measured at average 1995–97 prices, was US $43,900m., equivalent to $1,500 per head.

The Government's strategy for development traditionally involved a high degree of austerity, with heavy restrictions placed on the import of luxury and consumer goods. The first Four-Year Plan, covering the period 1970–73, emphasized the establishment of a capital-intensive sector, involving the hydrocarbons, iron and steel, chemical and engineering industries, and an annual growth rate of 9.7% was achieved. The second Plan, for 1974–77, aimed to establish a sound industrial base and also put emphasis on better agricultural methods, housing, health, job-creation and training. A high level of investment (40% of GDP) was maintained, and the Government aimed to achieve an average annual growth rate of 10%. Total expenditure, originally projected at AD 52,000m., was later increased to AD 110,000m., on the basis of increased income, owing to higher petroleum prices. The country's GDP grew by an average annual rate of 6%–6.5% in the 1970s, reaching AD 120,825m. in 1979.

During the 1980–84 planning period, total investment was estimated to have reached AD 345,000m. (nearly 14% below the Government's target figure), while GDP growth averaged 4.5% per year (compared with a planning target of 8.2% per year). Under a policy of gradual economic liberalization introduced during this planning period, light industries producing consumer goods were opened up to private investment, the private sector being responsible for an estimated AD 3,400m. of investment for the creation of 20,000 jobs (notably in the textile and leatherware industries). A new investment code was instituted in 1982 to stimulate private enterprise in areas such as retailing, hotels and catering, housing, handicrafts and light industry. Tax concessions were introduced to attract foreign partners into private-sector joint ventures. Within the state sector, efforts were made from 1981 to increase productivity and efficiency, notably by reorganizing 90 of Algeria's giant state corporations into 300 more specialized units, many with decentralized management away from Algiers.

The 1985–89 Development Plan, which required total investment of AD 550,000m., reflected the Government's new priorities for development, shifting investment away from industry and into agriculture and irrigation projects. Industry was to receive 32% of the total investment, compared with 38% in the previous Five-Year Plan. Agriculture and hydraulics were to receive 14% of investment, compared with 11% in 1980–84. About 30% of total investment spending in the Plan was allocated to social infrastructure, with projects for the development of housing, education, health and transport receiving particular emphasis. The targeting of these sectors reflected the need to satisfy the requirements of a rapidly expanding population, and to compensate for the imbalances of previous plans. More than one-half of the credits in the new Plan were to be allocated to the completion of existing projects.

The diversification of government revenue away from dependence on sales of crude petroleum to include refined products, natural gas and condensates—each contributing about one-quarter of total revenue by 1983—helped Algeria to adjust to the falls in OPEC-sponsored prices and quotas. During the 1985–89 Development Plan the Government aimed to increase non-hydrocarbon exports, particularly those of agricultural produce, other minerals and manufactured goods, which in 1984 accounted for only about 2% of total exports. In late 1985 a further slump in petroleum prices gave added urgency to the promotion of non-hydrocarbon exports. By 1988, however, revenue from the export of non-hydrocarbons had reached only AD 2,500m., just over 50% of the target figure. Meanwhile, the erosion of government income in 1986, as a result of the collapse in petroleum prices, had prevented the achievement of the investment targets of the 1985–89 Plan. Algeria entered this planning period with the highest foreign debt of any country in the Arab world (an estimated $18,500m. at the end of 1985), having financed many development projects through borrowings on the international capital markets since the 1970s. In 1986 Algeria borrowed from commercial banks to finance import spending; in 1987 it sought official export credit lines to finance imports; and in 1988/89 it had to raise major new medium- and long-term syndicated loans to finance current spending. Legislation enacted in December 1987 eased restrictions on commercial bank lending to private companies and opened the way for public-sector enterprises to adopt their own annual plans, to determine the prices of their products and to invest their profits freely. By mid-1989 three-quarters of Algeria's state-controlled enterprises, including banks, insurance companies and industrial, commercial and service organizations, had become autonomous *entreprises publiques économiques* (EPEs). Formal ownership of state shareholdings in EPEs was vested in eight state holding companies (*fonds de participation*), established in 1988 to take responsibility for different sectors (agriculture, fisheries and food; mining, hydrocarbons and hydraulics; equipment; construction; chemicals, petrochemicals and pharmaceuticals; electronics, telecommunications and computers; textiles, footwear and furnishings; and service industries). Regulations restricting access to convertible currency were modified in 1988 to attract investment in productive sectors and improve the export marketing capabilities of EPEs.

In June 1989 Algeria made its first ever use of IMF resources, securing a 12-month stand-by credit worth $187m. (to support the Government's economic programme) and a compensatory financing allocation of $378m. (to assist with trade financing). In 1990 the importation of goods for resale on the Algerian domestic market ceased to be a state monopoly. Foreign manufacturers and traders who established import businesses in Algeria were offered tax incentives to reinvest their profits in the country's production facilities. Under the old import rules there had been frequent supply shortages and widespread black-marketeering. Devaluation reduced the exchange rate of the dinar from around 8 dinars per US dollar at the end of 1990 to around 22 per dollar at the end of 1992. In June 1991 the IMF agreed to make $404m. of stand-by credit available in the period to March 1992, while the World Bank approved a $350m. structural adjustment loan to be disbursed in two instalments (one available immediately). In March 1992 a group of international banks agreed to refinance $1,457m. of Algeria's short-term commercial debt.

Prime Minister Sid-Ahmad Ghozali's announcement of a 'recovery programme' in February 1992 included details of recent economic statistics highlighting the seriousness of Algeria's current crisis. Reflecting the radical devaluation of the dinar, GDP had declined, in dollar terms, by 26.9% in 1991. GDP per head declined from $2,752 in 1987 to $1,607 in 1991. Production in 1991 was only 8% higher than in 1984 even though agricultural GDP and hydrocarbons output had risen substantially. Industrial production, in contrast, had fallen by 5.5% between 1987 and 1991. Consumer prices were increasing by about 28% a year. The debt-service ratio had risen from 35% in 1985 to 72.7% in 1991. Unemployment stood at 21% in 1991. Ghozali's recovery programme gave priority to key sectors of the economy, such as agriculture, public works and construction, which were targeted in a carefully structured import programme. Priority was also to be given to purchases of pharmaceuticals, essential consumer goods, food and spare parts. Ambitious plans were announced to develop small and medium-sized companies and to restructure public companies. While the programme envisaged a strong public sector at the centre of the economy, Ghozali favoured the private management of tourism, agriculture and trade. Financing the programme depended on the availability of international credit and success in attracting international petroleum companies to invest in the hydrocarbons sector.

In July 1992, addressing the nation for the first time since becoming Prime Minister, Belaid Abd es-Salam declared that Algeria had deviated from the principles of the revolution over the previous decade, and expressed strong reservations about Ghozali's economic reforms. He warned that a period of austerity lay ahead, stating that he intended to reduce imports to the bare minimum and close some factories, if necessary, in order to service the $25,000m.-foreign debt. He rejected debt rescheduling, devaluation and further trade liberalization. In Sep-

tember the Government imposed controls on imports, indicating that preference would be given in foreign exchange allocations to basic foods, spare parts and construction materials. In November the Government suspended indefinitely imports of luxury goods in order to conserve foreign exchange. Hydrocarbon earnings had fallen from AD 68,412m. ($3,096m.) in the second quarter of 1992 to AD 58,457m. ($2,645m.) in the third quarter, as a result of lower petroleum prices and changes in dollar exchange rates.

In August 1993 the decision of the High Council of State (HCS) to dismiss Abd es-Salam and to appoint Redha Malek resulted in a further change of economic policy. Mourad Benachenhou, formerly the Algerian representative at the World Bank and an advocate of debt rescheduling, was appointed Minister of the Economy in the new Government. It became clear that important decisions on economic policy would only be taken when the HCS, the Government and a majority of the conflicting pressure groups could agree on a suitable strategy. The new Government introduced an investment code (whose implementation had been postponed during the Abd es-Salam premiership), intended to stimulate foreign and domestic private investment in areas outside the mining and hydrocarbons sectors (which were covered by separate legislation introduced in late 1991), and providing protection for investors, who were offered a range of tax and duty reductions for certain categories of investment. A new national investment agency, APSI (Agence de Promotion et de Suivi des Investissements), was established in November to accelerate investment applications.

In December 1993 talks recommenced with the IMF concerning a loan to be linked to an economic stabilization programme, and government statements indicated a return to a more liberal economic policy. Officials stated that there were plans to ease import controls and to dissolve the committee established under the previous Government to allocate hard currency. Negotiations with the IMF ended without agreement but resumed in January 1994. The economic situation was exacerbated by the depressed price of petroleum on world markets. In January 1994 Algeria ceased repayment of most of its medium- to long-term debt insured by European export credit agencies, including payments to its largest creditors. Talks on a stand-by loan from the IMF continued and, although the Government was still advocating bilateral rescheduling, most creditors were convinced that a 'Paris Club' of creditor governments rescheduling had become inevitable.

In March 1994 Algeria further reduced its forecast of export revenues for the current year, and in April the Government formally requested the 'Paris Club' to consider rescheduling up to $13,500m. of Algerian debt. In the same month the IMF approved a stand-by package for Algeria and requested donor agencies to provide substantial new loans over the next year. Over the next 12 months the IMF was to provide a $500m.-stand-by loan and a $300m.-compensatory and contingency financing facility. The IMF agreement committed Algeria to a number of reforms, including a 40% devaluation and a sharp increase in interest rates, which had already been implemented in early April.

In June 1994 the 'Paris Club' creditor governments agreed to refinance a total of about $5,400m. of sovereign debt incurred by Algeria up to September 1993, repayments to be rescheduled over a period of 15 years following a four-year grace period. (The Algerian Government had requested an eight-year grace period.) Finalization of the rescheduling arrangements was completed in March 1995. In July 1994 Saudi Arabia (not a 'Paris Club' member) rescheduled $500m. of official debt on similar terms. In October the Banque d'Algérie began talks with the 'London Club' of banks to reschedule $3,200m. of long-term commercial debt (contracted by Algerian state-owned banks and by the state energy company SONATRACH). An agreement was reached in principle in May 1995 and finalized in July 1996 whereby repayments were rescheduled to start between September 1998 and September 2000.

In April 1994 Benachenhou became Minister of Industrial Restructuring and Participation with responsibility for managing the reform of the public sector as required by the new IMF programme. Later in the year the IMF indicated its approval of current government initiatives to contain the budget deficit and acknowledged that the overall performance of the economy in 1994 had to be seen against a background of escalating violence and political uncertainty which continued to discourage investment. Algeria's GDP declined by 1.8% in real terms in 1994 (the ninth consecutive year of negative growth), compared with a planning target of 3% positive growth. In January 1995 the World Bank approved a $150m. economic rehabilitation support loan to provide urgent assistance for current reform policies, including, in particular, privatization initiatives and the restructuring of public enterprises.

In February 1995 the IMF commenced talks with Algeria to agree a follow-up to the stand-by arrangement which was due to expire at the end of March. In May the IMF approved a $1,800m. three-year extended Fund facility for Algeria. The Government undertook to continue to pursue a wide-ranging programme of structural reforms, including privatization, rationalization of the public sector, trade liberalization, monetary and fiscal reforms to reduce inflation and encourage investment and private enterprise, and the elimination by the end of 1996 of subsidies on food and other commodities.

In advance of the IMF agreement, the Government submitted a draft privatization law to public and private organizations for consultation purposes, and in early 1995 invited bids for five state-owned hotels as a pilot project for the privatization programme. Private capital participation had been permitted in public-sector companies since 1994 but no ownership transfer had actually taken place. A comprehensive privatization law was enacted in August 1995. Legislation was introduced later in the year to allow local councils to employ private contractors to manage water resources and related services.

Under a balance-of-payments support contract signed in May 1995, the European Union (EU) agreed to lend Algeria $268m. on conditions similar to those of the IMF. In July the 'Paris Club' creditor governments agreed to a refinancing of debts worth over $7,000m. Payments due between June 1995 and May 1997 were rescheduled over 15 years starting in 1999. Unlike the June 1994 'Paris Club' agreement, which dealt only with repayments of principal, the July 1995 agreement included some rescheduling of interest payments. Finalization of the rescheduling arrangements under this agreement was completed in July 1996. In April 1996 the World Bank approved a further loan of $300m. to support the Government's structural adjustment programme, together with a loan of $50m. in support of job-creation and other social welfare measures to offset some of the negative social effects of the adjustment programme. Higher agricultural output and stronger international petroleum prices contributed to a 3.8% increase in real GDP in 1995 (the first year of real growth since 1985).

To expedite the restructuring of public-sector enterprises, the system of ownership through *fonds de participation*, dating from 1988 (see above) was replaced in October 1996 by a new ownership structure. The former holding companies, which had been conceived as permanent fiduciary institutions, were replaced by 11 holding companies authorized not merely to hold shares in state enterprises but also to offer shares for sale and to take action to close 'non-performing' enterprises. Once they had fulfilled their roles as vehicles for the transfer of state assets to the private sector and into independent public companies, the holding companies would disappear.

The World Bank stated in February 1997 that a total of 138 public-sector 'industrial units' had been disposed of to date, although 87 of these were liquidated rather than sold as going concerns and 13 others were construction companies rather than industrial enterprises. The World Bank noted that a further 134 public-sector companies had been offered for sale, and that the Government's privatization programme was currently running somewhat ahead of the agreed schedule. The 134 companies in the most recent round of privatization offers included 60 industrial units (many of them individual plants owned by larger public enterprises) as well a commercial, agricultural and tourism companies. Some were offered for outright or partial sale, while others were tendered to the private sector on a management contract basis. The next round of privatizations was to focus on 1,300 small and medium-sized companies.

In December 1996 the Government published a series of amendments to the August 1995 privatization law, designed to stimulate private-sector interest in the purchase of fully operational companies. Eligibility for privatization (hitherto

limited to EPEs) was to be extended to enterprises controlled by Algerian local government bodies; purchasers were no longer to be required to take on a legal duty to maintain pre-privatization staffing levels (although financial incentives would be available to buyers who gave voluntary undertakings); mechanisms were to be introduced to facilitate sales of shares to retail investors as well as to corporate buyers, and to open up the possibility of direct share sales to companies' staff members; and the administration of the privatization process (including the pricing of share offers) was to become more flexible.

There was a fall in the end-year inflation rate to 15% in 1996, compared with 22% in 1995 and 39% in 1994, reflecting the economy's adjustment to more stable conditions after the large 1994 currency devaluation and the subsequent withdrawal of price subsidies. The dinar's end-year exchange rate against the US dollar (AD 24.10 in 1993, AD 42.90 in 1994 and AD 52.20 in 1995) underwent a relatively small decline to AD 56.20 in 1996. The freeing of prices had by early 1997 produced what the World Bank described as 'one of the most liberal trade regimes in the region'. Increases in both the volume and unit value of hydrocarbon exports, coupled with a record cereals harvest, gave Algeria a significant trade surplus and a positive current-account balance in 1996, underpinning the achievement of 4% real GDP growth in that year. Most hydrocarbon exploration and production operations were relatively remote from centres of terrorist activity, which was not regarded as a major risk factor by petroleum companies operating in Algeria. Following the rescheduling agreements with foreign creditors, debt servicing as a proportion of export earnings (which had reached 76.3% in 1993, 47.0% in 1994 and 33.5% in 1995) fell to 27.7% in 1996, when the country's total external indebtedness amounted to $33,260m. (of which $30,808m. was long-term public debt). Foreign-exchange reserves doubled during 1996 and were sufficient to cover six months' imports in the first quarter of 1997. A greatly reduced budget deficit was achieved in 1996, and the 1997 budget estimates (see Finance section below) were said by the Government to include an 'underlying surplus'.

Against these and other positive macroeconomic achievements had to be set the fact that the output of non-hydrocarbon industries fell by 8% in 1996, contributing to a rise in Algeria's official unemployment rate to 28.3% of the work-force. Over 56% of the unemployed were aged under 24 years and about 80% were aged under 30 years. The removal of price subsidies had caused hardship for the poorest sections of society, who were also those worst affected by acute housing shortages in Algiers and other urban centres. Given the continuing volatility of the internal security situation, the Government was fully aware in 1997 that many entrenched structural problems remained to be solved before Algeria could claim to have made a genuinely successful transition to a free-market economy. GDP grew by an estimated 1.3% in 1997, well below the official target of 5%, as a result of a decline in both agricultural and industrial production. Non-hydrocarbon exports fell by 50% in that year.

Following an agreement with the powerful Union Générale des Travailleurs Algériens (UGTA) in March 1998, it was reported that the Government had pledged to stop the closure of public-sector companies and promised to re-examine the position of some enterprises that had already been closed. The agreement was reached after a two-day strike, organized by the UGTA to protest against the high level of redundancies, resulting from the closure of many loss-making public-sector companies, and delays in the payment of salaries. Industrial relations nevertheless remained strained, and there was a succession of strikes later in the year. In early 1999 officials reported that the reform of public-sector companies was nearly complete. Firms had either been closed, restructured or sold to employees. In May 1998 Abdelkrim Harchaoui, the Minister of Finance, stated that Algeria would not seek to extend the IMF credit facility when it expired later that month, because the economy could be supported by private investment. He insisted, however, that the Government would continue to maintain fiscal discipline even though its economic policies would no longer be under the formal scrutiny of the IMF. There were reports that the IMF had wanted Algeria to make a new agreement. Some financial analysts argued that, even though there had been an improvement in Algeria's macroeconomic situation, the Government would experience problems in raising finance cheaply from international capital markets. In May Prime Minister Ahmed Ouyahia signed a decree listing the first 89 companies to be privatized from June, affecting enterprises in the tourism, construction, services, agribusiness and transport sectors. The Government hoped to raise some $1,000m. from the sales. Despite the announcement of further privatization plans, later in the year the head of the National Privatization Council admitted that it was proving difficult interesting local or foreign investors in the programme. After the sale of a number of state-owned hotels was completed in November, the leader of the union of workers in the hotel and tourism sector threatened to burn down one of the hotels to demonstrate his union's opposition to the sale of state assets. Early in 1999 the part-privatization of the state-owned pharmaceuticals company, SAIDAL, and the cereals distributor, Eriad-Setif, raised more than AD 4,000m. for the Government.

Foreign investment outside the energy sector remained limited. A World Bank study in mid-1998 identified the inefficiency of the local banking system, property disputes, the threat of currency devaluation and the tax burden as the major obstacles deterring investment in the private sector. An independent report published in that year identified the informal economy as Algeria's most dynamic sector, accounting for over one-third of non-agricultural employment and one-fifth of household income.

After his appointment as premier in December 1998, Smail Hamdani announced a one-year economic programme that largely continued the work of the outgoing administration. He pledged a radical reform of the banking system, a more efficient privatization policy and increased local and foreign private investment. On the sensitive issue of labour relations Hamdani stated that the Government would seek solutions through dialogue, but warned that escalating pay rises for public-sector workers could increase the budget deficit and lead to inflationary pressures. Hamdani stated that the projected 1999 growth rate of 6.2% was 'realistic'. Projected real GDP growth in 1999 was later revised downwards to around 5% to take account of weak oil prices in the early part of the year. The official figure for growth in 1998 was provisionally estimated at 5.2%, but independent sources claimed that it was probably half that figure and stated that the Government's forecast for 1999 was optimistic. The IMF estimated real GDP growth during 1998 at 4%. According to official figures, the average inflation rate fell from 5.7% in 1997 to 5% in 1998.

Following a 'fact-finding' mission to Algeria in March 1999 the Arab Monetary Fund agreed to provide a loan of $131m. to help finance economic reforms in 1999–2000 and provide balance of payments support. In May the IMF approved a credit of $300m. under the compensatory and contingency financing facility to help Algeria offset the sharp decline in its hard currency earnings as a result of low oil prices in 1998. The loan was to be repaid over three to five years.

AGRICULTURE

The agricultural sector employed 25.0% of Algeria's labour force in mid-1997, and accounted for 10.2% of GDP in that year. In 1998 the value of domestic agricultural production reached $8,000m., according to official figures. More than 90% of the land consists of arid plateaux, mountains or desert, supporting herds of sheep, goats or camels. Only the northern coastal strip, 100 km–200 km wide, is suitable for arable farming. There are about 7.6m. ha of cultivable land, representing less than one ha per rural inhabitant. Forests cover about 4.4m. ha. Most of the Sahara is devoted to semi-desert pasturage. The most valuable crop is the grape harvest, and wheat, barley and oats, grown for local consumption, cover a large area. Other crops include maize, sorghum, millet, rye, rice, citrus fruit, olives, figs, dates and tobacco. A total of 3.6m. ha were under cultivation in 1998/99, of which only 400,000 ha were irrigated. The Government planned to increase the irrigated area to 1m. ha.

Scarcity of food is an acute problem in Algeria. In 1969 the country was 73% self-sufficient in food. However, by 1986 it was importing 75% of its food requirements, and by 1990 produced only 25% of its domestic cereal requirements. In 1991 food and live animals comprised about 24% of total imports. The recovery

programme announced by the Government in February 1992 drew attention to a dangerous level of dependence on strategic products such as cereals, animal feed and milk and stated that efforts to raise agricultural production were central to economic policy. Spending on imported foodstuffs amounted to $2,753m. (25.6% of total imports) in 1995 and $2,561m. (28.7% of total imports) in 1996. Food imports were estimated at $2,200m. in 1998. The Government stated that it planned to reduce the country's food dependence by 10% over the period 1999–2004.

AGRICULTURAL REFORM

By October 1963 state-owned farm land accounted for 2.7m. ha, roughly one-half of the cultivable land in Algeria. In May 1966 all remaining unoccupied property which had been evacuated by settlers was finally expropriated by the state; the land was turned into state farms run by workers' committees.

In mid-1971 President Boumedienne announced an agrarian reform programme which provided for the break-up of large, state-owned farms and their redistribution to families of landless peasants, or *fellahin*, who would be organized in co-operatives. The 1972 census showed that one-quarter of cultivable land was in the hands of 16,500 large landowners who represented only 3% of the total number of farmers. In 1973 the reform programme entered its second phase, that of redistributing over 650,000 ha of private land to 60,000 *fellahin*. Those receiving land were to be granted permanent use of it, on condition that they belonged to one of the new co-operatives. Through these they were to be given state loans and assistance in the form of seed, fertilizers and equipment. By early 1979, 22,000 absentee landowners had been obliged either to cultivate their land or to cede it to peasant farmers, and more than 6,000 agricultural co-operatives of various kinds had been established.

Following Boumedienne's death, there was a gradual change of priorities and the private sector was given new freedom to produce and market agricultural goods. The Chadli Government encouraged private, small-scale farmers by supplying equipment, loans and assistance, while investment in agricultural infrastructure, particularly the construction of dams, was increased in an attempt to reduce the need for food imports. Moreover, to discourage rural drift (particularly among young people), farmers' earnings were more closely related to those of their industrial counterparts.

A new Banque de l'Agriculture et du Développement Rural (BADR) was established in 1982, expressly to serve the rural sector, whether socialist, state-owned or private. One of the BADR's first projects was a lending programme which aimed to make Algeria self-sufficient in eggs and poultry. In the same year, the Government relaxed price controls, allowing farmers to sell directly to markets or to private vendors and across *wilaya* boundaries. After 1983, farmers who brought desert land under cultivation automatically received a title to own the land. In 1987, in an attempt to increase efficiency and improve motivation, the Government introduced major reforms, whereby the *fellahin* were allowed to form autonomous collectives, comprising at least three members, and to lease land units, formed from the subdivision of the existing 3,347 co-operatives. The *fellahin* were to be allowed to transfer or trade their leases after five years, to control their own operations, to work directly with banks and to make a profit. The state, as owner of the land, was to restrict its role to the provision of aid and to mediation in disputes over land division. By October the reforms were being implemented in 41 *wilayat*, and by the end of the following year 3,000 state farms were controlled by private entrepreneurs. Meanwhile, subsidies on staple foods were drastically reduced. In January 1989 the Banque Nationale de Paris agreed to channel an agroindustrial loan of nearly $750m. for 1989 through the BADR. In 1990 the Government announced plans to encourage agricultural producers to form a new type of co-operative which would market goods directly, thereby promoting price competition between the co-operatives. A public fund to protect farmers against climatic and other disasters became operational in May. The fund guaranteed loans and other credits to small-scale farmers affected by natural disasters. The Government also released $107m. to support farmers affected by drought. State subsidies for agriculture totalled $1,000m. in 1990. In late 1994 the Government announced the creation of a lending agency, the Crédit Mutuel Agricole, to provide private-sector farmers with financial assistance, and measures to reschedule their outstanding debts. A land reform bill was presented to the National People's Assembly in early 1998 to allow the privatization of state-owned farms. Land reform was one of the measures insisted upon by the World Bank under its structural adjustment loan agreement with the Algerian Government. By clarifying land rights, the Government hoped to encourage greater investment in agriculture and create new jobs. Some 1.5m. ha of state-owned agricultural land was scheduled to be distributed to farmers during the following three years.

CROPS

Wines have been one of Algeria's principal agricultural exports since the time of the French. However, Algeria's annual output of wine declined from 8m. hl in the early 1970s to around 3m. hl by the end of the decade. The Government planned to maintain production at the latter level for the rest of the century, while developing the production of better-quality wines, which are more easily marketable in the EU. In the early 1980s annual production fell to less than 2m. hl, before recovering to 2.2m. hl in 1985. In 1997 Algeria produced 46,000 tons of wine.

Production of cereals, grown principally in the Constantine, Annaba, Sétif and Tiaret areas, fluctuates considerably, largely as a result of drought, and grains have to be imported, particularly from Canada, France and the USA. Wheat and barley are the most important cereals. Yields are very low, at 26 cwt–32 cwt of wheat per ha, compared with average US yields of 70 cwt. In 1995 the harvest was badly affected by drought, producing only 2.1m. tons of cereals; however, in 1996 the cereals harvest totalled 4.6m. tons, including 2.8m. tons of wheat and 1.8m. tons of barley and oats. After a serious drought in 1997 cereal production fell to only 869,300 tons. Officials reported that 2.3m. ha of farmland (out of a total of 3.5m. ha) had been designated as drought-affected. Although cereal production rose to just over 3m. tons in 1998, this figure was still well below the level achieved in 1996. After heavy winter rain, it was anticipated that the 1999 harvest would be above average.

Olives are grown mainly in the western coastal belt and in the Kabyle. Production fluctuates because of the two-year flowering cycle of the olive. Production of olives totalled 319,000 tons in 1997. The citrus crop, grown in the coastal districts, increased from 350,000 tons in 1997 to 418,000 tons in 1998. Production of potatoes reached 1.2m. tons in 1996, but declined to 948,000 tons in 1997. About 300,000 tons of dried onions are produced annually. Algeria is the world's fifth largest producer of dates, most of which are consumed locally, with production reaching 303,000 tons in 1997 and 418,000 tons in 1998. About 4,000 tons of tobacco leaves are produced each year.

Overall agricultural output increased by 16.2% in volume in 1995 and by 12.7% in 1996. Although output declined by 14.9% in 1997, it rose by 27% in 1998. Agriculture provided 11.9% and 10.2% of GDP in 1996 and 1997, respectively. The average cereals yield in 1996 was 1.26 tons per ha, compared with 1.16 tons per ha in 1991.

LIVESTOCK, FORESTRY AND FISHING

Sheep, goats and cattle are raised, but great improvements are needed in stock-raising methods, grassland, control of disease and water supply if the increasing demand for meat is to be satisfied. The cost of raising milk production is prohibitive, and a high level of imports is likely to continue. By 1990 60% of milk requirements were imported. However, there has been a notable success in increasing production of white meat, in which the country was self-sufficient by 1984. About 1m. eggs, or one-half of total consumption, are imported annually. In September 1997 there were 1.3m. head of cattle, 16.8m. sheep and 3.1m. goats. Private farmers produce 90% of local meat.

The area covered by forests declined rapidly during 1970–90 in spite of the Government's plans to reafforest 364,000 ha in the 1985–89 Plan period. In 1975 work began to grow a 'green wall' of pines and cypresses 20 km wide, planted along 1,500 km on the northern edge of the Sahara from the Moroccan to the Tunisian frontier in order to arrest steady northward desertification. The project, which encountered numerous problems, also involved the construction of roads, reservoirs and plantations of fruit trees and vegetables.

During the 1990s the Government sought to exploit its fishing potential and made attempts to increase the annual catch. The total catch in 1996 was 99,678 tons. In late 1994 it was announced that construction of a new fishing port at el-Kala would begin in 1995, with capacity for 29 trawlers, 34 sardine boats and at least 25 small fishing boats. The $10.5m. project was to include a 900-metre quay and ship repair facilities.

METALLIC MINERALS

Algeria has rich deposits of iron ore, phosphates, lead, zinc and antimony. Mining is controlled by the state enterprises that were created in 1983 by the restructuring of the former monopoly, SONAREM. A mining law, passed in December 1991, allowed local private sector and foreign investment in the mining sector, which had been nationalized in 1966. The aim was to increase exploration and reverse declining production. Under the terms of the law, foreign companies could form joint ventures and benefit from tax concessions. The Office de Recherche Géologique et Minière was created to co-ordinate the various enterprises, state and private, involved in this sector. In September 1993 the Government authorized the allocation of mineral research permits to local companies and included for the first time enterprises from outside the mining sector.

Iron ore is mined at Beni-Saf, Zaccar, Timezrit and near the eastern frontier at Ouenza and Bou Khadra. The average grade of ore is 50%–60%. Production has fluctuated greatly since independence, reaching 2.1m. metric tons (metal content) in 1974, falling to 897,000 tons in 1981, and totalling 1.0m. tons in 1996. The deposits at Ouenza represent 75% of total production. Important deposits were found in 1975 at Djebel Bouari in Batna *wilaya*. Italy is the biggest customer, followed by the United Kingdom. Production of bituminous coal, mined at Colomb Béhar-Kenadza and Ksiksou, declined steadily from 153,000 tons in 1958 to about 5,000 tons in 1978. Production was estimated at 22,000 tons in 1995.

The main deposits of lead and zinc ores are at el-Abed, on the Algerian-Moroccan frontier, and at the Kherzet Youcef mine, in the Sétif region. Total zinc output (metal content) declined from 12,200 tons in 1988 to 3,700 tons in 1997, and deposits could be exhausted by the late 1990s. Production of lead in 1996 totalled 900 tons.

Exploitation of large phosphate deposits at Djebel-Onk, 340 km from Annaba, began in 1960. Total phosphate rock output was 760,000 tons in 1996. About one-half of phosphates produced is exported, mainly to France and Spain. Exports of phosphates earned AD 240m. ($27m.) in 1990.

Other mineral resources include tungsten, manganese, mercury, copper and salt. In January 1996 it was reported that mercury production was declining owing to technical problems. The Entreprise Nationale des Métaux Non-Ferreux exported only 2,500 flasks in 1995 (compared with a capacity of 25,000 flasks a year). Production of marble at Bendjerah in Guelma amounted to 3,500 cu m in 1990. According to studies carried out by the state-owned Entreprise d'Exploitation des Mines d'Or (ENOR), gold deposits at Tirek and Amessmessa in the Haggar region are capable of producing yields of 25.1 grams per ton. Having failed to secure investment from outside Algeria, ENOR was in 1996 joined by SONATRACH, Société Algérienne d'Assurance and the Banque d'Algérie in a joint venture to develop the Tirek gold deposits. In 1998 the Minister of Energy and Mines stated that some $40m. had been invested in the Amessmessa gold mine, where reserves were estimated at 80 tons, capable of producing two tons per year. Co-operation in the mining sector with South Africa, which was already involved in the exploitation of gold and diamond mines in southern Algeria, was to be strengthened. In 1999 the Government made changes to the mining law to try and attract more private investment into a sector considered underexploited, and was reported to be offering a series of partnerships with the state holding company.

ENERGY RESOURCES

Production of crude petroleum in the Algerian Sahara began, on a commercial scale, in 1958. The principal producing areas were at Hassi Messaoud, in central Algeria, and round Edjeleh-Zarzaitine in the Polignac Basin, near the Libyan frontier. Algeria's production of crude petroleum increased from 1.2m. metric tons in 1959 to 26m. tons per year in 1964 and 1965, with output limited by the capacity of the two pipelines to the coast, one from the eastern fields through Tunisia to La Skhirra, and the other from Hassi Messaoud to Béjaia on the Algerian coast. The Government established a state-controlled company, the Société Nationale pour la Recherche, la Production, le Transport, la Transformation et la Commercialisation des Hydrocarbures (SONATRACH), to be responsible for the construction of a third pipeline from Hassi Messaoud to Arzew on the coast. This pipeline came into operation in early 1966. In that year Algeria's production of crude petroleum was increased by substantial quantities from oilfields at Gassi Touil, Rhourde el-Baguel and Rhourde Nouss. Subsequent discoveries of petroleum were made at Nezla, Hoaud Berkaoui, Ouargla, Mesdar, el-Borma, Hassi Keskessa, Guellala, Tin Fouyé and el-Maharis. There were about 50 oilfields in operation in early 1989. Export pipelines link the oilfields to Algiers, to supply the refinery at el-Harrach, and to Skikda. Increased production of condensates and liquefied petroleum gas (LPG) prompted the construction of special pipelines to Arzew.

Output of crude petroleum peaked at around 1.2m. barrels per day (b/d) in 1979, representing over 92% of total Algerian oil production in that year. Thereafter output of crude petroleum was restricted in order to prolong the life of the oilfields and, after 1983, to conform to the production quotas set by OPEC. Production of other hydrocarbons, particularly gas, liquefied natural gas (LNG), natural gas liquids (NGL, a category which includes condensates) and refined products, assumed greater importance as a source of government revenues. By 1986 production of crude petroleum had decreased to an average of 670,000 b/d, mainly from the Hassi Messaoud oilfield, representing 56% of Algeria's total oil production in that year. By the mid-1990s, as new oilfields came into production, output began to rise. Algeria produces a light crude, with a low sulphur content, which is attractive to foreign refiners. Algeria's proven and recoverable petroleum reserves at the beginning of 1998 totalled 9,200m. barrels, equivalent to 18.8 years' output at 1997 levels. Although Algeria agreed to decrease production by 80,000 b/d from July 1998 (as part of an overall OPEC reduction totalling 2.6m. b/d to offset sharply falling oil prices), its actual cutback was much smaller and production during 1998 averaged 820,000 b/d rather than its revised quota of 788,000 b/d. Production averaged 820,000 b/d during the first quarter of 1999, but from 1 April Algeria's OPEC quota was reduced to 731,000 b/d as part of a new round of cuts agreed by OPEC ministers in March. Algeria's Minister of Energy and Mines instructed SONATRACH to negotiate with its foreign partners over sharing the production cuts. In early 1999 the Minister stated that the country's crude oil production capacity was expected to reach 1.3m. b/d by 2003 and 1.5m. b/d by 2005. About 72% of Algeria's exports of crude petroleum go to Western Europe, and another 17% to North America.

Algeria had a total refining capacity of 464,000 b/d in January 1988, and by February 1989 capacity had risen to more than 470,000 b/d. The Government had complete control of the Algiers refinery (capacity 58,000 b/d) and of the domestic distribution network. The expansion of a small refinery at Hassi Messaoud, with a capacity of about 23,000 b/d, was completed in 1979. There are other refineries at Arzew (built by a Japanese consortium and completed in 1973; capacity 60,000 b/d) and Skikda (built by Snamprogetti of Italy and completed in 1980; capacity 323,000 b/d). In 1996 Algerian refineries had an output capacity of around 590,000 b/d (22.5m. tons per year) of refined products. New investment was being sought to expand capacity, initially to supply the domestic market; new developments proposed included a condensate refinery at Arzew or Skikda, to be completed by 2001, and a 180,000-b/d crude oil refinery scheduled for completion in 2003. Algeria's domestic fuel prices were very low by international standards until March 1994, when the Government doubled the retail price of diesel fuel and petrol. In April 1995 the price of petrol for car-users was increased by 8%–11% as part of the Government's efforts to raise more revenue and control energy consumption.

In 1989 the Government announced its intention to increase the efficiency of the energy sector through new exploration and the introduction of a market-related price structure; also, exports of value-added products, such as condensate and LPG,

were to be increased at the expense of those of crude oil. In May 1991 Total of France and SONATRACH signed an agreement to develop condensate and LPG reserves in the Hamra field, 250 km from Hassi Messaoud.

In 1991 the Government established an organization to monitor energy strategy and projects. Its duties were to include approving oil-exploration concessions. Its members initially comprised the Minister for Industry and Mines, the Ministers of Commerce and Economic Affairs, the heads of SONATRACH and SONELGAZ and the Governor of the Central Bank.

At 1 January 1998 Algeria's published proved reserves of natural gas—mostly unassociated with oilfields—totalled 3,700,000m. cu m, equivalent to 70 years' output at current rates. Most of the gas was in the Hassi R'Mel region, 400 km south of Algiers. The field was discovered in 1956, and is still considered to be one of the largest in the world. Unassociated gas is also found near In Amenas, Alrar, Gassi Touil, Rhourde Nouss, Tin Fouyé and In Salah. The Government invested heavily in the development of these gas fields. Pipelines were laid to the coast, to supply local gas distribution systems, and LNG has been exported since 1965. The export of dry natural gas to Italy began in 1983 following the inauguration of the Transmed pipeline (running from Algeria to Sicily via Tunisia and the Mediterranean). By 1997 gas products comprised 34% of Algeria's total export receipts.

Before 1962 Algeria exported relatively small amounts of LNG from the Camel liquefaction plant at Arzew. The second phase of Algeria's gas development began in the early 1970s with the negotiation of major new export contracts with companies including the USA's Distrigas, Trunkline and El Paso, Belgium's Distrigaz, Enagas of Spain, and Italy's SNAM (a subsidiary of the Italian state energy group, Ente Nazionale Idrocarburi—ENI). Exports of LNG to the United Kingdom continued, and new contracts were signed with Gaz de France. The price of the gas to be delivered under the contracts was calculated according to the value of equivalent amounts of refined petroleum products (on a calorific basis). In 1978 there was a shift to a more aggressive pricing policy. The Government argued that the old pricing terms did not fully compensate Algeria for the massive investments in LNG facilities and transportation that it had made. The central feature of the change in Algerian gas policy was the demand that natural gas prices be linked to the then rapidly rising price of crude petroleum. The change in policy was strongly opposed by Algeria's customers, but the Government was able to persuade several clients to accept the terms, using various economic and political sanctions.

SONATRACH nevertheless lost several customers—El Paso, British Methane (after 1981) and Trunkline, which suspended purchases at the end of 1983. Other countries, such as the Federal Republic of Germany and Austria, considered buying Algerian gas, but then obtained cheaper supplies from the USSR and Norway. SONATRACH therefore became more flexible on the link between crude oil and gas prices in order to win new customers, while insisting on the existing index with current buyers. In April 1987 the US Panhandle Eastern Corpn, the parent company of Trunkline, agreed to resume shipments of Algerian LNG in late 1988. The price of deliveries was to be based on a flexible formula which would preserve SONATRACH's interests, while taking account of developments in the international market. In late 1987 Distrigas of Boston, USA, resumed shipments at the spot market price, after reaching a short-term agreement with SONATRACH in November. Distrigas had gone into liquidation under the US federal bankruptcy code in 1985, when its previous long-term contract with SONATRACH had proved to be too expensive. In February 1988 SONATRACH and Distrigas signed a 15-year contract, for the supply of LNG, whereby gas would be sold at 'market-responsive' prices. According to the terms of the contract, Distrigas was to pay for shipping and regasification, after which the gas would be sold at market prices and the profits divided on a ratio of 63:37 basis in SONATRACH's favour. In early 1988 SONATRACH reached similar long-term agreements with DEP of Greece and Botas of Turkey. Meanwhile, the signing of an agreement with Ruhrgas of the Federal Republic of Germany over purchases of LNG, discussed in late 1987, was delayed until early 1989. In 1991 a gas export agreement with ENI of Italy envisaged an increase of nearly 60% in the volume of SNAM's gas purchases from Algeria over the next 25 years.

In October 1992 Ente Nazionale per l'Energia Elettrica (ENEL) of Italy signed a 20-year supply contract with SONATRACH, starting in the last quarter of 1994, to lift 4,000m. cu m of gas annually through the enlarged Transmed pipeline and 1,000m. cu m–2,000m. cu m of LNG. The agreement helped to diversify gas exports and to strengthen Algeria's position in the Italian market. In January 1992 it was reported that Gaz de France had signed a series of new agreements with SONATRACH to extend its three gas supply contracts for another 10–15 years and that a new 10-year accord had been agreed. France was the major importer of Algerian LNG and, following the new agreement, annual imports were anticipated to rise to more than 10,000m. cu m. Gas sales to France increased from 1996, and Algeria was Gaz de France's second largest supplier in 1998, accounting for 27% of its supplies. In June 1992 SONATRACH signed a contract with Enagas of Spain to supply 6,000m. cu m of natural gas per year over 25 years via a new Maghreb-Europe pipeline (see below). In April 1994 the Portuguese consortium Transgas signed a 25-year contract with SONATRACH to take 2,500m. cu m of natural gas a year via the same pipeline. Under the terms of a co-operation agreement signed with SONATRACH in October 1994, ENI made a commitment to purchase 26,000m. cu m of natural gas a year by 1997, almost double the current amount. In late 1995 SONATRACH announced that it had signed an agreement to supply an extra 1,000m. cu m of LNG to Botas of Turkey in addition to the 2,000m. cu m already supplied. In May 1996 it was reported that Algeria's gas exports to the EU increased by 24% in 1995 to 1.6m. tons of oil equivalent, representing one-quarter of all EU gas imports. Algeria supplied one-half of Italy's natural gas imports in 1995.

In 1990 contracts were signed for the renovation of gas liquefaction facilities at Skikda and Arzew which were constructed in the 1970s. In January 1992 it was reported that the GL1-K plant at Skikda was operating at about 55% of its annual capacity of 8,500m. cu m. The three plants at Arzew, GL1-Z, GL2-Z and GL4-Z, with capacities of 10,580m. cu m, 10,700m. cu m and 1,400m. cu m, were operating at 60%, 85% and 90% of their respective capacities. In January 1996 SONATRACH announced that the renovation of the LNG units at Arzew and Skikda would raise total capacity to 30,000m. cu m per year and would generate additional revenue of up to $5,000m. The renovation programme, which was scheduled for completion in mid-1998, was expected to prolong the units' life by some 20 years. LPG exports, which totalled 5.8m. tons in 1997, were projected to increase to 6.8m. tons in 1999.

The annual capacity of the Transmed gas pipeline between Algeria and Italy was due to increase from 16,000m. cu m to 24,000m. cu m during 1997 on completion of expansion work. Transport of gas through the pipeline was halted for four days in November 1997 after a fire was reported in one of the sections. SONATRACH denied reports that the incident was an act of sabotage by Islamist guerrillas. In November 1996 a new Maghreb–Europe gas pipeline, running 1,365 km from Algeria to Spain via Morocco and the Mediterranean, carried its first supplies of Algerian dry gas to Spain. Portugal was linked to the pipeline in early 1997. Initially operating at a capacity of 7,000 cu m per year, the Maghreb–Europe line was expected to transport about 10,000m. cu m by 2000. In order to bring Algeria's expanded export pipeline capacity into full use there was a requirement to increase supplies from the Hassi R'Mel gasfield by building an additional 970-km 48-in trunkline within Algeria. In late 1997 the European Investment Bank (EIB) announced a $300m. loan for SONATRACH towards the $1,000m. project, known as the GR2 pipeline. Algeria's Minister of Energy and Mines stated that exports of natural gas reached 54,000m. cu m in 1998 and would rise to 60,000m. cu m in 1999. He envisaged exports rising to 75,000m. cu m in the short term and 100,000m. cu m in the medium term as a result of new discoveries, with Europe remaining the major market for Algerian gas. However, Algeria was expected to encounter growing competition in the European market in coming years. In February 1999 SONATRACH held talks with Gazprom of Russia about possible co-operation. In May it was reported that the chief economic adviser to the newly-elected President,

Abdelaziz Bouteflika, favoured a delinking of gas contract-pricing from the oil-price basket.

In 1970 the Algerian oil interests of Shell, Phillips, Elwerath and AMIF were nationalized, after protracted negotiations had failed to achieve agreement on tax reference prices, and SONATRACH thus became Algeria's largest producer. In 1971 Algeria nationalized French petroleum companies operating in the country, as well as pipeline networks and natural gas deposits. Later in the year President Boumedienne issued a decree banning concession-type agreements and laying down the conditions under which foreign oil companies could operate in Algeria. As a result, SONATRACH gained control of virtually all of Algeria's petroleum production, compared with only 31% in 1970. After 1979 SONATRACH attempted to bring foreign oil companies back to Algeria to explore, owing to its declining petroleum reserves. Some companies, such as Italy's Agip and France's Total, made small discoveries. In 1986 the Government passed a new oil exploration law, which offered better terms for foreign exploration companies, with the aim of encouraging those that had made discoveries to develop their finds. In addition, some new companies, including US oil firms, expressed an interest in acquiring rights to operate in Algerian concessions. In December 1987 Agip became the first foreign company to sign an exploration and production agreement with SONATRACH after the 1986 law. A further agreement was signed by the Spanish company Cepsa in January 1988, and a contract with the Australian group BHP Petroleum was concluded in December 1988. An agreement with the US company Anadarko Petroleum Corpn was signed in June 1989.

In December 1991 a new hydrocarbons law was promulgated, with the aim of encouraging greater participation by foreign companies in Algeria's oil and gas industry. It marked the most radical change in energy policy since the nationalizations in 1971. The legislation sought to stimulate exploration, but the most notable feature was that it allowed foreign companies to participate in existing oil fields in order to improve recovery rates and thus increase production. The Government hoped to encourage the participation of the major oil companies which were expected to pay substantial front-end bonuses in return for a share of the output. Equally significant was the fact that foreign companies would be allowed a stake in gas reserves discovered under exploration and production-sharing agreements, though not in existing fields. Previously gas had been a national monopoly and foreign companies had been excluded from benefiting from the discovery of gas in their oil acreage. New investment from the participation of foreign companies was regarded as essential to reverse falling oil output.

In July 1994 it was announced that negotiations were in progress with the US company Atlantic Richfield Co (Arco) on the terms of a $1,300m. enhanced oil recovery (EOR) contract to raise output in the Rhourde el-Baguel field. US firms were expected to take a leading role in future EOR contracts. Several contracts with international companies had been concluded in 1992–93 for new exploration work. In 1994 the Anadarko (Algeria) Petroleum Corpn of the USA announced plans to drill two more exploration wells in the Hassi Berkine field. Cepsa and Repsol of Spain and BHP Petroleum of Australia were also engaged in drilling projects. In late 1993 British Petroleum (BP) announced that it would drill its first exploration well in 1994 as part of a nine-year programme during which the company was committed to drill five wells. Despite the deteriorating security situation and the withdrawal of some expatriate staff and dependants, international petroleum companies stated that they were continuing operations. In January 1994 SONATRACH opened a second round of exploration bidding and announced that it was pursuing plans to allocate at least four new exploration permits; in May plans were announced to drill 51 exploration wells. In June Pluspetrol of Argentina signed an exploration agreement and in November a group of South Korean companies signed a contract to explore and drill wells in the central Illizi basin. In May 1995 Italy's Agip signed an exploration and production sharing agreement to undertake work in the Zemoul al-Kbar concession where three discoveries had already been made. Production facilities were under construction and a 230 km-pipeline was being built to link the new wells to the existing pipeline system. It was anticipated that total production would eventually rise to some 60,000 b/d. The agreement also included production tests at Agip's oil discovery at Rhourde Messaoud. In September 1994 Petro-Canada, which signed a 10-year exploration and production-sharing accord in April 1993, announced an oil and gas find in its Tinhrert acreage in the Illizi basin and in March 1995 sought approval to develop the field. In early 1995 Anadarko (Algeria) sought permission to develop two oil fields in the Hassi Berkine block following the announcement in December 1994 of a third oil discovery.

In December 1995 SONATRACH signed a gas exploration and production agreement with BP, the country's first gas production-sharing agreement with a private company. Under the agreement, BP would undertake a two-year exploration and appraisal phase in the (as yet undeveloped) district 3 of the In Salah area. If the operation was successful, BP would develop the area and produce an estimated 10,000m. cu m of gas a year. On the basis of proven reserves, BP indicated that it was confident of producing an annual 5,000m. cu m with good prospects for a further 5,000m. cu m a year. Total reserves in the concession area were estimated at 286,000m. cu m. Development of the concession would involve drilling 200 wells and building a 48-in pipeline to Hassi R'Mel, requiring investment of some $3,500m., 65% of which was to be covered by BP and the remainder by SONATRACH. Production was due to commence in 2002–03 and the gas would be marketed by SONATRACH and BP under a 50:50 joint venture company. In early 1999 the future of the project was uncertain owing to the falling price of gas, which remained linked to that of oil, and the need to sign more gas purchase agreements. Exploration and appraisal drilling operations were completed in February, and although total development costs were revised to $2,500m., rather than the original $3,500m., BP Amoco announced in March that the final decision whether or not to proceed had been delayed until the end of the year. By mid-1999 In Salah Gas, the joint venture created by SONATRACH and BP Amoco, had signed an agreement to supply 4,000m. cu m to ENEL, Italy's state power generator, and another for the same volume of gas with Edison Gas, also of Italy. After the agreement with BP was signed, Exxon of the USA announced that it was to begin negotiations with the Government to develop a gas field in the In Salah area close to BP's concession. In January 1996 Total of France, together with Repsol of Spain, signed a production agreement with SONATRACH to develop the Tin Fouye Tabankort gas field, the second agreement of its kind between the state energy company and private investors. After a total investment of $700m. by the three partners, the gas field officially came on stream in May 1999. Production was expected to reach 20m. cu m of wet gas a day, to be separated into dry gas, 23,000 b/d of condensate and 26,000 b/d of LPG.

In March 1996 Arco signed a contract with SONATRACH to rehabilitate the Rhourde el-Baguel oil field, the country's second largest field, for which a preliminary agreement had been reached in July 1994 (see above). This was the country's first EOR scheme and involved the drilling of additional wells and the use of gas injection techniques to gradually increase production from 25,000 b/d to 125,000 b/d within 10 years. The field was expected to produce more than 500m. barrels over a period of 25 years. Arco would take 49% of the field's output. In October 1995 Anadarko Petroleum announced that it was proceeding with plans to develop the Hassi Berkine South field, including processing units and a 30 in-pipeline linking up with an existing pipeline used by Agip.

In November 1995 Mobil of the USA, which had signed a production sharing and exploration agreement in February, announced that it had found oil at its first exploration well and was evaluating the results to decide whether or not the discovery was commercial. In December Agip of Italy, which had signed a $25m.-exploration agreement with SONATRACH in May, discovered oil in the Zemoul el-Kbar concession in the Hassi Berkine North field. A second discovery was made in May 1996, and Agip planned to develop both wells and connect them to existing production facilities at the Bir Rebaa North field. Production from the concession was to be increased from 46,000 b/d to 70,000 b/d. In March 1996 Cepsa of Spain announced that it was to develop a second field, the Rhourde el-Krouf field, in its Rhourde Yacoub concession with the aim of achieving production of 70,000 b/d by the end of the year. Estimated recoverable reserves at the field were 74m.–125m. barrels of

light crude. Speaking in March 1996, the Minister of Energy and Mines, Amar Makhloufi, urged international oil companies to invest $3,500m. in hydrocarbon projects in the following five years. Algeria aimed to exploit all gas reserves and to increase oil production at many existing fields by as much as 50% by introducing enhanced oil recovery technology, similar to the project signed with Arco. Makhloufi stated that EOR projects being discussed with other companies, which had been deliberately suspended, would be reopened in order to try and secure more deals in fields such as Rhourde el-Baguel. He said that $18,000m. was to be invested in the oil and gas industries in the following five years and that the Government hoped that as much as 20% might be covered by the private sector.

In January 1998 Oryx Energy, a US independent company, signed an exploration and production-sharing agreement with SONATRACH, whereby it would invest $28.8m. in exploration work in the Timissit region, south of Hassi Messaoud, over the following five years. By early 1998 there were 19 foreign oil companies with exploration and production-sharing contracts in Algeria. Anadarko (Algeria) announced a major investment programme in the country during 1998 to develop three oilfields and continue exploration work. In May Anadarko began producing oil at Hassi Berkine South, the company's first production in Algeria. Production rose from 5,000 b/d to 30,000 b/d in July. Following completion of the Nezla-Hassi Berkine South pipeline in December 1998, output was expected to increase to 55,000 b/d. It was anticipated that if new developments took place, output from the field could rise to 135,000 b/d by 2001. The Hassi Berkine South processing plant, built at a cost of $222m., formally started operations in May 1999. By early 1999 Arco and SONATRACH had invested over $1,000m. in the redevelopment of the Rhourde el-Baguel oilfield. The main construction phase was virtually complete but there were plans to build a gas plant capable of recovering some 150m. barrels of LPG, as well as to upgrade gas- and oil-handling facilities. In April 1998 Cepsa of Spain announced investment of over $1,000m. to develop the new Oughroud field, previously known as Qoubba. Cepsa was working with companies operating adjacent blocks, and development plans were being prepared for production to begin in 2002, rising to a target of 230,000 b/d. However, as a result of depressed oil prices, Mobil announced in early 1999 that it had stopped all exploration and production in Algeria.

By the late 1990s revenue from hydrocarbons exports had been expected to increase substantially, but a sharp fall in oil prices resulted in receipts from hydrocarbon exports falling from $13,600m. in 1997 to $9,700m. in 1998, according to the Banque d'Algérie. In May 1999 SONATRACH forecast hydrocarbon exports rising to $13,000m.–$14,000m. in 1999, based on an average price of $15 a barrel.

Following its establishment in 1963, SONATRACH expanded to become the largest, most complex and economically most important state company in Algeria. In May 1980 the Government decided that SONATRACH should be rationalized into smaller, specialized and more autonomous units. Thirteen such units were eventually formed, including SONATRACH itself. In January 1998 the National Energy Council, chaired by President Zéroual, approved a long-standing restructuring plan for SONATRACH, under which non-core activities were to be detached as separate companies, and the downstream oil and gas sector would be open to foreign investment. In March SONATRACH was converted into a joint-stock company by presidential decree, with a capital of AD 245,000m. ($4,100m.) entirely subscribed by the state. The company was to be headed by a director-general answerable to a board of directors chaired by the Minister of Energy and Mines. Foreign investors would not be allowed to have shares in SONATRACH, although the company would encourage foreign participation in both upstream and downstream projects. SONATRACH sought to become a global energy company by forging links with multinational and state-oil companies in petrochemicals, refining and power generation. In October 1998 Belgium's Générale de Banque SA signed a credit line of $57.5m. to finance the modernization of SONATRACH's pipeline infrastructure by Belgian firms, and the Banque Extérieure d'Algérie (BEA) provided a AD 15,000m.-seven-year loan to the company to finance new investments. In May 1999 SONATRACH signed a memorandum of understanding with Agip of Italy on joint oil exploration and production projects outside Algeria. Under the agreement, SONATRACH would take a 40% stake in an oilfield operated by Agip in Yemen.

In April 1989 Algeria's first nuclear reactor came into operation. Following international press speculation in April 1991 that the 15 MW nuclear reactor at Ain Oussera was for military use, officials of the Ministry of Research and Technology stressed its peaceful application and Algeria's willingness to allow an inspection by the International Atomic Energy Agency. At the inauguration of the reactor in December 1993, it was announced that Algeria would sign the nuclear non-proliferation treaty. In early 1990 plans to build a helium and nitrogen plant in Bethioua, near Arzew, were announced. The plant would produce 16m. cu m of liquid helium and 33,000 tons of liquid and gaseous nitrogen per year, mainly for export, utilizing gas from SONATRACH's LNG 2 plant at Arzew. Algeria has proven helium reserves of 6,000m. cu m.

HOUSING AND SOCIAL INFRASTRUCTURE

A key feature of the 1980–84 and the 1985–89 Development Plans, and a priority for the regime of President Chadli, was a concerted effort to address Algeria's chronic housing shortage. Additional expenditure was also allocated for other aspects of social infrastructure, notably health and education facilities, which, like housing, had been neglected in the 1970s. Under the 1985–89 Plan, 8% of total investment was allocated to transport infrastructure and nearly 16% to housing. More than 300,000 new homes were to be built and some 350,000 homes started under the previous Plan were to be completed.

According to government estimates, at least 100,000 new homes were built in 1982–83. Building, traditionally the province of state concerns, was facilitated by two independent factors: firstly, the 30,000 and more homes believed to have been started—frequently without official permission—by the thriving private domestic construction industry; and, secondly, the prefabricated construction techniques which had been introduced by foreign companies under the aegis of the Office National de la Promotion de la Construction en Préfabrique (ONEP), a state concern founded in March 1982, following the successful use of imported prefabricated building techniques to repair earthquake damage in el-Asnam. By the end of that year, ONEP had signed contracts for its entire construction programme of almost 5m. sq m, at a total cost of almost $2,800m. It was the world's largest prefabricated construction programme and was chosen as a costly, but speedy and efficient, way of satisfying urgent demand. ONEP drew most of its contractors from France, Spain, Italy, Denmark, Belgium, the United Kingdom, Switzerland, Portugal and Sweden, financing the bulk of its work through export credits. The 1982 programme included 21,000 homes (about one-half of that number being attached to hospitals), 34 fully-equipped hospitals, 60 polyclinics, 83 vocational training centres, 41 technical schools, 122 secondary schools, six biological research centres and six university housing 'cities'. ONEP contractors worked directly for local *wilayat* but negotiated through ONEP and received tax and customs dispensations.

Although prefabricated construction was, on average, almost one-half the cost of traditional methods, it drained Algeria's foreign exchange because of the high proportion of imported work. ONEP awarded no new contracts in 1983, and was disbanded in the following year. By then, traditional construction methods were being used to build most of the extra housing.

In 1983 the Government launched its other main scheme to expedite building, namely the use of foreign contractors under bilateral agreements with foreign governments. After the dissolution of ONEP, however, there was a general shift in government policy towards housing construction. Contracts were awarded to companies from Eastern Europe, often to accompany barter agreements, because they could complete the work more cheaply. The Government also urged local construction companies to become involved in the housing programme. Foreign companies were asked to form joint ventures with local companies if they wished to be awarded more work, but these requirements proved unpopular. After the collapse of petroleum prices in 1986, the Government began to search for cheaper methods of solving the housing crisis, encouraging local companies to undertake housing projects. The private sector was

given more freedom to undertake developments on its own, and those who had built their houses illegally were offered an amnesty. However, the Government remained determined to prevent housing development on potential farming land. In 1989 it was estimated that about 100,000 new homes needed to be built each year in order to solve the housing crisis.

Announcing the outlines of the Government's recovery programme in February 1992, Prime Minister Ghozali stated that priority would be given to spending on imports for public works and construction and that foreign participation would be encouraged in the production of construction materials. The Government's stated aim was to eliminate shanty towns, especially in the major cities. In April 1993 the World Bank approved a \$200m.-loan to support the Government's emergency programme to build 130,000 public housing units. The EU also approved a parallel structural adjustment grant of ECU 70m. (\$83m.) to finance imports needed for the construction of 100,000 social housing units. In July a loan was agreed with the Saudi Fund for Development to finance the construction of 2,000 homes in Algiers. Following agreement on a new accord with Algeria in April 1994, the IMF asked other donors to concentrate additional funding on social spending projects, especially housing. As a result of the political crisis in the 1990s, Algeria's housing stock, much of which was old or of poor quality, was not adequately maintained. One option under consideration by the Government in 1996 was the introduction of an accommodation tax to raise AD 400m. for housing maintenance in Algiers. In April 1997 the Abu Dhabi Fund for Development approved a \$20m. loan for housing projects.

A radical review of housing policy was in progress in early 1997 with a view to introducing reforms based on current IMF and World Bank criteria for structural adjustment loans. By this time the country's housing stock was estimated at 4m. units for a population exceeding 29m., one of the highest occupancy rates in the world. About one-half of all dwellings had been built more than 35 years earlier, the housing stock as a whole was of poor quality and rents in public housing were well below market prices. Agreement in principle with the World Bank was reached in March on an outline programme that envisaged a reform of the public-sector housing fund (Caisse Nationale d'Epargne et de Prévoyance—CNEP); privatization of state-run construction firms; privatization of the housing development sector, including the introduction of a mortgage market; and significant increases in rents for public-sector housing. In July the CNEP was restructured and converted into a state-owned commercial bank, the Banque de l'Habitat. At the same time new auxiliary financial institutions were created by the Government to open housing finance to the entire banking sector and to better control related risks. They included a mortgage refinancing company (Société de Refinancement Hypothécaire), a mortgage guarantee company (Société de Garantie du Crédit Immobilier) and a fund to provide guarantees to housing companies (Fonds de Garantie et de Caution Mutuelle de la Promotion Immobilière) which were expected to be functioning during 1998. The Government continued its progressive withdrawal from direct involvement in housing construction and the participation of the private sector in the provision of housing increased substantially. By 1997 many public construction companies had been liquidated and the work-force of those remaining substantially reduced. During 1995–97 some 93,000 construction workers were made redundant, just over one-half of current employment in public construction companies. Public enterprises increasingly turned to private subcontractors, especially in the finishing stages of public housing projects. By 1997 the private sector, mainly small local construction firms, accounted for more than 50% of work on public housing projects, compared with only 20% in 1994. Further public construction companies regarded as unviable were expected to be liquidated or listed for privatization. Subsidized public rents were increased substantially between March 1994 and December 1997. Further rises were envisaged, while the Government aimed to establish a system of direct subsidies to assist low-income tenants. In 1997/98 plans were announced to liquidate or restructure public rental companies responsible for the supply of most rental housing with the aim of privatizing the existing stock of public housing for rent and subcontracting its maintenance to the private sector. At the same time a shift was planned from rental public housing to the promotion of owner occupation.

By the end of 1997 the IMF reported that 79,000 housing units, out of 142,000 approved in 1995 (under a social construction programme) had been completed; the remainder were scheduled for completion in 1998. The supplementary budget for 1998 envisaged a new social construction programme of 80,000 units to be built by both private and public contractors, with 5,000 units completed during 1998. It was also reported that a joint programme with the World Bank to address the serious problem of 'shanty towns' would be launched by the end of 1998. Some 30 construction firms, including the state-owned Entreprise de Construction pour la Sidérurgie (COSIDER) and Entreprise Nationale de Réalisation des Travaux Sidérurgiques et Métallurgiques (REALSIDER), were among the first companies to be listed for privatization in May 1998.

In late 1997 a US company, Omnitek, signed a joint-venture agreement with COSIDER to build a factory in Algiers to produce prefabricated houses. In early 1998 it was reported that Royal Building Systems of Canada was to establish a similar plant with the capacity to produce 12,500 housing units per year.

TRANSPORT

At the start of the 1980s Algeria's state railway company, the Société Nationale des Transports Ferroviaires (SNTF), announced ambitious plans to double the length and the freight-carrying capacity of its 3,900-km network within 10 years. After 1985, however, SNTF revised its investment priorities in order to concentrate on the maintenance and upgrading of existing track and equipment. A local company was established in 1986 to implement the upgrading programme in co-operation with foreign firms, while most expansion projects were postponed or cancelled. In 1991 SNTF carried 58m. passengers and 12m. tons of freight. Rail routes within Algeria include Algiers–Oran, Béchar–Mohammedia (narrow-gauge), Mohammedia–Mostaganem, Algiers–Annaba, Constantine–Touggourt, Constantine–Skikda, Algiers–Tizi-Ouzou, Annaba–Tebessa and Djelfa–Blida (narrow-gauge). There are international rail links to Morocco and Tunisia.

In September 1994 the Government announced plans to restructure SNTF, including a proposed privatization of 12 subsidiary companies. Disagreements about corporate restructuring had earlier delayed the full utilization of a 1989 World Bank loan for railway projects. Contracts were awarded in 1996 for the construction of a 5.2-km tunnel at El-Achir, on the main east-west line between Constantine and Algiers, to be part-financed by an African Development Bank (ADB) loan approved in 1991. Completion of this project (which would reduce journey times considerably) was scheduled for 1999. Work to extend the Constantine–Touggourt line southwards to Ouargla and the oil town of Hassi Messaoud proceeded at a very slow rate, and in 1998 it was reported that work had come to a halt as a result of financial and technical difficulties, with only 23 km of track completed. Upgrading of the south-western (Béchar-Mohammedia) line, whose narrow-gauge track dated from 1912, was to be given high priority in the late 1990s. A long-standing (and repeatedly postponed) proposal to build a new east-west railway across the high plateaux of southern Algeria was in mid-1996 again rejected for the foreseeable future because of the high cost of the project (an estimated \$3,000m. at 1996 prices). The Government's most serious rail financing problem in 1996 arose out of the need to replace the 250 passenger carriages and 20 locomotives destroyed or damaged by Islamist guerrillas. In 1997 an Austrian railway equipment manufacturer announced plans to enter into a joint venture with an Algerian company within the framework of a 1986 Austrian–Algerian co-operation agreement which had latterly produced few new initiatives.

Construction of a proposed Algiers metro system began in the early 1980s but was suspended for some years, owing to financial constraints. Work resumed on the construction of the 26.5-km metro line in 1989. In 1995 a government initiative to attract international contractors to the metro project was unsuccessful, many potential bidders being deterred by the high level of terrorist activity in Algiers, and local firms continued the pro-

ject. The initial 12.5-km section of the metro line (including 16 stations) was scheduled to open in two stages, starting in 2000.

The national airline, Air Algérie, was restructured in 1984, with domestic routes being passed to the newly-formed Air Inter Services. Algeria purchased its first two European Airbus A310 aircraft in 1984. The number of passengers carried by Air Algérie fell from 4.2m. in 1986 to 3.7m. in 1991. The company's outstanding debt was calculated to have risen to AD 9,000m. in 1991 and debt due in 1992 equalled one-third of the company's turnover. The company's problems arose from the effects of devaluation, a reduction in traffic (due to the introduction of new visa regulations for Algerians visiting Europe) and increased operating costs. In 1991 Air Algérie raised its international fares by 50% and suspended plans to renew its aircraft fleet over the next 10 years. In 1992 a three-year reform programme, designed to improve the management and performance of the airline, was initiated. Air Algérie reported profits of $14.5m. in 1992, but in December 1994 the company's Director-General reported further losses of revenue, owing to the security crisis and tougher visa restrictions imposed by France and other countries.

In September 1994, as part of a radical review of all state transport undertakings, the Government indicated its intention to reform the structure of Air Algérie in order to improve its efficiency and competitiveness as the Government moved towards its medium-term goal of opening the air and sea transport sectors to private competition. Meanwhile, Air Algérie's aircraft purchase plans remained obstructed because of a lack of funds, the Government's stated preference in 1996 being for the airline to lease or charter additional aircraft while this remained a cost-effective option. In early 1998 it was reported that Air Algérie was in negotiations with international aircraft-leasing companies to lease nine new craft as the first part of a plan to renew all of its ageing medium-sized aeroplanes. In May 1997 plans were well advanced to create subsidiary companies to handle Air Algérie's non-core activities (including catering, cargo handling, distribution, security and the provision of petroleum industry chartering services), the intention being to leave the parent company free to concentrate on its primary passenger and freight transport operations. It was expected that the proposed subsidiaries would be opened to private-sector investment, with Air Algérie itself remaining in state ownership. A two-week strike of Air Algérie staff took place in October 1998 after rumours of plans to make redundant one-third of the company's 9,000 work-force. In 1998 the Algerian authorities gave permission for the establishment of the country's first private airline, Eco Air, with a capital of AD 7m. The new company would be allowed to operate both domestic and international passenger flights. In early 1999 it was reported that the Government had approved plans for a second private airline, Desert Aviation Co, based in Touggourt, which would operate internal flights only. Tassili Airlines, a joint venture between Air Algérie and SONATRACH, founded in 1997 with a joint capital of AD 700m., was given permission to begin operating domestic flights in September 1998. Based in Hassi Messaoud, it planned to concentrate on transporting oil company workers.

Airport upgrading projects undertaken in the early 1990s included the construction of new runways at Tamanrasset, El-Achouet, Ain-Arnet and Hassi R'Mel and the completion of basic structural work on a new international terminal at Algiers Houari Boumedienne airport. However, funding was not available in 1996 to equip the terminal building and bring it into operation, the need for new facilities having become less pressing because of a decrease in passenger numbers (attributable to Algeria's internal security problems). In late 1996 the Government was examining the scope for negotiating a partnership agreement to attract overseas project finance for the terminal. In early 1998 the Minister of Transport stated that a further AD 15,000m. ($256m.), one-half in convertible currency, would be needed to complete the new airport. In 1998 the Minister of Transport announced plans to extend and modernize the small airport serving Touggourt.

In 1993 Japan's International Co-operation Agency completed a major survey of development priorities for the seaports of Algiers, Oran and Annaba. It recommended that facilities for unloading cereals and containers should be upgraded at the ports of Annaba and Oran. In 1991 the three ports handled 71% of all traffic: Algiers 32%, Annaba 23% and Oran 16%. A new port at Djen-Djen near Jijel would serve Algeria's first free-zone development, and was scheduled to open in 1998 (see Manufacturing below). In October 1995, as part of a World Bank scheme to reduce petroleum pollution in the southern Mediterranean, contractors were invited to bid for the supply and installation of maritime traffic control equipment at the ports of Algiers, Skikda and Arzew. In March 1996 Sci Costruzioni of Italy was awarded a $48m.-contract to expand Algiers port in co-operation with a local partner. The project was due to be completed in mid-2000.

In 1992 it was reported that the Government was to revive plans to build an east-west motorway system linking Annaba and Tlemcen and forming part of a trans-Maghreb motorway. About 100 km of the highway were operational and another 55 km were under construction, although completion could take another 20 years. In December 1993 the EIB made a loan of $24.2m. for a section of the 1,400-km trans-Algerian highway between Lakhdaria and Bouira, and an agreement for a further loan of $97m. was concluded in late 1994. In December 1995 the ADB agreed a loan of $39m. to finance the construction of a motorway to bypass Constantine. The new 11 km six-lane highway was to be integrated into the east-west motorway system. In 1996 a government study of the roads programme estimated that total spending of AD 227,000m. ($4,124m.) would be needed to complete a full renovation of existing roads, while AD 243,000m. ($4,415m.) would be required to complete the east-west motorway project. Available resources during 1996 (as allocated in that year's national budget) were AD 3,500m. for road reinforcement work, AD 2,000m. for rehabilitation work and AD 2,300m. for maintenance work.

Various transport companies, including the Société Nationale des Transports Routiers, were in the privatization list published by the Government in May 1998.

MANUFACTURING

Industrial development has long been a priority area of Algerian economic policy and the major investment effort in the 1970–73 Development Plan was devoted to this end. Under the 1974–77 Plan, industry received about 43.5% of total allocations. In the 1980–84 Plan it was allocated 38% of total investment, and 32% in the 1985–89 Plan.

At the time of independence the Algerian industrial sector was very small, being confined mainly to food processing, building materials, textiles and minerals. The departure of the French entailed loss of demand, capital and skill, thereby decelerating the industrialization process. Foreign firms became increasingly reluctant in the 1960s to invest in Algeria because of the danger of nationalization. By 1978 about 300 state-owned manufacturing plants had been established, but productivity was very low, with some factories operating at only 15%–25% of design capacity. The early 1980s were a time of increasing emphasis on productivity and efficiency, and nowhere more so than in the manufacturing sector. The restructuring of the state mechanical manufacturing and supply monopoly, SONACOME, into 11 smaller and, in theory, more efficient units appears to have helped output, as did profit-sharing schemes.

In 1983 the Government began to encourage foreign and domestic manufacturers to supply the larger *sociétés nationales,* such as SONACOME. Foreign companies would be junior partners to state concerns, but local businesses would receive the finance from state banks which was normally available to state concerns. The Government also sought to encourage companies to establish joint ventures, in order to stimulate foreign investment and to ensure closer working relations with foreign companies, thus enabling Algerian enterprises to monitor the progress of projects and gain a genuine transfer of technology.

In the late 1980s the Ministry of Light Industries considered that the basic network of small-scale manufacturing was complete, and it intended to concentrate in future on improving the integration of the sector. The private sector was to be given a greater role in establishing manufacturing industries, to process raw materials produced in the state sector. Instead of investing in new cement works, the ministry was to concentrate on increasing output at existing works, and to carry out small extensions to satisfy any increase in demand. Beyond 1990 the ministry planned to develop high technology industries, such

as clock manufacturing, and intended to promote industries to integrate the sector, such as the manufacture of synthetic fibres. In 1992 the Government announced radical measures to open state-sector industries, which account for some 80% of industrial production, to local (private) and foreign participation. Officials acknowledged that many state industries were operating at below 50% capacity, and recognized that, as income from hydrocarbons was insufficient to finance the recovery of its industrial base, privatization was essential to provide investment and new markets as well as technology. The only exceptions would be industries classified as strategic, such as the Entreprise Nationale de Sidérurgie (SIDER), SONELGAZ and agroindustrial companies. After an audit of major state companies carried out as part of Algeria's World Bank structural adjustment programme, the following were identified as viable, if non-profit-making: Entreprise Nationale des Véhicules Industriels, Entreprise Nationale des Matériaux de Travaux Publics, Entreprise Nationale de Production de Matériel Agricole and Entreprise Nationale de Production de Matériel Hydraulique. In April 1994 a new ministry was created to oversee the restructuring of state companies as required by the agreements signed with the IMF in May 1994 and May 1995 (see Government Strategy).

According to a report by the Ministry of Industrial Restructuring and Participation in May 1996, four years of civil strife had reduced industrial capacity by 10%, but the decline was being stemmed, and industrial production fell by only 0.5% in 1995, compared with 8% in 1994. Also in May the state-owned Entreprise Nationale de Distribution et de Commercialisation des Produits Pétroliers (NAFTAL) indicated that sabotage, allegedly by Islamist extremists, had inflicted AD 3,000m.-worth of damage to the company's facilities. NAFTAL reported a deficit of AD 11,700m. and demanded urgent government assistance.

Government efforts to attract foreign investment in the manufacturing industry had only limited success, but in October 1997 Daewoo of South Korea signed a memorandum of understanding with the Ministry of Industry and Restructuring to invest some $2,000m. over a five-year period, including acquiring a share of a range of state-owned manufacturing industries such as fertilizers, car assembly and electrical goods. However, progress with this investment programme (representing more than twice the total foreign investment in the non-hydrocarbon sector over the previous three years) was threatened by South Korea's financial crisis which began in late 1997.

In February 1999 the Minister of Industry and Restructuring presented a report outlining major policy objectives for the manufacturing sector during the period to 2015. The report emphasized the need to achieve sustained industrial growth, improve the competitiveness of industrial enterprises, diversify products and promote a competitive export sector. The following month the minister announced that industrial production increased by 10.5% in 1998 compared with 1997, representing the first recorded growth since 1991. He attributed the increase to a reduction in the work-force by some 15,000 and measures taken to protect the domestic economy. Production rises had been strongest in electronics (18.3%) and food (13.1%), with more modest increases in building materials (5%), chemicals and pharmaceuticals (2.3%) and textiles (1.1%). Public companies remained heavily indebted to state banks, but the debt of AD 5,000m. ($75m.) had been reduced during 1998. Finally the minister revealed that foreign investment contracts totalling $220m. had been signed in 1997 and 1998, of which $161m. was in chemicals and pharmaceuticals. Of all investment outside the hydrocarbons sector only pharmaceuticals projects were making progress.

The iron and steel industry is crucial to the development of other industries. In 1988 the state-owned steel company, SIDER, announced proposals to increase output of long-steel products to meet 70%, rather than 30%, of local demand and thus reduce imports of steel, which totalled 1.9m.–2m. tons per year. Plans were also made to increase SIDER's annual flat-steel capacity to 1.8m. tons from 1.4m. tons. Huge investments were made in the el-Hadjar complex at Annaba. Liquid steel output rose slightly from 830,000 tons in 1991 to 841,115 tons in 1992. According to SIDER's projections, output should have reached 1.25m. tons, well below design capacity of 2m. tons. Exports of steel products in 1992 reached 281,949 tons. Metalsider, Algeria's first private steel maker, started operations in 1992. A merchant bar mill with a capacity of 100,000 tons a year commenced production in 1993 and a third bar/rod combination mill was due to commence operations in 1996. In April 1993 it was reported that Metalsider was seeking joint-venture partners to build a 1.5m.-ton-a-year direct-reduced iron plant.

Although ambitious plans were announced to expand the country's petrochemical industries, technical and financial problems have hindered progress. A vast petrochemical complex at Skikda produces polyethylene, PVC, caustic soda and chlorine. In 1991 a project to build a high-density polyethylene plant at Skikda was announced, with a capacity of 130,000 tons a year. ENIP (Entreprise Nationale d'Industrie Pétrochimique) formed a joint venture company (Polymed) with Spain's Repsol Química to build the plant, but a series of problems delayed the start of construction work until mid-1997. The plant was scheduled to come into operation by December 1999. In late 1991 it was reported that Rollechim Impianti of Italy together with ENIP and Entreprise Nationale de Raffinage de Pétrole had agreed to create a joint venture to build a petrochemicals plant at Skikda to produce 30,000 tons of orthoxylene, 71,000 tons of paraxylene and 25,000 tons of phthalic anhydride annually. There is a nitrogenous fertilizer plant at Arzew, utilizing natural gas, with an annual capacity of 800,000 tons, and a complex for the manufacture of intermediate petrochemical products. In May 1991 ENIP established a joint venture with Repsol of Spain and Rhône-Poulenc of France to build a polyester resins plant at Arzew with an annual production of 10,000 tons. In August Total of France, Ecofuel of Italy and SONATRACH confirmed plans to build a $400m.-methyl tertiary butyl ether plant at Arzew, with an annual production capacity of 600,000 tons mainly for export to refineries in southern Europe. By mid-1993 progress on the project had been limited, and it was reported that Total and Ecofuel were undecided about their continued participation. In early 1999 ENIP announced ambitious plans for a number of major new petrochemical plants, mainly at Skikda and Arzew, to be developed with foreign partners, but attracting investors appeared highly problematic for most of the projects listed.

Since the early 1970s fertilizer and associated phosphate industries have been developed at Annaba and later at Arzew. By the late 1990s the Annaba complex had the annual capacity to produce 164,000 tons of nitric acid, 330,000 tons of ammoniac, 330,000 tons of ammonium nitrate, 550,000 tons of phosphate fertilizers and 40,000 tons of soda tripolyphosphate. The Arzew complex had the annual capacity to produce 396,000 tons of nitric acid, 660,000 tons of ammoniac and 495,000 tons of ammonium nitrate, while a single superphosphate complex (with capacity of 600,000 tons per year) came on stream in 1998. In early 1999 it was reported that foreign investment was being sought for several major new projects including complexes for diammonium phosphate, phosphoric acid (900,000 tons per year), ammonia (1,221,000 tons per year), urea (594,000 tons per year) and superphosphate (300,000 tons per year).

Following a Government decision in January 1998 to open the downstream oil and gas sector to foreign investment, Prime Minister Ouyahia announced in March that the Government had started negotiations with several international companies wishing to invest in petrochemicals. In early 1998 a $500m. joint venture was agreed between Fertiberia of Spain and SONATRACH, together with the EPE Asmidal and the Entreprise Nationale du Fer et du Phosphate (Ferphos) (state-owned fertilizer and phosphate companies), to produce fertilizers and ammonia products for the Algerian market and for export. Both Asmidal and Ferphos were to be opened to foreign investors under the privatization programme.

The assembly of industrial vehicles in Algeria began in 1974 at a plant in Rouiba, established by a state-run company in association with the French manufacturer Berliet. A large farm machinery complex went into production at Sidi-Bel-Abbès in 1976. The closure of a Renault assembly plant at Algiers in 1970 left Algeria with no car production capacity. In 1992 work began at Ain Bouchekif, near Tiaret, to build a Fiat car assembly plant, to be 64.4% owned by an Algerian public-sector company, Fatia, and 35.6% owned by Fiat of Italy. The plant was to have the capacity to produce 30,000 Punto models each year. By mid-1999 work on the project remained stalled as a result of financial

difficulties, and it was reported that a $50m. line of credit provided through Italy's Crediop was blocked. Tyres are manufactured near Algiers. The local manufacture of vehicle components by Algerian companies and joint ventures with other countries has been encouraged by the Government since 1987. A plant for the overhaul of Peugeot engines was established near Algiers in 1990 under an agreement with the French company. The importation of vehicles to meet Algeria's annual demand for about 100,000 cars and light vans was opened to the private sector in 1990/91, allowing foreign manufacturers (including Peugeot, Renault, Fiat, Daewoo, Honda and Nissan) to establish local distribution agencies. Tax incentives were offered to encourage such manufacturers to make future investments in Algerian production facilities. As part of the 1997 agreement with Daewoo (see above), the South Korean company was reported to be in negotiations to acquire a 70% stake of the Société Nationale des Véhicules Industriels (SNVI), which manufactures industrial vehicles at Rouiba; however, the MAN group of Germany also expressed interest in acquiring part of the SNVI. In early 1999 negotiations with Daewoo to assume part of SNVI's operations were still continuing and it was reported that both MAN and Renault were engaged in talks about proposals to build a new production plant for SNVI. In mid-1999 an agreement was signed by Dacia-Romania of Romania and the local Dacia-Algeria to manufacture cars from kits. An assembly plant was to be built on the outskirts of Algiers, capable of producing 30,000 cars per year, some of which were to be exported. Production was due to begin in late 2000.

Other growth areas include the paper industry, textiles, electrical goods (including radio and television sets), flour milling and building materials. There are six cement works with a total installed capacity of about 9m. tons, but they have been operating at barely 50% of capacity. In July 1993 the four national cement companies created two new subsidiaries. The Société des Ciments de Tebessa was to manage the Tebessa factory, where there were plans to seek foreign capital for a project to double capacity. The Société de Maintenance et d'Équipment des Cimenteries was to deal with maintenance, subcontracting and the supply of parts to local cement companies. A pharmaceuticals industry was developed in Algeria after 1991, when international companies were encouraged to invest in local manufacturing facilities in return for licences to sell products on the local market. Several new joint ventures, including one between Rhône-Poulenc Rorer of France and the Entreprise Nationale de Production de Produits Pharmaceutiques (SAIDAL, the state-owned pharmaceutical company), were announced in early 1998. In 1992 the Caisse Française de Développement provided FF 160m. ($10.7m.) for the renovation of the Meftah asbestos cement plant, FF 35.4m. ($6.3m.) for upgrading the M'Sila aluminium plant and FF 19.6m. ($3.5m.) for reorganization and pollution reduction at the Ghazaouet zinc plant. In spite of all these efforts, it was estimated that total industrial production in 1991 was less than in 1984, while the country's population had increased by about 4m. Between the third quarter of 1995 and the third quarter of 1996 Algeria's official index of manufacturing output by public-sector enterprises outside the hydrocarbons sector fell from 70.8 to 59.9 (1989 = 100). In the first nine months of 1996 Algeria's production of iron and steel decreased by 18.7%, while output of chemical products declined by 17.1%. Output of building materials increased by 4.2% in response to strong demand for new housing units, and cement production rose by 11.6% (although cement plants continued to operate well below their full capacity). According to official figures, industrial production outside the hydrocarbon sector rose by 8.1% during the first nine months of 1998 compared with the same period of 1997. Growth was reported to be particularly strong in chemicals and pharmaceuticals, but iron and steel registered a decline.

The privatization offers announced by the Government during 1996 included a management contract for the SIDER steel mill; a management contract for the Ghardaia plant of the Entreprise Nationale de Tubes et de Transformation des Produits Plats (ENTTPP or ANABIB, the company supplying pipes for the Maghreb-Europe gas pipeline); a management contract for the Médéa plant of SAIDAL; the offer for sale of 17 textile manufacturing units currently owned by five state enterprises; management contracts for five cement units owned by two state enterprises; the offer for sale of six fertilizer units owned by Asmidal, with two further units offered on a management contract basis; and offers of shareholdings in several food companies, including the Office Régional des Produits Oléicoles (producing olive oil) and the Entreprise Nationale des Jus et Conserves Alimentaíres (ENAJUC, producing fruit juice and other food products). In early 1999 it was announced that the sale of brickworks and breweries had earned $150m., of which $100m. was in foreign investment. Later in the year the SAIDAL and the cereals distributor Eriad-Setif were part-privatized, raising some AD 4,000m.

Algeria's first 'free zone' area for industrial development was due to open in 1998 on a site at Bellara, near Jijel international airport and 40 km from a new harbour. Basic infrastructure had previously been installed on the 500-ha site as part of a plan (otherwise unimplemented) to build a steel complex. The national investment agency APSI was in 1997 seeking an operator to manage the zone on a concession basis. Figures released by APSI in mid-1997 showed that foreign companies invested a total of AD 56,800m. ($989m.) in non-hydrocarbon sectors of the Algerian economy between November 1993 and May 1997.

TRADE

Algeria had a consistent foreign trade deficit, with the exception of small surpluses recorded in 1967 and 1968, until the huge increases in petroleum prices in 1973. Exports of petroleum and natural gas have transformed the pattern of Algerian exports, previously limited to agricultural products and some minerals—mainly wine, citrus fruit and iron ore. Hydrocarbons accounted for more than 95% of visible export earnings in 1996. Other exports include vegetables, tobacco, hides and skins, dates and phosphates. Prior to the liberalization of trading policy in the mid-1990s, the Government fixed an annual budget for imports and strictly controlled the import requirements of public-sector companies.

The visible trade account turned from a state of chronic deficit to surplus in 1974, alternating annually between deficit and surplus thereafter. Increases in the price of petroleum in 1979, however, put Algeria in credit and kept the trade balance in surplus. In order to preserve this surplus (which reached AD 16,500m. in 1985), the Government introduced new import controls. However, the sharp fall in the price of petroleum in 1986 resulted in a trade deficit of AD 6,567m. for that year. In 1987 the price of petroleum recovered slightly and there was a trade surplus of $2,413m. There was a trade surplus of $946m. in 1988. In 1990, although imports increased by almost 22%, exports increased further, by 42%. This produced a trade surplus of AD 11,497m., compared with a deficit of AD 1,835m. in 1989. A trade surplus of $4,107m. was recorded in 1991, although in 1992 the surplus declined to $2,489m., owing to a 12.6% rise in expenditure on imports. In February 1994 officials of the Ministry of Commerce stated that a ban on imports of consumer goods imposed by the Abd es-Salam Government in November 1992 had been lifted.

Algeria's overall trade balance (including trade in services as well as visible commodities) evolved as follows between 1993 and 1996. In 1993 there was a surplus of $756m. (imports $10,004m., exports $10,760m., including $9,760m. from hydrocarbons). In 1994 there was a deficit of $1,500m. (imports $11,090m., exports $9,590m., including $8,610m. from hydrocarbons). In 1995 there was a deficit of $1,260m. (imports $12,200m., exports $10,940m., including $9,370m. from hydrocarbons). In 1996 there was a surplus of $3,030m. (imports $11,240m., exports $14,270m., including $12,640m. from hydrocarbons). Foodstuffs accounted for 28.7% of visible imports in 1996 (25.6% in 1995); raw materials and semi-finished products constituted 26.3% of visible imports in 1996 (30.5% in 1995); capital equipment accounted for 33.5% of visible imports in 1996 (27.7% in 1995); and consumer goods constituted 11.5% of visible imports in 1996 (16.2% in 1995). By the end of 1996 all restrictions on external trade had been eliminated, allowing public and private importers to finance their transactions from their own foreign-exchange holdings or through official cash and credit lines. Full convertibility of the Algerian dinar was expected to be achieved by early 1998. At the end of 1996 Algerian customs statistics indicated that more than 25,000

private enterprises and about 300 public enterprises were involved in foreign trading operations. In 1997 the Government established an export promotion agency (PROMEX, to be funded out of the receipts from taxes on imported luxury goods) and introduced a range of financial incentives to stimulate the growth of non-hydrocarbon exports. In 1997 there was a trade surplus of $5,790m., with exports totalling $14,140m. and imports restricted to $8,350m. In September 1997 the ADB approved a 20-year loan of $215m. to pay for imports. In early 1998 it was reported that terms had been issued to enable Algerian exporters to draw on new short-term state credit insurance facilities. As a result of a sharp fall in oil and gas revenues, exports totalled only $10,126m. in 1998, with imports rising to $9,323m., giving a trade surplus of only $803m.

Before independence France purchased 81% of Algeria's exports and provided 82% of its imports. In 1998 France remained Algeria's largest supplier of imports (with a 29.8% market share), but took only 14.3% of Algeria's 1998 exports. In 1996 hydrocarbons accounted for 96.3% of Algerian exports to France, while capital goods remained the single largest element in French exports to Algeria, followed by agroindustrial products and consumer goods. In April 1995 the French export agency, Coface, confirmed that it was continuing to provide normal cover for French export contracts despite the serious security situation in Algeria. The only modification to the agency's policy on Algeria concerned infrastructure projects which involved expatriate staff working in areas known to present a security problem. The agency, currently covering contracts worth $6,144m., was making every effort to ensure that projects in the oil and gas sector were covered in order to maintain Algeria's export capacity. Apart from France, Algeria's largest trading partners in 1998 were Italy (accounting for 19.5% of exports and supplying 9.2% of imports), the USA (17.4% of exports and 9.0% of imports), Spain (10.2% of exports and 7.8% of imports), Turkey, Germany, Canada and Belgium. Since 1995, when an agreement to supply Algerian gas to Turkey came into effect, trade between the two countries increased rapidly and in 1997 Turkey emerged as Algeria's fifth largest export market. Algerian exports to Turkey, valued at $49.5m. in 1994, rose to $828.8m. by 1997. Imports from Turkey also increased although at a more modest rate (from $250.5m. in 1994 to $306.6m. in 1997). In early 1999 the authorities made efforts to promote trade with the rest of the Arab world, which currently accounts for only 5% of Algeria's imports.

The finalization in July 1996 of debt rescheduling arrangements under the 1995 'Paris Club' and 'London Club' agreements (see Government Strategy section above) opened the way for a relaxation of export credit guarantee restrictions which had been introduced by several of Algeria's major trading partners. Agencies making announcements included Eximbank of the USA (short- and medium-term cover for Algerian public-sector importers resumed from August 1996); SACE of Italy (resumption of cover from late 1996, subject to strict conditions); the Belgian Government (reopening in November 1996 of a line of credit for Algerian transport projects, 'frozen' since 1994); and the United Kingdom's Export Credits Guarantee Department (resumption of cover for Algerian petroleum and gas projects from early 1997).

In February 1989 the Union of the Arab Maghreb (UAM) was formed by Algeria, Libya, Tunisia, Morocco and Mauritania. In January 1989 the Ministers of Industry of the Maghreb countries met to discuss industrial unity and economic integration; co-operation in the mining, textiles, electronics, domestic appliances, leather and construction industries is also under consideration. The UAM aimed to establish a customs union and a single monetary exchange currency. The ultimate aim was to allow all UAM members to establish industries in each of the five countries. But despite a great deal of rhetoric little progress was recorded in the late 1990s (see History).

Negotiations for an association agreement between Algeria and the EU (to be broadly modelled on the EU's existing agreements with Morocco and Tunisia) were formally inaugurated in March 1997, but made slow progress. Nevertheless, premier Hamdani, who took office in December 1998, pledged to continue talks 'to develop a genuine EU-Mediterranean partnership'. Negotiations were due to resume in 1999 when an early task would be to arrange disbursement of the first tranche of the $266m. Meda-1 financial-aid package. In 1998 the EU made a grant of $70m. to stimulate the development of small and medium-sized companies in Algeria as part of a strategy to bring Algerian businesses closer to European standards. The EU also provided humanitarian aid to Algeria's Red Crescent Society. With Algerian manufactures already having duty-free access to the EU, the main focus of the free-trade component of the negotiations was to be the phasing out of Algerian import duties on EU manufactures. Other issues to be discussed included economic co-operation, capital transfers, the establishment of companies, and social and cultural co-operation.

The second stage of negotiations on Algeria's membership of the World Trade Organization was due to begin in early 1999. The process was complex, requiring Algeria to achieve improvements in customs procedures, liberalizing the service sector and in tariff reductions. Although Algeria's application was not opposed, agreement was not expected until 2000, after which a transitional period for initial membership was envisaged.

FINANCE

Before independence, Algeria was mostly dependent on France for its central banking and monetary system, though some of the usual central banking functions were carried out by the Banque d'Algérie. The Banque Centrale d'Algérie started its operations on 1 January 1963; it issued currency, regulated and licensed banks and supervised all foreign transactions. A state monopoly on all foreign financial transactions was imposed in November 1967; this followed a similar monopoly imposed on insurance in June 1966. State-run banks include the Banque Nationale d'Algérie (BNA), founded in 1966, traditionally service-sector based; Crédit Populaire d'Algérie, founded in 1966, strong in the construction sector; the BEA, founded in 1967, dealing with foreign trade; the BADR, founded in 1982, providing finance for the agricultural sector; and the Banque de Développement Local (BDL), founded in 1985, which has traditionally provided loans for companies run by local government. Legislation on banking and credit was introduced in 1986 to define the role of these institutions and of the central bank, and to improve their project-assessment capabilities, as well as guaranteeing banking secrecy. In 1987 legislation was introduced to enable local commercial banks to provide credit directly to state-owned enterprises, as well as to private companies. The criteria for authorizing credit were modified, requiring the bank to assess a project primarily by its economic viability (including the company's ability to make repayments), rather than its social value. This legislation allowed banks to compete against each other for business, although they were not allowed to determine their own interest rates. In the same year the Conseil National de Crédit was established to supervise the implementation of the banking reforms and to determine the level of Algeria's foreign borrowing. In October 1988 banks were included in the group of more than 70 state-controlled companies which became EPEs. The Banque Extérieure d'Algérie was the first state bank to become fully autonomous under the scheme. In 1998 the central bank authorized a transfer of $8.13m. by the BEA to raise its stake in the Paris-based Union des Banques Arabes et Françaises.

Under the terms of the IMF accord signed in May 1995, five state-owned banks signed performance contracts of between one and three years with the Government in which they pledged to adhere to the Bank for International Settlements' standards, and to make their operations more transparent. The Government, for its part, would increase the banks' capital to help them restructure, but would phase out further subsidies over the contract period. The Ministry of Finance was to cease intervening in the running of the banks. The Government's aim was to prepare for privatization, encouraging banks to lessen their emphasis on lending and seek to expand their customer-base. In April 1996 the Minister of Finance announced that the Government was planning to restructure the five state-owned banks into five separate holdings, each with four subsidiaries specializing in financing areas such as leasing and equity participation. In March 1997 the Government announced that the first state bank to be opened to private investment would be the BDL, which drew 75% of its current clients from small and medium-sized private businesses. By early 1999, however, privatization was still in the planning stage and awaiting the

restructuring of the bank. At the end of 1998 plans were announced to sell a 30% share in the country's largest bank, the BNA, to local and foreign investors. The process of exchanging foreign currency—hitherto monopolized by the state banks—was opened to the private sector in 1997. Following the drafting of regulations to permit private companies to enter the Algerian insurance market, a new insurance venture, Trust Algeria, was announced in mid-1997. Trust Insurance Co (of Bahrain) and Qatar General Insurance and Reinsurance Co were to hold 65% of the shares; the remainder was to be held by the state-owned Compagnie Algérienne d'Assurance.

Algeria has also formed joint institutions with other countries. In 1974 an Algerian-Libyan bank, the Banque Internationale Arabe, opened in Paris to finance trade and investment between France and Arab countries. Possible joint financial institutions have been discussed with Kuwait, Saudi Arabia and the United Arab Emirates. The Banque de Coopération du Maghreb Arabe was established with Tunisia, in order to promote joint projects. In 1988 Algeria and Libya agreed to establish a joint bank, the Banque du Maghreb Arabe pour l'Investissement et du Commerce. In March 1990 a banking and investment law was approved which, for the first time since independence, permitted foreign investors, in most sectors, to own up to 100% of companies and to repatriate all of their profits. Foreign banks were to be allowed to establish representative branches. Three French banks had already opened 'liaison offices' in Algiers under the terms of earlier legislation. In June 1991 the Al-Baraka Bank of Algeria, the country's first joint-venture bank, opened. It was also Algeria's first Islamic bank, and the two partners were the BADR and Dallah Al-Baraka (of Jeddah). In June 1993 the Banque d'Algérie reported that legislation permitting the establishment of local private banks was in place and that applications to set up new institutions were being considered. The country's first local private bank, the Union Bank, was established in 1995 and recorded assets of AD 992m. ($16.6m.) at the end of 1996. Another two local private banks were authorized in early 1998: the El-Khalifa Bank, set up entirely by local investors, and the Mouna Bank, established in Oran. By the end of 1998 Citibank of the USA had upgraded its representative office in Algiers to a full branch and the Arab Banking Corpn of Bahrain had become the first major international Arab bank to open an office in Algiers. The latter planned to establish branches throughout the country. France's Natexis Groupe, Société Générale, SA, and Banque Nationale de Paris, SA received clearance to set up operations in Algeria, as did the Algerian-Saudi Leasing Co.

In January 1996 the Government announced the creation of two new financial institutions, an interbank foreign exchange market, the Bourse des Valeurs Mobilières, and a monitoring organization to control the new Algiers stock exchange, the Commission d'Organisation et de Surveillance des Opérations de Bourse (Cosob). The interbank foreign exchange market was to set the dinar's rate of exchange, based on bidding for currency by banks, other financial institutions and authorized intermediaries, bringing to an end the flexible system of fixing the value of the dinar (introduced in October 1994 under the IMF stand-by agreement). All dinar and convertible currency transactions were to pass through the interbank market, but the central bank was to retain control over the use of foreign exchange by intermediaries in order to prevent undue capital flight and large imports of luxury and other consumer goods. Non-hydrocarbon exports were expected to provide most of the receipts, and it was anticipated that the size of the market would increase in line with the growth of non-hydrocarbon exports, which were forecast to rise threefold by 1999. Cosob was entrusted with co-ordinating the establishment of the market and representing Algeria's nascent investment industry abroad. The Ministry of Finance sought to encourage public saving through the stock exchange and the establishment of unit trusts and mutual funds. The new Algiers stock exchange was scheduled to begin trading in mid-1999 after delays of over a year. To mark the opening, 2m. shares in SAIDAL were to be offered on the stock exchange, representing a 20% stake in the company. Shares in a further 20 state-owned companies were expected to be traded on the exchange by the end of 1999, together with the AD 5,000m.-worth of bonds issued by SONATRACH in 1998. The 1m. shares in the cereal distributor, Eriad-Setif, offered for sale in late 1998 through the five major state-owned banks, would also be traded on the stock exchange once it began its secondary market operations.

Statistics published in 1994 revealed that Algeria's budget was in deficit by more than AD 74,000m. in 1992 and by AD 192,000m. in 1993. The 1992 budget had introduced new corporate, income and value-added taxes; provided for higher investment in agriculture, mining and energy; and sought to limit the impact of price rises on poor families, partly by maintaining price subsidies on 10 essential food items. The 1993 budget included sharply higher defence and internal security spending. The original budget estimates for 1994 provided for a deficit of AD 125,300m. (9.6% of forecast GDP). However, Algeria's 1994 currency devaluation, together with lower than expected world petroleum prices, contributed to an actual deficit of some AD 160,000m. in 1994. In 1995 the Government originally budgeted for a deficit of AD 148,400m. (8.3% of forecast GDP), but subsequently undertook to curb the deficit through tighter fiscal policies when it agreed a structural reform programme with the IMF in May 1995.

In 1996 the Government originally budgeted for a deficit of AD 99,400m. (revenue AD 749,200m., expenditure AD 848,600m.), and introduced various measures to improve revenues, including price increases for bread and petrol and steps to counter the evasion of an estimated AD 2,000m. of taxes each year. In the event, the actual deficit in 1996 was only about AD 31,500m., reflecting a rise in the average oil export price to $22 per barrel, compared with the Government's original estimate of $16.50 per barrel. Provisional outturn statistics for 1996 showed that AD 485,600m. had been raised in hydrocarbon taxes out of total revenue of AD 810,100m., while spending had totalled AD 841,600m. (slightly less than originally budgeted).

The 1997 budget provided for revenue of AD 829,400m. ($14,520m.), including AD 451,000m. from hydrocarbon taxes, and for expenditure of AD 914,100m. ($16,003m.), producing a deficit of AD 84,700m. ($1,483m.). However, the Government argued that there was in effect an underlying surplus of AD 7,400m., given that the expenditure total included an allowance for amortization of domestic debt (not included in previous years' budget calculations) and a once-only allocation of AD 78,000m. for a fund to restructure public-sector enterprises. The budget assumed an average 1997 petroleum export price of $17.50 per barrel and forecast an increase in the economic growth rate to 5% (compared with 4% in 1996), while the annual inflation rate was expected to fall to 10% (compared with an end-year rate of 15% in 1996). Capital spending was to be 10.3% higher than in 1996 and was to emphasize the completion of existing projects, while new projects would be required to demonstrate good growth potential. There was a reduction in the rate of value-added tax for companies. The 1997 budget was revised in August 1997, setting revenues at AD 881,500m. (of which AD 507,000m. was anticipated from oil and gas) and expenditure at AD 946,200m., giving a deficit of AD 64,700m. The 1998 budget, given parliamentary approval in December 1997, projected revenues of AD 901,500m. (of which AD 528,000m. was anticipated from oil and gas) and set expenditure at AD 980,200m., giving a deficit of AD 78,700m., representing 2.6% of GDP. Revenues from oil and gas were based on oil prices averaging $17 per barrel in 1998. To balance a sharp increase in current expenditure in 1998, capital spending was reduced substantially. As a result of falling oil prices, the 1998 budget was revised mid-year, increasing projected expenditure slightly to AD 1,022,000m., while setting projected revenues at AD 882,000m. (of which AD 460,000m. was anticipated from oil and gas, based on a forecast oil price of $15 per barrel, giving a much larger deficit of AD 140,000m. Towards the end of the year, despite a decline in oil prices to just over $10 per barrel, the Minister of Finance insisted that the budget remained under control, adding that the deficit could have been reduced but that this would have meant less spending on urgently-needed housing, capital equipment and water projects. The 1999 budget projected spending at AD 1,098,000m. and revenue at AD 937,100m. (of which AD 480,000m. was expected from oil and gas, again based on a forecast oil price of $15 per barrel), giving a deficit of AD 161,500m. According to the Minister of Finance, the higher projected deficit was to take account of higher debt repayments. Education and vocational training, and

agriculture and irrigation accounted for the bulk of projected expenditure. As the price of oil did not exceed $11.75 per barrel during the early months of 1999, some observers forecast that the deficit could reach AD 184,400m. Later in 1999, as prospects for world oil prices improved, analysts forecast a budget deficit of AD 133,000m. In February there were reports that the Minister of Finance had instructed ministries to restrict their expenditure to 70% of allocations under the 1999 budget in order to avoid the necessity of formally adopting a revised budget.

During the 1970s Algeria borrowed heavily on the international markets to finance development, especially in its gas industry. Borrowing on the Euromarket, principally by SONATRACH, in one peak year, 1978, amounted to $2,515m. In 1979 total borrowing declined by almost one-third. The total borrowing requirement for the 1980–84 Plan was estimated at $10,000m. Algeria avoided the Euromarkets during 1980–83, but after 1983 the country again began to borrow heavily on the international markets, owing to a steady erosion of its earnings from hydrocarbons. Algeria's return to the international capital markets in 1983 ended a period during which the Government had managed to effect a net repayment of its external debt. The OECD estimated that total external debt rose from $17,924m. at the end of 1983 to $25,757m. at the end of 1993. The cost of servicing the debt in the latter year was equivalent to 89% of Algeria's export earnings.

As detailed under the section on Government Strategy above, major reschedulings of sovereign debt (through the 'Paris Club' of 17 creditor governments) and of commercial debt (through the 'London Club' of creditor banks) had been completed by 1996, temporarily eliminating the short-term component within Algeria's external debt and leaving a total long-term debt of $30,800m. at the end of 1996. In 1995 the debt-servicing requirement as a proportion of export earnings was 44% (but would have been 85% without rescheduling); in 1996 it was 29% (but would have been 53% without rescheduling). Statistics published by the World Bank in mid-1996 gave Algeria's 'financing gap' for 1995 as $6,000m., which was covered by $3,770m. of 'Paris Club' rescheduling, $1,010m. of 'London Club' rescheduling and $1,220m. of balance-of-payments support from the IMF, World Bank and other sources. In 1996 a gap of $4,780m. was covered by 'Paris Club' rescheduling ($2,810m.), 'London Club' rescheduling ($920m.) and balance-of-payments support ($1,050m.). By 1998 the World Bank expected the financing gap to be below $1,000m., and to be covered by $560m. of 'Paris Club' rescheduling and $400m. of balance-of-payments support. The first repayment of Algeria's 'London Club' debt was made in March 1998. During 1998, as the grace period in the 'Paris Club' and 'London Club' rescheduling agreements neared their end, debt-service repayments were forecast to rise to $5,210m. In April 1998 the Banque d'Algérie announced that Algeria's total foreign debt stood at $31,222m. at the end of 1997, equivalent to 66.4% of GDP, down from 73.5% in 1996. In May the Minister of Finance stated that, despite falling petroleum prices, external debt-servicing would not absorb more than 50% of foreign exchange reserves over the following three years. According to the central bank, total external debt fell slightly in 1998 to $30,470m., of which one-half was in medium- and long-term debt covered by rescheduling agreements. Government figures indicated that debt repayments rose more sharply than had been expected, from $4,465m. in 1997 to $5,180m. in 1998, with a further rise projected in 1999, putting more pressure on foreign reserves. The debt-service ratio rose sharply from 30.3% in 1997 to 47.5% in 1998. The authorities nevertheless insisted that debt repayments were manageable, with the debt to GDP ratio projected to fall from 55% in 1999 to 28% in 2005, and the debt-service ratio falling from 42% in 1999 to 31% in 2005, based on a projected oil price of $15–$16 per barrel. Independent sources projected lower export revenues and estimated that the debt-service ratio rose to 53.8% in 1998 and would remain at that level in 1999–2000.

In March 1999 a Russian delegation visited Algeria; discussions included the issue of repayment of debt incurred with the former Soviet Union, estimated at $3,000m.

According to IMF data, Algeria's foreign exchange reserves minus gold amounted to only $404m. in July 1991, as the Government came under pressure to meet debt repayments, but rose to $1,094m. in October. In June 1993 officials of the Banque d'Algérie stated that reserves had been increased to $2,000m., the highest level since 1986, as a result of the Government's austerity programme. By the end of 1993, however, they had decreased again to $1,510m. Subsequent end-year reserves levels were $2,640m. (1994), $2,110m. (1995) and $4,230m. (1996). At the end of June 1997 the reserves totalled $6,440m., representing around nine months' import cover. In May 1998 the Minister of Finance stated that foreign exchange reserves currently stood at $8,800m., but reserves contracted sharply, to $6,800m. by the end of the year, reflecting a drawdown to meet Algeria's debt repayment obligations. By March 1999 reserves had fallen to $5,266m.

Directory

The Constitution

A new Constitution for the Democratic and People's Republic of Algeria, approved by popular referendum, was promulgated on 22 November 1976. The Constitution was amended by the National People's Assembly on 30 June 1979. Further amendments were approved by referendum on 3 November 1988, on 23 February 1989, and on 28 November 1996. The main provisions of the Constitution, as amended, are summarized below:

The preamble recalls that Algeria owes its independence to a war of liberation which led to the creation of a modern sovereign state, guaranteeing social justice, equality and liberty for all. It emphasizes Algeria's Islamic, Arab and Amazigh heritage, and stresses that, as an Arab Mediterranean and African country, it forms an integral part of the Great Arab Maghreb.

FUNDAMENTAL PRINCIPLES OF THE ORGANIZATION OF ALGERIAN SOCIETY

The Republic

Algeria is a popular, democratic state. Islam is the state religion and Arabic is the official national language.

The People

National sovereignty resides in the people and is exercised through its elected representatives. The institutions of the State consolidate national unity and protect the fundamental rights of its citizens. The exploitation of one individual by another is forbidden.

The State

The State is exclusively at the service of the people. Those holding positions of responsibility must live solely on their salaries and may not, directly or by the agency of others, engage in any remunerative activity.

Fundamental Freedoms and the Rights of Man and the Citizen

Fundamental rights and freedoms are guaranteed. All discrimination on grounds of sex, race or belief is forbidden. Law cannot operate retrospectively and a person is presumed innocent until proved guilty. Victims of judicial error shall receive compensation from the State.

The State guarantees the inviolability of the home, of private life and of the person. The State also guarantees the secrecy of correspondence, the freedom of conscience and opinion, freedom of intellectual, artistic and scientific creation, and freedom of expression and assembly.

The State guarantees the right to form political associations (on condition that they are not based on differences in religion, language, race, gender or region), to join a trade union, the right to strike, the right to work, to protection, to security, to health, to leisure, to education, etc. It also guarantees the right to leave the national territory, within the limits set by law.

Duties of Citizens

Every citizen must respect the Constitution, and must protect public property and safeguard national independence. The law sanctions the duty of parents to educate and protect their children, as well as the duty of children to help and support their parents. Every citizen must contribute towards public expenditure through the payment of taxes.

The National Popular Army

The army safeguards national independence and sovereignty.

Principles of Foreign Policy

Algeria subscribes to the principles and objectives of the UN. It advocates international co-operation, the development of friendly relations between states, on the basis of equality and mutual interest, and non-interference in the internal affairs of states.

POWER AND ITS ORGANIZATION

The Executive

The President of the Republic is Head of State, Head of the Armed Forces and responsible for national defence. He must be of Algerian origin, a Muslim and more than 40 years old. He is elected by universal, secret, direct suffrage. His mandate is for five years, and is renewable once. The President embodies the unity of the nation. The President presides over meetings of the Council of Ministers. He decides and conducts foreign policy and appoints the Head of Government, who is responsible to the National People's Assembly. The Head of Government must appoint a Council of Ministers. He drafts, co-ordinates and implements his government's programme, which he must present to the Assembly for ratification. Should the Assembly reject the programme, the Head of Government and the Council of Ministers resign, and the President appoints a new Head of Government. Should the newly-appointed Head of Government's programme be rejected by the Assembly, the President dissolves the Assembly, and a general election is held. Should the President be unable to perform his functions, owing to a long and serious illness, the President of the Council of the Nation assumes the office for a maximum period of 45 days (subject to the approval of a two-thirds majority in the National People's Assembly and the Council of the Nation). If the President is still unable to perform his functions after 45 days, the Presidency is declared vacant by the Constitutional Council. Should the Presidency fall vacant, the President of the Council of the Nation temporarily assumes the office and organizes presidential elections within 60 days. He may not himself be a candidate in the election. The President presides over a High Security Council which advises on all matters affecting national security.

The Legislature

The legislature consists of the National People's Assembly and the Council of the Nation. The members of the National People's Assembly are elected by universal, direct, secret suffrage for a five-year term. Two-thirds of the members of the Council of the Nation are elected by indirect, secret suffrage from regional and municipal authorities; the remainder are appointed by the President of the Republic. The Council's term in office is six years; one-half of its members are replaced every three years. The deputies enjoy parliamentary immunity. The legislature sits for two ordinary sessions per year, each of not less than four months' duration. The commissions of the legislature are in permanent session. The two parliamentary chambers may be summoned to meet for an extraordinary session on the request of the President of the Republic, or of the Head of Government, or of two-thirds of the members of the National People's Assembly. Both the Head of Government and the parliamentary chambers may initiate legislation. Legislation must be deliberated upon respectively by the National People's Assembly and the Council of the Nation before promulgation. Any text passed by the Assembly must be approved by three-quarters of the members of the Council in order to become legislation.

The Judiciary

Judges obey only the law. They defend society and fundamental freedoms. The right of the accused to a defence is guaranteed. The Supreme Court regulates the activities of courts and tribunals, and the State Council regulates the administrative judiciary. The Higher Court of the Magistrature is presided over by the President of the Republic; the Minister of Justice is Vice-President of the Court. All magistrates are answerable to the Higher Court for the manner in which they fulfil their functions. The High State Court is empowered to judge the President of the Republic in cases of high treason, and the Head of Government for crimes and offences.

The Constitutional Council

The Constitutional Council is responsible for ensuring that the Constitution is respected, and that referendums, the election of the President of the Republic and legislative elections are conducted in accordance with the law. The Constitutional Council comprises nine members, of whom three are appointed by the President of the Republic, two elected by the National People's Assembly, two elected by the Council of the Nation, one elected by the Supreme Court and one elected by the State Council. The Council's term in office is six years; the President of the Council is appointed for a six-year term and one-half of the remaining members are replaced every three years.

The High Islamic Council

The High Islamic Council is an advisory body on matters relating to Islam. The Council comprises 15 members and its President is appointed by the President of the Republic.

Constitutional Revision

The Constitution can be revised on the initiative of the President of the Republic (subject to approval by the National People's Assembly and by three-quarters of the members of the Council of the Nation), and must be approved by national referendum. Should the Constitutional Council decide that a draft constitutional amendment does not in any way affect the general principles governing Algerian society, it may permit the President of the Republic to promulgate the amendment directly (without submitting it to refer-

endum) if it has been approved by three-quarters of the members of both parliamentary chambers. Three-quarters of the members of both parliamentary chambers, in a joint sitting, may propose a constitutional amendment to the President of the Republic who may submit it to referendum. The basic principles of the Constitution may not be revised.

The Government

HEAD OF STATE

President and Minister of Defence: ABDELAZIZ BOUTEFLIKA (inaugurated 27 April 1999).

COUNCIL OF MINISTERS

(September 1999)

A coalition of the Rassemblement national démocratique (RND), the Front de libération nationale (FLN) and the Mouvement de la société pour la paix (MSP).

Independent	11
Parti des travailleurs (PT)	4
Parti républicain progressif (PRP)	3
Union pour la démocratie et les libertés (UDL)	1
Parti social-libéral (PSL)	1
Total	380

Constitutional amendments, approved by national referendum in November 1996, provided for the establishment of a second parliamentary chamber, the Council of the Nation. In late December 1997 two-thirds of the Council's 144 members were indirectly elected by regional and municipal authorities: the RND won 80 seats, followed by the FLN (10), the FFS (4) and the MSP (2). The remaining 48 members were appointed by the President of the Republic. The Chairman of the Council is BACHIR BOUMAAZA.

Political Organizations

Until 1989 the FLN was the only legal party in Algeria. The February 1989 amendments to the Constitution permitted the formation of other political associations, with some restrictions. The right to establish political parties was guaranteed by constitutional amendments in November 1996; however, political associations based on differences in religion, language, race, gender or region were proscribed. Some 39 political parties contested the legislative elections which took place in June 1997. The most important political organizations are listed below.

Alliance nationale républicaine (ANR): Algiers; f. 1995; anti-Islamist; Leader REDHA MALEK.

Congrès national algérien: Algiers; f. 1999; Leader ABDELKADER BELHAYE.

Front démocratique: Algiers; f. 1999; Leader SID-AHMAD GHOZALI.

Front des forces socialistes (FFS): 56 ave Souidani Boudjemaâ, 16000 Algiers; tel. (2) 59-33-13; fax (2) 59-11-45; f. 1963; revived 1990; Leader HOCINE AÏT AHMED.

Front islamique du salut (FIS): Algiers; f. 1989; aims to emphasize the importance of Islam in political and social life; formally dissolved by the Algiers Court of Appeal in March 1992; Leader ABBASI MADANI.

Front de libération nationale (FLN): 7 rue du Stade, Hydra, Algiers; tel. (2) 59-21-49; telex 53931; f. 1954; sole legal party until 1989; socialist in outlook, the party is organized into a Secretariat, a Political Bureau, a Central Committee, Federations, Kasmas and cells; under the aegis of the FLN are various mass political organizations, including the Union Nationale de la Jeunesse Algérienne (UNJA) and the Union Nationale des Femmes Algériennes (UNFA); Sec.-Gen. BOUALEM BENHAMOUDA.

Front national algérien: Algiers; f. 1999; Pres. AHMED TOUATI.

Front national de renouvellement (FNR): Algiers; Leader ZINEDDINE CHERIFI.

Mouvement algérien pour la justice et le développement (MAJD): Villa Laibi, Lot. Kapiot No. 5, Bouzaréah, Algiers; tel. (2) 60-58-00; fax (2) 78-78-72; f. 1990; reformist party supporting policies of fmr Pres. Boumedienne; Leader MOULAY HABIB.

Mouvement pour la liberté: Algiers; f. 1999; Leader MOULOUD HAMROUCHE.

Mouvement de la réforme nationale (MRN): Algiers; f. 1998; Leader Sheikh ABDALLAH DJABALLAH.

Mouvement pour la démocratie et la citoyenneté (MDC): Tizi-Ouzou; f. 1997 by dissident members of the FFS; Leader SAÏD KHELIL.

Mouvement de la société pour la paix (MSP): 163 Hassiba Ben Bouali, Algiers; f. as Hamas; adopted current name in 1997; moderate Islamic party, favouring the gradual introduction of an Islamic state; Leader Sheikh MAHFOUD NAHNAH.

Nahdah: Algiers; fundamentalist Islamist group; Sec.-Gen. HABIB ADAMI.

Parti démocratique progressif (PDR): Algiers; f. 1990 as a legal party; Leader SACI MABROUK.

Parti national pour la solidarité et le développement (PNSD): Cité du 5 juillet 11, No. 22, Constantine; Leader MOHAMED CHERIF TALEB.

Parti du renouveau algérien (PRA): 29 rue des Frères Bouatik, el-Biar, Algiers; tel. (2) 56-62-78; Sec.-Gen. MUHAMMAD MENAI; Leader NOURREDDINE BOUKROUH.

Parti républicain progressif (PRP): 10 rue Ouahrani Abou-Medièene, Cité Seddikia, Oran; tel. (5) 35-79-36; f. 1990 as a legal party; Sec.-Gen. SLIMANE CHERIF.

Parti des travailleurs (PT): Algiers; workers' party; Leader LOUISA HANOUNE.

Rassemblement pour la culture et la démocratie (RCD): 87A rue Didouche Mourad, Algiers; tel. (2) 73-62-01; telex 67256; fax (2) 73-62-20; f. 1989; secular party; advocates recognition of the Berber language, Tamazight, as a national language; Pres. SAÏD SAADI.

Rassemblement national démocratique (RND): Algiers; f. 1997; centrist party; Sec.-Gen. AHMED OUYAHIA.

Union pour la démocratie et les libertés (UDL): Algiers; f. 1997; Leader ABDELKRIM SEDDIKI.

Judicial System

The highest court of justice is the Supreme Court (Cour suprême) in Algiers. Justice is exercised through 183 courts (tribunaux) and 31 appeal courts (cours d'appel), grouped on a regional basis. New legislation, promulgated in March 1997, provided for the eventual establishment of 214 courts and 48 appeal courts. The Cour des comptes was established in 1979. Algeria adopted a penal code in 1966, retaining the death penalty. In February 1993 three special courts were established to try suspects accused of terrorist offences; however, the courts were abolished in February 1995. Constitutional amendments, introduced in November 1996, provided for the establishment of a High State Court (empowered to judge the President of the Republic in cases of high treason, and the Head of Government for crimes and offences), and a State Council to regulate the administrative judiciary. In addition, a Conflicts Tribunal is to be established to adjudicate in disputes between the Supreme Court and the State Council.

Supreme Court: ave du 11 décembre 1960, Ben Aknoun, Algiers; tel. and fax (2) 92-44-89; telex 661663.

President of Supreme Court: A. NASRI.

Entreprise Nationale de Transformation de Produits Longs (ENTPL): BP 1005, 19 ave Mekki Khelifa, El Manouar; tel. (6) 34-52-40; telex 22953; fax (6) 34-19-50; f. 1983; production and distribution of girders; Dir-Gen. MUHAMMAD BOUTCHACHA.

Entreprise Nationale de Tubes et de Transformation de Produits Plats (ENTTPP): BP 131, route de la Gare, Reghaia, Algiers; tel. (2) 80-91-86; telex 68116; f. 1983; manufacture and distribution of tubing; Dir-Gen. RACHID BELHOUS.

Enterprise Nationale des Véhicules Industriels (SNVI): BP 153, 5 route nationale, 35300 Rouiba; tel. (2) 85-19-70; telex 68134; fax (2) 85-13-45; f. 1981; manufacture of industrial vehicles; Dir-Gen. ALI BEKKOUCHE.

Entreprise Nationale du Fer et du Phosphate (Ferphos): BP 122, Zhun 2, Tebessa; tel. (8) 47-49-10; telex 95004; fax (8) 47-43-38; f. 1983; production, import and export of iron and phosphate products; Dir-Gen. AHMAD BENSLIMANE.

Entreprise Publique Economique Asmidal, SpA: BP 326, route des Salines, 23000 Annaba; tel. (8) 83-20-22; telex 81922; fax (8) 84-47-20; f. 1985; production of ammonia, fertilizers, pesticides and sodium tripolyphosphate.

Entreprise Publique Economique des Manufactures de Chaussures et Maroquinerie (EMAC): route de Sidi Bel-Abbès, Sig 29300; tel. (6) 83-82-15; telex 13935; fax (6) 83-84-51; f. 1983; manufacture of shoes and leather goods; Dir-Gen. DJELLOUL BENDJEDID.

Office Régional du Centre des Produits Oléicoles (ORECPO): route de Aïn Bessem Bouira, 10000 Algiers; tel. (3) 92-92-11; telex 77098; fax (3) 92-00-88; f. 1982; production and marketing of olives and olive oil; Dir-Gen. CHABOUR MUSTAPHA.

Secrétariat d'Etat aux Forêts et au Reboisement: Direction Generale des Forêts, rue des quatre Canons, Algiers; tel. (2) 74-80-03; telex 52854; fax (2) 74-80-14; f. 1971; production of timber, care of forests; Man. Dir ABJELLAH GHEBALOU.

Société Nationale de Constructions Mécaniques (SONACOME): Algiers; tel. (2) 65-93-92; telex 52800; f. 1967; to be reorganized into 11 smaller cos, most of which will specialize in manufacture or distribution of one of SONACOME's products; Dir DAOUD AKROUF.

Société Nationale de Constructions Métalliques (SN METAL): Algiers; tel. (2) 63-29-30; telex 52889; f. 1968; production of metal goods; Chair. HACHEM MALIK; Man. Dir ABD AL-KADER MAIZA.

Société Nationale de Fabrication et de Montage du Matériel Electrique (SONELEC): 4 & 6 blvd Muhammad V, Algiers; tel. (2) 63-70-82; telex 52867; electrical equipment.

Société Nationale des Industries Chimiques (SNIC): BP 641, 4–6 blvd Muhammad V, Algiers; tel. (2) 64-07-73; telex 52802; production and distribution of chemical products; Dir-Gen. RACHID BEN IDDIR.

Société Nationale des Industries des Lièges et du Bois (SNLB): BP 61, 1 rue Kaddour Rahim, Hussein Dey, Algiers; tel. (2) 77-99-99; telex 52726; f. 1973; production of cork and wooden goods; Chair. MALEK BELLANI.

Société Nationale des Industries des Peaux et Cuirs (SONIPEC): BP 113, 100 rue de Tripoli, Hussein Dey, Algiers; tel. (2) 77-21-22; telex 52832; fax (2) 77-76-13; f. 1967; hides and skins; Chair. MUHAMMAD CHERIF AZI; Man. Dir NACERI ABDENOUR.

Société Nationale des Matériaux de Construction (SNMC): Algiers; tel. (2) 64-35-13; telex 52204; f. 1968; production and import monopoly of building materials; Man. Dir ABD AL-KADER MAIZI.

Société Nationale de Recherches et d'Exploitations Minières (SONAREM): 127 blvd Salah Bouakouiz, Algiers; tel. (2) 63-15-55; telex 52910; f. 1967; mining and prospecting; Dir-Gen. OUBRAHAM FERHAT.

Société Nationale des Tabacs et Allumettes (SNTA): 40 rue Hocine-Nourredine, Algiers; tel. (2) 66-18-68; telex 52780; monopoly of manufacture and trade in tobacco, cigarettes and matches; Dir-Gen. MUHAMMAD TAHAB BOUZEGHOUB.

TRADE UNIONS

Union Générale des Travailleurs Algériens (UGTA): Maison du Peuple, place du 1er mai, Algiers; tel. (2) 66-89-47; telex 65051; f. 1956; 800,000 mems; Sec.-Gen. ABDELMADJID SIDI SAID .

There are 10 national 'professional sectors' affiliated to UGTA. These are:

Secteur Alimentation, Commerce et Tourisme (Food, Commerce and Tourist Industry Workers): Gen. Sec. ABD AL-KADER GHRIBLI.

Secteur Bois, Bâtiments et Travaux Publics (Building Trades Workers): Gen. Sec. LAIFA LATRECHE.

Secteur Education et Formation Professionnelle (Teachers): Gen. Sec. SAÏDI BEN GANA.

Secteur Energie et Pétrochimie (Energy and Petrochemical Workers): Gen. Sec. ALI BELHOUCHET.

Secteur Finances (Financial Workers): Gen. Sec. MUHAMMAD ZAAF.

Secteur Information, Formation et Culture (Information, Training and Culture).

Secteur Industries Légères (Light Industry): Gen. Sec. ABD AL-KADER MALKI.

Secteur Industries Lourdes (Heavy Industry).

Secteur Santé et Sécurité Sociale (Health and Social Security Workers): Gen. Sec. ABD AL-AZIZ DJEFFAL.

Secteur Transports et Télécommunications (Transport and Telecommunications Workers): Gen. Sec. EL-HACHEMI BEN MOUHOUB.

Al-Haraka al-Islamiyah lil-Ummal al-Jazarivia (Islamic Movement for Algerian Workers): Tlemcen; f. 1990; based on teachings of Islamic faith and affiliated to the FIS.

Union Nationale des Paysans Algériens (UNPA): f. 1973; 700,000 mems; Sec.-Gen. AÏSSA NEDJEM.

Transport

RAILWAYS

A new authority, Infrafer (Entreprise Publique Economique de Réalisation des Infrastructures Ferroviaires), was established in 1987 to take responsibility for the construction of new track. In the following year a project to build an underground railway network in Algiers was revived in a modified form.

Entreprise Métro d'Alger: 4 chemin de Wilaya 13, Kouba, Algiers; tel. (2) 58-67-68; fax (2) 68-97-05; construction of a 26.5-km metro railway line began in 1989; initial 12.5-km section (16 stations) scheduled to open in two stages, starting in 2000; Dir-Gen. H. BELLIL.

Infrafer (Entreprise Publique Economique de Réalisation des Infrastructures Ferroviaires): BP 208, 35300 Rouiba; tel. (2) 85-27-47; telex 68152; fax (2) 85-17-55; f. 1987; Pres. and Dir-Gen. K. BENMAMI.

Société Nationale des Transports Ferroviaires (SNTF): 21–23 blvd Muhammad V, Algiers; tel. (2) 71-15-10; telex 66333; fax (2) 74-81-90; f. 1976 to replace Société Nationale des Chemins de Fer Algériens; 4,820 km of track, of which 304 km are electrified and 1,156 km are narrow gauge; daily passenger services from Algiers to the principal provincial cities and services to Tunisia and Morocco; Dir-Gen. A. LALAIMIA.

ROADS

In 1996 there were an estimated 104,000 km of roads and tracks, of which 640 km were motorways, 25,200 km were main roads and 23,900 km were secondary roads. The French administration built a good road system (partly for military purposes), which, since independence, has been allowed to deteriorate in parts. New roads have been built linking the Sahara oil fields with the coast, and the Trans-Sahara highway is a major project. In 1996 it was estimated that the cost of renovating the national road system would total US $4,124m.

Société Nationale des Transports Routiers (SNTR): 27 rue des Trois Frères Bouadou, Bir Mourad Rais, Algiers; tel. (2) 54-06-00; telex 62120; fax (2) 56-53-73; f. 1967; holds a monopoly of goods transport by road; Chair. El-Hadj HAOUSSINE; Dir-Gen. ESSAID BENDAKIR.

Société Nationale des Transports des Voyageurs (SNTV): Algiers; tel. (2) 66-00-52; telex 52603; f. 1967; holds monopoly of long-distance passenger transport by road; Man. Dir M. DIB.

SHIPPING

Algiers is the main port, with anchorage of between 23 m and 29 m in the Bay of Algiers, and anchorage for the largest vessels in Agha Bay. The port has a total quay length of 8,380 m. There are also important ports at Annaba, Arzew, Béjaia, Djidjelli, Ghazaouet, Mostaganem, Oran, Skikda and Ténés. Petroleum and liquefied gas are exported through Arzew, Béjaia and Skikda. Algerian crude petroleum is also exported through the Tunisian port of La Skhirra. In December 1997 Algeria's merchant fleet totalled 151 vessels, amounting to 982,528 grt.

Cie Algéro-Libyenne de Transports Maritimes (CALTRAM): 19 rue des Trois Frères Bouadou, Bir Mourad Rais, Algiers; tel. (2) 57-17-00; telex 62150; fax (2) 54-21-04; Man. Dir A. HASMIM.

Entreprise Nationale de Réparations Navales (ERENAV): quai no. 12, Port d'Alger, Algiers; tel. (2) 42-04-00; telex 66650; fax (2) 71-31-72; f. 1987; ship repairs; Dir-Gen. MUHAMMAD MOSLI.

Entreprise Nationale de Transport Maritime de Voyageurs—Algérie Ferries (ENTMV): BP 467, 5,6 Jawharlal Nehru, Algiers; tel. (2) 74-04-85; telex 55100; fax (2) 64-88-76; f. 1987 as part of restructuring of SNTM-CNAN; responsible for passenger transport; operates car ferry services between Algiers, Annaba, Skikda, Alicante, Marseilles and Oran; Dir-Gen. A. CHERIET.

Entreprise Portuaire d'Alger (EPAL): BP 259, 2 rue d'Angkor, Alger-Gare, Algiers; tel. (2) 71-54-39; telex 61275; fax (2) 71-54-52; e-mail ferrah@ist.cerist.dz; f. 1982; responsible for management and growth of port facilities and sea pilotage; Dir-Gen. ALI FERRAH.

Entreprise Portuaire d'Annaba (EPAN): BP 1232, Môle de la Cigogne-Quai nord, Annaba; tel. (8) 86-31-31; telex 81652; fax (8) 86-54-15; Man. Dir D. SALHI.

Entreprise Portuaire d'Arzew (EPA): BP 46, 7 rue Larbi Tebessi, Arzew; tel. (6) 37-24-91; telex 12919; fax (6) 47-49-90; Man. Dir CHAIB OUMER.

Entreprise Portuaire de Béjaia (EPB): BP 94, Môle de la Casbah, Béjaia; tel. (5) 21-18-07; telex 83055; fax (5) 22-25-79; Man. Dir M. BOUMSILA.

Entreprise Portuaire de Djen-Djen (EPDJ): BP 87, El Achouat, Djen-Djen, Djidjelli; tel. (5) 45-94-63; telex 84060; fax (5) 45-90-72; f. 1984; Man. Dir MUHAMMAD ATMANE.

Entreprise Portuaire de Ghazaouet (EPG): BP 217, Enceinte Portuaire Môle de Batna, 13400 Ghazaouet; tel. (7) 32-13-45; telex 18836; fax (7) 32-12-55; Man. Dir B. ABDELMALEK.

Entreprise Portuaire de Mostaganem (EPM): BP 131, quai du Port, Mostaganem; tel. (6) 21-14-11; telex 14097; fax (6) 21-78-05; Dir M. CHERIF.

Entreprise Portuaire d'Oran (EPO): BP 106, 6 blvd Mimouni Lahcène, Oran; tel. (6) 39-26-25; telex 22422; fax (6) 39-53-52; Man. Dir M. S. LOUHIBI.

Entreprise Portuaire de Skikda (EPS): BP 65, 46 ave Rezki Rahal, Skikda; tel. (8) 75-68-27; telex 87840; fax (8) 75-20-15; Man. Dir M. LEMRABET.

Entreprise Portuaire de Ténès (EPT): BP 18, 02200 Ténès; tel. (3) 76-72-76; telex 78090; fax (3) 76-61-77; Man. Dir K. EL-HAMRI.

NAFTAL Division Aviation Maritime: BP 70, Aéroport Houari Boumedienne, Dar-el-Beïda, Algiers; tel. (2) 50-95-50; fax (2) 50-67-09; Dir HAMZA BELAIDI.

Société Générale Maritime (GEMA): 2 rue J. Nehru, Algiers; tel. (2) 74-73-00; telex 56079; fax (2) 74-76-73; f. 1987 as part of restructuring of SNTM-CNAN; responsible for merchant traffic; Dir-Gen. ABDULLAH SERIAI.

Société Nationale de Transport Maritime et Cie Nationale Algérienne de Navigation (SNTM-CNAN): BP 280, 2 quai no. 9, Nouvelle Gare Maritime, Algiers; tel. (2) 71-14-78; telex 66581; fax (2) 61-59-64; f. 1963; state-owned co which owns and operates fleet of freight ships; rep. office in Marseilles (France) and rep. agencies in Antwerp (Belgium), Valencia (Spain) and the principal ports in many other countries; Gen. Man. GHAZI REGAÏNIA.

Société Nationale de Transports Maritimes des Hydrocarbures et des Produits Chimiques (SNTM-HYPROC): BP 60, Arzew, 31200 Oran; tel. (6) 37-30-99; telex 12097; fax (6) 37-28-30; f. 1982; Dir-Gen. CHAÏB OUMEUR.

CIVIL AVIATION

Algeria's main airport, Houari Boumedienne, 20 km from Algiers, is a class A airport of international standing. At Constantine, Annaba, Tlemcen and Oran there are also airports that meet international requirements. There are, in addition, 65 aerodromes, of which 20 are public, and a further 135 airstrips connected with the petroleum industry.

Air Algérie (Entreprise Nationale d'Exploitation des Services Aériens): BP 858, 1 place Maurice Audin, Immeuble el-Djazair, Algiers; tel. (2) 74-24-28; telex 67145; fax (2) 74-44-25; f. 1953 by merger; state-owned from 1972; internal services and extensive services to Europe, North and West Africa, and the Middle East; Sec.-Gen. ALI DJERABA; Dir-Gen. FAYSAL KHALIL.

Air Maghreb: planned consortium of the national airlines of Algeria, Libya, Mauritania, Morocco and Tunisia; the merger of the airlines has been delayed indefinitely.

Antinea Airlines: Algiers; domestic and international cargo and passenger services.

Desert Aviation Co: Touggourt; f. 1999; private co; internal flights; Exec. Dir CHOKRI MIAADI.

Eco Air: Algiers; f. 1998; private co operating domestic and international passenger flights.

Tassili Airlines: Hassi Messaoud; f. 1997; jt venture between SONATRACH and Air Algérie; domestic passenger services.

Tourism

Algeria's tourist attractions include the Mediterranean coast, the Atlas mountains and the desert. In 1998 a total of 107,214 tourists visited Algeria, compared with 722,682 in 1991. Receipts from tourism totalled US $24m. in 1996. In that year there were 737 hotels, with a total of 64,695 beds.

Agence Nationale de Développement Touristique (ANDT): BP 151, Sidi Fredj Staoueli, Algiers; tourism promotion; Dir-Gen. ABDELKRIM BOUCETTA.

Office National du Tourisme (ONT): 2 rue Ismail Kerrar, Algiers; tel. (2) 71-29-82; telex 55362; fax (2) 71-29-85; f. 1990; state institution; oversees tourism promotion policy; Dir-Gen. ABDELKADER GOUTI (acting).

ONAT-TOUR (Opérateur National Algérien de Tourism): 25–27 rue Khélifa-Boukhalfa, 16000 Algiers; tel. (2) 74-33-76; telex 66383; fax (2) 74-32-14; f. 1962; Dir-Gen. BELKACEMI HAMMOUCHE.

Société de Développement de l'Industrie Touristique en Algérie (SODITAL): 72 rue Asselah Hocine, Algiers; f. 1989; Dir-Gen. NOUREDDINE SALHI.

TCA-TOUR (Touring Club d'Algérie): BP 18, Birkhamden; rue Hacéne Benaamane, quartier les vergers, Algiers; tel. (2) 56-90-16; fax (2) 54-19-39; Dir-Gen. ABDERAHMANE ABD-EDDAIM.

Defence

Chief of Staff of the Army: Lt-Gen. MUHAMMAD LAMARI.

Commander of the Land Force: Maj.-Gen. SALAH GAÏD.

Commander of the Air Force: Maj.-Gen. MUHAMMAD BENSLIMANE.

Commander of the Naval Forces: Maj.-Gen. CHAABANE GHODBANE.

Defence Budget (1998): AD 112,000m.

Military Service: 18 months national service (army only).

Total Armed Forces (August 1998): 122,000: army 105,000 (75,000 conscripts); navy 7,000; air force 10,000.

Paramilitary Forces: 146,200 (including an estimated 100,000 self-defence militia and communal guards, and a gendarmerie of 25,000).

Education

Education, in the national language (Arabic), is officially compulsory for a period of nine years, for children between six and 15 years of age. Primary education begins at the age of six and lasts for six years. Secondary education begins at 12 years of age and lasts for a maximum of six years, comprising two cycles of three years each. In 1996 the total enrolment at primary and secondary schools was equivalent to 86% of the school-age population (89% of boys; 82% of girls). Primary enrolment in that year included 94% of children in the relevant age-group (boys 97%; girls 91%). The comparable ratio for secondary enrolment was 56% (boys 58%; girls 54%). Some 12.5% of total planned expenditure in the 1997 administrative budget was allocated to education and training.

There were some 4,674,947 pupils at primary schools in 1996/97, compared with about 800,000 in 1962. Most education at primary level is in Arabic, but at higher levels French is still widely used. The majority of foreign teachers in Algeria come from Egypt, Syria, Tunisia and other Arab countries.

In 1995/96 the number of students receiving higher education was 347,410. In addition to the 10 main universities there are seven other *centres universitaires* and a number of technical colleges. Several thousand students go abroad to study. Adult illiteracy, which, according to UNESCO estimates, averaged 38.4% (males 26.1%; females 51.0%) in 1995, has been combated by a large-scale campaign, in which instruction is sometimes given by young people who have only recently left school, and in which the broadcasting services are widely used.

BAHRAIN

Geography

The State of Bahrain consists of a group of about 35 islands, situated midway along the Persian (Arabian) Gulf, about 24 km (15 miles) from the east coast of Saudi Arabia, and 28 km (17 miles) from the west coast of Qatar.

The total area of the Bahrain archipelago is 707.3 sq km (273.1 sq miles). Bahrain itself, the principal island, is about 50 km (30 miles) long and between 13 km and 25 km (8 miles and 15 miles) wide. To the north-east of Bahrain, and linked to it by causeway and road, lies Muharraq island, which is approximately 6 km (4 miles) long. A causeway also links Bahrain to Sitra island. Some of the other islands in the state are Nabih Salih, Jeddah, Hawar, Umm Nassan and Umm Suban. A causeway linking Bahrain and Saudi Arabia was opened in November 1986.

The total population of Bahrain increased from 216,078 in April 1971, to 508,037 at the census of November 1991. Of the 1991 total, 323,305 were Bahraini citizens. According to official estimates, in mid-1997 the total population was 620,000. About 80% of the population are thought to be of Arab ethnic origin, and 20% Iranian. In 1991 the port of Manama, the capital and seat of government, had a population of 136,999. Bahrain's Muslim population (82% of the total in 1991) is estimated to consist of between 40% and 45% of the Sunni sect and between 55% and 60% of the Shi'ite sect. The Bahraini labour force, 60% of whom were estimated to be of non-Bahraini origin in 1993, was expected to double between 1989 and the end of the century. The ruling family are Sunnis.

History

After several centuries of independence, Bahrain passed first under the rule of the Portuguese (1521–1602) and then under periodic Persian rule (1602–1782). The Persians were expelled in 1783 by the Utub tribe from Arabia, whose leading family, the al-Khalifas, became the independent sheikhs of Bahrain and have ruled Bahrain ever since, except for a brief period before 1810. Nevertheless, claims, based on the Persian occupation of the islands in the 17th and 18th centuries, were renewed intermittently.

In the 19th century European powers began to take an interest in the Gulf area. Britain was principally concerned with preventing French, Russian and German penetration towards India, and suppressing the trade in slaves and weapons. In 1861 the Sheikh of Bahrain undertook to abstain from the prosecution of war, piracy and slavery by sea in return for British support in case of aggression. In 1880 and 1892 the Sheikh further undertook not to cede, mortgage or otherwise dispose of parts of his territories to anyone except the British Government, nor to enter into a relationship with any other government without British consent. A convention acknowledging Bahrain's independence was signed by the British and Ottoman Governments in 1913, although the islands remained under British administration.

Under Sheikh Sulman bin Hamad al-Khalifa (who became ruler of Bahrain in 1942), social services and public works were considerably extended. Sheikh Sulman died in November 1961 and was succeeded by his eldest son, Sheikh Isa bin Sulman al-Khalifa. In February 1956 elections were held for members of an Education and Health Council (the first election in Bahrain had been held in 1919 for the Municipal Council). Shortly after the 1956 elections, there was a strike in the petroleum refinery, alleged to be partly a protest against the paternalism of the British adviser to the Sheikh. There were further disturbances at the time of the Suez crisis. Other symbols of Bahrain's growing independence included the establishment of Bahraini, as opposed to British, legal jurisdiction over a wide range of nationalities (1957), the issue of Bahrain's own postage stamps (1960) and the introduction of a separate currency (1965). Bahrain also pioneered free education and health services in the Gulf region. In 1967 Britain transferred its principal Arabian military base from Aden to Bahrain, but by 1968 the British Government had decided to withdraw all forces 'East of Suez' before the end of 1971. In October 1973, at the time of the Arab–Israeli war, the Bahrain Government gave one year's 'notice to quit' to the US navy, whose ships had docking facilities in Bahrain. The evacuation did not, in fact, take place, but negotiations continued and Bahrain finally took over the base in July 1977.

Extensive administrative and political reforms came into effect in January 1970, when a 12-member Council of State was established. The formation of this new body, which became the state's supreme executive authority, represented the first formal derogation of the ruler's powers. Sheikh Khalifa bin Sulman al-Khalifa, the ruler's eldest brother, became President of the Council. Only four of the initial 12 'Directors' were members of the royal family, but all were Bahrainis, and the British advisers were reduced to the status of civil servants. Equal numbers of Sunni and Shi'ite Muslims were included (the royal family apart) to reflect Bahrain's religious balance. When Bahrain became fully independent, in August 1971, the Council of State became the Cabinet of the State of Bahrain (with Sheikh Khalifa as Prime Minister), with authority to direct the country's internal and external affairs.

After 1968 Bahrain was officially committed to membership of the embryonic Federation of Arab Emirates. The Bahrain Government, however, failed to negotiate an agreement on the terms of the federal constitution with the richer, but less developed, sheikhdoms in the region. Bahrain's position was strengthened in May 1970, when Iran accepted a UN report on Bahrain's future which found that popular opinion in Bahrain overwhelmingly favoured complete independence rather than union with Iran.

On 15 August 1971 Bahrain's full independence was proclaimed, a new treaty of friendship was signed with the United Kingdom, and Sheikh Isa took the title of Amir. Bahrain became a member of the League of Arab States (Arab League, see p. 264) and of the UN. In December 1972 elections were held for a Constituent Assembly. This body drafted a new Constitution, which came into force on 6 December 1973. Elections to a 44-member National Assembly were held on the following day. Of the members, 30 were chosen by the all-male electorate, and the remaining 14 were members of the Government. A delay in the establishment of trade unions, for which the Constitution made provision, and a sharp rise in the cost of living provoked industrial unrest in 1974. In August 1975 the Prime Minister submitted his resignation, complaining that the National

Assembly was preventing the Government from carrying out its functions. The Amir invited him to form a new government, and, two days later, dissolved the National Assembly and suspended the Constitution. The traditional administrative system of *majlis* (assembly), where citizens and non-citizens present petitions to the Amir, remains.

Bahrain joined other Arab states in condemning the Egyptian-Israeli peace treaty in March 1979, and suspended diplomatic relations with Egypt. In September 1979 Iranian Shi'ite elements exhorted Bahraini Shi'ites, who are in the majority and many of whom are of Iranian descent, to demonstrate against the Sunni Amir. Calm was restored but it was apparent that the new regime in Iran was interested in reviving the Iranian claim to Bahrain, which the Shah of Iran had not renounced until 1975. In December 1981 between 50 and 60 people, mainly Bahrainis, were arrested in Bahrain on charges of conspiring to overthrow the Government. Bahrain's Minister of the Interior alleged that the plot was the work of Hojatoleslam Hadi al-Mudarasi, an Iranian clergyman, who was operating in the name of the Islamic Front for the Liberation of Bahrain (IFLB). In 1984 the discovery of a cache of weapons in a Bahraini village renewed fears of Iranian attempts to disrupt the island's stability, and in June 1985 there was increased concern over Bahrain's security when a further plot to overthrow the Government was discovered. Despite subsequent assurances from President Rafsanjani of Iran, and cordial relations with his successor, President Khatami, Bahrain has continued to monitor carefully both the political situation in Teheran and domestic stability. Strict censorship is imposed, and political parties and trade unions are banned. The Government has been severely criticized by human rights organizations for its alleged use of torture and detention without trial.

Concern over regional security was one of the reasons why Bahrain joined five other Gulf states in forming the Co-operation Council for the Arab States of the Gulf (known as the Gulf Co-operation Council—GCC, see p. 255) in March 1981. In January 1987 the USA agreed to sell 12 F-16 fighter aircraft to Bahrain as part of a contract, valued at US $400m., to provide military equipment. In mid-1990 Bahrain became the first Gulf nation to receive such aircraft. Bahrain's intention to maintain its security through collective defence has also been emphasized by the country's participation in joint naval manoeuvres with Qatar and other Gulf states, and in the GCC's 'Peninsula Shield' military exercises. Bahrain provides onshore facilities for US forces, and there is a large US navy presence.

In April 1986 a long-standing territorial dispute between Bahrain and Qatar erupted into a military confrontation. Qatari military forces raided the island of Fasht ad-Dibal, a coral reef situated midway between Bahrain and Qatar, over which both claim sovereignty. During the raid Qatar seized 29 foreign workers (all of whom were subsequently released), who were constructing a Bahraini coastguard station on the island. Officials of the GCC met representatives from both states in an attempt to reconcile them and avoid a split within the Council. Fasht ad-Dibal was the third area of dispute between the two countries, the others being Zubara, on mainland Qatar, and the Hawar islands. In July 1991 Qatar instituted proceedings at the International Court of Justice (ICJ) in The Hague in an attempt to resolve the dispute over the potentially oil-rich Hawar islands, the shoals of Dibal and Quitat Jaradah and the delineation of the maritime boundary. In mid-1992 Qatar rejected Bahrain's attempt to broaden the issue to include its claim to part of the Qatari mainland, around Zubara, which had been Bahraini territory until the early 20th century. In February 1995, following deliberations, the ICJ declared that it would have authority to adjudicate in the dispute, even though Qatar had applied unilaterally to the Court. Bahrain continued to insist that a bilateral solution be sought, rejected the jurisdiction of the ICJ in the matter and welcomed a Saudi Arabian offer to mediate in the dispute. In September relations between Bahrain and Qatar deteriorated further, following the Bahraini Government's decision to construct a tourist resort on the disputed Hawar islands.

In 1990 Bahrain upgraded its relations with Iran to ambassadorial level, and in early 1992 Bahrain signed an important protocol for industrial co-operation with Iran. The first official Israeli delegation to visit Bahrain arrived in late September 1994, and in the following month the Israeli Minister of the Environment, Yossi Sarid, attended multilateral Middle East talks in Manama on environmental issues. During his visit Sarid met with Bahrain's Minister of Foreign Affairs, marking the first contact at ministerial level between Bahrain and Israel.

In August 1990 Bahrain's position assumed new strategic importance as a result of Iraq's occupation and annexation of Kuwait. Following the annexation, Bahrain firmly supported the implementation of UN economic sanctions against Iraq, and permitted the stationing of US combat aircraft in Bahrain. British armed forces participating in the multinational force for the defence of Saudi Arabia and the liberation of Kuwait were also stationed in Bahrain in 1990–91. In May 1991 representatives of the Bahrain Government met defence officials from the USA, the United Kingdom and Germany to discuss post-war security arrangements, and the role that the USA should play in the implementation of any regional security plan. In June the Amir visited Kuwait for talks on regional security, and it was announced that Bahrain would remain a regional support base for the USA, but would not become the headquarters of a Gulf-based US military command and control centre. At the end of October Bahrain and the USA signed a defence co-operation agreement allowing for joint military exercises, the storage of equipment and the use of Bahraini port facilities by US forces. In January 1994 memoranda of military co-operation were signed with the USA and the United Kingdom.

In July 1992 Bahrain's Prime Minister expressed the hope that the country's relations with Iraq would improve and that, eventually, both Iraq and Iran would be incorporated into the GCC. This was the first time that a government of a GCC state had openly recommended the restoration of contacts with Iraq. At the GCC summit in Riyadh, however, in December 1993, there was criticism of both Iraq and Iran. In the final communiqué the Heads of State of the six GCC member countries demanded that international pressure on Iraq to observe all of the UN resolutions pertaining to it should be maintained, and that the sovereignty of Kuwait should be respected. It was also decided to double the size of the Saudi-based 'Peninsula Shield' joint defence force. In October 1994, when Iraqi troops were again positioned in the Iraq-Kuwait border area, Bahrain deployed combat aircraft and naval units to join GCC and US forces in the defence of Kuwait. In a statement issued in mid-October, Bahrain, together with the other GCC member states and Egypt and Syria, condemned Iraqi threats against Kuwait and reaffirmed its full support for Kuwait's sovereignty.

In November 1992 the Amir announced the formation of a new, 30-member Consultative Council. The Council had little scope to question or alter government policy, and power remained with the Amir and the ruling al-Khalifa family. The establishment of the Council met with little popular enthusiasm.

Fears of renewed unrest among Bahrain's Shi'ite majority have continued to preoccupy the ruling regime and to prompt an uncompromising response to popular disaffection. In December 1993 a human rights organization, Amnesty International, published a report that was highly critical of the Bahrain Government, claiming that Bahraini Shi'ites had been deprived of their nationality and forcibly exiled by their own Government. In response to the criticism, the Amir issued a decree in March 1994 pardoning 64 Bahrainis exiled since the 1980s and permitting them to return to Bahrain. Unrest continued in the following months as young men demonstrated against rising unemployment among Bahraini nationals, particularly the Shi'ite population. In November 1994 12 Shi'ite villagers were reported to have been arrested in Jidd Hafs, to the west of Manama, following the violent disruption of a charity running event in which a group of expatriate men and women was participating. In early December the police arrested a young Shi'ite cleric, Sheikh Ali Salman, imam of the main Shi'ite mosque in Manama, who had demanded the release of those arrested at Jidd Hafs and had also condemned the participation of women in the race. Moreover, he had appealed for the restoration of the National Assembly (suspended in 1975) and criticized the ruling family, the large number of foreign workers employed on the island, and the decline of moral standards. Cassettes of his speeches had been widely circulated throughout Bahrain. Widespread rioting followed across the island, especially in Shi'ite areas; in the Shi'ite quarter of Manama demonstrators

appealed for the release of Sheikh Salman. In an attempt to defuse the crisis, the Amir, in an address on 16 December 1994, promised 'to encourage consultation' and to ensure that the Consultative Council became 'a sincere expression of the feelings and aspirations of all citizens'. The rioting continued and several people died in clashes with armed police. The crisis was particularly embarrassing for the Government as it occurred as Bahrain was about to host the 15th summit of the GCC, an event which had attracted numerous foreign journalists to the island. Later in the month the authorities acknowledged the existence of political unrest and blamed Sheikh Salman and certain 'foreign interests', a coded reference to Iran. The police proceeded to make a large number of arrests; according to the opposition some 2,500 Bahrainis, mainly Shi'ites, had been arrested by mid-January 1995. While some observers pointed to the role of Shi'ite clerics in instigating the unrest—many of whom received their religious training in the Iranian city of Qom—others have emphasized that these disturbances were very different from the events of 1981 when the new Islamic Republic urged Bahraini Shi'ites to overthrow the Amir. By late 1994 Iran, accused by Israel and the USA of having nuclear ambitions, had been trying to improve its relations with its Gulf neighbours, and the Iranian press was cautious in reporting the troubles. Indeed the political slogans employed during these demonstrations were not urging the establishment of an Islamic republic in Bahrain but, rather, the restoration of parliamentary life through the re-establishment of the National Assembly. Sheikh Salman had been active in supporting a petition (which had been circulating since October 1994) appealing for the restoration of the National Assembly, the involvement of women in the democratic process and the organization of free elections. According to opposition sources some 21,000–25,000 signatures had been obtained, including those of Sunnis and Shi'ites from the professional classes, despite the vigilance of the security services. The thwarted aspirations of the Shi'ite majority, primarily a result of socio-economic factors, especially rising unemployment, also contributed to the crisis. Shi'ite workers felt particularly threatened by the recruitment of cheap and well-qualified Asian labour, a practice encouraged by several members of the royal family who benefited financially from immigration. Resentment had also grown owing to the presence of a large number of highly-paid expatriates employed mainly in the financial sector.

In mid-January 1995 Sheikh Salman, together with two associates, was deported from Bahrain. When Sheikh Salman arrived in the United Kingdom seeking political asylum, the Bahraini Minister of Foreign Affairs, Sheikh Muhammad bin Mubarak al-Khalifa, was dispatched to London to demand that Salman's request be denied. The Crown Prince of Bahrain, Sheikh Hamad bin Isa al-Khalifa, accused Britain of sheltering 'terrorists and saboteurs'. The Government confirmed that the demonstrators arrested during the unrest in December would stand trial but denied foreign press reports of renewed civil disturbances.

Throughout the crisis the Amir received the full support of Saudi Arabia which, according to Bahraini opposition sources, had rapidly dispatched two brigades of its National Guard (around 4,000 men) across the causeway to Bahrain to assist the local police in quelling the rioting. During a visit to Manama in late December the Saudi Minister of the Interior, Prince Nayef ibn Abd al-Aziz as-Sa'ud, reiterated his country's support for the Bahrain Government's firm stance against the demonstrators, as Saudi Arabia was particularly concerned that any unrest among the Shi'ites of Bahrain should not spread to its own Shi'ite population, mainly concentrated in the oil-rich Eastern Province.

In early March 1995 the Amir ordered the release of 100 detainees, including some of those arrested during the disturbances in December 1994—300 of whom reportedly remained in prison. Meanwhile, as part of its efforts to confront anti-government protests, Bahrain convened a meeting of GCC Ministers of the Interior in Manama in April. In a statement issued following the meeting the GCC states fully supported the measures taken by Bahrain to maintain security and stability and declared their determination to fight 'the phenomenon of extremism which is alien to Islam'. Further violence had erupted at the end of March, in which at least two people died, and there were reports of almost daily protests during the first week in April. The Prime Minister claimed that 'the acts of sabotage' were linked to 'foreign groups' and were premeditated. Reports suggested that business life had been largely unaffected by the disturbances, but the US embassy in Manama nevertheless advised US nationals not to leave their homes at night or at the weekend. According to Amnesty International at least 700 people had been arrested since December 1994. In May and July 1995 several Bahrainis were sentenced to prison terms ranging from one year to life imprisonment for their role in the disturbances, and one Bahraini was sentenced to death for his part in the murder of a policeman in March. In mid-August the Amir issued a decree pardoning 150 people detained since the disturbances. In the same month the Government initiated talks with Shi'ite opposition leaders in an apparent attempt at reconciliation, although in mid-September it was announced that the talks had failed. Nevertheless, in late September an influential Shi'ite clergyman, Sheikh Abd al-Amir al-Jamri (imprisoned in April), was released from detention; more than 40 other Shi'ite detainees were released shortly afterwards.

At the end of June 1995 the Prime Minister, Sheikh Khalifa bin Sulman al-Khalifa, announced the first major cabinet reshuffle in nearly 20 years. Cabinet changes had been expected since the outbreak of political unrest in December 1994 but the regime stressed that the reshuffle was not a result of the pro-democracy demonstrations but had been planned for some time. There were no changes, however, at the key Defence, Foreign Affairs, Finance and National Economy and Interior portfolios. Within the new 16-man Cabinet, seven posts were retained by members of the ruling family and five by Shi'ites. Reducing unemployment by creating new job opportunities, and improving the standard of living were identified as the Government's major priorities, but education, public services and development were also to receive greater attention. It was announced that the Bahraini Defence Force would be expanded 'to protect the nation'. The opposition denounced the reshuffle as purely cosmetic and accused the Government of ignoring new political developments. While Bahraini official sources claimed that stability had been completely restored, the opposition stated that, in the absence of meaningful dialogue, and given the Government's refusal to consider demands for political representation, rioting could erupt again.

Meanwhile, the opposition maintained that, during the reconciliation talks which they had initiated in mid-1995, the authorities had agreed to release all detainees and to allow the return of political exiles. In return, the opposition pledged to exert their influence in an attempt to end the violence. By early October some 400 political prisoners had been released but others remained in detention. Accusing the Government of having failed to fulfil its promise to release all detainees, in October seven opposition leaders led by Sheikh al-Jamri staged a hunger strike. They demanded the release of all political prisoners, permission for those dissidents who had been deported to return to Bahrain, and an agreement by the authorities to resume open talks with the opposition regarding the restoration of the 1973 Constitution; the Government had denied that earlier meetings with the opposition had actually taken place. However, Sheikh al-Jamri and the other protesters ended their hunger strike at the beginning of November without achieving their objectives.

Disturbances erupted again in November 1995 (especially among students) and, according to opposition sources, the police made hundreds of arrests. The authorities sought assistance from Saudi Arabia, and it was reported that Saudi security officers were again dispatched to reinforce the Bahraini police. In January and February 1996 the conflict escalated when a number of bombs exploded in Manama's business district. The security forces had closed mosques where prominent leaders had continued to urge the authorities to restore democracy, and in late January eight opposition leaders, including Sheikh al-Jamri, had been rearrested. They were expected to stand trial on charges of inciting unrest. For the first time in the recent disturbances the authorities also detained a prominent Sunni member of the Committee for Popular Petition; Ahmad ash-Shamlan (a lawyer) was arrested after he distributed a statement criticizing the Government's authoritarian action. Ash-Shamlan was released in May following strong representation by international organizations. The closure of mosques provoked

renewed violence, as protesters clashed with police. Mass arrests were reported, and at the beginning of February the Ministry of the Interior admitted that some 600 people had been detained, although the opposition estimated the number of arrests at 2,000. Reports suggested that most of those detained were held without charge or trial and that they included women and children. A report published in September 1995 by Amnesty International had underlined the systematic use of torture by the security services when interrogating political prisoners. Previously, civil disturbances had been dealt with by the Ministry of the Interior, but in a statement issued at the end of January 1996 the Ministry of Defence announced that it was prepared to introduce martial law and to deploy the Bahrain Defence Force to restore effective order in the future.

In March 1996 as unrest continued, seven Bangladeshi workers were killed in a fire-bomb attack on a restaurant in Sitra, representing the worst arson attack since the disturbances began. Within days the Ministry of the Interior announced that it had arrested a number of individuals who had confessed to the attack, but many Bahrainis suspected that the attack was carried out by government agents. The opposition condemned the attack, while the Bangladeshi Government was critical of the Bahrain security forces' handling of the case. On 20 March the Amir issued a decree transferring jurisdiction for a range of offences from ordinary courts to the Higher Court of Appeal, sitting as the State Security Court. This effectively introduced a 'fast track' system where the accused has no right of appeal and the role of the defence is greatly limited. On 26 March, Isa Ahmad Hassan Qambar was executed by firing squad after being sentenced to death for killing a policeman during clashes with security forces in March 1995. It was the first execution in Bahrain for almost 20 years. Qambar's trial was condemned by Amnesty International for ignoring 'internationally accepted human rights standards', while the Bahraini opposition described it as a 'political murder' intended to prompt popular compliance. There were allegations that the case against Qambar had been based on confessions made in detention and under torture. The execution provoked mass protests, with police using tear-gas to disperse young Shi'ite protesters. Thousands of people observed a week of mourning declared by the opposition to mark Qambar's execution. In April the Government announced the creation of a Higher Council of Islamic Affairs, appointed by the Prime Minister and headed by the Minister of Justice and Islamic Affairs, to supervise religious activities in the country, including those of the Shi'ite population. Leading figures in the Shi'ite community immediately condemned the move as an attempt to interfere in their affairs. At the end of April the Government announced that the State Security Court had imprisoned 11 people on charges connected with the disturbances, including arson, sabotage and membership of illegal organizations. It was reported that large numbers of defendants had been tried in groups and sentenced to long terms of imprisonment by the Court. At the beginning of May, after the death of a demonstrator as a result of the security forces opening fire on a crowd of protestors, a number of bombs exploded throughout the country, killing several people including two policemen. Most observers are convinced that the pro-democracy movement is locally-rooted, unifying various trends and sections of Bahraini society with no outside support, despite the insistence of the authorities that the dissidents have foreign backers.

At the beginning of June 1996 the Government organized a press conference in Manama at which it announced that some 10 prisoners had confessed to belonging to the military branch of Hezbollah Bahrain, a previously unknown organization. The authorities stated that the prisoners had admitted that this terrorist group had been created on the instruction of Iran's Revolutionary Guards and had received financial support from them. They alleged that young Bahraini Shi'ites had received military training in the Iranian holy city of Qom and in guerrilla bases in the Beka'a valley in Lebanon. They also claimed that the previous 18 months of unrest had been the culmination of a 'terrorist programme of sabotage' perpetrated by this group in order to overthrow the regime and replace it with a pro-Iranian government. However, the authorities were satisfied that they had arrested the movement's leaders. The day after the press conference, as the prisoners made their confessions before television cameras, one of them claimed that Sheikh al-Jamri had 'sanctioned' two bomb attacks carried out in July 1995. However, an opposition spokesman in London rejected claims that a Hezbollah group sponsored by Iran was active in Bahrain, and claimed that the regime was merely using Iran as a scapegoat. Independent sources cast doubt on the validity of the confessions, claiming that the prisoners had been denied legal representation during their detention, and referred to Amnesty International's report in September 1995 which alleged that political detainees were systematically tortured. They also pointed out that recent acts of sabotage were not professionally executed and therefore not consistent with the presence of a well-trained and well-armed movement such as Hezbollah. This was the first time that the Bahrain Government had directly accused Iran of supporting the unrest, allegations which Iran continued to deny. Bahrain recalled its ambassador to Teheran and downgraded its diplomatic representation there.

In July 1996, the State Security Court imposed the death sentence on three of the eight young Bahrainis convicted of the arson attack in Sitra. Another four men were sentenced to life imprisonment. The death sentences provoked widespread protests and, after international criticism, the Government agreed to allow an appeal against the ruling. In October the Court of Cassation ruled that it had no jurisdiction to overturn the verdict, and the fate of the three men seemed likely to be decided by the Amir. There were more anti-government demonstrations in July and August, and a campaign of civil disobedience organized by the exiled Bahrain Freedom Movement (BFM) was reported to have been well supported, notably among the Shi'a population. Towards the end of the year, Government plans to close a number of Shi'a mosques resulted in further unrest. Demonstrators gathered at the Ras Roman mosque in central Manama became involved in a violent confrontation with the security forces during which police fired tear-gas at worshippers. Civil unrest continued in December, prompting rumours that the ruling family was divided over how to respond to the crisis.

In September 1996, in what was interpreted as a move to counter opposition demands, the Amir expanded the membership of the government-appointed Consultative Council from 30 to 40 and allowed up to one-half of the members to be elected indirectly through professional and cultural organizations. The new Council was comprised of 22 members of the previous council and 18 new members nominated by the Amir. Appointed for a four-year term, the new Council was to comment on most areas of government policy (the previous Council had been restricted to consideration of Cabinet-proposed legislation) but would still enjoy very limited powers since its recommendations would continue to be non-binding on the Government. A new decree, issued by the Amir in June, divided Bahrain into four new administrative regions known as *Mohafadat*, with the aim of improving services and making officials more accountable. However, opponents argued that the new system would enable the interior ministry to intensify security measures, particularly following reports that the ministry was to be reorganized and the intelligence service expanded. In January 1997 the Amir issued a decree establishing a National Guard to provide support for the Bahraini Defence Force and the security forces of the interior ministry. The Amir's son, Hamad, Commander-in-Chief of the Defence Force, was also appointed to command the new force, and there was speculation that its primary duty would be to protect the ruling family.

Unrest continued during 1997, and in March a week of anti-government protests marked the first anniversary of the execution of Isa Ahmad Hassan Qambar. Although stricter security measures had resulted in fewer public demonstrations, arson attacks increased substantially, especially against commercial premises in Manama. During 1994–97 more than 30 people were killed in arson attacks and small-scale bombings. Two car bomb explosions in the capital, in June and October 1997, were considered by some observers to signal the beginning of a heightened campaign of violence on the part of the opposition. A pronounced increase in the number of Asian workers targeted by arsonists between 1996 and early 1998 was attributed, in part, to mounting frustration among less privileged sections of Bahraini society at rising unemployment.

In April 1997 the US military command in Bahrain placed its forces on alert after reports of possible terrorist operations against US navy personnel by Hezbollah Bahrain. In January the security forces had successfully contained large-scale anti-government demonstrations organized by opponents of the regime on the occasion of the second anniversary of the arrest of Sheikh Abd al-Amir al-Jamri. The deteriorating health of the prominent Shi'ite cleric lent a sense of urgency to the occasion, particularly as Amnesty International had already raised concerns about his well-being. In July, following the death in custody of another senior Shi'ite dissident cleric, Human Rights Watch, an independent organization based in New York, published a report which condemned the security practices of the Bahrain Government. The report urged the US Government to take active steps to review its involvement in Bahrain and to put pressure on the ruling family to restore civil liberties. A UN sub-commission and the European Parliament were also critical of Bahrain's human rights record. The European Parliament in particular urged the Bahrain Government to release political prisoners and to grant access to human rights organizations. Growing concern for human rights in Bahrain resulted in unprecedented scrutiny of Bahraini internal affairs by the international community, and recent sentences against political opponents have been noticeably lenient. In mid-April 1997 the trial of 81 Bahrainis accused of membership of the terrorist organization Hezbollah Bahrain ended unexpectedly with relatively light sentences; no death sentences were passed and the maximum terms of imprisonment imposed were 15 years, for the alleged leaders. A lawsuit filed by the Government in October against eight Shi'ite members of the opposition residing abroad followed a simliar course. Despite the severity of the charges, which included inciting violence, establishing Hezbollah Bahrain, and attempting to overthrow the regime, the dissidents, who were tried *in absentia*, received prison sentences of between five and 15 years. During 1997 the authorities released a substantial number of political detainees (approximately 3,000 according to unofficial sources).

In January 1998 the Amir announced plans further to enlarge the Consultative Council. Media coverage of Council proceedings, meanwhile, has increased substantially and access to meetings has been granted to the press and to the state-controlled television. In addition, during 1997 the Ministry of Information relaxed publishing restrictions considerably. Administrative reorganization of the country is continuing, and two members of the ruling family were appointed to the governorships of Manama and Muharraq island in 1997 and 1998; they were to be directly responsible to the Ministry of the Interior. These new developments were interpreted as further evidence of an ongoing power struggle between the Prime Minister and the Crown Prince. In late February Ian Henderson, the long-serving, British-born head of the State Security Investigation Directorate, was replaced by Khalid bin Muhammad al-Khalifa, a close associate of the Crown Prince. The dismissal of Henderson, considered to be central to the apparatus of state repression, was welcomed by opponents of the Government, who stated that a precondition for dialogue with the Government was the 'Bahrainization' of the security forces; in 1997 opposition sources estimated that as many as 50,000 non-Bahrainis were employed in the country's security.

During 1998 the security forces were increasingly successful in containing internal unrest. Severe sentences were handed down to political opponents by the State Security Court, in contrast to the leniency displayed during the previous year. Although the International Committee of the Red Cross (ICRC) reported an improvement in prison conditions since 1997, opposition figures have continued to voice their concerns with security practices, particularly the extraction of confessions under torture and the enforced signing of pre-drafted documents. Renewed protests followed the death, in government custody, of a young Shi'ite in July 1998 and in late 1998 the death of a political activist, recently released from detention, provoked confrontations between Shi'ite demonstrators and the Bahraini police in Sitra. Also in July, the death of a Bahraini national, Tawfiq Abd an-Nabi Ibrahim al-Baharinah, in Lebanon prompted speculation about government efforts to trace links between the internal opposition and Hezbollah. Initial reports, endorsed by the Lebanese Minister of Foreign Affairs, suggested that al-Baharinah had been a Bahraini intelligence agent, although Bahrain subsequently denied this. Independent observers suggested that al-Baharinah, who had died under mysterious circumstances, might have been a member of the opposition IFLB, which is believed to have a strong support base in Lebanon. Renewed Government concerns with the possible involvement of Lebanese Hezbollah in Bahrain's internal affairs coincided with the explosion of a car bomb in central Manama in November. A few days earlier a Lebanese Shi'ite had been arrested, together with five Bahraini citizens, on terrorist charges; it was alleged that the six had smuggled explosives into Bahrain through Syria and Saudi Arabia, following intensive training at a Hezbollah camp in southern Lebanon. In October a report by British parliamentary and judicial human rights committees was highly critical of Bahrain's legal system and accused the Government of violating international standards of justice. In November the Bahrain Government announced its willingness to allow a UN human rights working party to visit Bahrain in order to investigate the application of the 1974 State Security Act. Following widespread international media attention focusing on criticism of alleged legal abuses in Bahrain, in late February 1999 the State Security Court finally began legal proceedings against Sheikh al-Jamri, the opposition spiritual leader imprisoned in 1996. (Under the terms of the State Security Act, which provides for the imprisonment of suspects without trial for a period of up to three years, Sheikh al-Jamri was due to be released in early 1999.) In July the Court sentenced al-Jamri to 10 years' imprisonment and imposed a substantial fine on him, although the new Amir granted him an official pardon on the following day. In June the Amir had granted an amnesty to a number of detainees being held on security-related charges.

On 6 March 1999 Sheikh Hamad bin Isa al-Khalifa, hitherto Crown Prince of Bahrain, was appointed Amir following the death of his father. His appointment encouraged expectations of political change among the opposition, which welcomed the change of leadership as an opportunity to renew negotiations with the Government and urged a temporary cessation of popular protest in respect for the deceased Amir. Mansoor al-Jamri, son of the Shi'ite cleric tried in February, urged the pursuit of a political, rather than military, solution to civil unrest. Although diplomatic sources in Bahrain predicted that the new Amir would adopt a more conciliatory position with regard to security issues, Sheikh Hamad's first official address to the nation in mid-March was emphatic in its high regard for the armed forces and the guardians of both internal security and regional stability. At the end of May Sheikh Hamad effected a cabinet reorganization in which three new Ministers were appointed, including Abdullah Hassan Saif, formerly Governor of the Bahrain Monetary Agency, as Minister of Finance; Majid Jawad al-Jishi was appointed to the newly-created post of Minister of State. Sheikh Salman bin Hamad al-Khalifa, eldest son of the Amir became Crown Prince and Sheikh Khalifa bin Sulman al-Khalifa remained Prime Minister, despite a long-standing power struggle with the new Amir.

Bahrain has received support from Pakistan, Egypt, Syria and Jordan, but Saudi Arabia has remained its most steadfast ally, and in 1998 continued to provide political and economic support to the al-Khalifa Government. Saudi Arabia increasingly links Bahrain's stability to its own internal security, owing to the large Shi'ite population in its Eastern Province. A number of GCC countries have offered their support for maintaining the status quo in Bahrain, but it is unclear whether they accept Bahrain's argument that if the dissidents succeed there, unrest will spread to other states in the region. However, regional tensions have continued to arise. An appeal made by a number of leading Kuwaiti personalities to the Amir to renew dialogue with the opposition resulted in an official Bahraini protest to the Kuwait Government and the UAE's request for an end to UN sanctions against Iraq was similarly rejected by Bahrain, which supports Saudi Arabia's uncompromising stance on this issue. Relations with Qatar, traditionally tense as a result of the long-standing dispute over the Hawar islands (see above), deteriorated sharply at the end of 1995. Qatar criticized Bahrain's decision to build a tourist resort on the disputed islands and urged co-operation with the ICJ on the resolution of the dispute. Bahrain, however, defended its decision, maintaining

that the islands were 'sovereign territory' and again refused to accept the jurisdiction of the ICJ on this issue. Bahrain boycotted the GCC annual summit convened in Doha in December 1996, at which it was decided to establish a quadripartite committee (comprising those GCC countries not involved in the dispute) to facilitate a solution. Attempts by the committee to foster improved relations between Bahrain and Qatar achieved a degree of success, and meetings between prominent government ministers from both countries in London (United Kingdom) and Manama in February and March 1997 resulted in the announcement that diplomatic relations at ambassadorial level were to be established between the two countries by mid-1997. However, while the Qatari Government appointed its diplomatic representative soon after the exchange of ambassadors was agreed, by mid-1999 the Bahraini authorities had yet to name their representative to Doha. There were renewed tensions between the two countries in mid-1997, when the Bahraini authorities opened a new hotel on the Hawar islands; plans to build a housing complex there were also announced at that time, and in February 1998 the Amir made a widely publicized visit to the islands. There have been repeated regional attempts to find a solution to the dispute, particularly by Saudi Arabia and the UAE, whose opposition to Qatar's stance has encouraged Bahrain to emphasize its belief in its territorial rights there by increasing its occupancy of the islands. Bahrain has repeatedly stated that it will disregard any final decision made by the ICJ, and has dismissed as forgeries a series of documents submitted by the Qatari Government in support of its own claim. In September the Qatari Government submitted a report to the ICJ in support of the legitimacy of the documents that it had previously presented to the Court, although it subsequently agreed to withdraw the documents from evidence. In mid-1998 Bahrain's plans to build a causeway linking the islands to the mainland fuelled speculation about a future military escalation between the two countries, and in October the Qatari Government retaliated by including Zubara and the Hawar islands among the listed constituencies at municipal elections. The Bahrain Government publicly denounced this action as a violation of Bahrain's territorial integrity and accused Qatar of undermining Bahrain's internal stability. Since the death of the old Amir, a prompt settlement of the dispute has seemed no more likely. The new Amir is considered to be a staunch defender of Bahrain's territorial rights and is expected to adopt an equally uncompromising attitude towards the issue.

Bahrain attended the Arab League summit meeting in Cairo at the end of June 1996, where the final communiqué criticized Iran for its 'interference in the internal affairs of Bahrain'. Relations have, however, improved steadily since the election of Sayed Muhammad Khatami as President of Iran in May 1997. The new Iranian Minister of Foreign Affairs, Kamal Kharrazi, visited Bahrain in November and discussed the expansion of diplomatic, cultural and economic relations between the two countries with his Bahraini counterpart. In March 1998 the former Iranian President, Hashemi Rafsanjani, held talks with the Amir during a two-day visit to Manama. In 1998 Saudi Arabia actively encouraged the increasing diplomatic contacts between Bahrain and Iran, which culminated in the appointment of an Iranian ambassador to Bahrain in December. In early October Bahrain's Minister of Labour and Social Affairs Abd an-Nabi ash-Shula had visited Iran, where he met representatives of a number of Shi'a religious foundations which the Bahrain Government has accused of providing financial support to sections of the Bahraini opposition. The Iranian Government has come under increasing pressure from Saudi Arabia to control the activities of uncompromising Shi'a clerics in Bahrain, particularly following the tentative *rapprochement* between Saudi Arabia and Iran which gathered momentum during 1998.

The Bahrain Government continued to receive support from its traditional Western allies, the USA and the United Kingdom, in its efforts to suppress recent domestic instability. The United Kingdom, under pressure from Saudi Arabia, had made it clear that dissidents from the Gulf region, including Bahrain, were no longer welcome there. In December 1995, with some reluctance, Bahrain agreed to a US request to allow the temporary stationing of American military aircraft in Bahrain. In March 1996 an agreement was reached with the USA to supply Bahrain with an advanced frigate and air-defence system. The USA condemned Iran for interfering in Bahrain's internal affairs, and in June 1996, after the Bahraini authorities announced the discovery of an alleged Iranian-backed plot to destabilize the archipelago, the Government made public US President Clinton's assurances to the Amir that the USA pledged its 'total support to his Government, his sovereignty and the security of Bahraini territories'. In late 1997 the USA supported Bahrain's candidature to the UN Security Council. However, relations between the two countries deteriorated subsequently; in early 1998 a US Department of State review of human rights was extremely critical of Bahrain's record, and relations deteriorated further in Febrary when Bahrain opposed any military intervention in Iraq, and advocated a diplomatic solution to the impasse between UN weapons inspectors and the Iraqi's authorities (see chapter on Iraq). In March the Bahrain Government agreed to accommodate a continued US military presence, and in April US forces replaced their combat and air support units using Bahrain as a base, in order to strengthen US attack capabilities; Bahraini forces also participated in naval exercises with both US and British units. However, following a visit by the Amir to the USA in June—the first such visit by a Gulf leader for more than five years—it seemed that the US Government was intending to reduce its military presence in the region. The Amir's second visit to France in late May was followed by talks with President Clinton and UN Secretary-General Kofi Annan in Washington in early June, and underlined Bahrain's support for the implementation of Middle East peace accords in line with the policy of the Arab League. Following a meeting of Bahraini and US officials in Washington, DC (USA) in October the US Secretary of Defense, William Cohen, visited Bahrain in an attempt to promote the purchase of a US anti-ballistic-missile system. Although the Bahraini authorities supported the US-led military campaign against Iraq in December (the operation was centred in Manama where the Fifth Fleet is headquartered), they maintained a low profile and refrained from any public endorsement of the air-strikes. Relations with the United Kingdom have been strained by the election there, in May 1997, of a Labour Government which has placed greater importance on human rights issues in its foreign policy dealings. Despite this increase in political tensions with the United Kingdom, in late October 1998 the British Secretary of State for Defence, George Robertson, visited Bahrain to rally support for a planned renewal of the military campaign against Iraq. At the end of 1998 the British Government attempted to improve military relations with Bahrain by actively encouraging an accord which would lead to the establishment of a UK-sponsored military college in the archipelago. The activities of the London-based opposition have, however, also strained diplomatic relations between the two countries. In September members of a British government delegation to Bahrain had encountered considerable opposition to a decision by the British authorities to grant refugee status to three prominent Bahraini opposition figures; earlier in September Ali Salman Ahmed, Hamza Ali ad-Dayri and Haidar Hasan as-Sitri, who were each sentenced *in absentia* to five years' imprisonment by a Bahraini court in November 1997, were allowed to extend their period of residence in the United Kingdom. A BBC report produced during the delegation's visit to Bahrain alleged discrimination by the Government against the local Shi'a population, and was publicized by the local media as evidence of continued British support of 'terrorist activities'. In late April 1999, during a short visit to London, Bahrain's Minister of Foreign Affairs, Sheikh Muhammad bin Mubarak al-Khalifa, demanded the immediate expulsion of the Government's political opponents from the United Kingdom.

While contacts at ministerial level have taken place between Bahrain and Israel it is thought that Bahrain will follow the example of Saudi Arabia and refuse a move towards diplomatic relations until there is a comprehensive Middle East peace settlement and the status of Jerusalem, in particular, is resolved. Bahrain, unlike Qatar and Oman, declined to send a representative to the funeral of assassinated Israeli Prime Minister Rabin in November and denied that there had been any contact between the Bahraini Minister of Commerce and his Israeli counterpart at the Middle East and North Africa Economic Summit conducted in Jordan during the previous month. In March 1997, in protest at Israel's decision to construct

a Jewish settlement in a disputed area of East Jerusalem, the Arab League voted to suspend negotiations to establish diplomatic links with Israel, close Israeli missions, restore the economic boycott and withdraw from multilateral peace talks.

Economy

ALAN J. DAY

Based on an earlier article by Dr. P. T. H. UNWIN, with subsequent revision by RICHARD I. LAWLESS

INTRODUCTION

During the 1970s and 1980s the exploitation of Bahrain's hydrocarbon resources was the basis for considerable economic diversification, particularly in the construction, industry and banking sectors. After the Gulf crisis of 1990–91 Bahrain encountered some difficulty in regaining the momentum for economic growth. The unemployment rate in 1998 was unofficially estimated to be more than 15%, the population growth rate (currently around 3.5% per year) having for some years exceeded the rate of real GDP growth (which in 1997 was 3.1%). The creation of new jobs was, therefore, a government priority.

In 1991 the Government established the Bahrain Development Bank to provide long-term loans and venture capital to attract investors, and the Bahrain Marketing and Promotions Office to encourage companies to establish a base in the region. Incentives to new investors introduced in the 1993 Government Incentive Programme included major tax concessions, rebates on rent and power charges to small and medium-sized companies, and a subsidy for every Bahraini national employed. Official procedures were simplified and full foreign ownership of companies was allowed provided that they were engaged in industrial activities or were establishing a base for the sale of manufactured goods and services in the Gulf region. According to the Government, this constituted the best foreign investment incentive package in the region. There was also duty-free access to the wider market of the Co-operation Council for the Arab States of the Gulf (GCC — of which Bahrain is a member — see p. 255) for Bahrain-based industries whose products met GCC eligibility criteria.

Having encouraged new private industrial investment, Bahrain was forced to consider the crucial future expansion of infrastructure, including water and electricity supply systems in imminent need of additional capacity to meet rising demand. The Government, however, was reluctant to embark on a major capital spending programme as long as it continued to experience problems in containing the existing budget deficit. Approval for several major development projects was postponed during 1994 and 1995, when it was widely predicted that the Government would eventually seek foreign private investment for key infrastructure developments. During 1996, however, the Government's financial situation (already benefiting from higher oil export prices) was greatly strengthened by Saudi Arabia's decision to allocate its share of the 1996 annual output of petroleum from the jointly-owned Abu Saafa oilfield to Bahrain (see Petroleum and Gas). By early 1997 the Government had approved a medium-term investment programme totalling more than US $3,000m., including a new port and industrial area and additional water and power plants, giving rise to expectations of a period of strong growth after the relative stagnation of recent years. However, the decline in world petroleum prices resulted in a budget deficit of 3% of GDP in 1998, the largest for many years. Some development projects were cancelled or scaled down and more than BD 70m. was to be borrowed during 1999 to finance essential infrastructure projects. It now seems likely that some form of privatization will be considered in the future, with the Hidd power and water project (see p. 357) a prime candidate for divestment.

AGRICULTURE AND FISHING

Agriculture has declined rapidly since the 1960s, and in 1996 contributed less than 1% of gross domestic product (GDP). The Bahrain islands are largely barren and have never been able to support farming on more than a limited scale. About three-quarters of the agricultural land in traditional farming areas in the north had been abandoned by the end of the 1970s. This reduction in agriculture was caused both by the increasing salinity of traditional supplies of water, and by the attractions of other sectors of the economy. The Government was, nevertheless, keen to develop the archipelago's agricultural potential. By 1988 milk production had risen sufficiently to satisfy 50% of local demand, and vegetable production had increased to meet 75% of requirements. Self-sufficiency in egg production had also been achieved. In order to increase the national agricultural area, the Government initiated a two-stage irrigation project, costing an estimated BD 12m., that entailed ozonizing and storing treated sewage at the Tubli sewage works for distribution and application to fields. In 1997 there were an estimated 12,000 cattle, 18,000 sheep and 17,000 goats in the country.

In 1979 the Bahrain Fishing Company was forced to cease its operations because of the virtual disappearance of shrimps from the Gulf, owing to pollution. In 1981 the Government initiated a five-year plan to revive the industry by acquiring more sophisticated equipment and establishing training schemes. In 1985 the Government announced an investment of BD 20,000 (US $54,000) to revive the pearling industry. In December 1988 a fisheries development programme, with a projected cost of BD 19m., was initiated, but in mid-1989 about 75% of the country's fish resources remained unexploited, and one-third of local fish requirements were being supplied by imports. There are plans to modernize the fishing fleet and processing facilities at Mina Salman, which could eventually supply 25% of the local market for fish products.

PETROLEUM AND GAS

Bahrain's average production of crude petroleum from the onshore Awali field peaked at 76,639 b/d in 1970 and subsequently decreased steadily as reserves were depleted. Since the 1980s output has generally been kept below a 42,000 b/d ceiling in order to regulate the rate of depletion. In 1998 production averaged 37,674 b/d. The field is operated by the state-owned Bahrain National Oil Company (BANOCO). At 1 January 1997 Bahrain's proven published reserves of petroleum were estimated at 200m. barrels; in 1997 total national production averaged 104,000 b/d. Between 1981 and 1984 the Government spent US $20m. on exploration and drilling, but no significant discoveries were made. Offshore exploration in the 1990s was similarly unproductive (although in February 1998 BANOCO signed an agreement with the US Chevron Corporation for renewed exploration of the northern and western offshore areas). However, Bahrain does have a long-standing entitlement to a 50% share in revenues from the Abu Saafa field, situated between Bahrain and Saudi Arabia and operated by Saudi Aramco. In the mid-1990s the field was producing an average 140,000 b/d. At the beginning of 1993 Saudi Arabia increased Bahrain's allocation to 100,000 b/d for two years and in early 1996 agreed to allocate the entire Abu Saafa revenue to Bahrain, this decision apparently being unconditional and open-ended.

A 250,000-b/d refinery at Sitra processes all Bahrain's onshore output and supplies Bahrain's domestic product requirements of around 10,000 b/d. However, the bulk of its crude supply is imported via pipeline from Saudi Arabia and the bulk of its product output is exported. The refinery is operated by the Bahrain Petroleum Company (BAPCO), which from 1981 was owned by the Bahrain Government (60%) and Caltex (40%) until in April 1997 the Government acquired the Caltex shareholding to become sole owner. The Government thus assumed complete control of Bahrain's oil exports and became the sole decision-maker on the question of implementing a major refinery modernization programme which had been repeatedly deferred

throughout the 1990s. In early 1999 it was announced that BANOCO and BAPCO were to merge as the Bahrain Petroleum Company. During the first half of the 1990s the Sitra refinery normally operated at close to its nominal capacity (which was sometimes exceeded). In 1996 it processed an average 250,975 b/d of crude oil. It has storage facilities for 14m. barrels and operates a six-berth export terminal. In July 1998 the Government's Supreme Oil Council approved a US $400m. refurbishment and expansion programme for the Sitra refinery, the main element of which was to be a low-sulphur production project. A development proposal from the Saudi Arabian Petroma Refining and Marketing Company for a 500,000-b/d refinery at Hidd, valued at some $2,500m., and an associated petrochemicals plant costing $2,200m., was given notice to proceed in March 1998.

Bahrain's proven reserves of natural gas totalled 140,000m. cu m at the end of 1997, sufficient to sustain production at current rates for 19 years. Marketed gas output in 1996 (excluding gas flared or reinjected into oil wells) was 7,200m. cu m. Nearly one-third of Bahrain's gas output is reinjected, with the remainder used by power stations, by the ALBA aluminium smelter (see Industry), by the Sitra oil refinery and (as feedstock) by the local petrochemicals industry. The 75% state-owned Bahrain National Gas Company (BANAGAS) has the capacity to process 4.8m. cu m of gas per day to produce liquefied products (propane, butane and naphtha) for export, and dry gases (mainly methane and ethane) for local use as industrial fuels.

INDUSTRY

Manufacturing accounted for about 21% of GDP in 1995 and for a similar proportion of exports in 1996. In the mid-1990s government efforts were concentrated on encouraging private foreign investment in the industrial sector to achieve greater diversification and to promote more export-oriented industries. Investment is being sought in downstream industries related to aluminium and pharmaceuticals, as well as in new activities. The Government's Incentive Programme, introduced in 1993, offers a wide range of concessions and incentives to attract foreign investment, and official procedures have been greatly simplified. There were seven designated industrial areas in Bahrain in 1996 offering competitively priced leases on manufacturing units with infrastructrual support services in place.

The aluminium industry remains central to the Government's strategy to expand the country's export-oriented industries. In 1994 some 23 downstream aluminium projects were being promoted by the state and private sectors. The development of Bahrain's aluminium industry began in 1969 when the Government formed a consortium with British, Swedish, French and US companies to construct and operate an aluminium smelter with a capacity of 120,000 metric tons per year. Production at the Aluminium Bahrain (ALBA) smelter began in 1972, using alumina imported from Australia. The Bahrain Government now owns 77% of ALBA together with the Public Investment Fund of Saudi Arabia (20%) and Breton Investments of Germany (3%). A US $1,500m.-expansion programme to increase the annual capacity of the smelter to 460,000 tons was completed in November 1992, making it one of the largest in the world. ALBA's output increased 461,245 tons in 1996, the first year in which the smelter operated above its nominal design capacity. At the start of 1997 a third potline came on stream, increasing annual capacity to 496,500 tons from the middle of the year. Infrastructural facilities within the ALBA production complex include two desalination plants with a combined capacity of 3,000 cu m per day, a 800-MW main power plant and an additional 164-MW gas turbine (added in 1997). In July 1998 ALBA secured a $400m.-loan to build a new coke-calcinating plant. Scheduled for completion in 2000, the plant will enable the company not only to meet its own requirement of 250,000 tons per year, which is currently imported, but also to export a further 200,000 tons per year. The project also includes construction of an associated 41,000-cu m-per-day sea water desalination plant at an estimated cost of BD 2.8m., and improvements to existing facilities. Aluminium accounts for about one-half of Bahrain's non-oil exports. Total production of primary aluminium reached a record 501,300 tons in 1998. ALBA's output is marketed abroad by the Bahrain-Saudi Aluminium Marketing Company (BALCO). About one-third of 1996 production was sold within Bahrain and other GCC countries.

Seven major secondary enterprises, related to aluminium, now exist in Bahrain. The first downstream venture was the International Bahrain Aluminium Atomizer Company, established in 1973 with 51% government ownership in association with Eckart Werke of Germany. It produces 7,000 tons of atomized aluminium powder per year which is marketed in Japan, Germany, the United Kingdom and the USA.

The Bahrain Aluminium Extrusion Company (BALEXCO, established in state ownership in 1977 and transferred to the private sector in 1995) produces aluminium profiles and sections for domestic and foreign markets. In 1997 it completed a third extrusion line which brought its total capacity up to 21,000 tons per year. During 1996 BALEXCO added a 12,000-tons-per-year scrap recycling plant and a powder-coating facility to its operations.

Midal Cables, established under private ownership in 1978, was producing around 50,000 tons per year of aluminium rods and coils (including overhead transmission conductors) in 1997 and planned to add more capacity in the future. Its subsidiary, Metal Form, was set up in 1994 to produce products from Midal's own aluminium rods. Another subsidiary, Aluwheel, established in 1991, produces semi-finished aluminium wheel hubs for European car manufacturers; its 1996 output was around 600,000 units.

Gulf Aluminium Rolling Mill Company (GARMCO, established in 1986 under the auspices of the Gulf Organization for Industrial Consulting—see p. 281) had a total production capacity of 120,000 tons per year of aluminium plate and sheet products in 1997, following a major expansion of its plant.

Bahrain Alloys Manufacturing Company, established by overseas investors in 1994, produces alloys for the automotive and aerospace industries.

The Gulf Petrochemical Industries Corpn (GPIC) built a petrochemicals plant at Sitra in 1985 with a capacity of 1,200 tons per day each of ammonia and methanol. The complex is a joint venture between the Bahrain National Oil Company, the Saudi Basic Industries Corpn and Kuwait's Petrochemical Industries Corpn. Output of ammonia and methanol totalled 777,000 tons in 1996, when GPIC recorded an operating profit of US $52m. A new plant, currently under construction, is designed to produce urea using ammonia feedstock from the existing GPIC facility.

In June 1993 the National Chemical Industries Corpn (NACIC) signed a US $13.1m.-contract with United Engineers International of the USA to build a sulphur derivatives plant near the refinery at Sitra. The plant was to produce 18,000 tons of sodium sulphite and sodium metabisulphite each year. NACIC is owned by the Bahraini United Gulf Industries Corpn (55%), together with the Qatar Industrial Manufacturing Company (15%), the Saudi Arabian Industry Development Company (10%), and the United Group for the Development of Riyadh (5%).

The Arab Shipbuilding and Repair Yard (ASRY) Company's dry dock, financed by the members of the Organization of Arab Petroleum Exporting Countries (OAPEC—see p. 268), was opened in 1977. It first recorded a full year's profitable trading in 1987. In 1992 ASRY invested US $61m. in two floating docks, giving the yard increased flexibility. The yard originally had a single 500,000-ton graving dock. ASRY reported operating profits of $8.5m. in 1995, 16% more than in 1994. Net ship-repair revenues rose to $72.6m., representing an increase of 10.8% compared with 1994, and the number of vessels repaired during the year rose from 104 to 113. An $87m.-expansion project for the shipyard was suspended in 1998, owing to continuing growth in overseas competition and falling trade volumes. Although the number of vessels repaired rose to 119 in 1998, repair revenues registered a decline. The Bahrain Ship Repairing and Maintenance Company specializes in smaller-scale ship repairs.

In 1995 a feasibility study was completed for a 1.2m.-tons-per-year sponge iron plant to be built by the Bahrain Ispat Company (BIC), established by India's Ispat Group. The US $290m.-plant will produce briquettes of compressed iron pellets to be used in steel-making, for export to India, Asia, the Middle East and Europe. The US company Midrex is to provide the direct reduction technology for the plant. In April 1996

the Gulf Investment Corpn, financial adviser to the project, announced that both local and international banks had expressed interest in raising some $210m. for the project; a further $80m. would be provided in the form of equity by the Mittal family of India who control the Ispat Group.

In 1985 the Gulf Acid Industries Company began production of sulphuric acid and distilled water. Light industry, including the production of supplementary gas supplies, asphalt, prefabricated buildings, plastics, soft drinks, air-conditioning equipment and paper products, also continued to develop during 1986. In 1987 the Government imposed a 20% tariff on competing imported goods for a trial period of 12 months, as part of a programme to support the expansion of light industry. In 1987 Wires International became the first Bahraini company to export an industrial product, aluminium fly mesh, to the Far East. In 1988 the Government announced plans to increase import substitution to a level of 30%, with guaranteed state protection of markets. In 1989 Bahrain Berger Paints, in a joint venture with United Breweries of India, announced a new US $3,000m.-project for a pharmaceuticals plant, the first of its kind in Bahrain. Following the introduction of the Government's Incentive Programme in 1993, two joint ventures were agreed: a tissue-paper mill—a joint venture between Olayan of Saudi Arabia and Kimberly-Clark of the USA—and a factory producing prefabricated pipeline systems, a joint venture between Shaw Industries of the USA and the local Ahmad Nass Industrial Services. The tissue-paper mill started production in March 1995. Output is marketed in the Gulf states, mainly in Saudi Arabia. A factory to manufacture construction chemicals is being set up in the North Sitra industrial area by Sika Gulf, a group of investors led by the Swiss chemical firm, Sika, and including Saudi Arabian interests. Output will be marketed mainly in Saudi Arabia and the UAE.

In January 1995 the Government launched a programme to encourage investment in medium-scale industrial projects in order to strengthen economic diversification. Some 13 industrial projects have been identified in food, engineering, textiles and health care, pre-feasibility studies have been completed and technology partners, mostly European companies, have been identified. As the new projects are of a modest scale, the Government hopes to attract investment from Bahraini entrepreneurs and provide more employment and training for Bahraini nationals. In early 1994 Bahrain became the first Gulf state to secure access to the EU equity investment funds for small and medium-sized industrial joint ventures. Up to 20% of the equity for joint ventures between local and European partners can be provided by the EU as well as concessional funding for feasibility studies and human resource development.

POWER AND WATER

Industrial expansion and rapid population growth have put increasing pressure on electricity and water supplies. Bahrain has four power stations: a gas-fired 126-MW station at Manama, a steam-fired 120-MW station at Sitra, a 38-MW station on Muharraq and the largest station, an open-cycle gas turbine plant, at Rifa'a with capacity of 700 MW. In 1991 plans for an increase in electricity supplies were activated. The Sitra power station was refurbished, and in 1994 the ALBA aluminium complex's 800-MW power plant was linked to the national grid, giving the Ministry of Power and Water access to an additional 250 MW of generating capacity for a period of 10 years. However, peak electricity demand is close to the national grid's maximum supply capability, with consumption in mid-1999 expected to absorb 1,200 MW of a total installed capacity of 1,261 MW. In January 1997 the Government signed a US $530m.-contract to construct a 280-MW power station and associated desalination plant with a capacity of 30m. gallons (136,380 cu m) per day on reclaimed land at Hidd. Phase one will comprise two 140-MW gas turbines (the first to be commissioned in July 1999 and the second to come on stream by December) and four desalination units. The initial $215m. of finance was secured by local and international banks in 1997; the remainder will be funded by export credit agencies. The Government has yet to decide on the size and method of financing for phase-two projects. Privatization options for phase-two participation and a reduction in subsidies (currently BD 12.8m. for power and BD 25m. for water supply) to curb consumption are currently being assessed. Essential upgrades, relying on Gulf-based aid agencies and Islamic funds, are promised. A consultant was appointed in March 1999 for the $50m.-upgrade of the Rifa'a station, to extend the operational life of five 50-MW gas turbines which are nearly 30 years old. Tender documents were issued in May 1999 for the BD 16m.-refurbishment of the power and desalination plant at Sitra, to extend its life by ten years, and for the construction of six new sub-stations and the upgrade of others in a project expected to cost some $80m. While the existing network can absorb the new capacity from Hidd, any further expansion of capacity would require a major reinforcement of the transmission network. The Government was forecasting an electricity demand of 1,280 MW in 2000, rising to 1,600 MW by 2005. In 1999 the Gulf Council Interconnection Authority (GCIA) was formed by the GCC to oversee the connection of the national grids of its six member states. The first phase will establish a link between Bahrain, Kuwait, Qatar and Saudi Arabia at an estimated cost of $2,500m., of which amount Bahrain will contribute almost $100m.

In early 1994 the Bahrain Centre for Studies and Research warned that the island's primary water resources could be exhausted by 2010 unless measures were taken to limit the rate of extraction from the underground aquifer. Extraction rates had in past decades been so far in excess of the natural replenishment rate of about 67.5m. gallons (306,820 cu m) per day that it was estimated that full regeneration of the aquifer could take centuries. Water pumped from underground had become increasingly saline, affecting crop yields in agriculture and necessitating an increasing admixture of desalinated water for domestic use. In 1994 the Ministry of Power imposed a ceiling on total water use which had the effect of reducing the groundwater extraction rate to about 29.2m. gallons (132,500 cu m) per day. Tariffs were introduced for agricultural water use in 1997.

Extensive renovation work was undertaken in 1999 to allow Bahrain's three desalination plants to operate at full capacity; the multi-stage flash plant at Sitra, with a capacity of 25m. gallons (113,650 cu m) per day is awaiting refurbishment. A consultant has been appointed to raise the capacity of the reverse osmosis plant at Abu Jajour from 3m. to 10m. gallons per day, and a BD 7.6m.-contract has been awarded to expand the capacity of a second reverse osmosis plant at Ad-Dur from the current 10m., to 15m. gallons per day. Construction has begun for the first stage of the Tubli sewerage plant expansion project, which involves raising the capacity of the secondary effluent plant from the current 120,000 cu m per day, to 200,000. Two contracts to link the power and desalination plant at Hidd to the existing water network have also been awarded.

BANKING, FINANCE AND TRADE

The Bahrain Monetary Agency (BMA), established in 1973 to replace the Bahrain Currency Board, has exercised all the powers of a central bank since 1975. The BMA oversees the issuing of currency, regulates exchange control and credit policy, and licenses and controls the banking and financial system. The Bahraini dinar is formally linked to the SDR, with the US dollar as intervention currency. Since 1975 a licensing status of 'offshore banking unit' (OBU) has been available to banks using Bahrain as a base from which to conduct exclusively offshore business (such companies being exempt from the shareholder nationality requirements applicable to banks providing services within Bahrain). There was a rapid expansion of offshore banking activities in the late 1970s and early 1980s, with Bahrain well placed to serve as a centre for the boom in international bank lending to Saudi Arabia and other major petroleum exporters in the Gulf.

The number of OBUs licensed in Bahrian peaked at 74 in 1985, when—in addition to the 20 locally-incorporated commercial banks within Bahrain's domestic banking system—there were also 60 representative offices, more than 12 licensed investment banks, six money brokers and 43 money changers. In subsequent years the number of OBUs declined as financial institutions adjusted to changing regional economic conditions at a time of declining oil prices. However, forecasts of a major decline in Bahrain's offshore financial services sector proved to be unfounded, with the combined assets of the remaining OBUs (numbering 65 in 1988) reaching a new record level of US $68,100m. in 1988. The annual contribution of OBUs to

Bahrain's economy was officially estimated to be in excess of $500m. in 1988.

The second half of the 1980s was also a period of readjustment for Bahrain's domestic commercial banks, some of which recorded reduced profits or net losses in 1986 and 1987 after making large provisions for loan defaults by recession-hit borrowers. By 1989 banking profits were generally much improved. The Gulf crisis of 1990–91 had a strong impact on Bahrain's banking sector as funds were withdrawn on a large scale. However, the BMA ensured that dinar liquidity was maintained, and by October 1990 the outflow of capital had been stemmed.

Between 1992 and 1997 the number of financial institutions in Bahrain increased from 155 to 183, the latter total comprising 19 commercial banks serving the domestic market, 47 OBUs, 30 investment banks, 12 Islamic banks, 41 representative offices and 27 money changers. In 1996 Bahrain-based banks had approval to market a total of 281 collective investment schemes (mutual funds) in or from Bahrain.

The aggregate assets of OBUs at the end of March 1998 were US $72,053m. At the end of September 1996 the aggregate assets of Bahrain's commercial banks were BD 3,800m. ($10,000m.) and their aggregate credit outstanding within Bahrain amounted to BD 941.2m. ($2,490m.), of which 32% was personal lending, 21% was for the trade sector, 13% for manufacturing and 16.7% for construction. Bahrain's main conventional commercial banks in 1998 (with end-1998 assets) were National Bank of Bahrain ($2,274m.), Bank of Bahrain and Kuwait ($2,490m.) and Al-Ahli Commercial Bank ($811m.). Bahrain's two largest Islamic banks in 1996 were Bahrain Islamic Bank ($392m.) and Faysal Islamic Bank ($356m.). There were 16 Islamic financial institutions in Bahrain in 1996—the highest concentration for any country having both conventional and Islamic banking—following the efforts of the BMA to promote Bahrain as a centre of Islamic banking. Important investment banks in Bahrain—owned by shareholders in the Gulf but having most of their earning assets outside the region—included in 1998 Investcorp (end-1998 assets $2,490m.) and Bahrain Middle East Bank ($765m.). Foreign life insurance companies, whose entry into Bahrain had been restricted to representative offices since 1987 were to be permitted to set up branch offices from 1997.

In 1982, when oil provided 80% of Bahrain's budgetary revenues, there was a budget surplus of BD 46.4m.—the latest in a succession of such surpluses. In 1983 a budget deficit of a similar margin was recorded, mainly because of a 17% decline in oil revenue. Thereafter, budget deficits have recurred, despite the Government's efforts to moderate its spending programmes and despite the receipt of annual grant aid from Kuwait and Saudi Arabia (each providing about US $50m.). Moreover, from January 1993 Saudi Arabia waived part (and from April 1996 waived all) of its entitlement to 50% of the revenue from oil produced in the shared Abu Saafa field.

Bahrain's two-year budget for 1995–96 provided for deficits of BD 65.2m. in 1995 and BD 114.0m. in 1996. In 1995 there was provision for total revenue of BD 560.8m. (57% from petroleum) and total expenditure of BD 626m. (83% recurrent and 17% capital). In 1996 there was provision for total revenue of BD 530m. (48% from oil) and total expenditure of BD 644m. (81% recurrent and 19% capital). In view of advantageous developments subsequent to publication of the 1996 budget (increased Abu Saafa revenues and relatively strong world oil prices in 1996), actual revenue in 1996 was BD 615.5m., with expenditure of BD 581.3m., resulting in a surplus of BD 34.2m. The two-year budget for 1997–98, drawn up at the end of 1996, provided for a deficit of BD 75m. in each year (1997 revenue BD 615m., expenditure BD 690m.; 1998 revenue BD 630m., expenditure BD 705m.). In March 1996 the Government approved a public-expenditure management strategy for the period 1997–2006, outlining a wide range of actions to eliminate the budget deficit within 10 years. The strategy document did not consider the introduction of a direct income tax, the absence of which was regarded as an important factor in Bahrain's appeal to foreign investors. The two-year budget for 1999–2000 forecast deficits of BD 160m. for both 1999 and 2000, owing to the downturn in world oil prices. In 1999 there was provision for total revenue of BD 566m. (BD 260m. from oil) and total expenditure of BD 726m. In 2000 there was provision for total revenue of BD 572m. (BD 256m. from oil) and total expenditure of 732m. The deficit was to be covered by borrowings, and privatization options were also being considered.

Provisional trade figures for 1997 indicated a deficit of US $880.1m., whereas in 1996 they had indicated a surplus of $508m. (exports $4,437m., imports $3,929m.). Bahrain's imports of Saudi Arabian crude petroleum in 1996 were valued at $1,710m., while exports of petroleum products were valued at $3,180m. Manufactured goods accounted for 21.4% of 1996 exports, while re-exports were responsible for just 1% of the total. In 1995 there had been a trade surplus of $466.1m., based on export earnings of $4,080.6m. (60% from petroleum products) and import spending of $3,614.5m. (including 36.7% on crude petroleum). Apart from Saudi Arabia, significant suppliers of imports in 1996 included the United States, Australia and the United Kingdom. Important export markets in that year included Saudi Arabia, Japan, Taiwan, the Republic of Korea and the USA.

Tourism, which has been systematically promoted by the Government since 1985, generated estimated spending of US $870m. by visitors in 1995, of which $450m. was classed as 'direct income to Bahrain's economy'. Spanning both the recreational and conference markets, tourism contributed 9.2% of GDP and employed 16.7% of the workforce in 1995. Tourist revenues were estimated at $258m. in 1996. Events at the Bahrain International Exhibition Centre attracted nearly 250,000 visitors in 1996. Inaugurated in 1991, the purpose-built centre was scheduled to undergo a major expansion programme to be completed in 1999. A new International Convention Centre was opened at Bahrain's Gulf Hotel in 1997. In 1999 the local EBH Holdings and India's Oberoi Group announced plans for the development of a luxury hotel and resort, at a cost of $70m., on the man-made Lulu Island. The development was to include a five-star hotel, restaurants, conference facilities and a marina; the island was to be linked to the mainland by a new causeway. Further plans, for a multi-million dollar development at Manama port, to include a five-star hotel, an auditorium, shopping areas and residential apartments, were being prepared at the same time and were to be financed by a private Saudi investor.

The Bahrain Stock Exchange opened in June 1989 with an initial market capitalization of BD 1,121m. Since the end of 1994 the stock exchanges of Bahrain and Oman have listed each other's shares under a reciprocal agreement. Bahrain and Jordan made similar reciprocal listing arrangements in March 1996. At the end of 1998 42 companies were listed on the stock exchange with a market capitalization of US $7,000m. Under liberalized rules introduced in 1997, and further amended in 1999, non-GCC investors may hold up to 49% of shares in any listed company provided that they have resided in Bahrain for at least one year or are resident outside Bahrain. An electronic trading system was to be introduced by the end of 1999.

TRANSPORT AND COMMUNICATIONS

Bahrain's role as a major financial centre has been associated with an expansion of the country's air and telephone services. The Bahrain International Airport was opened in 1971 on Muharraq island and it has also become the headquarters of Gulf Air, which is owned jointly by the Governments of Bahrain, Oman, Qatar and the UAE. In 1996 the airport (in the fourth phase of an expansion programme) handled nearly 56,600 flights and abut 3.4m. passengers (about 55% of them transit passengers). In 1995 the airport handled around 100,000 tons of cargo, about 30% of which was transhipment cargo.

In 1995, as a result of fierce regional competition, Gulf Air recorded an annual loss of BD 61.9m. (US $164m.), prompting a programme of aircraft disposals and route cuts designed to eliminate some of the 60 destinations previously served. In 1995 Gulf Air carried over 5m. passengers and 170,000 tons of cargo. Its finances had been depleted by a large loan-servicing burden in respect of aircraft purchased in the late 1980s. During 1996 measures were adopted which reduced operating costs by 5% and increased operating revenue by 5%, but the airline nevertheless reported an annual loss of BD 25.2m. ($66.8m.). Recommendations to increase the airline's capital from BD 150m. to BD 250m. were discussed by the shareholder Governments in January 1997. An offer by Abu Dhabi to inject more capital in

return for an increased shareholding was rejected by Oman and Qatar, and it was instead agreed that the shareholder Governments should provide 'discretionary loans' totalling $200m. to Gulf Air. The shareholders' respective contributions were not specified. By early 1997 Gulf Air had sold seven Boeing 767s and reduced its total number of destinations to 50. In that year the company recorded an operating profit of $8m. In June 1999 Gulf Air was to receive the first of six A330 Airbuses as part of a $550m.-investment initiative to renew its fleet.

The Bahrain Telecommunications Company (BATELCO) was formed in July 1981, with capital of BD 60m. At the beginning of 1986 Bahrain became the 45th member of the London-based International Maritime (now Mobile) Satellite Organization (INMARSAT), and during 1986 BATELCO also introduced a cellular telephone system. In 1992 the digitalization of Bahrain's 120,000-line domestic network was completed. There is a digital international exchange. The capacity of the mobile telephone system was expanded to 25,000 lines in 1997. In March 1996 it was announced that BD 100m. was to be invested in the network over the next five years. Projects contained in the BD 27m.-investment budget for 1996 included work on a regional fibre-optic link between Bahrain, Qatar, Kuwait and the UAE. An International Services Digital Network (ISDN) capability was in place in Bahrain in 1997. BATELCO's profits rose by 33% in 1998, to BD 43.1m., owing to a 57% increase in mobile telephone users (subscriptions were expected to reach 150,000 in 1999) and a 53% increase in internet subscribers.

A container terminal was opened at the port of Mina Salman in 1979, with a 400-m quay allowing simultaneous handling of two 180-m vessels. In total, Mina Salman has 14 conventional berths, two container terminals and a roll-on/roll-off berth. A construction project for the first phase of a new port complex and industrial development zone at south Hidd was expected to be put out to tender in late 1999. The proposed port would have an annual handling capacity of 234,000 TEUs and would include a general cargo berth and two container berths with roll-on/roll-off facilities. Following the completion of a 2.5-km causeway from Manama to Muharraq in early 1997, a contract to build a second causeway, linking Hidd and Manama, was to be put out to tender in 1999. Construction costs for the 404-m long causeway were expected to be in the region of BD 10m.

The inauguration, in February 1987, of a causeway between Bahrain and Saudi Arabia led to increased motor traffic in Bahrain, in the light of which the road network has been upgraded and traffic management studies have been undertaken. The causeway was used by 1.3m. vehicles in its first year of operation. There were nearly 150,000 cars and more than 32,200 goods vehicles and buses registered in Bahrain at the end of 1997.

SOCIAL SERVICES

Health services and housing have received considerable support. In 1985 there were 518 physicians, 19 dentists and 1,148 nursing personnel working in Bahrain. By 1988 there were seven hospitals, 19 government health centres and seven government maternity centres. In 1995 there were 935 inhabitants per doctor and 391 inhabitants per nurse. In that year there were 297 hospital beds per 100,000 inhabitants. In 1996 the Ministry of Health was responsible for 89% of out-patient services, 72% of hospital bed places and 90% of nursing employment in Bahrain. In the same year the health minister employed 63% of physicians and 60% of dentists. (The Bahraini Defence Force provides the remaining medical facilities.) A comprehensive primary health-care system was developed during the 1980s. The Government provides primary, secondary and tertiary health care free of charge to all Bahrainis and charges nominal fees to non-Bahraini residents. In 1994 some 4.3% of Bahrain's GNP was devoted to health expenditure. Overall health spending per caput was US $350, of which $220 was Ministry of Health spending. The Government is a significant provider of low- and middle-cost housing, particularly in the new towns. In the first half of 1997 the Goverment received a $49.7m.-loan from the Arab Fund for Economic and Social Development (see p. 252), and a $27m. funding pledge from the Abu Dhabi Development fund to finance new housing projects. Several previous public housing projects were aided by Gulf donors, including Saudi Arabia. Of total government expenditure in 1997, some 9.8% was for health, while 3.9% was allocated to social security and welfare.

Statistical Survey

Source (unless otherwise stated): Central Statistics Organization, POB 5835, Manama; tel. 725725; telex 8853; fax 728989.

AREA AND POPULATION

Area (1995): 707.3 sq km (273.1 sq miles).

Population: 350,798 (males 204,793, females 146,005) at census of 5 April 1981; 508,037 (males 294,346, females 213,691), comprising 323,305 Bahrainis (males 163,453, females 159,852) and 184,732 non-Bahraini nationals (males 130,893, females 53,839), at census of 16 November 1991; 620,000 (official estimate) at mid-1997.

Density (mid-1997): 876.6 per sq km.

Principal Towns (population in 1991): Manama (capital) 136,999; Muharraq Town 74,245. *Mid-1992:* Manama 140,401.

Births, Marriages and Deaths (1995): Registered live births 13,481 (birth rate 23.3 per 1,000); Registered marriages 3,321 (marriage rate 5.7 per 1,000); Registered deaths 1,910 (death rate 3.3 per 1,000).

Expectation of Life (UN estimates, years at birth, 1990–95): 71.6 (males 69.8; females 74.1). Source: UN, *World Population Prospects: The 1996 Revision.*

Economically Active Population (persons aged 15 years and over, 1991 census): Agriculture, hunting, forestry and fishing 5,108; Mining and quarrying 3,638; Manufacturing 26,618; Electricity, gas and water 2,898; Construction 26,738; Trade, restaurants and hotels 29,961; Transport, storage and communications 13,789; Financing, insurance, real estate and business services 17,256; Community, social and personal services 83,944; Activities not adequately defined 2,120; *Total employed* 212,070 (males 177,154; females 34,916); Unemployed 14,378 (males 9,703; females 4,675); *Total labour force* 226,448 (males 186,857; females 39,591), comprising 90,662 Bahrainis (males 73,118, females 17,544) and 135,786 non-Bahraini nationals (males 113,739, females 22,047). *Mid-1997* (estimates): Agriculture, etc. 3,000; Total 261,000 (Source: FAO, *Production Yearbook*).

Directory

The Constitution

A 108-article Constitution was ratified in June 1973. It states that 'all citizens shall be equal before the law' and guarantees freedom of speech, of the press, of conscience and religious beliefs. Other provisions include the outlawing of the compulsory repatriation of political refugees. The Constitution also states that the country's financial comptroller should be responsible to the legislature and not to the Government, and allows for national trade unions 'for legally justified causes and on peaceful lines'. Compulsory free primary education and free medical care are also laid down in the Constitution. The Constitution, which came into force on 6 December 1973, also provided for a National Assembly, composed of 14 members of the Cabinet and 30 members elected by popular vote, although this was dissolved in August 1975.

The Government

HEAD OF STATE

Amir: Sheikh HAMAD BIN ISA AL-KHALIFA (succeeded to the throne on 6 March 1999).

Crown Prince and Commander-in-Chief of Bahraini Defence Force and National Guard: Sheikh SALMAN BIN HAMAD AL-KHALIFA.

CONSULTATIVE COUNCIL

The Consultative Council is an advisory body of 40 members appointed by the ruling authorities for a four-year term, which is empowered to advise the Government but has no legislative powers. The Council held its inaugural session on 16 January 1993.

President: IBRAHIM MUHAMMAD HUMAIDAN.

Legislature

NATIONAL ASSEMBLY

In accordance with the 1973 Constitution, elections to a National Assembly took place in December 1973. About 30,000 electors elected 30 members for a four-year term. Since political parties are not allowed, all 114 candidates stood as independents but, in practice, the National Assembly was divided almost equally between conservative, moderate and more radical members. In addition to the 30 elected members, the National Assembly contained 14 members of the Cabinet. In August 1975 the Prime Minister resigned because, he complained, the National Assembly was preventing the Government from carrying out its functions. The Amir invited the Prime Minister to form a new Cabinet, and two days later the National Assembly was dissolved by Amiri decree. It has not been revived.

Judicial System

Since the termination of British legal jurisdiction in 1971, intensive work has been undertaken on the legislative requirements of Bahrain. The Criminal Law is at present contained in various Codes, Ordinances and Regulations. All nationalities are subject to the jurisdiction of the Bahraini courts which guarantee equality before the law irrespective of nationality or creed.

Directorate of Courts: POB 450, Government House, Government Rd, Manama; tel. 531333.

Religion

At the November 1991 census the population was 508,037, distributed as follows: Muslims 415,427; Christians 43,237; Others 49,373.

ISLAM

Muslims are divided between the Sunni and Shi'i sects. The ruling family is Sunni, although the majority of the Muslim population (estimated at almost 60%) are Shi'ite.

CHRISTIANITY

The Anglican Communion

Within the Episcopal Church in Jerusalem and the Middle East, Bahrain forms part of the diocese of Cyprus and the Gulf. There are two Anglican churches in Bahrain: St Christopher's Cathedral in Manama and the Community Church in Awali. The congregations are entirely expatriate. The Bishop and Archdeacon in Cyprus and the Gulf are both resident in Cyprus.

Provost: Very Rev. KEITH W. T. W. JOHNSON, St Christopher's Cathedral, POB 36, Al-Mutanabi Ave, Manama; tel. 253866; fax 246436; e-mail provost@batelco.com.bh; internet http://www.stchcathedral.com.bh.

Roman Catholic Church

A small number of adherents, mainly expatriates, form part of the Apostolic Vicariate of Arabia. The Vicar Apostolic is resident in the United Arab Emirates.

'Offshore' Banking Units

Bahrain has been encouraging the establishment of 'offshore' banking units (OBUs) since 1975. An OBU is not permitted to provide local banking services, but is allowed to accept deposits from governments and large financial organizations in the area and make medium-term loans for local and regional capital projects. Prior to the Iraqi invasion of Kuwait in August 1990, there were 56 OBUs in operation in Bahrain. By 1997, however, the number of OBUs had declined to 47.

Representative Offices

In 1997 there were 41 representative offices in Bahrain.

Investment Banks

Gulf Aluminium Rolling Mill Co (GARMCO): POB 20725, Manama; tel. 731000; telex 9786; fax 730542; f. 1980 as a joint venture between the Governments of Bahrain, Saudi Arabia, Kuwait, Iraq, Oman and Qatar; produced 120,000 tons of rolled aluminium in 1997; Chair. and Man. Dir Sheikh IBRAHIM BIN KHALIFA AL-KHALIFA; Gen. Man. ANTHONY LEWIS.

Maskati Brothers and Co: POB 24, Manama; tel. 729911; telex 8621; fax 725454; f. 1957; sales BD 9.0m. (1995); cap. and res BD 9m.; paper converters, polyethylene manufacture, injection moulders; Man. Dir KHALID H. MASKATI; 400 employees.

Midal Cables Ltd: POB 5939, Manama; tel. 830111; telex 9127; fax 830168; e-mail midalcbl@batelco.com.bh; f. 1978; cap. US $4.08m.; sales US $100m. (1995); manufacture of aluminium and aluminium alloy electrical rods and conductors for overhead transmission and distribution lines; Man. Dir HAMID R. AZ-ZAYANI; CEO SALMAN ASH-SHEIKH; 250 employees.

TRADE UNIONS

There are no trade unions in Bahrain.

Transport

RAILWAYS

There are no railways in Bahrain.

ROADS

At 31 December 1996 Bahrain had 2,938 km of roads, of which 75% were hard-surfaced. Most inhabited areas of Bahrain are linked by bitumen-surfaced roads. A modern network of dual highways is being developed, and a 25-km causeway link with Saudi Arabia was opened in 1986. A three-lane dual carriageway links the causeway to Manama. Other causeways link Bahrain with Muharraq island and with Sitra island. In March 1997 the Government approved the construction of a US $80m.-causeway linking Hidd on Muharraq island with the port of Mina Salman; the new causeway was scheduled to be completed in 2001. A second 2.5-km Manama-to-Muharraq causeway was opened in early 1997.

Directorate of Roads: POB 5, Sheikh Hamad Causeway, Manama; tel. 535222; telex 7129; fax 532565; responsible for traffic engineering, safety, planning, road design, maintenance and construction; Dir ESSAM A. KHALAF.

SHIPPING

Numerous shipping services link Bahrain and the Gulf with Europe, the USA, Pakistan, India, the Far East and Australia.

The deep-water harbour of Mina Salman was opened in 1962; it has 13 conventional berths, two container terminals (one of which has a 400-m quay—permitting two 180-m container ships to be handled simultaneously) and a roll-on/roll-off berth. Two nearby slipways can accommodate vessels of up to 1,016 tons and 73m in length, and services are available for ship repairs afloat. During 1992 Mina Salman handled about 90,000 TEUs (20-ft equivalent units).

Plans to build a new port and industrial zone at Hidd, on Muharraq island, were approved by the Cabinet in March 1997. At an estimated total cost of US $330m., the proposed port would have an annual handling capacity of 234,000 TEUs and would include a general cargo berth and two container berths with roll-on/roll-off facilities.

Directorate of Customs and Ports: POB 15, Manama; tel. 725555; telex 8642; fax 725534; responsible for customs activities and acts as port authority; Pres. of Customs and Ports EID ABDULLAH YOUSUF; Dir-Gen. of Ports Capt. MAHMOOD Y. AL-MAHMOOD; Dir-Gen. of Customs JASSIM JAMSHEER.

Sheikh ALI BIN KHALIFA AL-KHALIFA (Bahrain); Pres. and Chief Exec. Sheikh AHMAD BIN SAIF AN-NAHYAN (Abu Dhabi).

Tourism

There are several archaeological sites of importance in Bahrain, which is the site of the ancient trading civilization of Dilmun. There is a wide selection of hotels and restaurants, and a new national museum opened in 1989. In 1996 some 1.8m. tourists visited Bahrain, and income from tourism totalled some US $258m.

Bahrain Tourism Co (BTC): POB 5831, Manama; tel. 530530; telex 8929; fax 530867; e-mail bahtours@batelco.com.bh; Chair. MUHAMMAD YOUSUF JALAL.

Defence

Commander-in-Chief of Bahraini Defence Force and National Guard: Sheikh SALMAN BIN HAMAD AL-KHALIFA.

Estimated Defence Budget (1998): BD 151m.

Military Service: voluntary.

Total Armed Forces (August 1998): 11,000 (army 8,500; navy 1,000; air force 1,500).

Paramilitary Forces: estimated 9,850 (police 9,000; national guard 600; coast guard 250).

Education

In 1996 enrolment at primary level included 98% of children in the relevant age-group (males 98%; females 98%) and enrolment at the intermediate level included 96% of children in the relevant age-group (males 97%; females 96%). In that year, enrolment at secondary level was equivalent to 95% (males 90%; females 100%) of children in the relevant age-group. Education is compulsory between the ages of six and 17, and is available free of charge. In 1994/95, 108,606 pupils were receiving education in 174 government-operated schools. Private and religious education are also available.

Education begins at six years of age. Basic education, from the ages of six to 14, is divided into two levels; children attend primary school from the ages of six to 11 and intermediate school from 12 to 14. Secondary education, beginning at the age of 15, lasts for three years, for which time children choose to follow a general, commercial or industrial programme.The University of Bahrain, established by Amiri decree in 1986, comprises five colleges: the College of Engineering, the College of Arts, the College of Science, the College of Education and the College of Business and Management. About 8,160 students were enrolled at the University in 1998. Higher education is also provided by the College of Health Sciences (696 students) and the Hotel and Catering Training Centre.

The Arabian Gulf University (AGU), funded by seven Arab Governments, also provides higher education. In 1998 it comprised two colleges: the College of Medicine and Medical Sciences, and the Post-Graduate College. The University campus is due to be completed at the end of 2006, and will accommodate 5,000 students. In 1998 696 students were enrolled at the AGU.

In 1981 the average rate of adult illiteracy among the indigenous Bahraini population was 31.3% (males 21.2%; females 41.4%). In 1991, according to census results, the illiteracy rate among all adults resident in Bahrain was 15.9% (males 11.4%; females 23.0%). According to UNESCO estimates, in 1995 the rate of adult illiteracy was 14.8% (males 10.9%; females 20.6%). Expenditure on education by the central Government in 1997 was BD 84.8m. (13.7% of total expenditure).

CYPRUS

Physical and Social Geography

W. B. FISHER

The island of Cyprus, with an area of 9,251 sq km (3,572 sq miles), is situated in the north-eastern corner of the Mediterranean Sea, closest to Turkey (which is easily visible from its northern coast), but also less than 160 km (100 miles) from the Syrian coast. Its greatest length (including the long, narrow peninsula of Cape Andreas) is 225 km (140 miles). The census of 1 October 1982, which was held in Greek Cypriot areas only, recorded a total population (including an estimate for the Turkish-occupied region) of 642,731. According to an official estimate, the population was 746,100 (including 88,200 in the Turkish-occupied region) at 31 December 1997. However, these figures exclude settlers from Turkey in the 'Turkish Republic of Northern Cyprus' ('TRNC'), who are regarded as illegal residents by the Greek Cypriot authorities. This group was believed to total more than 114,000 in 1997. The authorities in the 'TRNC' estimated the population of the region to be 179,208 in 1994, rising to 183,290 by 1995, and to 200,587 according to a census conducted in the 'TRNC' on 15 December 1996. Thus the total number of inhabitants of Cyprus exceeded 850,000 by the late 1990s.

PHYSICAL FEATURES

Cyprus owes its peculiar shape to the occurrence of two ridges that were once part of two much greater arcs running from the mainland of Asia westwards towards Crete. The greater part of these arcs has disappeared, but remnants are found in Cyprus and on the eastern mainland, where they form the Amanus range of Turkey. In Cyprus the arcs are visible as two mountain systems—the Kyrenia range of the north, and the much larger and imposing Troödos massif in the centre. Between the two mountain systems lies a flat lowland, open to the sea in the east and west and spoken of as the Mesaoria. Here also lies the chief town, Nicosia (Lefkoşa in Turkish).

The mountain ranges are actually very different in structure and appearance. The Kyrenia range is a single narrow fold of limestone, with occasional deposits of marble, and its maximum height is 900 m (3,000 ft). As it is mainly porous rock, rainfall soon seeps below ground; and so its appearance is rather arid, but very picturesque, with white crags and isolated pinnacles. The soil cover is thin. The Troödos, on the other hand, has been affected by folding in two separate directions, so that the whole area has been fragmented, and large quantities of molten igneous rock have forced their way to the surface from the interior of the earth, giving rise to a great dome that reaches 1,800 m (6,000 ft) above sea-level. As it is impervious to water, there are some surface streams, rounder outlines, a thicker soil, especially on the lower slopes, and a covering of pine forest.

CLIMATE

The climate in Cyprus is strongly 'Mediterranean' in character, with the usual hot dry summers and warm, wet winters. As an island with high mountains, Cyprus receives a fair amount of moisture, and up to 1,000 mm (40 ins) of rain falls in the mountains, with the minimum of 300 mm–380 mm (12 ins–15 ins) in the Mesaoria. Frost does not occur on the coast, but may be sharp in the higher districts, and snow can fall fairly heavily in regions over 900 m (3,000 ft) in altitude. In summer, despite the nearness of the sea, temperatures are surprisingly high, and the Mesaoria, in particular, can experience over 38°C (100°F). A feature of minor importance is the tendency for small depressions to form over the island in winter, giving a slightly greater degree of changeability in weather than is experienced elsewhere in the Middle East.

Cyprus is noteworthy in that between 50% and 60% of the total area is under cultivation—a figure higher than that for most Middle Eastern countries. This is partly to be explained by the relatively abundant rainfall; the expanses of impervious rock that retain water near the surface; and the presence of rich soils derived from volcanic rocks which occur around the Troödos massif. The potential of the tourist trade and the export markets in wine and early vegetables add to the incentives to development. In the southern (Greek) part of the island economic recovery after partition has been considerable: far less so in the north.

History

Revised for this edition by ALAN J. DAY

EARLY HISTORY

Cyprus first became important in recorded history when the island fell under Egyptian control in the second millennium BC. After a long period during which the Phoenicians and the people of Mycenae founded colonies there, Cyprus, in the eighth century BC, became an Assyrian protectorate, at a time when the Greeks of the mainland were extending their settlements in the island. From the sixth century BC it was a province of the Persian empire and took part in the unsuccessful Ionian revolt against Persian rule in 502 BC. Despite the Greek triumph over Xerxes in 480 BC, subsequent efforts by the Greek city states of the mainland to free Cyprus from Persian control met with little success, largely because of dissension among the Greek cities of Cyprus itself. For more than two centuries after 295 BC the Ptolemies of Egypt ruled in Cyprus until it became part of the Roman Empire.

Cyprus prospered under the enlightened Roman rule of Augustus, for trade flourished while the Romans kept the seas free of piracy. When Jerusalem fell to the Emperor Titus in AD 70, many Jews found refuge in Cyprus where they became numerous enough to undertake a serious revolt in AD 115. Christianity, apparently introduced into the island in the reign of the Emperor Claudius (AD 41–54), grew steadily in the next three centuries, during which Cyprus, isolated from a continent frequently ravaged by barbarian inroads, continued to enjoy a relative degree of prosperity. From the time of Constantine the Great, Cyprus was a province governed by officials appointed from Antioch and formed part of the diocese of the East. In the reign of Theodosius I (379–395) the Greek Orthodox Church was firmly established there and in the fifth century proved strong enough to resist the attempts of the Patriarchs of Antioch to control the religious life of the island.

The Arab attack of 649 began a new period in the history of Cyprus which now became, for more than 300 years, the object of dispute between the Byzantines and the Muslims. Whenever the Byzantine fleet was weak, Cyprus remained a doubtful possession of the Empire. After the decisive Byzantine recon-

quest of 964–65, Cyprus enjoyed, for more than two centuries, a period of relative calm.

WESTERN RULE

In 1192 King Richard I of England, having taken the island from the Greek usurper Comnenus, sold it to the Knights Templar, who, in turn, sold it to Guy de Lusignan, formerly King of Jerusalem. Thus began almost 400 years of Western rule, which saw the introduction of Western feudalism and of the Latin Church into a land which hitherto had been Greek in its institutions and Orthodox in its religious beliefs.

In the period from 1192 to 1267 (when the direct line of the Lusignan house became extinct) the new regime was gradually elaborated. The Lusignan monarchy was limited in character, for the royal power was effective only in the military sphere, all other important business of state being decided in a high court which consisted of the nobles, the fief-holders, and the great officers of state. This court applied to the island a highly developed code of feudal law derived from the Assizes of Jerusalem, the Cypriots being allowed to retain their own laws and customs in so far as these did not conflict with the feudal law. The period was also marked by the determined efforts of the Latin clergy, supported by the Papacy, to establish complete control over the Orthodox Church, a policy carried out with much harshness, which the Crown and the feudal nobility often sought to mitigate in order to keep the loyalty of the subject population. The dominance of the Latin Church was finally assured by the Bulla Cypria of Pope Alexander IV (1260).

During the second half of the 13th century the kingdom of Cyprus (now ruled by the house of Antioch-Lusignan) played an important role in the last struggle to maintain the Latin states in Syria against the Mamluk offensive. The influence of the monarchy was further strengthened in this period, and when, in 1324, Hugues IV became king, the great age of feudal Cyprus had begun. Cyprus was now of great importance in the commerce which the Italian republics maintained with the East, and Famagusta became a flourishing port. The Papacy, however, always anxious to weaken the power of Mamluk Egypt, placed severe limitations on the trade of the Italian republics with that state and charged Cyprus and Rhodes with their enforcement. Thus began a conflict between the kings of Cyprus and the great republics of Venice and Genoa, which did not endanger Cyprus provided that the Papacy could mobilize sentiment in the West to support the crusading state of the Lusignans. When, as the 14th century advanced, the Papacy lost its power to command such support in the West, Cyprus was left to face unaided the ambitions of Genoa and Venice, which she was powerless to withstand.

Before this decline began, Cyprus enjoyed a brief period of great brilliance under her crusading king, Peter I (1359–69). In 1361 he occupied the port of Adalia on the south coast of Asia Minor, then held by the Turkish emirate of Tekke, and in the years 1362–65 he toured Europe in an effort to win adequate support for a new crusade. His most memorable exploit came in 1365, when he captured Alexandria in Egypt, sacking it so completely that even as late as the 16th century it had not recovered its former splendour. With his assassination in 1369 the great period of the Lusignan house was ended.

The reign of King Janus I (1398–1432) was a long struggle to drive out the Genoese, who had seized Famagusta during the war with Cyprus in 1372–74, and to repel the attacks of Mamluk Egypt, which had become weary of the repeated sea-raids undertaken from the ports of Cyprus. After plundering Larnaca and Limassol in 1425, the Mamluks crushed the army of Cyprus in a battle at Khoirakoitia in 1426, King Janus himself being captured, and his capital, Nicosia, sacked. The king was released in 1427, when he had promised the payment of a large ransom and of an annual tribute. The last years of Lusignan power were marked by dissension in the ruling house and by the increasing domination of Venice which, with the consent of Caterina Cornaro, the Venetian widow of the last Lusignan king, annexed Cyprus in 1489.

TURKISH RULE

Venice held Cyprus until 1570 when the Ottoman Turks began a campaign of conquest which led to the fall of Nicosia in September 1570 and of Famagusta in August 1571. The Turks now restored to the Greek Orthodox Church its independence and ended the former feudal status of the peasantry. The Cypriots paid a tax for the freedom to follow their own religion and were allowed to cultivate their land as their own and to hand it to their descendants on payment of a portion of the produce. About 30,000 Turkish soldiers were also given land on the island, thus forming a Turkish element in the population which was later reinforced by immigration from Asia Minor.

The 17th and 18th centuries were a melancholy period in the history of Cyprus. Repeated droughts and ravages of locusts preceded a famine in 1640 and an outbreak of plague in 1641. In 1660 the Ottoman Government, in order to limit the extortions of its officials and of the tax-farmers, recognized the Orthodox Archbishop and his three suffragans as guardians of the Christian peasantry, but this step did not prevent revolts in 1665 and 1690. A great famine in 1757–58 and a severe attack of plague in 1760 reduced the numbers of the peasantry very considerably, causing a widespread distress which culminated in the revolt of 1764–66. From 1702 Cyprus had been a fief of the Grand Vizier who normally sold the governorship to the highest bidder, usually for a period of one year. This practice created great opportunities for financial oppression. Perhaps the most striking development of the period was the continued rise in the power of the Orthodox bishops, whose influence was so great in the late 18th century that the Turkish administration depended on their support for the collection of revenues. The Turkish elements in Cyprus, resenting the dominance of the Orthodox bishops, accused them in 1821 of having a secret understanding with the Greeks of the Morea (who had revolted against Turkish rule) and carried out a massacre of the Christians at Nicosia and elsewhere, which brought the supremacy of the bishops to an end.

In 1833 the Sultan granted Cyprus to Muhammad Ali, Pasha of Egypt, who was forced, however, to renounce possession of it in 1840 at the demand of the Great Powers. During the period of reforms initiated by Sultan Mahmud II (1808–39) and continued by his immediate successors, efforts were made to improve the administration of the island. The practice of farming out taxes was abolished (although later partially re-introduced) and the Governor became a salaried official, ruling through a divan that was half-Turkish and half-Christian in composition.

BRITISH RULE

At the Congress of Berlin of 1878 the Great Powers endorsed an agreement between the United Kingdom and the Sultan of Turkey, whereby Cyprus was put under British control, to be used as a base from which to protect the Ottoman Empire against the ambitions of Russia. Control of Cyprus was now regarded as vital, since the opening of the Suez Canal (1869) had made the eastern Mediterranean an area of great strategic importance. Under the agreement of 1878, Cyprus remained legally a part of the Ottoman Empire, to which a tribute was paid, consisting of the surplus revenues of the island, calculated at less than £93,000 per annum.

From 1882 until 1931 the island had a legislative council that was partly nominated and partly elected. Various reforms were carried out in this first period of British rule: the introduction of an efficient judicial system and of an effective police force, and considerable improvements in agriculture, roads, education and other public services.

When Turkey joined the Central Powers in World War I, Britain immediately annexed Cyprus (1914) and then offered it to Greece (1915), provided the latter joined the Allies: this offer was refused, however, and was not repeated when Greece eventually joined the hostilities in 1917. Under the terms of the Treaty of Lausanne of 1923, both Greece and Turkey recognized British sovereignty over Cyprus, which became a Crown Colony in 1925. Thereafter, discontent among the Greek Cypriots began to assume serious proportions, culminating in anti-British riots in 1931 and the suspension of constitutional rule.

In the period after 1931 the desire to achieve self-government within the British Commonwealth grew stronger, but the movement for Enosis (union with Greece) became the dominant influence in the political life of the island. Cypriot troops performed valuable services in the war of 1939–45, for example in Libya, under Lord Wavell, and in the Greek campaign of 1941. Later, Cyprus was used as a place of detention for illegal Jewish

immigrants into Palestine, the last of such detention camps being closed in 1949. Following his election as head of the Orthodox Church of Cyprus in 1950, Archbishop Makarios III assumed the leadership of the Enosis movement. An unofficial plebiscite, conducted by the Church in that year, demonstrated overwhelming support for Enosis among Greek Cypriots.

CONSTITUTIONAL PROPOSALS

In July 1954 the United Kingdom made known its intention to prepare a restricted form of constitution for Cyprus, with a legislature containing official, nominated and elected members. The Greek Cypriots, insisting that their ultimate goal was Enosis, viewed the proposed constitution with disfavour, whereas the Turkish Cypriots declared their readiness to accept it. The Greek Government at Athens now brought the problem of Cyprus before the United Nations (UN). The United Kingdom, however, argued that the question was one with which it alone was competent to deal. The result was that, in December 1954, the UN resolved to take no immediate action in the matter.

The more extreme advocates of Enosis, grouped together in EOKA (National Organization of Cypriot Combatants) under the leadership of Gen. George Grivas (Dhigenis), now began a campaign of terrorist activities against the British administration. A conference including representatives from the United Kingdom, Greece and the Turkish Republic met in London in August 1955. The British offer of substantial autonomy for Cyprus failed to win the approval of Greece, since it held out no clear prospect of self-determination for the island, and the conference therefore ended in frustration.

A new and more violent wave of terrorism swept Cyprus in November 1955. A state of emergency was declared on 27 November whereby the death penalty was imposed for the bearing of arms, life imprisonment for sabotage and lesser sentences for looting and the harbouring of terrorists. All public assemblies of a political nature were forbidden; the British troops in Cyprus (about 10,000 in all) assumed the status of active service in war time. The Governor now ruled the island through an executive council consisting of four officials from the administration, two Greek Cypriots and one Turkish Cypriot.

At the beginning of 1956 the Governor, Sir John Harding, discussed the situation with Archbishop Makarios. Since the United Kingdom was now willing to accept the principle of ultimate independence for Cyprus, agreement seemed to be within reach. In March 1956, however, the discussions were suspended, and Archbishop Makarios, implicated in the activities of EOKA, was deported to the Seychelles Islands.

RELEASE OF MAKARIOS

In March 1957 Archbishop Makarios was released from detention in the Seychelles and, since he was not allowed to return to Cyprus, went to Athens. The British authorities also relaxed some of the emergency laws, such as the censorship of the press and the mandatory death penalty for the bearing of arms. These measures facilitated the holding of further discussions but little progress was made by the end of the year.

The tide of violence ran high in Cyprus during the first half of 1958. EOKA carried out an intensive campaign of sabotage, especially at Nicosia and Famagusta. At the same time strife between the Greek Cypriots and the Turkish Cypriots was becoming more frequent and severe, the outbreaks in June 1958 being particularly serious. There was increased tension, too, between the governments at Athens and at Ankara.

It was amid this situation that in June 1958 the United Kingdom made public a new scheme for Cyprus, which came into force in October. The island was to remain under British control for seven years; full autonomy in communal affairs would be granted, under separate arrangements, to the Greek Cypriots and the Turkish Cypriots; internal administration was to be reserved for the Governor's Council, which would include representatives of the Greek Cypriot and Turkish Cypriot communities and also of the Greek and Turkish Governments in Athens and Ankara.

ACHIEVEMENT OF INDEPENDENCE

As a result of a conference held in Zürich, it was announced in February 1959 that Greece and Turkey had devised a compromise settlement concerning Cyprus. A further conference in London decided that Cyprus was to become an independent republic with a Greek Cypriot president and a Turkish Cypriot vice-president. There would be a Council of Ministers (seven Greeks, three Turks) and a House of Representatives (70% Greek, 30% Turkish) elected by universal suffrage for a term of five years. Communal Chambers, one Greek, one Turkish, were to exercise control in matters of religion, culture and education. The Turkish inhabitants in five of the main towns would be allowed to establish separate municipalities for a period of four years.

Cyprus was not to be united with another state, nor was it to be subject to partition. The United Kingdom, Greece and Turkey guaranteed the independence, the territorial integrity and the Constitution of Cyprus. Greece received the right to station a force of 950 men on the island, and Turkey a force of 650 men. The United Kingdom retained under its direct sovereignty two base areas in Cyprus—at Akrotiri and at Dhekelia.

In November 1959 agreement was attained in regard to the delimitation of the executive powers to be vested in the President and Vice-President of Cyprus. A further agreement defined the composition of the Supreme Constitutional Court. In December the state of emergency came to an end and Archbishop Makarios was elected to be the first President of Cyprus. The post of Vice-President was awarded, unopposed, to the Turkish Cypriot leader, Dr Fazil Küçük. After long negotiations, concluded in July 1960, the United Kingdom and Cyprus reached agreement over the precise size and character of the two military bases to be assigned to British sovereignty.

Cyprus formally became an independent republic on 16 August 1960, and, in September, a member of the UN. The Conference of Commonwealth Prime Ministers, meeting in London, resolved in March 1961 to admit Cyprus as a member of the Commonwealth.

CONSTITUTIONAL PROBLEMS

As Cyprus entered into its independence, serious problems began to arise over the interpretation and working of the Constitution. There was divergence of opinion between Greek and Turkish Cypriots over the formation of a national army, in accordance with provisions of the Zürich agreement of 1959 (2,000 men; 60% Greek, 40% Turkish); the main point of dispute being the degree of integration to be established between the two components. In October 1961 the Turkish Vice-President, Dr Küçük, used his power of veto to ban full integration, which President Makarios favoured at all levels of the armed forces. Difficulties also arose over the implementation of the 70:30 ratio of Greek Cypriot to Turkish Cypriot personnel in the public services.

The year 1962 saw the development of a serious crisis over the system of separate Greek and Turkish municipalities in the five main towns of Cyprus—Nicosia, Famagusta, Limassol, Larnaca and Paphos. In December the Turkish Communal Chamber passed a law maintaining the Turkish municipalities in the five towns from 1 January 1963, and also establishing a similar municipality in the predominantly Turkish town of Lefka. President Makarios now issued a decree stating that, from 1 January 1963, government-appointed bodies would control municipal organizations throughout the island—a decree which the Turkish Cypriots denounced as an infringement of the Constitution.

The Constitutional Court of Cyprus, sitting in judgement on the financial disputes, ruled in February 1963 that, in view of the veto exercised by the Turkish members of the House of Representatives since 1961, taxes could be imposed on the people of the island, but that no legal machinery existed for the collection of such taxes. In April the court declared that the Government had no power to control the municipalities through bodies of its own choosing and that the decision of the Turkish Communal Chamber to maintain separate Turkish municipalities in defiance of the Cyprus Government was also invalid.

Negotiations between President Makarios and Vice-President Küçük to resolve the deadlock broke down in May. Accordingly, in November, Archbishop Makarios put forward proposals for a number of reforms. However, these proved to be unacceptable to the Turkish Cypriots.

CIVIL WAR

Meanwhile, underground organizations, prepared for violence, had been formed among both the Greek and the Turkish communities. In December 1963 serious conflict broke out. The United Kingdom suggested that a joint force composed of British, Greek and Turkish troops based in Cyprus should be established to restore order. The governments at Nicosia, Athens and Ankara gave their assent to this scheme. At this time the forces of Turkey serving in the island occupied a strong position, north of Nicosia, which gave them control of the important road to Kyrenia on the northern coast of Cyprus—a road which was to become the scene of much conflict in the future. As a result of the December crisis, co-operation between the Greek Cypriots and the Turkish Cypriots in government and in other sectors of public life came almost to an end, most notably in the Turkish Cypriot boycott of the House of Representatives.

There was renewed violence in February 1964, especially at Limassol. Arms in considerable quantities were being brought secretly into the island for both sides, and the number of armed 'irregulars' was increasing rapidly. These developments also gave rise to friction between Athens and Ankara.

ESTABLISHMENT OF UN PEACE-KEEPING FORCE

In January 1964, following a request by the Cyprus Government, the UN nominated Lt-Gen. Prem Gyani of India to act as its representative to the island. Later in the same month the Cyprus Government informed the Secretary-General of the UN that it would be glad to see a UN force established in the island; on 4 March the UN Security Council adopted a resolution establishing the UN Peace-keeping Force in Cyprus (UNFICYP). Advance units of the Canadian contingent reached the island in March, and by 22 May the UN headquarters at Nicosia controlled 6,931 men.

There was more fighting between Greek and Turkish Cypriots in March and April 1964. On 1 June the Cyprus House of Representatives approved legislation establishing a National Guard and rendering all male Cypriots between the ages of 18 and 59 liable to six months of service. Only members of the National Guard, of the regular police and of the armed forces would now have the right to bear arms. One purpose of the legislation was to suppress the irregular bands which increasingly tended to escape the control of the established regime.

Under the agreements concluded for the independence of Cyprus in 1959–60, Turkey maintained a contingent of troops on the island, the personnel of this force being renewed from time to time on a system of regular rotation. A new crisis arose in August–September 1964 when the Government at Nicosia refused to allow such a rotation of personnel. After much negotiation through the UN officials on the island, the Cyprus Government agreed to raise its existing blockade of the Turkish Cypriots entrenched in the Kokkina district and to allow the normal rotation of troops for the Turkish force stationed at Cyprus. The Government at Ankara now consented that this force should come under UN command in Cyprus.

GENERAL GRIVAS

There was further tension in Cyprus during March 1966 over the position of Gen. Grivas, the former head of EOKA. Grivas had returned to the island in June 1964 at a time when it was felt that he might be able, with his high personal prestige, to bring to order the small 'private armies' and 'irregular bands' which had emerged among the Greek Cypriots and which were violently defying the Cyprus Government.

In March 1966 President Makarios attempted to limit the functions of Gen. Grivas in Cyprus and so to end a situation which saw political control vested in himself, while command of the armed forces (both the Greek Cypriot National Guard and also the 'volunteer' Greek troops stationed in Cyprus), rested with the General, who took his orders from Athens. The President suggested that the National Guard should be transferred to the control of the Cyprus Minister of Defence—a proposal which found favour neither with Gen. Grivas nor in Athens, where it provoked a serious political crisis. The whole affair underlined the distrust separating President Makarios and Gen. Grivas and the doubts existing in Athens regarding the ultimate intentions of the President.

The military coup in Greece in April 1967 was followed by a brief improvement in Greco–Turkish relations. The Prime Ministers and Foreign Ministers of Greece and Turkey met in Thrace in September, but failed to reach an agreement on Cyprus, Greece rejecting any form of partition, which was implicit in the Turkish proposal to accept Enosis in return for military bases and 10% of the island's territory.

TURKISH CYPRIOT ADMINISTRATION

On 29 December 1967 the Turkish Cypriot community announced the establishment of a 'Transitional Administration' to administer their affairs until the provisions of the 1960 Constitution were implemented. Measures were approved to establish separate executive, legislative and judicial authorities, and Dr Küçük, who remained the official Vice-President of Cyprus, was appointed President of the Transitional Administration, with Rauf Denktaş as Vice-President. A legislative body was established, consisting of the Turkish Cypriot members of the House of Representatives elected in 1960 and the members of the Turkish Communal Chamber. The Executive Council's nine members functioned as the administration. President Makarios described the Transitional Administration as 'totally illegal', but it continued to function as the *de facto* Government of the Turkish community in Cyprus.

INTERCOMMUNAL TALKS, 1968–74

Between January and April 1968 the Cypriot Government gradually relaxed the measures it had adopted against the Turkish community. With the exception of the Turkish area in Nicosia, freedom of movement for Turkish Cypriots was restored, checkpoints were removed and unrestricted supplies to Turkish areas were permitted. In April Rauf Denktaş, the Vice-President of the Turkish Cypriot Administration, was permitted to return from exile, and in May he began talks with Glavkos Klerides, the President of the House of Representatives. These negotiations were intended to form the basis of a settlement of the constitutional differences between the Greek and Turkish communities, but very little progress was made. After years of intermittent discussion, there was still an impasse, the Turks demanding local autonomy, the Greeks rejecting any proposals tending towards a federal solution, fearing that it might lead to partition. In June 1972 Dr Kurt Waldheim, the UN Secretary-General, attended the talks, stressing the need for a peaceful settlement and expressing a hope that UNFICYP might be withdrawn in the near future. By the end of 1973 the Greek Cypriot representative seemed to have accepted the principle of local autonomy, but the talks still dragged on, with no acceptable compromise having been found on the scope of local autonomy or the degree of control to be exercised by the central government over local authorities. A statement by Bülent Ecevit, Prime Minister of Turkey, calling for a federal settlement of the constitutional problem, caused the talks to break down in April 1974. The Greek and Cypriot Governments claimed that the negotiations had been conducted on the understanding that any solution would be in terms of a unitary state; Denktaş declared that federation would not necessarily mean partition. Denktaş also feared that the Greek Government was giving support to the Enosis movement. Each side accused the other of trying to sabotage the talks.

TERRORISM AND ELECTIONS

While the talks between the Greek and Turkish communities continued, there was a marked reduction in intercommunal violence, but the Greek population of the island was divided between supporters of Makarios, and his aim of an independent unitary state, and those who demanded union with Greece. In 1969 the National Front, an organization advocating immediate Enosis, embarked on a campaign of terrorism, raiding police stations to steal arms, bombing British military buildings and vehicles, shooting and wounding the chief of police and making several unsuccessful bomb attacks on government ministers. Georgios Papadopoulos, the Greek Prime Minister, denounced terrorism in Cyprus and the National Front in particular.

On 8 March 1970 there was an attempt to assassinate President Makarios, attributed to the National Front. A week later Polykarpos Georghadjis, a former Minister of the Interior, was

found shot dead. At the trial of the President's would-be assassins, Georghadjis was named as a party to the conspiracy.

Despite the activities of the National Front, the Government decided to hold a general election on 5 July 1970. The dissolved House of Representatives had been in existence since 1960, and the elections which should have been held in 1965, according to the Constitution, had been postponed from year to year, owing to the continuing crisis. The continued absence of the 15 Turkish members, who met as part of the Turkish Legislative Assembly, meant that the Greek Cypriot House of Representatives contained only 35 members. Fifteen of the Greek Cypriot seats were won by the Unified Party, led by Glavkos Klerides, with a policy of support for President Makarios and a united independent Cyprus. The communist Anorthotiko Komma Ergazomenou Laou (Progressive Party of the Working People—AKEL) won nine seats, to become the second largest in the House. None of the candidates of the Demokratikon Ethnikon Komma (Democratic National Party—DEK—which advocated Enosis), won a seat. The elections held at the same time by the Turkish Cypriots resulted in a victory for the National Solidarity Party, led by Rauf Denktaş.

RETURN OF GRIVAS AND EOKA-B

The ideal of Enosis was still attractive to many Greek Cypriots, despite the lack of success for pro-Enosis candidates in the election. Greek Cypriot students condemned President Makarios's support for the creation of an independent unitary state, and called for an end to the intercommunal talks. Gen. Grivas attacked the President in an article in an Athens newspaper, calling for his resignation on the grounds that, by abandoning Enosis, the President had betrayed EOKA's struggle for freedom.

At the beginning of September 1971 Gen. Grivas returned secretly to Cyprus and began to hold meetings with the leaders of the National Front and his followers in the EOKA movement of the 1950s. President Makarios threatened to arrest the General for setting up armed bands, and declared his opposition to the achievement of Enosis by violent means. His opponents, pro-Enosis Greek Cypriots, condemned the intercommunal talks and rejected the idea of a negotiated compromise with the Turkish community. The Cyprus Government imported a considerable quantity of arms as a precautionary measure, but after protests from Greece and Turkey that the distribution of these arms would serve only to aggravate an already tense situation, the consignment was placed under the custody of UNFICYP.

The President had been under pressure for some time from the Greek Government to dismiss ministers considered hostile to Athens. In February 1972 it was suggested in Athens that a Cypriot government of national unity should be formed, including moderate representatives of Gen. Grivas. For some months the President resisted this pressure, and it seemed that the Greek Government, in alliance with dissident bishops and Gen. Grivas, was intent on forcing his resignation. In May Spyros Kyprianou, the Foreign Minister, who had been the main target of Greek hostility and one of the President's closest collaborators, resigned, and in June the President capitulated and carried out an extensive reorganization of his Cabinet.

Gen. Grivas organized a new guerrilla force, which became known as EOKA-B, and launched a series of attacks on the Makarios Government, similar to those against British rule in the 1950s. While the Committee for the Co-ordination of the Enosis Struggle, Grivas's political front organization, demanded a plebiscite on Enosis and rejected intercommunal agreement as a means of settling the future of Cyprus, EOKA-B raided police stations, quarries and warehouses, stealing arms, ammunition, dynamite and radio transmitters.

1973 PRESIDENTIAL ELECTION

The demand for a plebiscite from supporters of Gen. Grivas was put forward as an alternative to the election for the presidency, called by President Makarios as a test of strength. The President's speech of 8 February 1973 explained his position; while believing in Enosis, he considered that talks with the Turkish community on the basis of an independent Cyprus were the only practical possibility. He condemned terrorism and violence as counter-productive, likely to lead to Turkish intervention and unsupported by the Greek and Cypriot authorities. The Greek Government also repudiated terrorism and expressed its support for a constitutional solution.

On 8 February 1973 Makarios was returned unopposed for a third five-year term as President, and in the Turkish quarter of Nicosia Rauf Denktaş was declared elected Vice-President, following the withdrawal of Ahmet Berberoğlu.

EOKA-B continued its terrorist activities throughout 1973, concentrating on bombings and raids on police stations. In July the Minister of Justice, Christos Vakis, was kidnapped, prompting an escalation in violence. The President refused to submit to violence or to blackmail, rejecting the terms put forward by Grivas for the release of Vakis. Numerous police and National Guard officers, suspected of being Grivas sympathizers, were dismissed, and Vakis was released in August. Action by security forces against secret EOKA bases resulted in many arrests, the seizure of quantities of munitions and the discovery of plans to assassinate the President. President Papadopoulos of Greece publicly condemned the activities of 'the illegal organization of Gen. Grivas', which undermined the Greek policy of 'support for the finding of a solution to the Cyprus problem through the enlarged local talks aimed at ensuring an independent, sovereign and unitary state'.

ABORTIVE 1974 MILITARY COUP

The deposition of three bishops of the Orthodox Church of Cyprus for attempting to remove Archbishop Makarios from the Church, and the resultant demonstrations of popular support for the President enabled the Cypriot Government to take strong measures against other supporters of Gen. Grivas. Forces loyal to the President waged guerrilla war against EOKA-B, and carried out a purge of the armed forces and police, some of whose members had collaborated with EOKA and helped in their raids. The Grivas campaign of terrorism seemed to have been checked by the beginning of 1974, and when Gen. Grivas died as a result of a heart attack in January the President granted an amnesty to 100 of his imprisoned supporters, hoping to restore normality in Cyprus.

In June 1974 President Makarios ordered a purge of EOKA supporters in the police, civil service, schools and National Guard, and on 2 July he wrote to President Ghizikis of Greece, accusing the Greek military regime of giving arms and subsidies to EOKA and of using the Greek army officers attached to the Cyprus National Guard for subversion. The President demanded that the Greek officers who had collaborated with EOKA should be withdrawn, and began to take steps to ensure that the Guard were loyal to Cyprus, rather than to Greece and Enosis. The National Guard, apparently with Greek support, then staged a coup. On 15 July a former EOKA gunman, Nikos Sampson, was appointed President. Makarios fled to Britain, the resistance of his supporters was crushed, and Greece sent more officers to reinforce the National Guard.

Rauf Denktaş, the Turkish Cypriot leader, called for military action by the United Kingdom and Turkey, as guarantors of Cypriot independence, to prevent Greece imposing Enosis. Having failed to induce the United Kingdom to intervene, Turkey acted unilaterally. Turkish troops landed in Cyprus on 20 July, and seized the port of Kyrenia and a corridor connecting it to the Turkish sector in Nicosia. A cease-fire on 22 July did not prevent further Turkish advances, and the UN peacekeeping force had little success in its efforts to interpose itself between the two Cypriot communities. Massacres and other atrocities were reported from many bi-communal villages, reinforcing the hostility between the Greeks and Turks.

TURKEY OCCUPIES NORTHERN CYPRUS

The successful Turkish invasion had foiled Greek plans to take over Cyprus using the National Guard, and when the military Government of Greece resigned on 23 July 1974, Sampson did likewise. Glavkos Klerides, the moderate Speaker of the House of Representatives who had led the Greek Cypriot delegation to the intercommunal talks, was appointed President, and began negotiations with Rauf Denktaş. In Geneva, the United Kingdom, Greece and Turkey also held talks, seeking a settlement, but negotiations broke down following Turkish demands for the establishment of a cantonal federation giving almost a third of the area of Cyprus to the Turkish Cypriots.

On 14 August, the day after the Geneva talks ended, the war was renewed. Turkish forces seized the whole of Cyprus north of what became the 'Attila line', running from Morphou through Nicosia to Famagusta, and the new civilian Government in Greece announced its inability to intervene. Turkey proclaimed that, by this *fait accompli,* the boundaries of an autonomous Turkish Cypriot administration had been established, while Denktaş spoke of establishing a completely independent Turkish Cypriot state north of the 'Attila line' and of encouraging the immigration of Turkish Cypriots from areas still under Greek Cypriot control, to produce a permanent ethnic and political partition of the island. The UN Secretary-General, Dr Kurt Waldheim, succeeded in arranging talks between Klerides and Denktaş, but was unable to bring about any constructive results from these negotiations. An important round of peace talks on the Cyprus problem began in Vienna between Klerides and Denktaş in January 1975, under the aegis of Dr Waldheim. The success of the negotiations depended on whether the two sides could reach agreement on the political future of the island: the Turkish Cypriots wanting a Greek-Turkish bi-regional federation with strong regional governments, whereas the Greeks, whilst not ruling out a bi-zonal solution, favoured a multi-regional or cantonal federation with strong central government. Both parties stressed the need for an independent, non-aligned, demilitarized Cyprus.

On 13 February 1975 a 'Turkish Federated State of Cyprus' ('TFSC') was proclaimed in the part of the island under Turkish occupation. The new State was not proclaimed as an independent republic, but as a restructuring of the Autonomous Turkish Cypriot Administration, a body established after the invasion, 'on the basis of a secular and federated state until such time as the 1960 Constitution of the Republic . . . is amended in a similar manner to become the Constitution of the Federal Republic of Cyprus'. Rauf Denktaş was appointed President of the new 'state'. Greece denounced this move as a threat to peace and declared that the issue would be taken to the UN Security Council, which, in March, adopted a resolution regretting the unilateral decision to establish a Federated Turkish State. Talks were resumed in April, and the foundation was laid for intercommunal reconciliation and co-operation, when the Cypriot leaders agreed to form an expert committee, under the auspices of Dr Luis Weckmann-Muñoz, Special Representative of the UN Secretary-General, to consider the powers and functions of a central government for Cyprus and present their findings in June to the Cypriot negotiators in Vienna.

The flight of Turkish Cypriots to British bases after the National Guard coup and the withdrawal of Greek Cypriot civilians before the advancing Turkish army had created a major problem in Cyprus. In August 1974 the UN estimated that there were some 225,600 refugees in Cyprus, of whom 183,800 were Greek Cypriots. In the southern part of Cyprus, under Greek Cypriot control, were 198,800 of these refugees, of whom 35,000 were Turkish Cypriots, including prisoners of war. This problem remained unsolved in 1976, with an estimated 200,000 refugees on the island. However, 9,000 Turkish Cypriots were given the opportunity to move to the northern sector in August 1975. In return the Turkish Cypriot authorities allowed 800 relatives of Greeks who remained in the north to join them in the Turkish sector. The concern over the treatment of Greeks in the Turkish-occupied area gave rise in August 1975 to an investigation by the European Commission of Human Rights which, in a report published in January 1977, found Turkey guilty of committing atrocities in Cyprus.

In December 1974 Archbishop Makarios returned to Cyprus, and resumed the presidency. In January 1975 Britain decided to permit the resettlement of over 9,000 Turkish Cypriot refugees from the British Sovereign Base at Akrotiri. In retaliation for the alleged ill-treatment of Turkish Cypriots still living in Greek areas, and in order to force a decision on the release of the refugees and their resettlement, the Turks threatened to expel all remaining Greek Cypriots in northern Cyprus and launched a massive scheme to colonize the area, bringing thousands of farmers and peasants from mainland Turkey and settling them in Greek-owned property.

ELECTIONS AND INTERCOMMUNAL TALKS 1975–76

In September 1975 talks between the two sides resumed in New York. However, these and further discussions in February 1976 were completely unproductive. In April 1976 the divergence in the policies of Archbishop Makarios and Glavkos Klerides, the Greek Cypriot negotiator, eventually led to the resignation of the latter and his replacement by Tassos Papadopoulos. At the same time Umit Süleyman Onan replaced Rauf Denktaş as the Turkish Cypriot negotiator.

During 1976 general elections were held on both sides of the 'Attila line'. In June Rauf Denktaş was elected President of the 'TFSC'. His election placed him constitutionally above party politics but in fact his position depended upon the support of the Ulusal Bırlık Partisi (National Unity Party—UBP). Under the terms of the Constitution promulgated by the Turkish Cypriot authorities, 40 deputies were elected to a legislative assembly, with the UBP gaining a majority. Nejat Konuk, the Secretary-General of the UBP, was appointed Prime Minister. In September general elections were held in the government-controlled area. A new party under Spyros Kyprianou, the Democratic Front (supporting the policies of Archbishop Makarios), won a decisive victory, gaining 21 of the 35 seats. The party of Glavkos Klerides, the Dimokratikos Synagermos (Democratic Rally—DISY), did not win any seats.

In January 1977 Denktaş initiated a meeting with Archbishop Makarios to establish preliminaries for resuming intercommunal talks (suspended since February 1976); Archbishop Makarios made it clear that he was prepared to accept a bi-zonal federation provided the Turkish authorities made territorial concessions, and only if there was provision for a central government with adequate powers. A sixth round of talks, which opened in Vienna in March, broke down, was resumed in Nicosia in May but was suspended until after the general elections in Turkey in June.

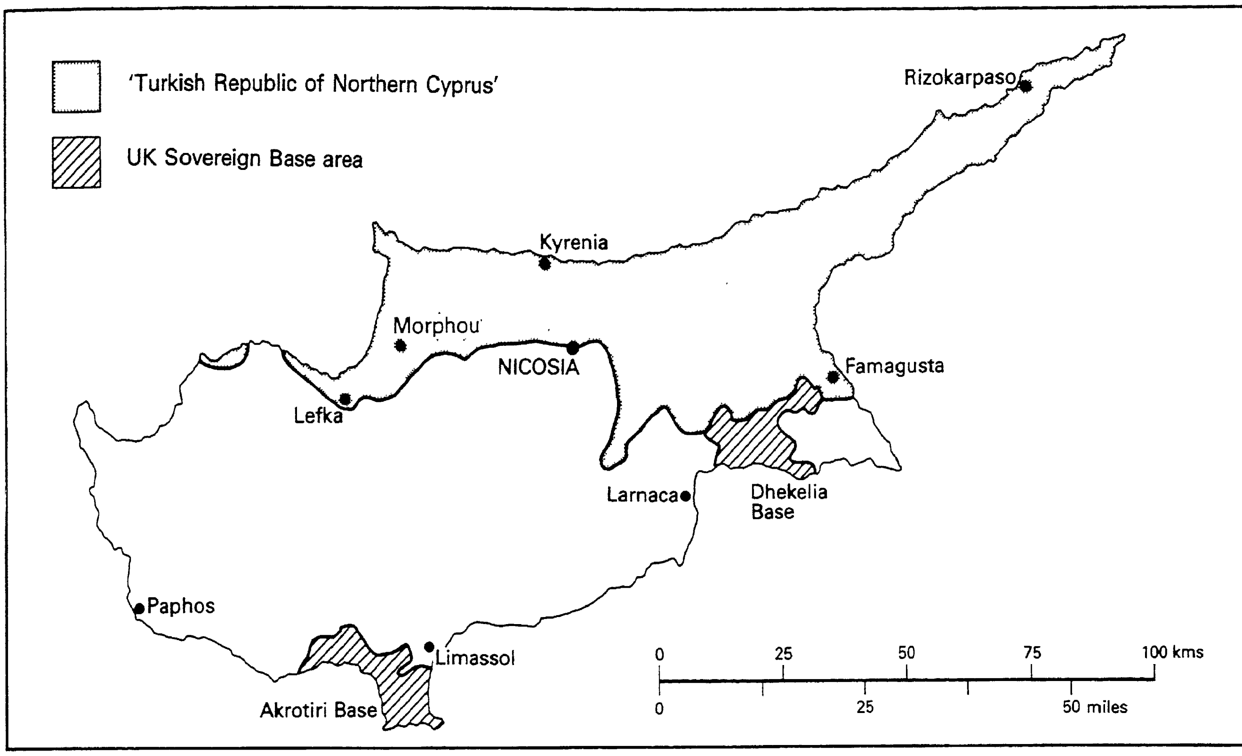
DEATH OF MAKARIOS, ACCESSION OF KYPRIANOU

The death of Archbishop Makarios on 3 August 1977, put an end to hopes for an immediate continuation of negotiations and gave rise to fears about the stability of the Greek Cypriot regime in his absence, especially since there was no obvious successor. Spyros Kyprianou, the President of the House of Representatives, was elected on 31 August to serve the remainder of Makarios's term of office. In the elections of January 1978 he was re-elected unopposed and formed a new Cabinet with an increased membership of 13. Shortly afterwards the EOKA-B announced its dissolution, but in April, after the discovery of a plot, 22 of its members were arrested. In the same month, following criticism in the Turkish Cypriot press about rising prices, Nejat Konuk resigned as Prime Minister of the 'TFSC' and was replaced by Osman Orek, former President of the National Assembly, who formed a new Cabinet.

In April and July 1978 President Kyprianou was subjected to criticism from within his own Government, both from the powerful left wing and from the followers of Makarios. This resulted in the dismissal of his chief negotiator with the Turkish Cypriots, Tassos Papadopoulos. In December there was a crisis in the 'TFSC' as a result of factional disputes within the UBP. Amid widespread rumours about the establishment of a multinational company to which the Turkish Cypriot unions were opposed, all nine cabinet ministers resigned, followed by the Prime Minister, Osman Orek. A new Cabinet was formed under Mustafa Çağatay, formerly Minister of Labour, Social Affairs and Health. In April 1979 a new party, the Democratic Party, was formed by Nejat Konuk, the former Prime Minister, as the UBP lost support in the legislature.

On 19 May 1979 Kyprianou and Denktaş drew up a 10-point agenda, based on the Makarios/Denktaş agreement. However, intercommunal talks in June were adjourned after a week, over differences in the interpretation of the agreement, which Turkish Cypriots saw as providing for bi-zonality on the island. Meanwhile, the mandate of the UN Peace-keeping Force (UNFICYP) continued to be extended at six-monthly intervals.

On 9 September 1980 the Greek Cypriot Government's reshuffle led to the appointment of seven new ministers. As a result, President Kyprianou was again attacked by AKEL and by the right-wing opposition under Klerides, thus losing his overall majority in the House of Representatives. During the



Cyprus, showing the 'Turkish Republic of Northern Cyprus'

next three months, three new 'centrist' political parties were established: the Pankyprio Ananeotiko Metopo (Pancyprian Renewal Front—PAME), the Dimokratiko Komma (Democratic Party—DIKO) and the Enosi Kentrou (Centre Union).

ELECTIONS AND FURTHER TALKS 1980–81

On 16 September 1980, in the shadow of the military coup in Turkey, the intercommunal peace-talks were resumed after an interval of 15 months. These were to be held within the framework of a procedural formula proposed by Hugo Gobbi, the UN Special Representative for Cyprus. The negotiators for the Greek and Turkish sides were, respectively, George Ioannides and Umit Süleyman Onan. There were to be four main areas of discussion: the re-settlement of Varosha (the Greek area of Famagusta); constitutional aspects; territorial aspects; and 'initial practical measures by both sides to promote goodwill, mutual confidence and the return to normal conditions'. The talks continued intermittently, but by the spring of 1981 no concrete results had been achieved. In March negotiations with Britain about outstanding development payments to Cyprus, which, according to the Cypriots, amounted to £150m. since 1960, were resumed.

Growing criticism of Kyprianou's Government for its failure to avert an economic crisis or to make any real progress in the intercommunal talks led the House of Representatives to vote almost unanimously on 16 April for the dissolution of the Government. In the subsequent parliamentary elections, held on 24 May 1981, under a system of proportional representation, the communist AKEL party and the DISY party of Glavkos Klerides each won 12 of the 35 Greek Cypriot seats in the House of Representatives, while President Kyprianou's DIKO party achieved only eight seats. In the elections held in the 'TFSC' in June, President Rauf Denktaş was returned to office, but with only 52% of the vote. His right-wing UBP won 18 out of 40 seats, compared with 23 at the previous elections.

The intercommunal talks continued throughout 1981, but little progress was made. In August there were signs of hope when fresh proposals were put forward by the Turkish Cypriots. These envisaged handing back 3% to 4% of the 35.8% of land now controlled by them, as well as the buffer zone between the two communities, and allowing some 40,000 of the 200,000 Greek Cypriot refugees to return to the Famagusta area. The constitutional issue remained the main problem: the Greek Cypriots wanted a federation with a strong central government and freedom of movement throughout the island; the Turkish Cypriots favoured something similar to a partition within a confederation, equal representation in government and strong links with the mother country. The Greek Cypriots, although they agreed to the principle of an alternating presidency, objected to disproportionate representation of the Turkish community, who form less than 20% of the population. The Turkish proposals were rejected by the Greek Cypriots, but it was agreed that the talks should continue.

NEW UN PEACE PROPOSAL

In November 1981 the UN put forward a new peace plan, or 'evaluation', for a federal, independent and non-aligned Cypriot state. Although more favourable to the Greek side than the Turkish Cypriot proposals had been, this was only accepted reluctantly as a basis for negotiation by the Greek Cypriots, in the face of opposition from the Church and some political groups. The Turkish Cypriots accepted the plan.

The socialist Government of Greece, elected in October 1981, pledged more active support for the Greek Cypriots than their predecessors. Andreas Papandreou, the Greek Prime Minister, who visited Cyprus early in 1982, wanted to see the withdrawal of all Greek and Turkish troops from the island, and favoured an international conference on Cyprus rather than the continuation of the intercommunal talks.

With presidential elections in view, President Kyprianou and his DIKO party formed an alliance with the communist AKEL party in April 1982, based on a 'minimum programme' of continuance of the non-aligned status quo, defence of the mixed economy and support for the intercommunal talks. This put a strain on relations with the Greek Government since it was contrary to the policy which had recently been laid down by Athens and Nicosia. The alliance with AKEL involved a cabinet reshuffle in which all but three ministers were replaced.

In the 'TFSC' the Çağatay Government resigned in December 1981. A three-month crisis followed until March 1982, when a coalition government was formed by Çağatay between his own UBP, the Democratic People's Party and the Turkish Unity Party.

In February 1983 President Kyprianou was re-elected for a five-year term by a comfortable 56.5% majority. Glavkos Klerides's DISY party polled 34%, and Vassos Lyssarides's

Socialistiko Komma Kyprou EDEK (EDEK Socialist Party of Cyprus—EDEK) 9.5%. President Kyprianou reiterated that communist policies would not be introduced and that no communists would be given cabinet rank.

In May the UN General Assembly voted overwhelmingly in favour of the withdrawal of Turkish troops from Cyprus, although the USA and the United Kingdom abstained in protest against the partisan wording of the resolution. In retaliation, Rauf Denktaş threatened to boycott any further intercommunal talks and to call a referendum in the 'TFSC' to decide whether to make a unilateral declaration of independence and seek international recognition. The Cyprus pound was replaced by the Turkish lira as legal tender in the 'TFSC'.

Informal talks, under the auspices of the UN, continued in August 1983 but no agreement was reached, and in September the Greek Cypriot Minister of Foreign Affairs resigned because of policy differences with President Kyprianou over the proposed resumption of the intercommunal talks.

DECLARATION OF 'TURKISH REPUBLIC OF NORTHERN CYPRUS'

UN proposals for a summit meeting between Denktaş and Kyprianou in late 1983 were unsuccessful. On 15 November the 'TFSC' made a unilateral declaration of independence as the 'Turkish Republic of Northern Cyprus' ('TRNC'), with Denktaş as President. Later that month, Mustafa Çağatay resigned as Turkish Cypriot Prime Minister and as leader of the UBP. On 2 December the Legislative Assembly of the 'TRNC' adopted legislation for the establishment of a 70-member constituent assembly (comprising the 40 elected members of the Legislative Assembly and 30 others appointed from representative groups within the community), which met for the first time on 6 December. On the following day President Denktaş appointed Nejat Konuk (who had been Prime Minister of the 'TFSC' in 1976–78 and was then President of the 'TRNC' Legislative Assembly) to be Prime Minister in an interim Cabinet, pending elections in 1984. Like the 'TFSC', the 'TRNC' was recognized only by Turkey, and the declaration of independence was condemned by the UN Security Council. The EC resolved not to apply trade sanctions against the 'TRNC', and the mandate of UNFICYP continued to be extended at six-monthly intervals. Conciliatory proposals that were made by the 'TRNC', including the resettlement of 40,000 Greek Cypriot refugees, were rejected by the Cyprus Government in January 1984, while the 'TRNC', in turn, refused to accept President Kyprianou's proposal that the Turkish Cypriots should be allowed to administer 25% of the island (despite the fact that they comprised only 18% of the population) on condition that the declaration of independence be withdrawn before talks resumed.

In April 1984 Turkey and the 'TRNC' exchanged ambassadors, and plans were made for a referendum on 19 August to approve a new constitution, to be followed by a general election on 4 November to elect members for the Constituent Assembly. (These elections were subsequently postponed.) The establishment of diplomatic links with Turkey was followed by a formal rejection of UN proposals for a 'freezing' of independence as a pre-condition of peace talks, along with a continued refusal to return the Varosha (Greek Cypriot) area of Famagusta.

ABORTIVE 1985 KYPRIANOU-DENKTAŞ SUMMIT

In August and September 1984 the Greek and Turkish Cypriots conferred separately with the UN Secretary-General, Javier Pérez de Cuéllar, whose aim was to bring the two sides together for direct negotiations. The Turkish Cypriots reiterated that they would accept the proposed creation of a bi-zonal federation only if power were to be shared equally between the north and the south. The third round of negotiations, begun in November, were seen as being crucial to any long-term solution of the problem but, despite some concessions on the part of the Turkish Cypriots, an impasse was reached. In December 1984, after the third round of talks had ended, the leaders of the two communities, Spyros Kyprianou and Rauf Denktaş, agreed to hold a summit meeting in January 1985. No agreement was reached at the meeting, however, and Denktaş subsequently declared that a further summit meeting could not be arranged until after the elections which were due to be held in the 'TRNC' in June. The new Constitution of the 'TRNC' was approved by a referendum in May, and this was followed by a presidential election on 9 June, at which Rauf Denktaş was returned to power with over 70% of the vote. A general election followed on 23 June, with the UBP, led by Dr Derviş Eroğlu, winning more seats than any other party (24) but failing to win an overall majority in the 50-seat Legislative Assembly.

In July 1985 the UN Secretary-General drew up further proposals, which the Greek Cypriots accepted. The new UN proposals were for a bi-zonal federal Cyprus (with the Turkish Cypriots occupying 29% of the land) in which the government would be led by a Greek Cypriot president and a Turkish Cypriot vice-president, both having limited power of veto over federal legislation. Ministers would be appointed in a ratio of seven Greek Cypriots to three Turkish Cypriots. One 'major' ministry would always be held by a Turkish Cypriot, and a special working party would consider demands that the Minister of Foreign Affairs should always be a Turkish Cypriot. There would be two assemblies: an upper house, with a 50:50 community representation, and a lower house, weighted 70:30 in favour of the Greek Cypriots. Legislation on important issues would require 'separate majorities in both chambers'. A tripartite body, including one non-Cypriot voting member, would have the final say in constitutional clashes concerning the extent of federal power. However, serious problems remained over the crucial questions of a timetable for the withdrawal of Turkey's troops and the nature of international guarantees for a newly united Republic of Cyprus. This plan was underwritten by foreign governments (in effect the USA), which were to subsidize two funds: one to help the poorer Turkish Cypriot community, and the other to aid both Greek and Turkish Cypriots who had been displaced as a result of the events of 1974. However, the Turkish Cypriots did not accept the revised plan, as they wanted Turkish troops to remain on the island indefinitely, to protect their interests, and they felt that any peace settlement must include Turkey as a guarantor. They had also revised their opinion on allowing Greek Cypriot refugees to return to the 'TRNC'.

1985 GREEK CYPRIOT ELECTIONS

President Kyprianou had come under severe criticism, from within the House of Representatives, over the failure of the summit in January 1985. He reshuffled the Council of Ministers and terminated his alliance with AKEL, which had become increasingly strained, mainly because of Kyprianou's unyielding attitude to the intercommunal talks. In November, following an acrimonious debate over Kyprianou's leadership, the House of Representatives was dissolved. A general election was not due to be held until May 1986, but the two largest parties, AKEL and the conservative DISY, had formed an alliance with the intention of achieving a two-thirds majority in the House, which would enable them, under Article 44, to amend the Constitution and so force an early presidential election. However, they were one vote short of the required majority.

A general election was held on 8 December 1985 for an enlarged House of 56 Greek Cypriot seats (compared with 35 previously), while the nominal allocation of seats to the Turkish Cypriot community was increased from 15 to 24. Significant gains were made by Kyprianou's DIKO party, although it remained a minority party. It won 16 seats and increased its share of the vote to 27.6% (compared with 19.5% in the 1981 election). AKEL suffered a set-back, gaining only 15 seats, while its share of the vote fell to 27.4% from 32.8% in 1981. This ended a communist ascendancy in Greek Cypriot politics which dated back to the independence of Cyprus from Britain in 1960 (although AKEL partially recovered its position in the local elections in May 1986). DISY replaced AKEL as the largest party in the House by winning 19 seats, with 33.6% of the vote, compared with 31.9% in 1981. The socialist party, EDEK, which supported Kyprianou's stand on peace negotiations, won six seats with 11.1% of the vote, compared with 8.2% in 1981. Campaigning was dominated by two issues: the proposed peace plan and Kyprianou's argument that, constitutionally, the President was not bound by the decisions of the House. The result of the election was interpreted as evidence of widespread support for Kyprianou's policies.

Further meetings to discuss the UN peace plan were conducted in March 1986. On this occasion the Turkish Cypriots accepted the draft peace plan (which was still based on the idea

of establishing a bi-zonal federal republic, with specified posts and ratios for the Greek and Turkish Cypriot participants in the federal government) while the Greek Cypriots stated that it was the same as that put forward in January 1985 (which they had rejected). The Greek Cypriots' principal objections were that the plan failed to envisage the withdrawal of the Turkish troops prior to implementation of the plan; the removal from Cyprus of settlers from the Turkish mainland; the provision of suitable international guarantors for the settlement, with the exclusion of Turkey; and the assurance of the 'three basic freedoms', namely the right to live, move and work anywhere in Cyprus. Kyprianou and other Greek Cypriot leaders, as well as Prime Minister Papandreou of Greece, were all opposed to the plan but were careful not to reject it absolutely. They wanted a summit meeting between the two leaders (Kyprianou and Denktaş) or an international conference to discuss the matter. President Denktaş, however, later stated that he would not accept an international conference which treated the Greek Cypriots as the official government of Cyprus and the Turkish Cypriots as a minority population and that, should such a conference be arranged, he would seek international recognition of the 'TRNC'.

In July 1986 Turgut Özal, the Prime Minister of Turkey, made his first visit to the 'TRNC' and urged the adoption of an economic model similar to that in Turkey. The Toplumcu Kurtuluş Partisi (Communal Liberation Party) disagreed with this policy, and in August it withdrew from the coalition Government of the 'TRNC'. In September the Prime Minister, Dr Derviş Eroğlu, formed a new administration in coalition with the Yeni Doğuş Partisi (New Dawn Party—YDP).

In July 1987 it was reported that the Cyprus Government had proposed to the UN Secretary-General that the Cypriot National Guard be dissolved, and orders for military equipment cancelled, in exchange for the withdrawal of Turkish forces from the island. In an address to the UN General Assembly in October, President Kyprianou proposed an international peacekeeping force to replace the armed forces of both the Greek and Turkish Cypriots. President Denktaş, however, maintained that negotiations on the establishment of a federal bi-zonal republic should precede any demilitarization.

ELECTION OF VASSILIOU AS PRESIDENT

The first round of voting in presidential elections took place in the Greek Cypriot zone on 14 February 1988. There were four main candidates, including the incumbent President Kyprianou, who was seeking his third consecutive five-year term. The three other main candidates were: Georghios Vassiliou, who presented himself as an independent, but who was unofficially backed by the communist party, AKEL (although he, himself, was not a communist); Glavkos Klerides, the leader of the conservative DISY; and Dr Vassos Lyssarides, leader of the socialist EDEK. Since no candidate received more than 50% of the total vote, a second round was held a week later, to decide between the two candidates who had received the most votes—Glavkos Klerides, with 33.3% of the total vote, and Georghios Vassiliou, with 30.1%. Kyprianou was third, with 27.3% of the total vote. This surprising defeat was widely interpreted as a result of the failure of Kyprianou's uncompromising policies for the reunification of Cyprus. The outgoing President decided not to support either of the remaining presidential candidates. In the second round of voting, Georghios Vassiliou, with the backing of EDEK and a significant number of Kyprianou supporters, was elected as the new President by a narrow margin, with 167,834 votes (51.6% of the total), whilst Glavkos Klerides gained 157,228 votes (48.4%).

Although it was predicted that President Vassiliou would promote his predecessor's policies regarding a settlement for the divided island, he, unlike Kyprianou, quickly expressed his willingness to enter into direct informal dialogue with the Turkish Cypriot leader. Vassiliou also promised to re-establish the National Council, which was to include representatives from all the main Greek Cypriot political parties, to negotiate plans for the settlement of the Cyprus problem. On 28 February 1988 Vassiliou was officially sworn in as the new President and named his new nine-member Council of Ministers. On the same day President Vassiliou proposed a meeting with the Turkish Prime Minister, Turgut Özal, to discuss the withdrawal of Turkish troops from Cyprus. Özal responded by claiming that Vassiliou's priority, as regards the Cyprus problem, should be to talk with President Denktaş of the 'TRNC'. In March Denktaş submitted a series of goodwill proposals to President Vassiliou, via the new Special Representative of the UN Secretary-General, Oscar Camilión. Vassiliou immediately rejected the proposals, which included a plan to form committees to study the possibilities of intercommunal co-operation. In the same month President Vassiliou held talks with the Greek Prime Minister, Andreas Papandreou, in Athens, to examine the prospects for a Cyprus settlement. Papandreou said that, despite the recent breakthrough in Greco-Turkish relations, there could be no overall improvement unless progress was made towards solving the Cyprus problem.

RESUMPTION OF INTERCOMMUNAL TALKS

After a meeting with the newly-revived National Council in June 1988, President Vassiliou agreed to a proposal by the UN Secretary-General to resume intercommunal talks, without preconditions, with President Denktaş of the 'TRNC', in the capacity of the leaders of two communities. Following a meeting with the Turkish Government in July, Denktaş also approved the proposal. Consequently, the impasse between the two sides was ended and a Cyprus summit meeting took place in Geneva on 24 August, under the auspices of the UN. At this summit, which was the first such meeting between Greek and Turkish Cypriot leaders since January 1985, Vassiliou and Denktaş resumed direct talks on a settlement of all aspects of the Cyprus problem. As a result of this meeting, the two leaders began the first formal round of substantive direct negotiations, under UN auspices, in Nicosia on 15 September. A target date of 1 June 1989 was set for the conclusion of a comprehensive political settlement. Despite several rounds of intensive direct talks, under the supervision of the UN, in Nicosia and New York, however, it became apparent, by the end of June 1989, that no progress had been achieved as a result of the discussions. The general consensus seemed to be that, although the two leaders expressed their willingness that Cyprus should be reunited as a bi-zonal federation, they disagreed on what form government should take. In addition, attitudes regarding three issues due to which former talks had broken down (i.e. the withdrawal of Turkish troops, the right of Turkey to intervene as a guarantor, and the assurance of the 'three basic freedoms'—see above) appeared irreconcilable. Vassiliou and Denktaş agreed to hold another meeting with the UN Secretary-General to review the intercommunal talks in New York in September.

In mid-May 1989, under the supervision of the UNFICYP, a deconfrontation agreement (reached at the end of March) was implemented, which involved the withdrawal of Greek Cypriot and Turkish Cypriot troops from 24 military posts along the central Nicosia sector of the 'Attila line'. It was hoped that this limited withdrawal would reduce the tension (there were five fatal shootings reported during the period May 1988–December 1988), which persisted in this troubled area. In July, however, crowds of Greek Cypriot women held angry demonstrations at the buffer zone to protest against the continuing partition of Cyprus. There was a dramatic escalation in tension when more than 100 protesters were arrested by the Turkish Cypriot forces during the demonstration and were detained for several days.

ABORTIVE 1990 VASSILIOU-DENKTAŞ SUMMIT

Despite a relaxation, in November 1989, of entry restrictions for Greek Cypriots with compelling reasons to travel to the 'TRNC', no significant progress was made towards a political settlement in the first half of 1990. A new round of UN-sponsored talks, which began in late February 1990 in New York, came to a premature end in early March, following disagreement arising from demands by Rauf Denktaş that the right to self-determination of the Turkish Cypriots be recognized by the Greek Cypriot community. President Vassiliou accused Denktaş of deliberately frustrating hopes of a settlement by introducing new conditions to the negotiations and implicitly advocating some form of partition or secession. Denktaş, in turn, accused Vassiliou of refusing to consider any form of compromise. A resolution approved by the UN Security Council later in March rejected Denktaş's stance and reaffirmed the UN's commitment to a resolution based on a bicommunal federal republic.

Later in March 1990 Denktaş resigned the presidency in order to call early presidential elections on 22 April. Denktaş, standing as an independent, received 66.7% of the votes cast, while İsmail Bozkurt, who also stood as an independent, received about 32%, and Alpay Durduran of the Yeni Kıbrıs Partisi (New Cyprus Party—YKP) slightly more than 1%. Denktaş's victory was widely interpreted as a sign of public approval of the President's stance throughout the recent negotiations with President Vassiliou, although opposition parties advocating a more conciliatory approach commanded significant support in the 'TRNC'.

The UBP retained its majority in the 'TRNC' Legislative Assembly at a general election on 6 May 1990, when it received 55% of the votes cast, thereby securing 34 of the 50 available seats. In June Denktaş approved the appointment of several newcomers to the Council of Ministers, which Derviş Eroğlu continued to head as Prime Minister. In local elections on 24 June the UBP consolidated its position when its candidates were elected to 14 out of a total of 22 mayoral positions.

Rumours in the Greek Cypriot zone of widespread disaffection within the communist party, AKEL, were substantiated in early 1990, when resignations and dismissals from the party's central committee and politburo followed calls for democratic reform of the party structure. At least five of the party's 15 parliamentary representatives were thought to belong to the dissident faction. A new political party, the Ananeotiko Demokratiko Sosialistiko Kinima (Democratic Socialist Reform Movement—ADISOK), was formed in April 1990, and was expected to attract many dissatisfied supporters of AKEL.

In July 1990 Cyprus formally applied for full membership of the European Community (EC). International observers regarded the political division within the island as a major obstacle to Cyprus's achieving member status, while President Denktaş declared that the 'unilateral' application by the Greek Cypriots on behalf of the whole island would further complicate the search for a political settlement for Cyprus.

In July and October 1990, in retaliation for the EC application, the 'TRNC' Government and Turkey signed an agreement envisaging the creation of a customs union, the abolition of passport controls and the introduction of a 'TRNC' currency backed by the Turkish central bank. These 'unilateral' steps were condemned by the Greek Cypriot Government, which claimed that the 'TRNC' was also actively planning to settle sensitive northern areas, such as Varosha, with Palestinians and Bulgarian Turkish immigrants. (In June 1989 President Denktaş had advocated the transfer of Bulgarian Turkish refugees from Turkey to the 'TRNC' but the Turkish Government had declined the offer.)

UN-sponsored efforts to revive intercommunal talks on the Cyprus question were hindered by international preoccupation with the conflict in the Persian (Arabian) Gulf after August 1990. As a supporter of the multinational coalition against Iraq, the Vassiliou Government drew parallels between the Iraqi invasion of Kuwait and the Turkish occupation of northern Cyprus in 1974. The 'TRNC' and Turkish authorities, however, maintained that any similarities lay rather with the attempted Greek military takeover of Cyprus in 1974, which had precipitated the Turkish action. Of the obstacles to an outline agreement as proposed by the UN, the most intractable remained the demands of the Turkish Cypriots for recognition as a 'people' with the right to self-determination in UN terms, a demand which was interpreted by the Greek Cypriots as a desire for distinct sovereignty. Another major point of contention remained each side's rejection of the other's preferred negotiating framework: whereas the Greek Cypriots, with support from Greece, advocated a UN-chaired conference to be attended by the five permanent members of the UN Security Council, the Turkish Cypriots, with Turkish support, favoured a conference at which participation would be limited to representatives of the Turkish and Greek Cypriot sectors as well as Turkey and Greece.

While efforts to resume the negotiating process revolved mainly around the UN and the US Government, the Greek Cypriots also attached importance to the potential role of the EC and the newly-institutionalized Conference on Security and Co-operation in Europe (CSCE). In November 1990 President Vassiliou urged the CSCE to consider the plight of Cyprus in the context of its situation as 'the only European country facing foreign occupation'. In April 1991 the EC ministers of foreign affairs authorized Luxembourg (the presiding member nation at that time) to organize an independent diplomatic initiative for Cyprus, to be co-ordinated with that of the UN.

1991 GREEK CYPRIOT ELECTIONS

In general elections for the 56 Greek Cypriot seats in the House of Representatives, which took place on 19 May 1991, campaigning focused on economic and social issues, there being only marginal policy differences between the parties regarding the Cyprus issue. The conservative DISY party, in alliance with the Komma ton Phileleftheron (Liberal Party), received 35.8% of the votes cast (2.2% more than in 1985) and secured 20 seats, representing a gain of one seat. The AKEL communists, despite competition from ADISOK, unexpectedly achieved the biggest advance, with 30.6% of the vote and 18 seats, representing a gain of three seats. The EDEK socialists also gained ground by securing seven seats in the House, while support for the 'centrist' DIKO party decreased from 27.6% of votes cast and 16 seats in 1985 to 19.5% of the vote and just 11 seats in 1991. Both ADISOK and the Pankyprio Komma Prosfygon ke Pligenton (Pancyprian Party of Refugees and Stricken Persons—PAKOP) failed to win a seat in the House.

On 30 May 1991, at the inaugural meeting of the newly-constituted House of Representatives, Alexis Ghalanos (the former parliamentary spokesman for DIKO) was elected President of the House in succession to the EDEK leader, Dr Vassos Lyssarides.

RESUMPTION OF UN-SPONSORED TALKS, 1991–92

US diplomatic efforts resulted in an announcement, made by President George Bush in August 1991, that the Greek and Turkish Prime Ministers had confirmed their willingness to attend a UN-sponsored conference in New York with the aim of finding a solution to the Cyprus question. However, although Presidents Vassiliou and Denktaş declared their support for this initiative, hopes of a breakthrough receded when the UN Secretary-General made it clear that the conference would not be convened unless progress had been made on resolving outstanding differences. No such progress being immediately apparent, the Bush schedule for a conference in September was not met. In a report to the UN Security Council in October, Pérez de Cuéllar stated that in the latest discussions Denktaş had asserted 'that each side possessed a sovereignty which it would retain after the establishment of a federation, including the right of secession', and had sought 'extensive changes in the text of the ideas that were discussed'. Recalling that the UN Security Council had 'posited a solution based on the existence of one state of Cyprus comprising two communities', he concluded that the introduction of the Denktaş concept would 'fundamentally alter the nature of the solution' as envisaged previously.

On taking office on 1 January 1992, the new UN Secretary-General, Dr Boutros Boutros-Ghali, initiated another attempt to establish the basis for a high-level conference on Cyprus. To this end, UN envoys visited Cyprus, Turkey and Greece in February, and Dr Boutros-Ghali had meetings in New York with Vassiliou and Denktaş in January and March. However, in a report to the Security Council in April, the UN Secretary-General advised that no progress had been made towards resolving basic disagreements and that 'there has even been regression'. Although there was a measure of agreement on the shape of a federal government structure, the issues of 'territorial adjustment' and the return of displaced persons remained serious problems. In a resolution adopted on 10 April, the Security Council reaffirmed that a settlement 'must be based on a state of Cyprus with a single sovereignty and international personality and a single citizenship, with its independence and territorial integrity safeguarded, and comprising two politically equal communities'.

In accordance with Security Council instructions, Dr Boutros-Ghali had further separate talks with Vassiliou and Denktaş in New York in June 1992, when deliberations centred on UN proposals for the demarcation of Greek Cypriot and Turkish Cypriot areas of administration under a federal structure. In view of the reluctance of the parties to discuss lines on a map, the cartographic ideas put forward by Dr Boutros-Ghali were

described as a 'non-map'. Although both sides undertook to observe a news blackout on the talks, pending a further round in mid-July, the Boutros-Ghali 'non-map' was published by the Turkish Cypriot press on 30 June. It showed that the area of Turkish administration would be about 25% smaller than the 'TRNC', from whose present territory the Greek Cypriots would recover the towns of Morphou and Varosha (although not old Famagusta) and a total of 34 villages. According to the published details, the new division would, among other things, create a Turkish enclave to the east of Nicosia and a Greek enclave in the north-east tip of the island. It was estimated that under the UN plan some 60,000 displaced Greek Cypriots would be able to return to their pre-1974 homes and remain under Greek Cypriot administration.

While denying that he had leaked details of the 'non-map' (which were eventually released by the UN in August), Denktaş seized the opportunity presented by its publication to assert that its proposals were totally unacceptable to the 'TRNC' Government. On the Greek Cypriot side, government spokesmen took the view that the disclosure of the UN plan was a ploy by which the Turkish Cypriots hoped to gain negotiating leverage. As regards the content of the 'non-map' and related ideas for a settlement, Greek Cypriot opinion was divided: whereas AKEL and DISY continued to express broad support for Vassiliou's conduct of the negotiations, DIKO and EDEK spokesmen declared that the UN plan would entrench an unacceptable partition of the island. Greek Cypriot critics of the emerging proposals also complained that there appeared to be no provision for the removal of post-1974 Turkish settlers from Cyprus.

Following further unsuccessful UN-sponsored talks, conducted in New York during October and November 1992, the Secretary-General took the unusual step of publishing a tabulation of the respective responses to his settlement ideas. This revealed that, whereas the Greek Cypriot side accepted the proposals and the UN map as the basis for a negotiated settlement, the Turkish Cypriot side had reservations with regard to nine of the 100 articles, all of which dealt with crucial matters. The tabulation demonstrated that, apart from the basic issues of sovereignty and territorial division, the Turkish Cypriots were continuing to insist that the posts of federal President and Vice-President should rotate between the two communities and that the federal Government should contain an equal number of Greek Cypriot and Turkish Cypriot ministers. The Greek Cypriots proposed that the two premier positions should be decided by 'federation-wide and weighted universal suffrage', and also endorsed the UN proposal that there should be a 7:3 ratio of Greek Cypriot and Turkish Cypriot ministers, although they accepted that a Turkish Cypriot should normally hold one of the three main portfolios of foreign affairs, finance and defence. Moreover, while both sides accepted the 'security and guarantees' section of the UN proposition (including provisions for the withdrawal of all non-Cypriot forces), considerable disagreement persisted as to whether or not the 1959 treaty of guarantee afforded Turkey a unilateral right of intervention in Cyprus.

Reporting to the UN Security Council on the failure of the latest round of negotiations, Dr Boutros-Ghali noted that a 'lack of political will ... continues to block the conclusion of an agreement', adding that 'it is essential that the Turkish Cypriot side adjust its position'. This assessment was reflected in the resultant Security Council Resolution 789, adopted in late November 1992, which also incorporated a set of proposed confidence-building measures. These included a reduction in the level of armed forces on both sides, the extension of the UN security zone to include the disputed Varosha suburb of Famagusta, the easing of restrictions on 'people to people' contacts and the reopening of Nicosia international airport.

GREEK CYPRIOT AND TURKISH CYPRIOT ELECTIONS, 1993

The veteran DISY leader, Glavkos Klerides, was the unexpected victor in Greek Cypriot presidential elections conducted in two rounds on 7 and 14 February 1993, narrowly defeating Vassiliou's bid for a second term. Standing, once again, as an independent with AKEL support, Vassiliou headed the first-round voting with 44.2%, compared with 36.7% for Klerides and 18.6% for a joint DIKO-EDEK candidate, Paschalis Paschalides. Although DISY had previously declared its support for the Government's conduct of the settlement negotiations, in the election campaign Klerides distanced himself from Vassiliou's stance. This enabled DIKO and EDEK, both strongly opposed to the UN plan, to transfer their support to Klerides, who won 50.3% of the second-round vote compared with 49.7% for Vassiliou. The new Government, appointed by the President-elect on 25 February, contained six DISY ministers and five from DIKO.

Despite his long-standing personal relationship with Denktaş, Klerides failed to obtain any significant compromise in the Turkish Cypriots' declared objections to the confidence-building measures at reconvened talks in New York during May and June 1993. Denktaş submitted counter-proposals urging international recognition of certain other parts of Turkish-controlled northern Cyprus, but these were interpreted by Klerides as an attempt to obtain a degree of international acceptance of the division of Cyprus, in opposition to the Greek Cypriot (and UN) insistence that the island should remain a single state.

Despite the recommendation of the new Turkish President, Süleyman Demirel, that Denktaş should adopt a more conciliatory approach to the negotiations, Denktaş failed to meet the Secretary-General's proposed deadline of mid-June for acceptance of the confidence-building measures. A mission to Athens, Cyprus and Ankara, undertaken by the UN Secretary-General's new Special Representative in Cyprus, Joe Clark, failed to foster any significant new initiative for peace.

An early general election in the 'TRNC' on 12 December 1993 partially resolved a long power-struggle between Denktaş and the Prime Minister, Derviş Eroğlu, in the former's favour. The UBP, once led by Denktaş but now advocating Eroğlu's openly pro-partition stance, remained the largest party in the Legislative Assembly, but failed to win an overall majority. The pro-Denktaş Demokrat Parti (Democrat Party—DP) and the left-wing Cumhuriyetçi Türk Partisi (Republican Turkish Party—CTP) thereupon agreed to form a coalition under the premiership of Hakki Atun, the DP leader (hitherto the Speaker of the Assembly). The new coalition supported the Denktaş policy that talks should continue, while at the same time confirming policy positions likely to ensure continued deadlock.

DEADLOCK ON CONFIDENCE-BUILDING MEASURES

Negotiations in the first half of 1994 on the UN-sponsored confidence-building measures centred on the proposed transfer to UN administration of the Turkish-held Varosha suburb of Famagusta (so that its former Greek Cypriot inhabitants might then return) and the reopening of Nicosia airport for use by both sides. Despite a further visit by Clark in May, no agreement could be reached, in particular because Denktaş claimed that the proposals envisaged greater concessions by the Turkish Cypriots than by the Greek Cypriots. In a report submitted to the Security Council in May, the UN Secretary-General again censured the Turkish Cypriot side for failing to show the political will needed to produce a settlement. In the following month, however, he amended this verdict by stating that there was 'a very substantial measure of agreement' and that the only obstacle to implementation of the confidence-building measures was disputed methodology. The Greek Cypriots reacted angrily that this assessment did not give 'the true picture' of the persisting differences between the two sides.

In a concurrent deterioration, Denktaş warned, on 30 May 1994, that, if Greek Cyprus was admitted to the EC (now European Union—EU) without reference to the Turkish Cypriots, the 'TRNC' would opt for integration with Turkey. However, this warning did not deter Greek Cypriot spokesmen from welcoming an EU decision, in June, to include Cyprus in the next phase of enlargement. The Greek Cypriot Government was also gratified by a ruling of the European Court of Justice on 5 July, banning EU members from importing goods from the 'TRNC' (see Economy section). This ruling was condemned by the 'TRNC' authorities, who proceeded to organize large-scale public celebrations to commemorate the 20th anniversary of the 1974 Turkish invasion of the island. In late August the 'TRNC' Legislative Assembly sought co-ordination with Turkey on defence and foreign policy, and rejected a federal solution, urging

instead 'political equality and sovereignty' for the Turkish Cypriots.

In Resolution 939, adopted on 29 July 1994, the UN Security Council effectively conceded that confidence-building measures were not a realistic possibility in the absence of agreement on fundamental issues. Yet another round of UN-sponsored talks then reached familiar deadlock by September, whereupon President Klerides demanded coercive UN measures to achieve a settlement and appealed for the support of the UN General Assembly. Pursuant to a November 1993 agreement placing Cyprus within 'the Greek defence area', joint Greek/Greek Cypriot military exercises were held for the first time in October 1994, matching similar military co-operation between the 'TRNC' and Turkey.

TURKISH CYPRIOT PRESIDENTIAL ELECTION, 1995

In the approach to the 1995 Turkish Cypriot presidential election, Atun resigned as 'TRNC' Prime Minister on 24 February, after the CTP had opposed President Denktaş's pre-election offer to distribute to 'TRNC' citizens the title deeds to property in the north owned by Greek Cypriots; however, after Eroğlu of the UBP had rejected an invitation to form a government, the DP leader was reappointed in the following month. At the presidential election, on 15 and 22 April, Denktaş for the first time failed to win an outright majority in the first round (receiving only 40.4% of the votes), although he achieved a comfortable 62.5% to 37.5% victory over arch-rival Eroğlu in the second round of voting. Protracted inter-party negotiations were then needed to produce a new government, which was a further DP-CTP coalition under the premiership of Atun.

In a forceful statement on 2 May 1995, Denktaş opined that war might result from unilateral Greek Cypriot accession to the EU, because it would constitute a form of Enosis with Greece (already an EU member) and would be in breach of international treaty stipulations that Cyprus was barred from joining any supranational grouping which did not include both Greece and Turkey. Nevertheless, President Klerides on 4 May headed a visit to Athens by the Greek Cypriot National Council (consisting of the main party leaders) for a 'unity' meeting with Greek government leaders, at which he expressed gratitude for Greek support for his Government's EU application.

1996 GREEK CYPRIOT ELECTIONS – NEW 'TRNC' GOVERNMENT

In the wake of its success in achieving a Bosnian peace accord in November 1995, the US Government gave renewed attention to the Cyprus issue, regarding it as the remaining major source of instability in the eastern Mediterranean region to affect the allied countries; but political instability in Turkey and the impending Greek Cypriot legislative elections precluded any progress being made in the early months of 1996.

The elections to the Greek Cypriot House of Representatives were held on 26 May 1996 and the DISY-DIKO government coalition retained a comfortable majority. DISY remained the largest single party, with 20 seats (34.5% of the vote), slightly ahead of the opposition AKEL, which achieved 19 seats (33.0%). DIKO lost one of its 11 seats (16.4%), while the EDEK Socialists retained only five seats (8.1%) and the new Free Democrats, led by ex-President Vassiliou, took the remaining two seats (3.7%).

US diplomatic efforts on Cyprus gathered pace in June 1996, partly owing to President Clinton's desire to make substantive progress towards a settlement before the US presidential election in November. UN and EU endeavours to bring the sides together continued in parallel to the US initiative, while in May the British Government appointed Sir David Hannay, the United Kingdom's former ambassador to the UN, to be its own special representative for Cyprus. President Klerides had talks with President Clinton in Washington in mid-June, and at the end of the month the UN Security Council unanimously urged both sides to respond 'urgently and positively' to the Secretary-General's efforts to break the deadlock.

Following policy disagreements, the DP-CTP coalition Government of the 'TRNC' resigned in July 1996; the UBP authorized Eroğlu to begin talks with the DP, now headed by Serdar Denktaş (the President's son, who had been elected in May), on forming a new government. After a successful conclusion to the negotiations, the protocol of the new DP-UBP coalition Government was signed in mid-August; ministers assumed their duties shortly thereafter, with Eroğlu replacing Atun as Prime Minister and Serdar Denktaş becoming Deputy Prime Minister.

1996 VIOLENCE IN THE UN BUFFER ZONE – CRISIS OVER GREEK CYPRIOT PURCHASE OF RUSSIAN MISSILES

From mid-1996 intercommunal relations descended to some of their most hostile levels since 1974, as the result of a series of violent incidents in the UN buffer zone. In early June Turkish Cypriot forces shot and killed an unarmed Greek Cypriot soldier in the Nicosia sector, and on 11 August a Greek Cypriot anti-partition demonstrator was beaten to death by Turkish nationalist extremists during a protest rally, at which an estimated 50 people were injured. The victim's funeral on 14 August was followed by further violence, in which a Greek Cypriot was shot dead by Turkish Cypriot guards (as he attempted to remove a Turkish flag at a fortified post in the buffer zone), and a further 11 people, including two UN officials, were injured. Greek Cypriot outrage at the killings intensified when the Turkish Minister of Foreign Affairs, Tansu Çiller, visited the 'TRNC' on 15 August and warned that Turkey would continue to retaliate with force against those who insulted the Turkish flag. Tensions were further exacerbated in September when a Turkish Cypriot soldier was shot and killed, and another wounded, across the buffer zone, in the south-eastern sector, and on 13 October another Greek Cypriot was shot dead by Turkish Cypriot forces near the British army's military base at Dhekelia.

Renewed international attempts at mediation prompted by the intercommunal crisis in Cyprus, resulted in meetings between Sir David Hannay and the two Cypriot leaders in October, as a result of which the British special representative announced that sufficient progress had been made to enable direct negotiations to resume in 1997, under UN auspices. At the same time, senior military commanders from both sides began UN-sponsored talks which aimed to defuse tension along the demarcation line.

In a landmark judgment delivered on 18 December 1996, the European Court of Human Rights ruled that Turkey, as the effective power in the 'TRNC', had breached the European Convention on Human Rights by denying a Greek Cypriot woman access to her property in Kyrenia since the 1974 invasion. Applauded by the Greek Cypriot Government, the ruling opened the way for compensation claims against Turkey by other displaced persons.

Another severe crisis developed in January 1997, when it was confirmed that the Greek Cypriot Government had signed an agreement to purchase Russian S-300 surface-to-air missiles. Amid international criticism of the purchase, particularly by the USA, the 'TRNC' authorities described the agreement as an 'act of aggression', while the Turkish Government warned that it would be prepared to use military force to prevent deployment of the system. Mediation by the USA and other foreign governments succeeded in defusing the immediate crisis on the basis of an assurance by the Greek Cypriot Government that the missiles would not be deployed for at least 13 months. However, indications of continuing tension included a 'TRNC'-Turkish commitment to a joint defence strategy, whereby an attack on the 'TRNC' would be regarded as an attack on Turkey itself.

1997 KLERIDES–DENKTAŞ TALKS – EU ACCESSION NEGOTIATIONS SCHEDULED

In April 1997 major changes to the Greek Cypriot Government included the appointment of Yiannakis Kasoulides as Minister of Foreign Affairs. Two months later, Kasoulides welcomed President Clinton's appointment of Richard Holbrooke as US mediator on Cyprus, in the hope that Holbrooke would be able to repeat his success as the chief broker of the Dayton peace agreement on Bosnia. Following proximity talks which had begun in March, Klerides and Denktaş attended their first direct discussions for three years on 9–12 July at Troutbeck, New York State (USA). The meetings were chaired by UN Special Representative Diego Córdovez and were attended by the UN Secretary-General, Kofi Annan, and other Security Council representatives. Sufficient progress was made for further direct talks to be held by the two leaders in late July, in

Nicosia, where agreement was reached regarding the implementation of measures to establish the fate of persons missing since the hostilities which took place both prior to and during 1974.

Meanwhile, the Greek Cypriot Government's objective of EU membership became a critical source of dissension in July 1997, when an EU summit in the Netherlands formally agreed that Cyprus would be included in the next phase of EU enlargement, on which negotiations were to begin in 1998. The decision was to apply to Cyprus as a whole and was regarded by the EU as a possible device for bringing about a settlement which would preserve Cyprus as a single sovereignty. However, the Turkish Cypriot authorities categorically rejected any EU negotiations which were not based on Turkish Cypriot sovereignty, while the Turkish Government also opposed any accession by Cyprus to the EU which did not accommodate Turkish Cypriot demands or which preceded the admittance of Turkey itself. On 20 July, at celebrations to mark the 23rd anniversary of Turkish military intervention on the island, President Denktaş and the Turkish Deputy Prime Minister, Bülent Ecevit, signed a joint declaration threatening to integrate the 'TRNC' into Turkey, if EU negotiations with the Greek Cypriot administration commenced as planned.

Further formal intercommunal talks, which took place in Switzerland on 11–15 August 1997, demonstrated that the conceptual gulf between the two sides remained as wide as ever, notably in that Denktaş continued to insist upon recognition of separate Turkish Cypriot sovereignty, while accusing both Klerides and the EU of having disregarded the rights of the Turkish Cypriot community. Talks broke down on 15 August with Denktaş claiming that the Cypriot application for EU membership was illegal, since it had not been made on behalf of the population of the whole island. Further meetings between Klerides and Denktaş were conducted in Nicosia on 26 September and 11 November—the latter hosted by Holbrooke during his first visit to Cyprus as official US mediator—but failed to break the deadlock. Relations worsened in December when an EU summit in Luxembourg issued a formal invitation to Cyprus to begin accession negotiations in 1998; the 'TRNC' responded by suspending its participation in intercommunal talks.

RE-ELECTION OF KLERIDES, 1998—MILITARY TENSIONS

The five DIKO ministers resigned from the coalition Greek Cypriot Government in early November 1997 (and were replaced by non-partisan technocrats), following an announcement by Klerides that he intended to seek a second presidential term with the endorsement of DISY. In the first round of the presidential election, conducted on 8 February 1998, Georghios Iacovou (who had secured the support of AKEL and DIKO) obtained a narrow victory over Klerides, while the five other candidates were eliminated. However, in the second round of voting, conducted on 15 February, Klerides gained 50.8% of the votes, thus defeating Iacovou. The decision of EDEK, whose candidate had gained 10.6% of the votes in the first round of the election, to support Klerides in the second round had been crucial to his success. A new Government of national unity was sworn in on 28 February and included ministers from DISY, DIKO, EDEK, the Liberal Party and Enomeni Dimokrates (United Democrats—EDE). Former President Vassiliou was appointed chief negotiator for Cyprus at the EU accession talks, which were formally inaugurated on 31 March.

Meanwhile, there had been renewed tensions in January 1998 following the completion of a new Greek Cypriot military airfield at Paphos. In the absence of a Cypriot air force, the new airfield was intended to be an emergency base for Greek war planes, and was to be protected by the controversial missiles being purchased from Russia. This development provoked vociferous opposition from Denktaş, prompting the Greek Government to emphasize that the new site had the status of a Greek military base, so that any attack on the site would be regarded as an attack on a mainland military installation. There was further tension in mid-June when six Turkish war planes landed at a 'TRNC' airfield, in response to the landing of Greek military aircraft at the new Paphos airfield the previous week. While Greek Cypriot and Greek spokesmen described the Turkish action as 'completely illegal', the US Department of State condemned both deployments as unhelpful to the peace process and urged an end to such actions.

At the end of June 1998, President Konstantinos Stefanopoulos of Greece paid an official visit to Cyprus (the first such visit by a Greek head of state since independence in 1960), during which he publicly envisaged 'a free and truly independent Cyprus', with equality for all its citizens; he also appealed to the Turkish Cypriots to seize the opportunity offered by the prospective accession to the EU. Denktaş responded in August by elaborating his proposal for a confederation based on two sovereignties, and by again rejecting the resumption of intercommunal talks unless the Greek Cypriot Government suspended accession negotiations with the EU. The following month the UN Secretary-General announced that efforts to resolve the differences between the two sides were to be renewed by the UN Deputy Special Representative for Cyprus, Dame Ann Hercus, who engaged in considerable 'shuttle diplomacy' at a series of meetings with Klerides and Denktaş in October.

Parliamentary elections in the 'TRNC', conducted on 6 December 1998, resulted in gains for the UBP, which won 24 of the 50 contested seats, followed by the DP with 13, the Toplumcu Kurtuluş Partisi (Communal Liberation Party—TKP) with seven and the CTP with six. At the end of the month UBP leader Eroğlu was reappointed Prime Minister at the head of a new Government formed in coalition with the TKP.

NON-DEPLOYMENT OF RUSSIAN MISSILES—IMPACT OF 1999 KOSOVO CRISIS

Following intense pressure from the UN, the USA and the countries of the EU, on 29 December 1998 President Klerides announced that Russian-supplied S-300 missiles would not, after all, be deployed in Cyprus. A crucial factor in this decision had been the adoption by the UN Security Council (on 22 December) of two new resolutions pertaining to Cyprus; one renewed the UNFICYP mandate and urged reunification as a single sovereign state (apparently dismissing notions of a confederation), while the other expressed 'grave concern at the lack of progress towards an overall political settlement' based on UN resolutions, and advocated a phased demilitarization of the island. For the first time, the resolutions incorporated a requirement for compliance by the parties involved, although they contained no timetable for a settlement. After consultations with the Greek and Russian authorities, in January 1999 the Greek Cypriot Government confirmed that the missiles would instead be deployed on the Greek island of Crete, after the necessary preparations had been made to install them. Although the Turkish authorities claimed to have won a political victory over the decision to relocate the missiles, Ankara maintained that it was equally opposed to their deployment on Crete. Klerides' decision aroused strong domestic criticism and prompted the departure from the ruling coalition of the EDEK members, who had favoured adherence to the original plan. New Ministers of Defence and Education and Culture were appointed in January 1999 to replace the EDEK representatives. A further reorganization was announced in March following the resignation of the Minister of the Interior, Dinos Michaelides, as a result of allegations of corruption, which he strenuously denied.

During talks, held in Washington, DC, in February 1999, the Greek Cypriot Minister of Foreign Affairs, Yiannakis Kasoulides, secured an agreement from the US Government that a new diplomatic initiative on Cyprus would be launched following the Turkish general elections scheduled for April. However, the ongoing political and humanitarian crisis in the Yugoslav province of Kosovo and NATO air assaults on Yugoslavia, from late March, served to divert international attention from the Cyprus problem. While the 'TRNC' followed Turkey's lead in backing the Kosovar Albanians, the Greek Cypriot Government responded to massive popular support for the Serbian cause,

aligning itself with Greece in urging a prompt negotiated solution which preserved the territorial integrity of Yugoslavia. Although in May the Greek Cypriot Government agreed to observe sanctions against Yugoslavia proposed by NATO and the EU it was emphasized that this decision had been taken in the 'national interest', given the paramountcy of eventual accession to the EU.

At the end of June 1999 the UN Security Council adopted two new resolutions on Cyprus, one renewing the UNFICYP mandate for a further six months and the other urging the two sides to participate in (UN-sponsored) direct talks later in the year without preconditions or proscribed topics.

At the end of August 1999 three new Ministers were appointed to the Greek Cypriot Government to replace the Ministers of Health, Defence and Communications and Works, all of whom had resigned during July and August.

Economy

Revised for this edition by ALAN J. DAY

Geographically, Cyprus may be divided into four regions, distinguished by their natural and climatic features. These are the northern coastal belt, including the narrow Kyrenia mountain chain; the central plain, known as the Mesaoria, from Famagusta and Larnaca to Morphou Bay; the mountainous area of the south-centre, dominated by the Troödos massif, with the summit of Mt Olympus (1,951 m or 6,403 ft above sea-level) as its highest point; and the coastal plain of the south, running from a point west of Larnaca to Limassol and Paphos.

Since the middle of 1974, however, the most important division in Cyprus has been that between the areas to the north and south of the 'Attila line' which divides the island (see map, p. 373). The northern two-fifths of the country, under Turkish Cypriot control, are closely linked to the economy of Turkey, and have almost no economic contact with the south of the island. The unilateral declaration of independence by the 'Turkish Republic of Northern Cyprus' ('TRNC') in November 1983 reinforced the economic embargo, which has caused serious problems for the northern sector. Both areas suffered severe disruption as a result of the events of 1974. As well as the physical damage caused by the fighting, more than one-third of the total population of around 640,000 became refugees, some 180,000 Greek Cypriots fleeing to the south and about 45,000 Turkish Cypriots moving to the north. The collapse of essential services in many places reduced economic activity to a low level. Crops were not harvested, tourism ceased, and industrial buildings and plants were destroyed or lost their workforce.

THE SOUTHERN ECONOMY

Since 1974 the economies to the north and the south of the 'Attila line' have diverged. The economy of the south made a remarkable recovery, despite having lost 38% of the island's territory, 70% of its productive resources, 30% of its factories, 60% of the tourist installations, the main port (Famagusta), 66% of the grain-producing land and 80% of the citrus fruit groves, all of which were on the northern side of the line. In 1975 the gross domestic product (GDP) was only two-thirds of the 1973 level, but during 1976 and 1977 production rose at an average of 18% per year. Even with the growth rate falling to an average 7% annually during 1978 and 1979, at the end of that period, production in the southern part of the island was 12% higher than for the whole of Cyprus in 1973. Unemployment was reduced from almost 25% of the labour force in late 1974 to 1.8% in 1979, partly by the emigration of workers but largely through the promotion of labour-intensive industry and massive expansion of the construction sector, both for private housing and development projects.

By 1980, however, it was clear that the post-1976 boom in the Cypriot economy would not continue at the same level. This was partly the result of the disappearance of short-term factors which had favoured growth: in 1977 market conditions in the Middle East and Europe were advantageous to Cypriot exports, and petroleum prices were temporarily stable, whereas by 1979 it was becoming difficult for agricultural products from Cyprus to penetrate the European market, while petroleum prices were once more rising sharply. However, there was also a deeper instability in the economy. Recovery was based on labour-intensive production by a low-wage workforce—wages in 1976 were lower than in 1973—but, with full employment from 1977, wage rises escalated. Between 1976 and 1979 real wages increased by an average 10% annually, and in 1980 average wages rose by 20%, not allowing for inflation, or by 6.5% in real terms. Rising wages and the increasing cost of imported petroleum, among other factors, helped to increase inflation, from an annual average of 4% in 1976–77, to 9.8% in 1979 and 13.4% in 1980. The Cyprus Government was also faced with a growing balance-of-payments deficit and a budgetary deficit. Economic growth had been stimulated by tax incentives and direct government investment in development projects. Consequently, revenue failed to keep pace with expenditure. Despite loans from international agencies and foreign governments, and extensive borrowing abroad, Cyprus's reserves in 1980 were perilously low. The Government adopted a stabilization programme which was designed to reduce imports, to cut the budget deficit and to limit inflation. As a result, inflation declined from 10.8% in 1981 to 5% in 1985. The trade deficit continued to widen, however, despite a reduction in visible imports in 1985. It rose from C£345.2m. in 1983 to C£413.2m. in 1984, and to C£431.8m. in 1985. The deficit on the current account of the balance of payments, however, returned to 1983 levels, owing to an increase in earnings from tourism, which reduced the deficit to C£98.7m. in 1985, compared with C£116.7m. in 1984 and C£93.4m. in 1983.

Real GDP increased by an annual average of 5.6% in 1980–1985, and in 1985–90 GDP at constant 1985 prices increased by an annual average of 6.8%. The rate of growth was only 0.9% in 1991, but rose sharply to 9.9% in 1992 (partly a consequence of the introduction of value-added tax—VAT, see below). The Government's Five-Year Economic Plan for the period 1989–93, adopted in June 1989, envisaged annual growth of 5%. However, in 1993 the growth rate was only 1.8%, owing to the effects on the Cyprus economy of the European recession, before approaching the Government's 5% target in 1994 and 1995. The annual growth rate then decreased to 2.8% in 1996, and to 1.7% in 1997, before recovering to an estimated 5% in 1998.

In 1993, according to estimates by the World Bank, Cyprus's gross national product (GNP), measured at average 1991–93 prices, was US $7,539m., equivalent to $10,380 per head, significantly greater than that of Greece. However, this level of GNP per head was calculated on the basis of a mid-1993 population of 726,000, i.e. excluding Turkish immigrants in the 'TRNC' (numbering more than 80,000 in 1993 and accounting for nearly one-half of the region's inhabitants), who are regarded as illegal residents by the Greek Cypriot authorities. According to independent estimates, Greek Cyprus's GNP per head rose from $12,500 in 1994 to $13,300 in 1995 and to $14,930 in 1997 (compared with $4,016 in the 'TRNC'). In August 1991, in view of the government-controlled area's encouraging economic performance, the World Bank removed Cyprus from its official list of developing countries, thereby ending Cyprus's qualification for development loans at preferential rates.

The average level of unemployment decreased steadily from 3.6% of the registered labour force in 1986 to 1.8% in 1990; it fluctuated during the early 1990s and stood at 2.7% in 1995, before rising to 3.1% by December 1996, to 3.3% by December

1997 and to 3.5% (10,782 persons) by December 1998. After a reduction in the average annual rate of inflation to 1.2% in 1986 (its lowest level for 20 years), an increase in economic activity caused the rate to rise again, reaching an annual average of 4.7% during 1990–95. The rate fell to 2.6% in 1995, before rising to 3.0% in 1996 and to 3.6% in 1997. In 1998 inflation declined to 2.2%, well within the 2.7% necessary for participation in the single European currency.

A persistent substantial trade deficit (with imports regularly being three or four times as great as exports in terms of value) has been offset by an increasingly healthy invisible balance, arising mainly from earnings from tourism. The effect has been a manageable current-account deficit, which stood at C£99.4m. in 1995 (while there was an overall balance-of-payments deficit of C£111m.), with a net invisible surplus of C£889.8m. being exceeded by a trade deficit of C£989.2m. (from exports of C£510.2m. and imports of C£1,499.4m.). In 1996 the current-account balance worsened to produce a deficit of C£228.2m. (with the overall balance-of-payments deficit amounting to C£219.7m.), as the result of a crude trade deficit of C£1,070.3m. (from exports of C£597.1m. and imports of C£1,667.4m.) and a reduced surplus on the invisible account of C£842.1m. Nevertheless, at the end of 1996 foreign exchange reserves totalled C£2,249.7m. (compared with C£1,861.4m. at the end of 1995), mainly as the result of a large increase in non-resident deposits. In 1997 both the current-account deficit and the overall balance-of-payments deficit decreased, to C£187.8m. and C£119.1m. respectively. A small rise in the trade deficit to C£1,099.1m. (from exports of C£605.6m. and imports of C£1,704.7m.) was offset by a surplus on invisibles of C£911.3m. and a net capital movement surplus of C£94.4m. Provisional figures for 1998 showed a widening trade deficit of C£1,353.6m. (from exports of C£551.1m. and imports of C£1,904.7m.) and an overall balance-of-payments deficit of C£177.7m. Having risen to C£2,607.6m. at the end of 1997, foreign-exchange reserves declined to C£2,315.7m. by the end of 1998.

The 1980s saw a diversification of the Greek Cypriot economy, with less reliance being placed on the agricultural sector, and increased emphasis on the development of more broadly-based services and industrial sectors, particularly tourism, shipping and financial services. One of the main problems facing the economy, however, is the continuing high level of foreign debt. Total outstanding external debt (government, semi-government and private) increased from C£736m. in 1988 to C£1,042.2m. in 1993, then decreased to an estimated C£1,029.5m. in 1994. By 1997 it had decreased further, to an estimated C£825m.

A feature of economic policy in 1992 was the gradual adaptation of economic practices and procedures to prepare for full membership of the European Community (EC, now the European Union—EU), for which the Cyprus Government had applied in July 1990 (having achieved customs union with the EC from 1 January 1988). In addition to the introduction of VAT (see above), in June 1992 the Government linked the Cyprus pound to the narrow band of the EC's exchange rate mechanism (ERM). Both the Vassiliou administration and its successor expressed support for a policy of economic harmonization with EC guidelines, including those detailed in the Treaty on European Union (which had been agreed by EC heads of government at Maastricht, the Netherlands, in December 1991) for eventual economic and monetary union. Full achievement of the Maastricht 'convergence' criteria was identified as a central objective of the Government's Strategic Development Plan for the period 1994–98, the three 'axes' of which were the preparation for Cyprus's accession to the EU; the technological upgrading, restructuring and modernization of the economy, with the general aim of creating the necessary conditions for a satisfactory growth rate within a climate of external and internal stability; and the improvement of the quality of life in Cyprus, with particular emphasis on the environment and on cultural development. Specific targets of the Plan included an average annual growth rate over the five-year period of 4% and, by 1998, a fiscal deficit of no more than 3% of GDP and public debt of 53.3% of GDP. Within the framework of the Plan, in October 1995 the Government announced a US $2,000m. programme of infrastructural projects.

A feature of the campaign for the February 1993 elections was the contrast in assessment of the state of the economy expounded by Vassiliou and by the opposition. While the former stressed the high rate of growth and low rate of unemployment, the latter focused on the burgeoning budget deficit, claiming that Cyprus was heading for economic crisis. In May 1993 the new Klerides Government announced a programme of austerity measures designed to reduce the budget deficit and the public debt (which totalled C£2,400m.). An increase in the rate of VAT from 5% to 8% was to take effect from October 1993, while higher taxes were to be imposed on petrol and cigarettes. A proposed end to the index-linking of wages to inflation encountered considerable opposition from trade unions. However, the economic stance of the new Government received endorsement from an IMF report, published in July, which warned that wage increases were surpassing productivity gains and eroding competitiveness, and from the Governor of the Central Bank of Cyprus, who, later in the month, urged broader deregulation of capital markets and speedier progress towards trade liberalization.

The budget for 1994 envisaged expenditure and net lending of C£1,221.6m., against revenue and grants of C£1,108.9m. The main items of development expenditure under the 1994 budget were the road network (C£43.5m.), water development (C£19.4m.), education (C£17.5m.), public construction (C£13.6m.) and airports (C£10.2m.). The fiscal deficit fell to 1.4% of GDP in 1994 (from 2.4% in 1993). The 1995 budget provided for expenditure of C£1,306m. and revenue of C£1,267m. (a deficit equivalent to 1.0% of GDP), while the 1996 budget (designed to encourage 'stability and modernization') set expenditure at C£1,349m. and anticipated revenue of C£1,321m., resulting in a deficit estimated to be equivalent to 0.6% of GDP for that year. A reduction in the performance of the economy in 1996 was attributable mainly to a decline in tourism and in investment and private consumption expenditure. The 1997 budget, adopted in February, forecast net expenditure of C£1,689m. against revenue of C£1,106m. and was accompanied by a series of measures designed to boost tourism, manufacturing, exports, investment and agriculture. In May 1997 the government approved a plan of action for 'the harmonization, adjustment and convergence of the Cyprus economy with the EU *acquis*', the aim being to prepare the ground for the opening of formal accession negotiations in 1998.

The 1998 budget, approved in January, provided for total net expenditure of C£1,603m. and revenues of C£1,080m. Following an IMF warning in June that the fiscal deficit was on the verge of becoming unsustainable, the Government drafted further proposals designed to reduce government spending and to increase revenues. Nevertheless, the budget deficit, expressed as a percentage of GDP, increased to 5.4% in 1998 (from 5.3% in 1997), while Government debt rose to 59.3% of GDP (from 57.6% in 1997). As finally adopted, the 1999 budget provided for total expenditure of C£1,707m., against forecast revenue of C£1,106m., producing an anticipated increased deficit of 5.7% of GDP. In January 1999 the Government announced that VAT would be increased, in stages, to 15% by 2002, balanced by tax relief and other measures benefiting lower-income groups. The Government also announced that a bill would be introduced to abolish the current statutory ceiling of 9% on interest rates by 2003, in line with the requirements of eventual EU accession.

To signify its commitment to EU accession, the Greek Cypriot Government welcomed the introduction, on 1 January 1999, of the euro as the new currency of 11 EU members, and maintained the existing parity of the Cyprus pound against the European currency at C£1 = €1.7086.

The regional financial importance of Cyprus was signalled by the opening of a stock exchange in Nicosia in March 1996. In February 1997 the Government approved a number of relaxations to the rules governing foreign investment in Cyprus and investment by Cypriots overseas, the aim being to create an environment of minimum intervention, in accordance with EU legislation. Allowing foreign investment in Cyprus provided that it 'does not pose a national risk, has no negative environmental impact and is not a burden on the economy,' the new rules permitted foreigners to own 100% of share capital in companies in the clothing, footwear, furniture, wholesale and retail sectors, and up to 49% of share capital in those in the primary sector (agriculture, fisheries and forestry) and in the tourism and leisure sectors. Foreign ownership of banks, finance and insur-

ance companies, newspapers and new airlines would, in future, be permitted according to individual merit, although sectors which continued to exclude foreign investment included real estate, utilities such as electricity and water, and tertiary education. The recovery of the tourist industry in 1997, combined with optimistic economic projections for 1998, produced a significant increase in investment activity on the Cyprus Stock Exchange (CSE) from December 1997, assisted by the announcement, in January, that the Bank of Cyprus would have a listing on the London Stock Exchange (the first such foreign listing of a Cypriot concern). The annual volume of CSE transactions doubled in 1998 compared with 1997, reaching a record value of C£337m. and generating a 17% increase in share prices overall. In May 1999 the CSE introduced electronic trading of shares, a further step towards the creation of a regional financial and business centre in Cyprus.

THE NORTHERN ECONOMY

Since 1974 the economy of the area north of the 'Attila line' has not made nearly as much progress as the Greek Cypriot area, despite an extensive programme of development, based on aid from Turkey (estimated to amount to some 20% of projected budget expenditure in recent years). Initial development priorities of the 'TRNC' authorities were the improvement of communications, irrigation, and the restoration of damaged citrus groves, in the pursuit of which the methods of central planning were used for some years. Beginning in 1978, successive development plans aimed, according to official statements, 'to secure the achievement of the highest rate of growth compatible with the maintenance of economic stability'. Other goals included increased capital investment, particularly in tourism and industry, balance-of-payments improvement, 'the more equitable distribution of economic burdens and national income', and 'the further expansion and improvement of the financial sector and social services'. From 1987, however, the emphasis switched to the encouragement of free-market economic activity, with priority being given to the development of trade, tourism, banking, education, transportation and the industrial sector.

Assessment of the real performance of the 'TRNC' economy has been notoriously difficult, because of the lack of objective data. Much of the statistical material issued by the northern authorities is not regarded as accurate by the Greek Cypriot side (or by many independent observers). According to official 'TRNC' figures, northern GNP increased by 87% in the period 1977–92, measured at constant 1977 prices. However, the annual growth target of 7.5% during the first Five-Year Plan (1978–82) was not thought to have been achieved: in 1981, for example, the 'TRNC' economy contracted by 7.5%. By the final year of the second Five-Year Plan (1983–87) GNP had officially risen to TL5,684m. (at 1977 prices), compared with TL3,810.5m. in 1977. The targets of the third Five-Year Plan (1988–92) included an annual growth rate of 7%, but the out-turn was officially assessed at 4.6%, in part because of an actual 5.3% decline in 1991. Measured at 1977 prices, total GNP reached TL7,125m. in 1992, according to official figures, which also claimed that GNP per head had increased by 66.4% over the period of the plan, to stand at US $3,343 in 1992 (compared with $2,009 in 1987). Independent observers, however, estimated annual GNP per head to be no higher than $1,650 in both 1992 and 1993. The sectors which were reported to have contributed most to economic growth in 1988–92 were manufacturing, construction, tourism and services, which yielded average annual growth rates of 9.2%, 7.7%, 9.6% and 7.2% respectively. After a 7.8% increase in 1992, GNP expanded by 5.9% in 1993 (well above the original projection), but contracted by 3.7% in 1994, to $554m., yielding a GNP per head of $3,093. According to official statistics, aggregate GNP rose to $755.7m. in 1995 and to $773.9m. in 1996, the latter figure resulting in annual GNP per capita of $4,222—a figure not greatly in excess of independent estimates. In 1996 trade and tourism contributed 15.6% of GDP, industry 14.1%, agriculture 10.4% and transport and communications 11.2%. According to official statistics, aggregate GNP increased further, to $757.7m. in 1997 and to $820.1m. in 1998, when GNP per head was $4,241. Economic growth of 3.8% was recorded in 1997 and increased to 5.3% in 1998.

Total local revenues, according to official reports, showed 'an ascending tendency' during the period 1987–92, with an average annual growth rate of 5.9%. During the same period total budgetary expenditures increased by 3% annually, whereas as a proportion of GNP they declined from 36.7% to 33.9%. As a result, the ratio of budget deficit to GNP was reduced from 16.3% to 12.2%, and to total budget from 44.3% to 36%. On 1 July 1992, in partial parallel to Greek Cypriot policy, the 'TRNC' Government introduced VAT on consumer goods, at a rate of 10% (compared with the introductory rate of 5% in the south). The 1993 budget envisaged a 9.9% increase in total local revenues, while expenditure and the budget deficit were projected to increase by 7.6% and 3.5% respectively; these targets implied a ratio of revenue, expenditure and deficit to GNP of 23.5%, 35.9% and 12.4% respectively. In the 1994 Annual Programme total local revenues were projected to increase by 5.4% at 1993 prices, the growth targets for expenditure and budget deficit being 4.6% and 3% respectively. Actual 1994 local revenues were officially reported as the equivalent of US $137.7m. and budgeted expenditure as $198.6m., the shortfall being covered by foreign aid loans of $60.8m. The 1995 budget provided for expenditure of TL14,450,000m. against local revenue of TL8,000,000m., with the shortfall to be covered by foreign aid and loans of TL6,450,000. The 1996 budget envisaged expenditure of TL24,380,624.4m. against local revenue of TL15,528,392.7m., with the shortfall to be met by foreign aid and loans of TL8,852,231.7m. Budgeted expenditure in 1997 was TL50,160,862m., compared with income of TL34,385,090m., the corresponding figures in 1998 (following sharp depreciation of the Turkish lira) being TL105,910,700m. and TL62,798,400m. In US dollar terms, budgeted expenditure rose from $321.5m. in 1997 to $405.7m. in 1998, while budgeted income increased from $220.4m. to $240.5m.

The 'TRNC' has experienced a persistently high level of inflation, much of it 'imported' from Turkey, in that the Turkish lira is the currency in use and the local authorities have no control over the money supply. Having reached 93% in 1980, the annual inflation rate fell to 33% in 1982, but then rose again to an estimated 69% in 1990, before dipping to 61% in 1993. A further inflationary surge in 1994, to 215%, was reversed in 1995 to 72.2%, although the rate rose again in 1996 to 87.5% and declined slightly to 81.7% in 1997, before subsiding to 66.5% in 1998. Agreements that Turkey and the 'TRNC' signed in 1990 envisaged the eventual replacement of the Turkish lira in the 'TRNC' by a local currency, backed by the Turkish central bank (as well as the creation of a full customs union between the two entities), but no substantive progress had been made on these goals by mid-1998. The official unemployment rate remained low in the 'TRNC', despite an increase of 11.8% in the working population in the period 1987–92, to a total of 74,037 (increasing to 76,454 in 1995). According to official figures, the unemployment rate declined from 1.8% of the labour force in 1987 to 0.9% (or 704 persons) in 1994 and to 0.7% (567 persons) in 1995. The official unemployment rate for 1996 was 1.2% of a total labour force of some 79,400 people. In 1997 the unemployment rate declined to 0.9%, before returning to 1.2% in 1998.

The liberal trade policies adopted by the 'TRNC' since 1987 have resulted in the establishment of trading relations with over 60 countries. Its volume of trade was officially said to have increased from US $276.1m. in 1987 to $426m. in 1992, with imports increasing by 68% from $221m. to $371.4m. and exports decreasing from $55.1m. to $54.6m., with the result that the trade deficit grew from $165.9m. in 1987 to $316.8m. in 1992. Net tourism revenues rose from $103.5m. in 1987 to $175.1m. in 1992 (i.e. by an annual average of 11%), while other invisible earnings increased by 15% per annum, so that the current-account deficit in 1992 was only $23.4m. Moreover, a positive capital movements balance, of $41.7m. in 1992, produced an overall balance-of-payments surplus of $18.3m. in 1992, compared with $23.1m. in 1987. After falling to $275m. in 1993, the trade deficit showed a further official contraction to $233.2m. in 1994, when net receipts from tourism were $172.9m. and from other invisibles $56.1m., so that the current-account deficit was only $4.2m. In 1995 both exports and imports increased, and the deficit widened to $266.7m.; net receipts from tourism were $187.3m. and other invisibles yielded $62.8m., resulting in a current-account deficit of only $16.6m. In 1996 imports of $318.4m. and exports of $70.5m. resulted in a crude trade deficit of $247.9m., although net receipts from tourism of $175.6m.

and other invisibles reduced the current-account deficit to $2m. End-1996 foreign-exchange reserves totalled $510.9m. In 1997 the trade deficit increased to $316.5m. (from imports of $374.2m. and exports of $57.7m.), while in 1998 the trade deficit expanded to $367.1m. (from imports of $421.0m. and exports of only $53.9m.). The current-account deficit in 1997 was $42.2m., but the overall balance of payments (including net capital movement of $49.3m.) was $7.1m. in surplus. In 1998 a current-account deficit of $69.1m. was more than offset by net capital movement of $131.3m., yielding an overall balance-of-payments surplus of $62.2m.

From August 1990 the northern economy encountered major difficulties as a result of the collapse, with debts of some £1,300m., of Polly Peck International, a fruit-packaging, tourism and publishing conglomerate based in the United Kingdom but with substantial interests in the 'TRNC'. In December 1990 charges of theft and fraud were preferred against the Turkish Cypriot chairman of the conglomerate, Asil Nadir, whose various companies were estimated to have provided more than one-third of the GDP in the 'TRNC', accounting for 60% of total exports. Pending Nadir's trial, British administrators of the collapsed concern attempted to locate the conglomerate's assets in the 'TRNC', but encountered legal and political obstacles. Further complications arose when Greek Cypriot authorities claimed that several of Polly Peck's major properties in the 'TRNC' had been expropriated from Greek Cypriots after 1974. In May 1993 Nadir fled to the 'TRNC', claiming that he could not expect a fair trial from the British authorities. It was reported that he intended to revive the remnants of the Polly Peck empire in northern Cyprus. Whether or not he had the official support of the 'TRNC' authorities in this endeavour remained unclear. At mid-1999 legal and other efforts by British administrators to recover Polly Peck assets in the 'TRNC' were still in progress.

Further prospective damage was done to the 'TRNC' economy by a European Court of Justice ruling on 6 July 1994, banning EU member states from importing goods originating from the 'TRNC'. Under an earlier decision, the Council of Ministers of the then EC had enjoined in 1983 that exports from the Turkish-controlled area of Cyprus would be allowed to enter EC countries only if accompanied by documents from the Greek Cypriot Government, and that such goods also had to pass through ports controlled by that administration. However, this restriction had been evaded by the 'TRNC' by use of Turkey as an export channel, and the United Kingdom, in particular, had been prepared to import goods from northern Cyprus as long as the export documents did not bear the stamp of the 'TRNC'. The Court ruling said, *inter alia*, that 'co-operation is excluded with the authorities of an entity such as that established in the northern part of Cyprus, which is recognized neither by the Community nor by the member states'. It was subsequently reported that the United Kingdom and other EU Governments were taking measures to ensure compliance with the ruling, one consequence of which was that hundreds of 'TRNC' textile workers were made redundant.

AGRICULTURE

Until quite recently agriculture was the most important single economic activity in Cyprus, but in recent years, in the Greek Cypriot sector, agriculture has been superseded in importance by tourism, manufacturing and financial services. In 1974 agriculture employed 33% of the island's labour force. In 1997 some 22% of the northern sector's working population were engaged in agriculture, compared with 9.5% of the employed labour force in the south. In that year the agricultural sector contributed about 7.7% of GDP in the north and 5.5% in the south. The chief crops are citrus fruits, potatoes, olives, carobs, tobacco, wheat and barley.

After the division of the island in 1974, the Government of the Republic of Cyprus initiated a series of emergency development plans in which agriculture and irrigation featured prominently. Loans were given to farmers, and agricultural production responded rapidly. Most of the island's citrus trees were in the north, so they were replaced as the main agricultural product in the south by potatoes and other vegetables. Total exports of agricultural products (mainly citrus fruits and potatoes) accounted for more than one-third of the value of all domestic exports from the government-controlled area in 1977. Following a disappointing year in 1978, exports of fruit and vegetables recovered in 1979, largely owing to an increase in the production and export of citrus fruits, grapes and wine. Although potatoes remained the single most important crop, the importance of fruits and wine continued to grow throughout the 1980s, and, despite periodic drought conditions, agricultural production increased by an annual average of 1.5% in 1989–92.

During 1995 agricultural production expanded by 12.9%, mainly owing to a 25% increase in output of potatoes, vegetables and fruit, while a small overall increase of 2.7% was recorded in livestock production. Exports of potatoes reached 187,903 tons in 1995 (worth C£43m.), compared with 95,303 tons in 1994 (C£23.7m.), when production was severely affected by an insect-induced disease. Exports of citrus fruit expanded by a substantial 26% in 1995, reaching 99,032 tons, compared with 78,515 tons in 1994. Large increases were also recorded for exports of oranges (56%), mandarins (36%) and grapefruit (28%), although there was an 11% decrease in the export of lemons. Production of cereals declined from 162,000 tons in 1994 to 145,000 tons in 1995. The total value of raw agricultural products in 1995 was provisionally estimated at C£67.7m., compared with C£45m. in 1994. In 1996 agricultural production fell by 3.3%, as a result of a decrease of 7% in the output of crops such as potatoes and fruit, although livestock and meat production increased by 3%. Production of cereals and grapes declined to 141,200 and 113,000 tons respectively. Exports of potatoes fell to 178,532 tons in 1996, while the prices secured in foreign markets were some 30% lower than in 1995, as a result of competition from other suppliers. Exports of citrus fruit fell to 83,934 tons, owing principally to a 23% decrease in the export of grapefruit. The total value of raw agricultural products fell by approximately 20% in 1996, to some C£53.3m.

Agricultural production during 1997 was seriously affected by adverse weather conditions and declined by 18.8% compared with 1996. Severe drought caused production of cereals to decrease to 47,780 tons, while the potato crop was badly hit by frost, with the result that exports fell dramatically to 35,218 tons. Exports of citrus fruits, at 80,410 tons, were slightly below 1996 levels. The total value of raw agricultural exports fell by 32.6% in 1997 to C£35.9m., although meat production expanded by 4.5%, the largest increases being recorded in the production of beef and poultry. Agricultural output recovered partially in 1998, increasing by about 14% over the previous year, mainly owing to a large increase in production of cereals (to 67,000 tons), while livestock production remained static. Although exports of citrus fruit contracted to 59,221 tons, exports of potatoes more than doubled in 1998, to 87,171 tons, contributing to a 13% increase in the value of raw agricultural exports, to C£40.5m.

The Paphos project, completed in 1983 at a cost of C£24m., involved the irrigation of some 5,000 ha along the south-western coast, to facilitate the production of tropical fruits such as mango, avocado and papaya, as well as grapes and early vegetables. The Government is currently working on the Southern Conveyor Project, the completed first phase of which carries water from the mountainous region of western Cyprus to the main potato-growing area in the south-east of the island. The second phase of the project, completed in 1994, increased water supplies to Nicosia, Larnaca and Limassol. The project is the largest water treatment and irrigation programme ever undertaken on the island, and total costs are expected to amount to C£175m. Another major investment is the Pitsilia Integrated Rural Development Project, which aims to stem the tide of rural depopulation by doubling the irrigated area in the mountainous central regions of the island. In early 1992 the Greek Cypriot Government approved initial plans for the construction of a number of desalination plants, intended to compensate for the shortfall in water resources resulting from inconsistent rainfall. The first such plant, at Dhekelia on the southern coast, became operational in 1997, providing 20,000 cu m of water a day. A second desalination plant, at Tersephanou, was inaugurated in May 1998, initially providing 6,000 cu m of water a day to Nicosia and having a total capacity of 90,000 cu m a day when fully operational (scheduled for 1999). By mid-1998 one of the most protracted droughts of the 20th century had reduced reservoirs to their lowest-ever levels, obliging the authorities to institute stringent rationing and conservation measures.

Government backing was also given to promising new research by the Cyprus Higher Technical Institute into the use of applied solar energy in reducing the high energy costs of the desalination process. In May 1999 the Government announced that winter rainfall and collection levels had been sufficient to meet consumer needs through the coming dry season and forecast that the water shortage problem would be solved by the end of 2000 with the completion of the desalination plant construction programme.

The Turkish Cypriot north inherited about 80% of the island's citrus groves, all the tobacco fields, 40% of the carobs, 80% of carrots and 10%–15% of potatoes. Nevertheless, agriculture in the north has lagged behind that of the south. In the chaos which followed the fighting, many citrus trees were neglected and died, or contracted diseases. Production resumed gradually, with exports of citrus fruit rising from 66,174 tons in 1976/77 to 96,637 tons in 1980 and 115,163 tons in 1982. The growing importance of citrus fruit in the Turkish Cypriot economy was reflected in the fact that the value of citrus fruit exports in 1986 totalled US $28.5m. (54.8% of total export revenue), although in 1987 the value of citrus fruit exports declined to $22.5m. and the proportion of total export revenue derived from citrus fruit decreased to 40.9%. In 1990–91 the collapse of Polly Peck International (see above) seriously disrupted the northern citrus fruit industry, resulting in the closure of some processing plants and severely reducing export volumes. Agricultural exports from the 'TRNC' were valued at $24.3m. in 1993, representing 44.6% of total exports, and increased to $25.7m. and 48.1%, respectively, in 1994. However, the European Court of Justice ruling in July 1994, effectively barring the import of 'TRNC' goods and produce by EU countries unless certificated by the recognized Cypriot authorities, had damaging consequences. In 1995, figures showed that agricultural exports had decreased to 40% of the total, valued at $27m., although in 1996 there was a partial recovery to $31m., representing 44% of total export value. In 1998 the total value of agricultural production in the 'TRNC' increased to TL26,758,500m. from TL13,895,700m. in 1997.

INDUSTRY

Industry, also, was severely affected by the war of 1974. It was estimated that the Greek Cypriots lost 70% of gross domestic manufacturing output, yet the growth of this sector since 1975 has been spectacular. Government incentives for investment, combined with a decline in real wages, stimulated a rapid expansion of manufacturing industry, especially in small-scale labour-intensive plants which produce goods for export. The share of manufactured products in total exports increased from around 40% in 1975 to more than 62% in 1981, although it declined to 58% in 1982. During 1983 exports of manufactured goods were valued at C£134.3m., compared with a record of almost C£142m. in 1981. Largely owing to competition from south-east Asia, however, the revenue from manufactured exports (nearly 80% of which go to the Middle East) fell by almost 30%, from C£140m. in 1985 to C£98.4m. in 1986. The most striking success in manufacturing has been clothing and footwear, with exports rising from C£3.2m. in 1974 to C£82m. in 1991, representing some 30% of total domestic export earnings. A greater emphasis was placed on the sector in the late 1980s and, although manufacturing has gradually declined as a proportion of GDP, the sector continues to grow in real terms, and exports have recovered. Manufacturing, construction and utilities, combined, employed about 26% of the labour force in 1991 and accounted for 27% of GDP in 1990, when manufactured exports were valued at C£186m. and accounted for 72% of total domestic exports (compared with 60% in 1987). In 1991 exports of manufactured goods were valued at C£178.2m. The value of the output of manufactured goods increased from C£132.2m. in 1980 to C£366.7m. in 1990, representing 14.4% of GDP. Cement production increased from 338,000 metric tons in 1974 to 1,233,000 tons in 1980. It declined to 659,000 tons in 1985, but had recovered to 1,132,000 tons by 1992. In the late 1980s one of the main areas of growth was the cigarette industry. Production of cigarettes increased from 3,718m. in 1987 to 6,177m. in 1992. Export earnings from cement and cigarettes were valued at C£16.5m. in 1990 (compared with C£13.6m. in 1988). In 1992 manufacturing output (excluding construction and utilities) was valued at C£416.9m. (equivalent to 14.1% of GDP), of which C£172.1m. was exported (representing 80% of total exports). In 1993 output fell to C£407.1m. (13.3% of GDP), of which C£154.3m. was exported (representing 77% of total exports). Employment in the industrial sector as a whole (manufacturing, construction and utilities) declined gradually as a proportion of the total, from 26.6% in 1988 to an estimated 24.4% in 1994, in which year there was a modest 3% recovery in manufacturing output. In 1995 25.3% of the employed labour force were engaged in the sector, when industry contributed 24.7% of GDP totalling C£3,976m. Total GDP in 1996 was C£4,125.5m., of which the industrial sector accounted for about 25%. In 1997 and 1998 industry contributed about 22% of GDP totalling C£4,335m. and C£4,650m., respectively.

By 1992 the availability of footwear produced in Asia (utilizing cheaper labour) had begun to pose a serious threat to the Cypriot shoe-manufacturing industry. In August 1992, therefore, the Government imposed a ban on the import of inexpensive shoes from non-EC countries, and placed restrictions on the import of more expensive footwear. In April 1993, moreover, the new Klerides administration agreed to extend 'substantial assistance' to the industrial sector, with the aim of increasing its competitiveness. Clothing has remained the largest manufacturing category, albeit declining in value, yielding exports of C£51.0m. in 1993 (compared with C£74.6m. in 1988), representing 25% of total domestic exports by value. By 1998 the value of clothing exports had fallen to C£29.0m., representing 17% of total domestic manufacturing exports by value, followed by pharmaceutical products (12%) and cigarettes (7%).

The construction sector grew rapidly after the 1974 Turkish invasion, with an average annual growth of 40% in 1975–79. The most important growth area was the housing sector, which provided accommodation for refugees. A record 9,449 units of housing were constructed in 1979. The manufacturing and construction sectors were hampered, in the early 1980s, by the adverse effects of the Government's measures to deflate the economy and by the accumulated results of wage inflation over several years. However, the construction sector enjoyed a period of rapid growth in the late 1980s, contributing C£240m. (10%) to GDP in 1990, in which year authorized building permits increased by 47% in value and by 22% in volume, in comparison with 1989. The number of building permits authorized decreased from 7,259 in 1995, to 7,156 in 1996 and to 6,614 in 1997. Construction activity showed a sharp decline in 1997, as indicated by the quantity index of the main construction materials for local use, which during 1997 fell by 6% (compared with a marginal decline of 0.2% in 1996). There was a further decline in authorized building permits in 1998, to 6,558. This particularly affected the hotel and tourist apartment sector, which declined by 59% in 1998, although there was a substantial increase in the volume of permits granted for commercial buildings.

In the period 1989–92 the output of the manufacturing sector increased at an average rate of 3% per year, compared with the planning target of 5% annually. Failure to attain the projected growth rate was attributed to adverse conditions in major markets, such as the United Kingdom and the Arab states. From the mid- to late 1980s the service industries, such as banking, insurance and consultancy, grew at a remarkable rate and emerged as an important part of the Greek Cypriot economy. By the end of 1994 more than 17,000 foreign companies were registered in the Greek Cypriot sector, although only about 10% maintained offices on the island. In the period 1989–92 the services sector expanded at an average annual rate of 8% in real terms, exceeding the original planning target of 5.7%. In this period all service areas, both those directly connected with tourism (e.g. hotels, restaurants and transport) and other activities (e.g. commerce, communications, banking and professional services), expanded at substantially higher rates than had been projected. By 1995 the services sector was providing 69.8% of GDP and engaging 64.0% of the employed labour force. The 'offshore' sector produced revenue of C£147m. in 1994.

In 1995 mining and quarrying production declined by 8% compared with the previous year, mainly owing to large decreases in output of building stone, marble and umber, while production of sand, gravel and road aggregate (the bulk of this sector's output) increased from 6,000 tons in 1994 to 6,200 tons in 1995. Domestic exports of manufactured products continued on a downward trend, decreasing by some 1.6% compared with 1994. The decline

was attributed principally to an erosion of competitiveness (including high production costs and low quality output) and an increase in the value of the Cyprus pound relative to the pound sterling and other currencies. Mining and quarrying production rose by 10.2% in 1996, compared with 1995, although the manufacturing sector continued its downward trend. During the second half of 1996 domestic exports of manufactured products showed a partial recovery, increasing by some 12% compared with the same period in 1995.

The manufacturing sector demonstrated a partial recovery in 1997, fostered by a revival in foreign and domestic demand. The volume index of manufacturing production fell by 0.7% compared with a 5.1% decline in 1996, the biggest decreases being recorded in the non-metallic mineral products industry (cement, bricks and tiles), which declined by 9.7% owing to the decrease in construction activity, in the paper products and printing industry (down 6.7%) and in textiles, clothing and leather (down 4.2%). The food, beverages and tobacco industry showed a 0.7% increase, retaining its leading position in the manufacturing sector by contributing 31% to manufacturing value added. Increases in production were also recorded in the sub-groups 'other manufacturing industries' (mainly goldsmiths and silversmiths), which increased by 8.3%, chemical, petroleum and plastic products (4.2%), and metal products and machinery (2.7%). Domestic exports of manufactured goods began to recover from the second quarter of 1997, increasing by 5.5% over the year to a value of C£176.4m. Large decreases were recorded in exports of clothing, fruit juices and wine; these were more than offset by increases in exports of other products, the largest increases being recorded in cathodes of refined copper (248.3%) and cigarettes (70.1%). The price index of manufacturing production rose by 2.3% in 1997 (compared with 2.7% in 1996), as a result of an increase of 5.8% in export prices and of 1.6% in local market prices. Mining and quarrying production, at 6,500 tons in 1997, decreased by 0.3% compared with 1996, mainly because of a 5.1% decline in output of sand, gravel and road aggregate, although significant increases were recorded in the production of havara, gypsum, bentonite and marble. In 1998 the volume index of manufacturing production showed a small increase of 1.2%. Although decreases were recorded in the wood products (–3.8%), paper products (–3.3%) and chemicals (–1.5%) industries, there was an expansion in other sectors, notably cement and other non-metallic mineral products (9.7%). Nevertheless, the value of domestic exports of manufactured products fell by 3% in 1998, to C£171.1m. Large increases were recorded in exports of plastic products, cosmetics, cigarettes, furniture and cheese, although these were offset by decreases in exports of electric accumulators, fruit juices, clinker, cathodes of refined copper, paper products, meat products, wine, edible oils and clothing. The price index of manufacturing production rose by 1.5% in 1998, as the result of increases of 1.5% in local market prices and of 1.1% in export prices.

Although the labour market loosened somewhat in the early 1980s, an increase in economic activity, beginning in 1986, resulted in a shortage of skilled labour. In conditions of effective full employment in 1990, the Government authorized the recruitment of 1,600 additional foreign workers (mainly from Bulgaria and Poland) to fill vacancies in the construction and manufacturing sectors. In the early years after 1974, the Government encouraged the temporary emigration of workers as a solution to unemployment. Now the emphasis is more on encouraging workers to return, although their remittances are still important to Cyprus's foreign reserves. By mid-1992 renewed labour shortages had induced the Greek Cypriot Government to authorize the recruitment of another 8,000 foreign workers (some 2%–3% of the labour force). Owing to Government fears that permanent immigration might engender social problems, the maximum contract period was restricted to two years.

The Turkish-occupied area has few industrial resources. The share of industrial exports in total 'TRNC' exports, however, increased from 28.3% (US $14.7m.) in 1986 to 55.0% ($30.0m.) in 1993, before falling slightly to 51.3% ($27.4m.) in 1994. The textile and clothing industry has grown rapidly since the early 1980s (although most of the raw material has to be imported), overtaking citrus fruit as the largest source of export revenue, with earnings of $18m. (33.7% of the total) in 1994.

It is estimated that 90% of Cyprus's mining operations are in the Greek zone, while the Turkish zone has no petroleum refinery. Hitherto also lacking electricity-generating capacity, the 'TRNC' was reported, in July 1994, to be about to open its first power plant, located near Kyrenia and financed by Turkey; however, an explosion at the site rendered the start-up date uncertain. Meanwhile, the Cyprus Electricity Authority was continuing to supply electricity to both zones and the Turkish north's debt for unbilled consumption had reached some $270m. by the end of 1993. A successful energy conservation programme is under way in the Greek Cypriot sector, involving the exploitation of solar and wind energy and the development of hydroelectricity potential.

TRADE, TOURISM AND COMMUNICATIONS

Cyprus has experienced a trade deficit for many years. During the 1980s, despite government efforts to stimulate exports, the deficit continued to widen. Later, although growth in exports of manufactured goods improved (following depressed figures in 1986), the trade deficit increased, reaching C£1,092.2m. in 1992, before falling to C£795.9m. in 1993. The trade deficit increased to C£1,114.8m. in 1995, when imports were valued at C£1,670.4m. and exports at C£555.6m. Total imports increased by 11.2% in 1996, to a value of C£1,857.6m., while total exports expanded by 17.6%, to a value of C£653.5m. Large increases were recorded in imports of fuels and lubricants, consumer goods and capital items, while a decline in domestic exports (notably of agricultural products) was offset by a sharp increase in re-exports.

In 1997, due to restrained domestic demand, total imports (excluding imports of military equipment) recorded a small increase of less than 3%, to C£1,704.7m., with increases in imports of consumer goods and of fuels and lubricants of 14.9% and 3%, respectively, being offset in particular by a 7.6% decrease in imports of transport equipment. During 1997 EU countries supplied 47.6% of total imports (including 11.4% from the UK), other European countries 8.1%, the USA 19% and Asian countries 16%. Total exports declined to C£605.7m., so that the crude trade deficit (excluding military imports) widened to C£1,099m. Strong economic growth in 1998 resulted in an increase in imports to C£1,904.7m., while exports declined to C£551.1m. Categories of imports showing the highest growth rates were capital goods (24.2%), transport equipment (22.5%) and consumer goods (21.2%), while the value of imports of fuel and lubricants fell by 21.6% owing to the decline in world petroleum prices. A sharp increase in exports of agricultural products offset a decline in manufactured exports, while a 21.5% decline in re-exports was mainly attributable to a sharp fall in re-exports of cigarettes, particularly to Russia

There was a significant alteration in the Greek Cypriot trading pattern in the mid-1980s, with EC countries taking over the dominant role from Arab countries (chiefly Lebanon, Egypt, the states of the Arabian peninsula, and Libya), although exports to the latter rose again in the early 1990s. The Arab countries' share of total Greek Cypriot exports was reduced from 48% in 1985 to 28% in 1990, largely as a result of the conflict in the Persian (Arabian) Gulf region; thereafter they recovered to some 40% in 1991–93, with the economic revival of Lebanon, in particular, providing an expanding market. Greek Cypriot exports to EC countries, on the other hand, increased from 32.4% of total domestic export revenue in 1985 to 53.2% in 1990, although they declined in the succeeding years, to 41.7% in 1993. In 1987 the Greek Cypriot Government established a Council for the Promotion of Exports (COPE), one of the main aims of which was to promote exports to Europe. EC countries were also the main suppliers of goods to the Greek Cypriot sector, their share of the region's total imports, by value, increasing to 60.8% in 1986, before decreasing slightly, to 57% in 1987 and 54% in 1990, only to increase again to 58% in 1992. Imports from Arab countries, in turn, declined after 1985, when they accounted for 10.1% of total import costs, to 6.1% in 1987 and to 5% in 1993. In 1994 the United Kingdom remained the largest individual trading partner of Cyprus, supplying 11.4% of its imports and taking 27.1% of total Cypriot exports. A feature of Cypriot trade in 1995 was the rapid growth in imports from and exports to the USA, although the EU countries (particularly the United Kingdom) remained the dominant trading partners. In 1998 EU countries received 52.4% of Greek Cypriot exports and Arab countries took 26.9%, compared with 49.4% and 28.8%, respectively, in 1997.

In November 1985 the EC Council of Ministers approved the admission of Cyprus to a customs union with the EC. The terms of this union were agreed by both sides and a protocol with the EC was signed in October 1987, which came into effect on 1 January 1988. The protocol defined an initial 10-year phase (1988-98), during which time tariffs on imports to Cyprus were to be reduced by 10% annually, leading to their complete removal by 1998. For some products, which are important to the island's economy (e.g. clothing and footwear), tariffs were to fall by only 4% annually in the first phase. The EC agreed to waive quantitative restrictions on exports to the EC of Cypriot garments and to make concessions to Cypriot agricultural exports, particularly potatoes, grapes, wine and citrus fruit. Cyprus, in turn, agreed to dismantle its quantitative restrictions on imports of industrial products from EC countries, yet, was to be allowed to retain a 20% tariff on up to 15% of imports that competed with local products. A second phase, lasting four to five years, which was to be introduced after a review of the first phase, was to lift all remaining restrictions and trade barriers on products covered by the agreement. Cyprus was, then, expected to adopt the EC's common customs tariff, in accordance with its third-country provisions, freeing it of restrictions within the EC. The President of the 'TRNC', Rauf Denktaş, strongly attacked the customs union, claiming that the EC was not entitled to negotiate the agreement without consulting representatives of the Turkish sector of the island. The EC, however, made it clear that the union would apply to the whole island: an assertion that was reiterated in an EC report, published by the Commission in June 1993, which confirmed Cyprus's eligibility for EC membership. Under the fourth EU-Cyprus financial protocol, signed in June 1995 in the framework of the existing association agreement, the island was to receive ECU 74m. in loans and grants over five years, in support of efforts to promote economic integration and to prepare for EU membership.

Tourism was one of the areas of the Greek Cypriot economy which was most adversely affected by the 1974 war, as 90% of the island's hotels came under Turkish Cypriot control. Following the introduction of a government loan plan, however, the number of hotel beds increased from a low point of 3,880 in 1975 to 18,197 in 1985. Tourist receipts rose to C£71m. in 1980, with 353,375 visitors. The sector continued to expand rapidly in the 1980s, and in 1986 the number of tourist arrivals rose to 900,727; the tourist industry became the Republic of Cyprus's largest source of income, with receipts totalling C£257m. By 1990 the annual total of tourist arrivals had increased to 1,561,479 (of whom 44% were from the United Kingdom). Receipts from tourism in that year totalled C£573m., representing an increase of 13% over 1989's total (compared with a 27% increase between 1988 and 1989). There were an estimated 47,500 tourist beds (many of them in self-catering accommodation) in 1988, with projects to provide a further 15,500 already in progress. Employment in the hotel and restaurant sector increased to 24,000 in 1990, accounting for almost 10% of the employed labour force. In promoting the industry, the Greek Cypriot authorities laid emphasis on the desirability of developing 'high-value' tourism (as opposed to the 'package' holiday trade) and on sustainable tourist development. In 1996 efforts were mounted to attract more tourists from the USA, although the United Kingdom, Scandinavia and Germany continued to provide the majority of visitors to the island. Although tourist arrivals in that year declined slightly, to 1,950,000, with receipts from tourism totalling C£780m. (compared with 2,100,000 arrivals and receipts of C£813m. in 1995), tourism revived in 1997, largely owing to the strength of sterling against the Cyprus pound, the economic upswing in most EU countries and the restrained pricing policy followed by Cypriot hoteliers. Total tourist arrivals increased to 2,088,000, of which 40.5% came from the United Kingdom, and large increases were recorded in arrivals from Russia, Switzerland and Israel. Foreign-exchange earnings from tourism in 1997 totalled C£843m., with the sector accounting for 20% of GDP and 12% of employment. In 1998 total tourist arrivals increased to 2,222,701. The United Kingdom continued to be the largest source of tourists (with 45.7%), followed by Germany (9.4%), Russia (7.9%) and Sweden (5.1%). Foreign-exchange earnings from tourism in that year were provisionally estimated to have risen to about C£880m.

Tourism in the north has also expanded, giving rise to a shortage of hotel beds. The best hotels still exist in the Turkish sector, but most remained unused and derelict after the invasion, although some have been taken over, much against the will of the Greek Cypriot owners. The number of non-Turkish visitors rose steadily from 8,172 in 1978 to 36,372 in 1987. Turkish visits from the mainland remained fairly steady between 1978 (when they totalled 104,738) and 1986, increasing to 147,965 in 1987, when net income from tourism totalled US $103.5m. By 1990 tourism receipts had increased to $224.8m. (from 243,269 Turkish visitors and 57,541 others), then declined to $172.9m. (from 256,549 Turkish visitors and 95,079 others) in 1994; although 1995 revenue increased to $218.9m. (from 298,026 Turkish visitors and 87,733 others), a further downturn in 1996 resulted in net revenue of $175.6m. (from 289,131 Turkish visitors and 75,985 others). Total tourist arrivals increased to 399,364 (326,364 from Turkey) in 1997, but declined to 393,027 in 1998.

As part of a programme of economic diversification, the Greek Cypriot sector has become a major maritime trading centre. Shipping heads the 'offshore' sector in terms of turnover, providing some 30% of revenue receipts from 'offshore' activities. From 1989 to mid-1992 the number of shipping companies registered in Cyprus doubled to more than 700, making the Cyprus registry the fastest-growing in the world. By the end of 1996 Cyprus had climbed to fifth position in terms of displacement, which totalled more than 23m. grt.

Famagusta formerly handled 83% of Cyprus's freight traffic but, now that it is in Turkish hands, it has been largely superseded by Larnaca and Limassol. In 1996 a total of 5,109 vessels visited Greek Cypriot ports, of which 3,747 visited Limassol. Port development schemes for Larnaca and Limassol are expected to cost US $65m., and a new port is also planned for Paphos.

PROSPECTS

The economy and its future are inextricably linked with the political deadlock in the island, which seems unlikely to be resolved by diplomacy in the near future. The Turkish Cypriot opposition to accession negotiations with the EU aggravates the problem. Meanwhile, both sides are proceeding with their own plans for development on either side of the 'Attila line'.

Trade between the EU and the Greek Cypriots will retain its predominant share of both exports and imports, providing new opportunities for local industries, but, at the same time, presenting them with the challenge of competing with EU exports to Cyprus. The 1990–91 crisis in the Persian (Arabian) Gulf region was a set-back for the expanding Greek Cypriot economy, which had benefited from reconstruction activity in the Gulf region; it has quickly recovered its forward momentum, however, and seems likely to receive increasing economic benefit from its geographical location as a staging-post between Europe and the Middle East and from its long-standing connections in Eastern Europe and the former Soviet republics.

For the Greek Cypriot Government, entry into the EU remains a cardinal goal, in which context it welcomed the formal opening of accession negotiations in March 1998 and urged the 'TRNC' to participate; this invitation was, however, refused. Questions over the legitimacy of Greek Cypriot accession while the island remains divided have been raised, although most EU members have given assurances that the absence of a political settlement would not be a barrier to Greek Cypriot accession in advance of the 'TRNC' and prior to reunification. Internally, the harmonization of domestic legislation and economic arrangements with the EU's *acquis communautaire* has been accelerated, although the associated deregulation or privatization of state-owned sectors such as telecommunications is politically controversial despite almost universal support for EU membership.

A serious restraint on future economic growth is likely to be a shortage of labour. Rather than incur the social problems assumed to be associated with unrestricted immigration of foreign workers, the Greek Cypriot authorities prefer to maintain severe entry restrictions, despite the probable inhibition of economic expansion. A political solution to the island's division would release the labour potential of the stagnant north for the thriving south; meanwhile, the economic division of the two sectors of the island seems likely to worsen.

Statistical Survey

Source (unless otherwise indicated): Department of Statistics and Research, Ministry of Finance, Nicosia; tel. (2) 309301; telex 3399; fax (2) 374830.

Note: Since July 1974 the northern part of Cyprus has been under Turkish occupation. As a result, some of the statistics relating to subsequent periods do not cover the whole island. Some separate figures for the 'TRNC' are given on pp. 388–389.

AREA AND POPULATION

Area: 9,251 sq km (3,572 sq miles), incl. Turkish-occupied region.

Population: 602,025 (males 299,614; females 302,411), excl. Turkish-occupied region, at census of 1 October 1992; 746,100 (males 372,000; females 374,100), incl. 88,200 in Turkish-occupied region, at 31 December 1997 (official estimate). Note: Figures for the Turkish-occupied region exclude settlers from Turkey, estimated at 114,000 in 1997.

Ethnic Groups (estimates, 31 December 1997): Greeks 634,900 (85.1%), Turks 88,200 (11.8%), others 23,000 (3.1%); Total 746,100.

Principal Towns (population at 1 October 1992): Nicosia (capital) 181,234 (excl. Turkish-occupied portion); Limassol 139,424; Larnaca 62,178; Famagusta (Gazi Mağusa) 39,500 (mid-1974); Paphos 33,246; (estimated population at 31 December 1997): Nicosia 194,100 (excl. Turkish-occupied portion); Limassol 152,900; Larnaca 68,000; Paphos 38,000.

Births, Marriages and Deaths (government-controlled area, 1997): Registered live births 9,275 (birth rate 14.2 per 1,000); Registered marriages 7,187 (marriage rate 11.0 per 1,000); Registered deaths 5,173 (death rate 7.9 per 1,000).

Expectation of Life (government-controlled area, years at birth, 1996–97): Males 75.0; Females 80.0.

Employment (government-controlled area, provisional figures, '000 persons aged 15 years and over, excl. armed forces, 1997): Agriculture, hunting, forestry and fishing 28.5; Mining and quarrying 0.6; Manufacturing 40.9; Electricity, gas and water 1.5; Construction 24.9; Trade, restaurants and hotels 76.5; Transport, storage and communications 19.0; Financing, insurance, real estate and business services 24.2; Community, social and personal services 69.5; employment on British sovereign bases 3.0; Total 288.6 (males 174.6, females 114.0).

AGRICULTURE, ETC.

Principal Crops (government-controlled area, '000 metric tons, 1997): Wheat 11.5; Barley 36; Potatoes 81.5; Olives 9; Tomatoes 34; Watermelons 29*; Melons 9*; Grapes 122; Apples 9; Oranges 50.5; Tangerines, mandarins, etc. 22; Lemons and limes 23; Grapefruit 47. *FAO estimate (Source: FAO, *Production Yearbook*).

Livestock (government-controlled area, '000 head, 1997): Cattle 70; Sheep 265; Goats 275; Pigs 415; Chickens 3,600.

Livestock Products (government-controlled area, '000 metric tons, 1997): Beef and veal 5; Mutton and lamb 3.8; Goat meat 4.3; Pig meat 46; Poultry meat 31.8; Cows' milk 133; Sheep's milk 20; Goats' milk 25; Cheese 5; Hen eggs 12.

Forestry (government-controlled area, '000 cubic metres, 1997): Roundwood removals (excl. bark) 33; Sawnwood production (incl. railway sleepers) 13.

Fishing (metric tons, live weight, government-controlled area): Total catch (excl. fish-farming) 2,798 in 1994; 2,593 in 1995; 2,639 in 1996. Source: FAO, *Yearbook of Fishery Statistics*.

MINING AND QUARRYING

Selected Products (metric tons, government-controlled area, 1997): Sand and gravel 6,870,000; Marble 25,100; Gypsum 236,200; Bentonite 98,700.

INDUSTRY

Selected Products (government-controlled area, 1997): Cement 910,421 metric tons; Bricks 48.5 million; Mosaic tiles 1.3 million sq metres; Cigarettes 3,662 million; Footwear (excluding plastic and semi-finished shoes) 2.3 million pairs; Beer 32.0 million litres; Wines 42.8 million litres; Carbonated soft drinks 57.8 million litres.

FINANCE

Currency and Exchange Rates: 100 cents = 1 Cyprus pound (Cyprus £). *Sterling, Dollar and Euro Equivalents* (30 April 1999): £1 sterling = 88.05 Cyprus cents; US $1 = 54.60 Cyprus cents; €1 = 57.86 Cyprus cents; Cyprus £100 = £113.58 sterling = $183.14 = €172.82. *Average Exchange Rate* (US $ per Cyprus £): 2.1446 in 1996; 1.9476 in 1997; 1.9342 in 1998.

Budget (Cyprus £ million, government-controlled area, 1997): *Revenue:* Taxation 1,072.36 (Taxes on income 268.73, Social security contributions 206.41, Taxes on payroll 22.09, Taxes on property 24.31, Excises 107.67, Value-added tax 206.40, Other domestic taxes on goods and services 52.69, Import duties 76.54, Other taxes 107.53); Entrepreneurial and property income 204.66; Administrative fees and charges, non-industrial and incidental sales 65.42; Other current revenue 30.33; Capital revenue 0.58; Total 1,373.36, excl. grants from abroad (1.64). *Expenditure:* General public services 101.82; Defence 61.46; Public order and safety 89.55; Education 190.32; Health 101.34; Social security and welfare 392.67; Housing and community amenities 64.91; Recreational, cultural and religious affairs and services 27.47; Economic affairs and services 207.17 (Agriculture, forestry, fishing and hunting 90.04, Mining 0.15, Road transport 42.84, Other transport and communication 29.09, Other economic affairs 45.05); Other purposes 240.00; Sub-total 1,476.71 (Current 1,315.81, Capital 160.90); Adjustment 126.82; Total 1,603.30, excl. lending minus repayments (2.72).

International Reserves (US $ million at 31 December 1998): IMF special drawing rights 0.3; Reserve position in IMF 35.8; Foreign exchange 1,343.6; Total (excl. gold) 1,379.7. Source: IMF, *International Financial Statistics*.

Money Supply (Cyprus £ million at 31 December 1998, government-controlled area): Currency outside banks 290.1, Demand deposits at deposit money banks 439.2; Total money (incl. others) 730.3. Source: IMF, *International Financial Statistics*.

Cost of Living (Retail Price Index, government-controlled area; base: 1995 = 100): 103.0 in 1996; 106.7 in 1997; 109.1 in 1998. Source: IMF, *International Financial Statistics*.

Gross Domestic Product in Purchasers' Values (Cyprus £ million at current prices, government-controlled area): 4,134.6 in 1996; 4,334.9 in 1997; 4,650.1 in 1998. Source: IMF, *International Financial Statistics*.

Expenditure on the Gross Domestic Product (Cyprus £ million at current prices, government-controlled area, 1996): Government final consumption expenditure 745.0; Private final consumption expenditure 2,522.0; Increase in stocks 230.0; Gross fixed capital formation 807.2; Statistical discrepancy 98.9; *Total domestic expenditure* 4,403.1; Exports of goods and services 1,923.1; *Less* Imports of goods and services 2,191.6; *GDP in purchasers' values* 4,134.6. Gross Domestic Product by Economic Activity (provisional, Cyprus £ million at current prices, government-controlled area, 1997): Agriculture, hunting, forestry and fishing 178.1; Mining and quarrying 11.3; Manufacturing 487.6; Electricity, gas and water 92.9; Construction 348.5; Wholesale and retail trade, restaurants and hotels 850.4; Transport, storage and communications 365.7; Finance, insurance, real estate and business services 805.4; Government services 587.5; Other community, social and personal services 359.9; Other services 41.2; *Sub-total* 4,128.5; Import duties 150.9; Value-added tax 206.4; *Less* Imputed bank service charges 150.9; *GDP in purchasers' values* 4,334.9.

Balance of Payments (US $ million, government-controlled area, 1997): Exports of goods f.o.b. 1,246.3, Imports of goods f.o.b. –3,318.3, *Trade balance* –2,072.0; Exports of services 2,796.7, Imports of services –1,111.2, *Balance on goods and services* –386.5; Other income received 291.4, Other income paid –374.2, *Balance on goods, services and income* –469.3; Current transfers received 118.7; Current transfers paid –15.0, *Current balance* –365.5; Direct investment (net) 16.5; Portfolio investment (net) 149.9, Other investment (net) 202.4, Net errors and omissions –50.3, *Overall balance* –46.9.

EXTERNAL TRADE

Principal Commodities (Cyprus £ '000, government-controlled area, 1997): *Imports c.i.f.:* Textiles and textile articles 128,081 (Clothing and clothing accessories 53,655); Road vehicles, parts and accessories 144,486; Mineral products 160,840 (Crude oil 75,041); Base metals and articles of base metal 104,191; Products of chemical or allied industries 129,281; Prepared foodstuffs, beverages, spirits and vinegar, tobacco and manufactured tobacco substitutes 398,761 (Tobacco and manufactured tobacco substitutes 309,998); Plastics and articles thereof 67,485; Paper, paperboard and articles thereof 44,204; Live animals and animal products 28,182; Total (incl. others) 1,899,339. *Exports f.o.b.:* Clothing 29,896; Footwear 8,049; Potatoes 19,648; Citrus fruit 17,296; Cement 12,482; Pharmaceutical products 19,648; Alcoholic beverages 8,578 (Wines 7,890); Fruit and

vegetable juices 4,525; Total (incl. others) 219,754. Figures for exports exclude re-exports (Cyprus £'000): 420,260.

Total Trade (Cyprus £ '000, government-controlled area): *Imports c.i.f.* (incl. military equipment): 1,670,408 in 1995; 1,857,509 in 1996; 1,899,339 in 1997. *Exports f.o.b.* (incl. re-exports): 555,607 in 1995; 649,027 in 1996; 640,015 in 1997.

Principal Trading Partners (Cyprus £ '000, government-controlled area, 1997): *Imports c.i.f.:* France 79,930; Germany 113,360; Greece 135,956; Italy 156,231; Japan 100,128; Russia 85,905; United Kingdom 217,034; USA 360,199; Total (incl. others) 1,899,339. *Exports f.o.b.* (excl. re-exports): France 5,615; Germany 16,810; Greece 16,980; Israel 7,768; Lebanon 24,861; Russia 6,232; United Kingdom 43,254; Total (incl. others) 219,754.

TRANSPORT

Road Traffic (licensed motor vehicles, government-controlled area, 31 December 1997): Private passenger cars 227,695; Taxis and self-drive cars 7,281; Buses and coaches 2,800; Lorries and vans 105,652; Motorcycles 45,226; Total (incl. others) 402,586.

Shipping (freight traffic, '000 metric tons, government-controlled area, 1997): Goods loaded 2,248, Goods unloaded 4,678. At 31 December 1997 a total of 1,650 merchant vessels (combined displacement 23,652,626 grt) were registered in Cyprus (Source: Lloyd's Register of Shipping, *World Fleet Statistics*).

Civil Aviation (government-controlled area, 1997): Overall passenger traffic 4,672,733; Total freight transported 32,116 metric tons.

TOURISM

Tourist Arrivals (government-controlled area): 2,100,000 in 1995; 1,950,000 in 1996; 2,088,000 in 1997.

Tourist Receipts (Cyprus £ million, government-controlled area): 810 in 1995; 780 in 1996; 843 in 1997.

COMMUNICATIONS MEDIA

Radio Receivers (government-controlled area, 1996): 300,000 in use.

Television Receivers (government-controlled area, 1996): 244,000 in use.

Telephones (main lines in use, 1997): 386,000.

Telefax Stations (number in use, 1993): 7,000.

Mobile Telephones (subscribers, 1995): 44,453.

Book Production (government-controlled area, 1996): 930 titles and 1,776,000 copies.

Newspapers (1996): 9 daily (circulation 84,000 copies); 31 non-daily (circulation 185,000 copies).

Sources: mainly UNESCO, *Statistical Yearbook*, and UN, *Statistical Yearbook*.

EDUCATION

1996/97 (government-controlled area): Kindergarten: 659 institutions, 1,426 teachers, 25,996 pupils; Primary schools: 376 institutions, 4,159 teachers, 64,761 pupils; Secondary schools (Gymnasia and Lyceums): 114 institutions, 5,067 teachers, 56,652 pupils; Technical colleges: 11 institutions, 690 teachers, 4,614 pupils; University of Cyprus: 241 teachers, 2,097 students; Other post-secondary: 34 institutions, 571 teachers, 7,885 students.

Directory

The Constitution

The Constitution, summarized below, entered into force on 16 August 1960, when Cyprus became an independent republic.

THE STATE OF CYPRUS

The State of Cyprus is an independent and sovereign Republic with a presidential regime.

The Greek Community comprises all citizens of the Republic who are of Greek origin and whose mother tongue is Greek or who share the Greek cultural traditions or who are members of the Greek Orthodox Church.

The Turkish Community comprises all citizens of the Republic who are of Turkish origin and whose mother tongue is Turkish or who share the Turkish cultural traditions or who are Muslims.

The official languages of the Republic are Greek and Turkish.

The Republic shall have its own flag of neutral design and colour, chosen jointly by the President and the Vice-President of the Republic.

The Greek and the Turkish Communities shall have the right to celebrate respectively the Greek and the Turkish national holidays.

THE PRESIDENT AND VICE-PRESIDENT

Executive power is vested in the President and the Vice-President, who are members of the Greek and Turkish Communities respectively, and are elected by their respective communities to hold office for five years.

The President of the Republic as Head of the State represents the Republic in all its official functions; signs the credentials of diplomatic envoys and receives the credentials of foreign diplomatic envoys; signs the credentials of delegates for the negotiation of international treaties, conventions or other agreements; signs the letter relating to the transmission of the instruments of ratification of any international treaties, conventions or agreements; confers the honours of the Republic.

The Vice-President of the Republic, as Vice-Head of the State, has the right to be present at all official functions; at the presentation of the credentials of foreign diplomatic envoys; to recommend to the President the conferment of honours on members of the Turkish Community, which recommendation the President shall accept unless there are grave reasons to the contrary.

The election of the President and the Vice-President of the Republic shall be direct, by universal suffrage and secret ballot, and shall, except in the case of a by-election, take place on the same day but separately.

The office of the President and of the Vice-President shall be incompatible with that of a Minister or of a Representative or of a member of a Communal Chamber or of a member of any municipal council including a Mayor or of a member of the armed or security forces of the Republic or with a public or municipal office.

The President and Vice-President of the Republic are invested by the House of Representatives.

The President and the Vice-President of the Republic in order to ensure the executive power shall have a Council of Ministers composed of seven Greek Ministers and three Turkish Ministers. The Ministers shall be designated respectively by the President and the Vice-President of the Republic who shall appoint them by an instrument signed by them both. The President convenes and presides over the meetings of the Council of Ministers, while the Vice-President may ask the President to convene the Council and may take part in the discussions.

The decisions of the Council of Ministers shall be taken by an absolute majority and shall, unless the right of final veto or return is exercised by the President or the Vice-President of the Republic or both, be promulgated immediately by them.

The executive power exercised by the President and the Vice-President of the Republic conjointly consists of:

Determining the design and colour of the flag.

Creation or establishment of honours.

Appointment of the members of the Council of Ministers.

Promulgation by publication of the decisions of the Council of Ministers.

Promulgation by publication of any law or decision passed by the House of Representatives.

Appointments and termination of appointments as in Articles provided.

Institution of compulsory military service.

Reduction or increase of the security forces.

Exercise of the prerogative of mercy in capital cases.

Remission, suspension and commutation of sentences.

Right of references to the Supreme Constitutional Court and publication of Court decisions.

Address of messages to the House of Representatives.

The executive powers which may be exercised separately by the President and Vice-President include: designation and termination of appointment of Greek and Turkish Ministers respectively; the right of final veto on Council decisions and on laws concerning foreign affairs, defence or security; the publication of the communal laws and decisions of the Greek and Turkish Communal Chambers respectively; the right of recourse to the Supreme Constitutional Court; the prerogative of mercy in capital cases; and addressing messages to the House of Representatives.

THE COUNCIL OF MINISTERS

The Council of Ministers shall exercise executive power in all matters, other than those which are within the competence of a Communal Chamber, including the following:

General direction and control of the government of the Republic and the direction of general policy.

Foreign affairs, defence and security.

Co-ordination and supervision of all public services.

Supervision and disposition of property belonging to the Republic.

Consideration of Bills to be introduced to the House of Representatives by a Minister.

Making of any order or regulation for the carrying into effect of any law as provided by such law.

Consideration of the Budget of the Republic to be introduced to the House of Representatives.

THE HOUSE OF REPRESENTATIVES

The legislative power of the Republic shall be exercised by the House of Representatives in all matters except those expressly reserved to the Communal Chambers.

The number of Representatives shall be 50, subject to alteration by a resolution of the House of Representatives carried by a majority comprising two-thirds of the Representatives elected by the Greek Community and two-thirds of the Representatives elected by the Turkish Community.

Out of the number of Representatives 70% shall be elected by the Greek Community and 30% by the Turkish Community separately from amongst their members respectively, and, in the case of a contested election, by universal suffrage and by direct and secret ballot held on the same day.

The term of office of the House of Representatives shall be for a period of five years.

The President of the House of Representatives shall be a Greek, and shall be elected by the Representatives elected by the Greek Community, and the Vice-President shall be a Turk and shall be elected by the Representatives elected by the Turkish Community.

THE COMMUNAL CHAMBERS

The Greek and the Turkish Communities respectively shall elect from amongst their own members a Communal Chamber.

The Communal Chambers shall, in relation to their respective Community, have competence to exercise legislative power solely with regard to the following:

All religious, educational, cultural and teaching matters.

Personal status; composition and instances of courts dealing with civil disputes relating to personal status and to religious matters.

Imposition of personal taxes and fees on members of their respective Community in order to provide for their respective needs.

THE PUBLIC SERVICE AND THE ARMED FORCES

The public service shall be composed as to 70% of Greeks and as to 30% of Turks.

The Republic shall have an army of 2,000 men, of whom 60% shall be Greeks and 40% shall be Turks.

The security forces of the Republic shall consist of the police and gendarmerie and shall have a contingent of 2,000 men. The forces shall be composed as to 70% of Greeks and as to 30% of Turks.

OTHER PROVISIONS

The following measures have been passed by the House of Representatives since January 1964, when the Turkish members withdrew:

The amalgamation of the High Court and the Supreme Constitutional Court (see Judicial System section).

The abolition of the Greek Communal Chamber and the creation of a Ministry of Education.

The unification of the Municipalities.

The unification of the Police and the Gendarmerie.

The creation of a military force by providing that persons between the ages of 18 and 50 years can be called upon to serve in the National Guard.

The extension of the term of office of the President and the House of Representatives by one year intervals from July 1965 until elections in February 1968 and July 1970 respectively.

New electoral provisions; abolition of separate Greek and Turkish rolls; abolition of post of Vice-President, which was re-established in 1973.

The Government*

HEAD OF STATE

President: GLAVKOS KLERIDES (took office 28 February 1993; re-elected 15 February 1998).

COUNCIL OF MINISTERS

A Government of national unity, comprising DISY, EDE (United Democrats) and Independents.

(September 1999)

Minister of Foreign Affairs: YIANNAKIS KASOULIDES (DISY).

Minister of Defence: SOKRATIS HASIKOS (DISY).

Minister of Finance: TAKIS KLERIDES (Independent).

Minister of the Interior: CHRISTODOULOS CHRISTODOULOU (DISY).

Minister of Justice and Public Order: NIKOS KOSHIS (DISY).

Minister of Commerce, Industry and Tourism: NIKOS ROLANDIS (DISY).

Minister of Education and Culture: OURANIOS IOANNIDES (DISY).

Minister of Health: FRIXOS SAVVIDHIS (Independent).

Minister of Labour and Social Insurance: ANDREAS MOUSHATTAS (Independent).

Minister of Communications and Works: AVEROF NEOPHITOU (DISY).

Minister of Agriculture, Natural Resources and the Environment: KOSTAS THEMISTOKLEOUS (EDE).

* Under the Constitution of 1960, the vice-presidency and three posts in the Council of Ministers are reserved for Turkish Cypriots. However, there has been no Turkish participation in the Government since December 1963. In 1968 President Makarios announced that he considered the office of Vice-President in abeyance until Turkish participation in the Government is resumed, but the Turkish community elected Rauf Denktaş Vice-President in February 1973.

MINISTRIES

Ministry of Agriculture, Natural Resources and the Environment: Loukis Akritas Ave, Nicosia; tel. (2) 300807; fax (2) 781156.

President and Legislature

PRESIDENT

Election, 8 and 15 February 1998*

Candidates	Votes	%
GLAVKOS KLERIDES (Democratic Rally)	206,879 (158,763)	50.8 (40.1)
GEORGHIOS IACOVOU (Independent, with AKEL/DIKO support)	200,222 (160,918)	49.2 (40.6)
VASSOS LYSSARIDES (EDEK—Socialist Party)	– (41,978)	– (10.6)
ALEXIS GALANOS (Independent)	– (16,003)	– (4.0)
GEORGHIOS VASSILIOU (United Democrats)	– (11,908)	– (3.0)
NIKOS KOUTSOU (New Horizons)	– (3,625)	– (0.9)
NIKOS ROLANDIS (Liberal Party†)	– (3,104)	– (0.8)
Total	407,101 (396,299)	100.0 (100.0)

* Figures from the first round of voting appear in brackets.

† Subsequently merged with DISY.

HOUSE OF REPRESENTATIVES

The House of Representatives originally consisted of 50 members, 35 from the Greek community and 15 from the Turkish community, elected for a term of five years. In January 1964 the Turkish members withdrew and set up the 'Turkish Legislative Assembly of the Turkish Cypriot Administration' (see p. 392). At the 1985 elections the membership of the House was expanded to 80 members, of whom 56 were to be from the Greek community and 24 from the Turkish community (according to the ratio of representation specified in the Constitution).

President: SPYROS KYPRIANOU.

Elections for the Greek Representatives, 26 May 1996

Party	Votes	% of Votes	Seats
DISY (Democratic Rally)/Liberal Party	127,380	34.5	20
AKEL (Communist Party)	121,958	33.0	19
DIKO (Democratic Party)	60,726	16.4	10
EDEK (Socialist Party)	30,033	8.1	5
KED (Free Democrats)*	13,623	3.7	2
New Horizons	6,317	1.7	–

Yugoslavia: 2 Vasilissis Olgas St, Nicosia; tel. (2) 445511; fax (2) 445910; Chargé d'affaires a.i.: IVAN MRKIĆ.

Judicial System

Supreme Council of Judicature: Nicosia. The Supreme Council of Judicature is composed of the President and Judges of the Supreme Court. It is responsible for the appointment, promotion, transfer, etc., of the judges exercising civil and criminal jurisdiction in the District Courts, the Assize Courts, the Family Courts, the Military Court and the Industrial Dispute Court.

SUPREME COURT

Supreme Court: Char. Mouskos St, 1404 Nicosia; tel. (2) 302237; fax (2) 304500. The Constitution of 1960 provided for a separate Supreme Constitutional Court and High Court but in 1964, in view of the resignation of their neutral presidents, these were amalgamated to form a single Supreme Court.

The Supreme Court is the final appellate court in the Republic and the final adjudicator in matters of constitutional and administrative law, including recourses on conflict of competence between state organs on questions of the constitutionality of laws, etc. It deals with appeals from Assize Courts and District Courts as well as from the decisions of its own judges when exercising original jurisdiction in certain matters such as prerogative orders of *habeas corpus*, *mandamus*, *certiorari*, etc., and in admiralty cases.

President: GEORGHIOS M. PIKIS.

Judges: I. C. CONSTANTINIDES, T. ELIADES, CHR. C. ARTEMIDES, G. NIKOLAOU, P. KALLIS, FR. G. NIKOLAIDES, S. NIKITAS, P. CH. ARTEMIS, M. KRONIDES, A. KRAMVIS, R. GAVRIELIDES, D. HADJICHAMBIS.

Attorney-General: ALEKOS MARKIDES.

OTHER COURTS

As required by the Constitution a law was passed in 1960 providing for the establishment, jurisdiction and powers of courts of civil and criminal jurisdiction, i.e. of six District Courts and six Assize Courts. In accordance with the provisions of new legislation, approved in 1991, a permanent Assize Court, with powers of jurisdiction in all districts, was established.

In addition to a single Military Court, there are specialized Courts concerned with cases relating to industrial disputes, rent control and family law.

'Turkish Republic of Northern Cyprus'

The Turkish intervention in Cyprus in July 1974 resulted in the establishment of a separate area in northern Cyprus under the control of the Autonomous Turkish Cypriot Administration, with a Council of Ministers and separate judicial, financial, police, military and educational machinery serving the Turkish community.

On 13 February 1975 the Turkish-occupied zone of Cyprus was declared the 'Turkish Federated State of Cyprus', and Rauf Denktaş declared President. At the second joint meeting held by the Executive Council and Legislative Assembly of the Autonomous Turkish Cypriot Administration, it was decided to set up a Constituent Assembly which would prepare a constitution for the 'Turkish Federated State of Cyprus' within 45 days. This Constitution, which was approved by the Turkish Cypriot population in a referendum held on 8 June 1975, was regarded by the Turkish Cypriots as a first step towards a federal republic of Cyprus. The main provisions of the Constitution are summarized below:

The 'Turkish Federated State of Cyprus' is a democratic, secular republic based on the principles of social justice and the rule of law. It shall exercise only those functions which fall outside the powers and functions expressly given to the (proposed) Federal Republic of Cyprus. Necessary amendments shall be made to the Constitution of the 'Turkish Federated State of Cyprus' when the Constitution of the Federal Republic comes into force. The official language is Turkish.

Legislative power is vested in a Legislative Assembly, composed of 40 deputies, elected by universal suffrage for a period of five years. The President is Head of State and is elected by universal suffrage for a period of five years. No person may be elected President for more than two consecutive terms. The Council of Ministers shall be composed of a prime minister and 10 ministers. Judicial power is exercised through independent courts.

Other provisions cover such matters as the rehabilitation of refugees, property rights outside the 'Turkish Federated State', protection of coasts, social insurance, the rights and duties of citizens, etc.

On 15 November 1983 a unilateral declaration of independence brought into being the 'Turkish Republic of Northern Cyprus', which, like the 'Turkish Federated State of Cyprus', was not granted international recognition.

The Constituent Assembly, established after the declaration of independence, prepared a new constitution, which was approved by the Turkish Cypriot electorate on 5 May 1985. The new Constitution is very similar to the old one, but the number of deputies in the Legislative Assembly was increased to 50.

HEAD OF STATE

President of the 'Turkish Republic of Northern Cyprus': RAUF R. DENKTAŞ (assumed office as President of the 'Turkish Federated State of Cyprus' 13 February 1975; became President of the 'TRNC' 15 November 1983; re-elected for five-year terms on 9 June 1985, on 22 April 1990 and on 22 April 1995).

COUNCIL OF MINISTERS
(September 1999)

A coalition of the Ulusal Bırlık Partisi (UBP) and the Toplumcu Kurtuluş Partisi (TKP).

Prime Minister: Dr DERVIŞ EROĞLU (UBP).

DIPLOMATIC REPRESENTATION

Embassy in the 'TRNC'

Turkey: Bedrettin Demirel Cad., Lefkoşa Büyükelçisi, Lefkoşa (Nicosia), Mersin 10, Turkey; tel. (22) 72314; fax (22) 82289; Ambassador: ERTUĞRUL APAKAN.

Turkey is the only country officially to have recognized the 'Turkish Republic of Northern Cyprus'.

JUDICIAL SYSTEM

Supreme Court: Lefkoşa (Nicosia), Mersin 10, Turkey; tel. (22) 87535; fax (22) 85265. The highest court in the 'TRNC' is the Supreme Court. The Supreme Court functions as the Constitutional Court, the Court of Appeal and the High Administrative Court. The Supreme Court, sitting as the Constitutional Court, has exclusive jurisdiction to adjudicate finally on all matters prescribed by the Constitution. The Supreme Court, sitting as the Court of Appeal, is the highest appellate court in the 'TRNC'. It also has original jurisdiction in certain matters of judicial review. The Supreme Court, sitting as the High Administrative Court, has exclusive jurisdiction on matters relating to administrative law.

The Supreme Court is composed of a president and seven judges.

President: SALİH S. DAYIOĞLU.

Judges: GONUL ERONEN, NEVVAR NOLAN, CELÂL KARABACAK, TANER ERGINEL, METİN A. HAKKI, MUSTAFA ÖZKOK, SEYİT A. BENSEN.

Subordinate Courts: Judicial power other than that exercised by the Supreme Court is exercised by the Assize Courts, District Courts and Family Courts.

Supreme Council of Judicature: The Supreme Council of Judicature, composed of the president and judges of the Supreme Court, a member appointed by the President of the 'TRNC', a member appointed by the Legislative Assembly, the Attorney-General and a member elected by the Bar Association, is responsible for the appointment, promotion, transfer and matters relating to the discipline of all judges. The appointments of the president and judges of the Supreme Court are subject to the approval of the President of the 'TRNC'.

Attorney-General: SAİT AKIN.

Religion

Greeks form 77% of the population and most of them belong to the Orthodox Church, although there are also adherents of the Armenian Apostolic Church, the Anglican Communion and the Roman Catholic Church (including Maronites). Most Turks (about 18% of the population) are Muslims.

CHRISTIANITY

The Orthodox Church of Cyprus

The Autocephalous Orthodox Church of Cyprus, founded in AD 45, is part of the Eastern Orthodox Church; the Church is independent, and the Archbishop, who is also the Ethnarch (national leader of the Greek community), is elected by representatives of the towns and villages of Cyprus. The Church comprises six dioceses, and in 1995 had an estimated 600,000 members.

Archbishop of Nova Justiniana and all Cyprus: Archbishop CHRYSOSTOMOS, POB 1130, Arch. Kyprianos St, Nicosia; tel. (2) 430696; fax (2) 432470.

Metropolitan of Paphos: Bishop CHRYSOSTOMOS.

Metropolitan of Kitium: Bishop CHRYSOSTOMOS, Dem. Lipertis St, Larnaca; fax (41) 55588.

Metropolitan of Kyrenia: Bishop PAULUS.

Metropolitan of Limassol: Bishop ATHANASIOS.

Metropolitan of Morphou: Bishop NEOPHYTES.

The Roman Catholic Church

Latin Rite

The Patriarchate of Jerusalem covers Israel, Jordan and Cyprus. The Patriarch is resident in Jerusalem (see the chapter on Israel).

Vicar Patriarchal for Cyprus: Father UMBERTO BARATO.

Maronite Rite

Most of the Roman Catholics in Cyprus are adherents of the Maronite rite. Prior to June 1988 the Archdiocese of Cyprus included part of Lebanon. At December 1997 the archdiocese contained an estimated 10,000 Maronite Catholics.

Archbishop of Cyprus: Most Rev. BOUTROS GEMAYEL, POB 2249, Maronite Archbishop's House, 8 Ayios Maronas St, Nicosia; tel. (2) 678877; fax (2) 668260.

The Anglican Communion

Anglicans in Cyprus are adherents of the Episcopal Church in Jerusalem and the Middle East, officially inaugurated in January 1976. The Church has four dioceses. The diocese of Cyprus and the Gulf includes Cyprus, Iraq and the countries of the Arabian peninsula.

Bishop in Cyprus and the Gulf: Rt Rev. CLIVE HANDFORD, c/o POB 22075, Diocesan Office, 2 Grigoris Afxentiou St, 1517 Nicosia; tel. (2) 671220; fax (2) 674553; e-mail georgia@spidernet.com.cy.

Other Christian Churches

Among other denominations active in Cyprus are the Armenian Apostolic Church and the Greek Evangelical Church.

ISLAM

Most adherents of Islam in Cyprus are Sunni Muslims of the Hanafi sect. The religious head of the Muslim community is the Mufti.

Mufti of Cyprus: AHMET CEMAL İLKTAÇ (acting), PK 142, Lefkoşa (Nicosia), Mersin 10, Turkey.

Offshore (International) Banking Units

Cyprus-based Offshore Banking Units (OBUs) are fully-staffed units which conduct all forms of banking business from within Cyprus with other offshore or foreign entities and non-resident persons. (OBUs are not permitted to accept deposits from persons of Cypriot origin who have emigrated to the United Kingdom and taken up permanent residence there.) Although exempt from most of the restrictions and regulatory measures applicable to onshore banks, OBUs are subject to supervision and inspection by the Central Bank of Cyprus. OBUs may conduct business with onshore and domestic banks in all banking matters which the latter are allowed to undertake with banks abroad. OBUs are permitted to grant loans or guarantees in foreign currencies to residents of Cyprus (conditional on obtaining an exchange control permit from the Central Bank of Cyprus). Interest and other income earned from transactions with residents is subject to the full rate of income tax (20%), but the Minister of Finance is empowered by law to exempt an OBU from the above tax liability if satisfied that a specific transaction substantially contributes towards the economic development of the Republic. In 1999 there were 29 OBUs operating in Cyprus.

ÖNDER KONULOĞLU; Gen. Sec. ASLAN BIÇAKLI.

Transport

RAILWAYS

There are no railways in Cyprus.

ROADS

In December 1995 there were 25,378 km of roads in the government-controlled areas, of which 5,942 km were paved and the remainder were earth or gravel roads. The Nicosia–Limassol four-lane dual carriageway, which was completed in 1985, was subsequently extended with the completion of the Limassol and Larnaca bypasses. New highways between Nicosia and Larnaca, and Larnaca and Kophinou have been completed, as well as the Aradippo–Dhekelia and Larnaca Airport bypasses. The Nicosia–Anthoupolis–Kokkinotrimithia highway was completed in 1994. At December 1995 the total extent of the highway network was 178.4 km., which was expected to be increased further with the construction of a Limassol–Paphos highway (the first section of which opened in January 1997; work was scheduled to be completed in 2000). In October 1997 work began on a Dhekelia–Ammochostos (Famagusta) highway. The north and south are now served by separate transport systems, and there are no services linking the two sectors.

SHIPPING

Until 1974 Famagusta, a natural port, was the island's most important harbour, handling about 83% of the country's cargo. Since its capture by the Turkish army in August 1974 the port has been officially declared closed to international traffic. However, it continues to serve the Turkish-occupied region.

The main ports which serve the island's maritime trade at present are Larnaca and Limassol, which were constructed in 1973 and 1974 respectively. Both ports have since been expanded and improved. There is also an industrial port at Vassiliko and there are three specialized petroleum terminals, at Larnaca, Dhekelia and Moni. A second container terminal became operational at Limassol in 1995.

In 1996 5,109 vessels, with a total net registered tonnage of 17,767,000, visited Cyprus, carrying 9,500,000 metric tons of cargo to and from Cyprus. In addition to serving local traffic, Limassol and Larnaca ports act as transhipment load centres for the Eastern Mediterranean, North Adriatic and Black Sea markets and as regional warehouse and assembly bases for the Middle East, North Africa and the Persian (Arabian) Gulf. Containerized cargo handled at Cypriot ports amounted to 3,428,000 metric tons in 1996.

Both Kyrenia and Karavostassi are under Turkish occupation and have been declared closed to international traffic. Karavostassi used to be the country's major mineral port, dealing with 76% of the total mineral exports. However, since the war minerals have been passed through Vassiliko which is a specified industrial port. A hydrofoil service operates between Kyrenia and Mersin on the Turkish mainland. Car ferries sail from Kyrenia to Taşucu and Mersin, in Turkey.

CIVIL AVIATION

There is an international airport at Nicosia, which can accommodate all types of aircraft, including jets. It has been closed since July 1974 following the Turkish invasion. A new international airport was constructed at Larnaca, from which flights operate to Europe, the USA, the Middle East and the Gulf. Another international airport at Paphos began operations in November 1983.

Defence

The National Guard was set up by the House of Representatives in 1964, after the withdrawal of the Turkish members. Men between the ages of 18 and 50 are liable to 26 months' conscription. In August 1998 it comprised an army of 10,000 regulars, mainly composed of Cypriot conscripts, but with some seconded Greek Army officers and NCOs, and 88,000 reserves. There is also a Greek Cypriot paramilitary force comprising some 500 armed police and 120 maritime police. In August 1998 the 'TRNC' had an army of about 4,500 regulars and 26,000 reserves. Men between the ages of 18 and 50 are liable to 24 months' conscription. In 1998 it was estimated that the 'TRNC' forces were being supported by some 30-33,000 Turkish troops. Cyprus also contains the UN Peace-keeping Force and the British military bases at Akrotiri and Dhekelia.

Commander of the Greek Cypriot National Guard: Lt-Gen. NIKOLAOS VORVOLAKOS.

Commander of 'TRNC' Security Forces: Brig.-Gen. HASAN PEKER GUNAL.

UNITED NATIONS PEACE-KEEPING FORCE IN CYPRUS (UNFICYP)

Headquarters at POB 1642, Nicosia; tel. (2) 464000; telex 2329.

Set up for a three-month period in March 1964 by Security Council resolution (subsequently extended at intervals of three or six months by successive resolutions) to keep the peace between the Greek and Turkish communities and help to solve outstanding issues between them. In mid-1993, following an announcement by troop-providing countries that they were to withdraw a substantial number of troops, the Security Council introduced a system of financing UNFICYP by voluntary and assessed contributions. At 1 August 1998 the Force comprised 1,279 military and police personnel, drawn from six countries (compared with 2,078 at November 1992).

Commander: Maj.-Gen. EVERGISTO DE VERGARA (Argentina).

Special Adviser to the UN Secretary-General: JAMES HOLGER.

See p. 231.

BRITISH SOVEREIGN BASE AREAS

Akrotiri and Dhekelia

Headquarters British Forces Cyprus, British Forces Post Office 53; tel. (5) 263395; fax (5) 211593.

Under the Cyprus Act 1960, the United Kingdom retained sovereignty in two sovereign base areas and this was recognized in the Treaty of Establishment signed between the United Kingdom, Greece, Turkey and the Republic of Cyprus in August 1960. The base areas cover 99 square miles. The Treaty also conferred on Britain certain rights within the Republic, including rights of movement and the use of specified training areas. In August 1998 an estimated 3,700 military personnel were resident in the sovereign base areas.

Administrator: Maj.-Gen. ANGUS RAMSAY.

Chief Officer of Administration: PATRICK ROTHERAM.

Senior Judge of Senior Judge's Court: (vacant).

Resident Judge of Judge's Court: GORDON WARD.

Education

Until 1965 each community in Cyprus managed its own schooling through a Communal Chamber. On 31 March, however, the Greek Communal Chamber was dissolved and a Ministry of Education was established to take its place. Intercommunal education has been placed under this Ministry.

GREEK CYPRIOT EDUCATION

Primary education is compulsory and is provided free in six grades to children between 5½ and 12 years of age. In some towns and large villages there are separate junior schools consisting of the first three grades. Apart from schools for the deaf and blind, there are also seven schools for handicapped children. In 1996/97 there were 659 Kindergartens (including privately run pre-primary schools) for children aged 3–5½ years of age. There were 376 primary schools, with 4,159 teachers and 64,761 pupils in 1996/97. In 1995 enrolment in primary education included 96% of children in the relevant age-group (males 96%; females 96%).

Secondary education is also free for all years of study and lasts six years, three years at the Gymnasium being followed by three years at technical school or the Lyceum. Attendance for the first cycle of secondary education is compulsory. Pupils at the Lyceums may choose one of five main fields of specialization: humanities, science, economics, commercial/secretarial and foreign languages. At technical schools students may undertake one of several specializations offered within two categories of courses—technician and craft; the school-leaving certificate awarded at the end of the course is equivalent to that of the Lyceum. In 1996/97 there were 114 secondary schools (gymnasia, lyceums and technical schools) with 5,067 teachers and 56,652 pupils. In addition, there were numerous privately-operated secondary schools, where instruction is in English. In 1995 enrolment in secondary education included 93% of children in the relevant age-group (males 91%; females 94%).

Post-Secondary education is offered at the University of Cyprus, which was inaugurated in September 1992 with 440 undergraduates. There are currently schools in the humanities and social sciences, pure and applied sciences, and economics and management. The University is expected to reach its full operational level of 4,000 students by 2000. In addition, there are five other public third-level institutions. The Higher Technical Institute offers sub-degree courses, leading to a diploma, in civil, electrical, mechanical and marine engineering and in computer studies. Other specialized training is provided at the Forestry College, the Higher Hotel Institute, the Mediterranean Institute of Management and the School of Nursing. There are also a number of private third-level institutions, registered with the Ministry of Education and Culture, offering courses in various fields.

In 1994/95, 9,188 students were studying at universities abroad, mainly in Greece, the USA, and the United Kingdom.

TURKISH CYPRIOT EDUCATION

With the exception of private kindergartens, a vocational school of agriculture attached to the Ministry of Agriculture, a training school for nursing and midwifery attached to the Ministry of Health and Social Welfare, and a school for hotel catering attached to the Ministry of Communications, Public Works and Tourism, all schools and educational institutes are administered by the Ministry of National Education and Culture.

Education in the Turkish Cypriot zone is divided into two sections, formal and adult education. Formal education covers nursery, primary, secondary and higher education. Adult (informal) education caters for special training outside the school system.

Formal education is organized into four categories: pre-primary, primary, secondary and higher education. Pre-primary education is provided by kindergartens for children between the ages of 5 and 6. In 1997/98 there were 6 public kindergartens with 47 teachers catering for 761 children. Primary education is provided at two stages. The first stage (elementary) lasts five years and caters for children aged 7–11. The second stage (junior), lasting three years, is intended for pupils aged 12–14. Both stages of primary education are free and compulsory. In 1997/98 there were 91 elementary primary schools with 1,293 teachers and 16,659 pupils. In that year there were 16 junior primary schools with 489 teachers and 5,897 pupils. Secondary education consists of a three-year programme of instruction for pupils aged 15–17. Pupils elect either to prepare for higher education, to prepare for higher education with vocational training, or to prepare for vocational training only. Secondary education is free, but not compulsory. In 1997/98 there were 14 schools and lycées, with 715 teachers and 8,022 pupils. There were also 10 lycées and technical secondary schools, with 396 teachers and 2,428 pupils.

In 1982 an Institute of Islamic Banking and Economics was opened to provide postgraduate training. Cyprus's first university, The Eastern Mediterranean University, which is located near Gazi Mağusa (Famagusta), was opened in October 1986. The university has four main faculties: Engineering, Arts and Sciences, Tourism and Hotel Management, and Economics and Business Administration. A total of 10,223 students attended the university in 1997/98. There are a further seven institutions which provide higher

education in the Turkish Cypriot zone: the Teachers' Training College in Lefkoşa (Nicosia), which trains teachers for the elementary school stage, attended by 205 students in 1997/98; the Near East University College in Lefkoşa (Nicosia), with 4,426 students; the International American University, with 1,040; the Girne (Kyrenia) American University, with 1,098; the Anadolu Open University, with 3,092; Lefke (Levka) University, with 918; and the International Cyprus University, with 115.

In 1996/97 3,411 students were pursuing higher education studies abroad, mainly in Turkey, the USA and the United Kingdom.

EGYPT

Physical and Social Geography

W. B. FISHER

SITUATION

The Arab Republic of Egypt occupies the north-eastern corner of the African continent, with an extension across the Gulf of Suez into the Sinai region which is usually, but not always, regarded as lying in Asia. The area of Egypt is 1,002,000 sq km (386,874 sq miles) but only 5.5% can be said to be permanently settled or cultivated, the remainder being desert or marsh. Egypt lies between Lat. 22°N and 32°N; and the greatest distance from north to south is about 1,024 km (674 miles), and from east to west 1,240 km (770 miles), giving the country a roughly square shape, with the Mediterranean and Red seas forming, respectively, the northern and eastern boundaries. Egypt has political frontiers on the east with Israel, on the south with the Republic of Sudan, and on the west with the Great Socialist People's Libyan Arab Jamahiriya. The actual frontiers run, in general, as straight lines drawn directly between defined points, and do not normally conform to geographical features. Between June 1967 and October 1973 the *de facto* frontier with Israel was the Suez Canal. As a result of the 1979 Peace Treaty, the frontier reverted to a line much further to the east (see p. 112).

PHYSICAL FEATURES

The remarkable persistence of cultural cohesion amongst the Egyptian people may largely be explained by the geography of the country. Egypt consists essentially of a narrow, trough-like valley, some 3 km to 15 km wide, cut by the Nile river in the plateau of north-east Africa. At an earlier geological period a gulf of the Mediterranean Sea probably extended as far south as Cairo, but deposition of silt by the Nile has entirely filled up this gulf, producing the fan-shaped Delta region (22,000 sq km in area), through which flow two main distributary branches of the Nile—the eastern, or Damietta branch (240 km long), and the western, or Rosetta branch (235 km), together with many other minor channels. As deposition of silt takes place, large stretches of water are gradually impounded to form shallow lakes, which later become firm ground. At present there are four such stretches of water in the north of the Delta: from east to west, and, in order of size, lakes Menzaleh, Brullos, Idku and Mariut.

Upstream from Cairo the Nile Valley is at first 10 km to 15 km in width, and, as the river tends to lie close to the eastern side, much of the cultivated land, and also most of the big towns and cities, lie on the western bank. Towards the south the river valley gradually narrows until, at about 400 km from the frontier of Sudan, it is no more than 3 km wide. Near Aswan there is an outcrop of resistant rock, chiefly granite, which the river has not been able to erode as quickly as the rest of the valley. This gives rise to a region of cascades and rapids which is known as the First Cataract. Four other similar regions occur on the Nile, but only the First Cataract lies within Egypt. The cataracts form a barrier to human movement upstream and serve to isolate the Egyptian Nile from territories farther south. In Ancient Egypt, when river communications were of paramount importance, there was a traditional division of the Nile Valley into Lower Egypt (the Delta), Middle Egypt (the broader valley above the Delta), and Upper Egypt (the narrower valley as far as the cataracts). Nowadays, it is usual to speak merely of Upper and Lower Egypt, with the division occurring at Cairo.

The fertile strip of the Nile Valley is isolated to the south by the cataracts and by the deserts and swamps of Sudan; to the north by the Mediterranean Sea; and to east and west by desert plateaux, about which a little more must be said. The land immediately to the east of the Nile Valley, spoken of as the Eastern Highlands, is a complex region with peaks that rise 1,800 m to 2,100 m but also much broken up by deep valleys which make travel difficult. Owing to aridity the whole region is sparsely populated, with a few partly nomadic shepherds, one or two monasteries and a number of small towns associated chiefly with the exploitation of minerals—petroleum, iron, manganese and granite—that occur in this region. Difficult landward communications mean that contact is mostly by sea, except in the case of the ironfields. The Sinai, separated from the Eastern Highlands by the Gulf of Suez, is structurally very similar, but the general plateau level is tilted, giving the highest land (again nearly 2,100 m in elevation) in the extreme south, where it rises in bold scarps from sea-level. Towards the north the land gradually slopes down, ultimately forming the low-lying sandy plain of the Sinai desert which fringes the Mediterranean Sea. Because of its low altitude and accessibility, the Sinai, in spite of its desert nature, has been for many centuries an important corridor linking Egypt with Asia.

West of the Nile occur the vast expanses known as the Western Desert. Though by no means uniform in height, the land surface is much lower than that east of the Nile, and within Egypt rarely exceeds 300 m above sea-level. Parts are covered by extensive masses of light, shifting sand that often form dunes; but in addition there are a number of large depressions, some with the lowest parts actually below sea-level. These depressions seem to have been hollowed out by wind action, breaking up rock strata that were weakened by the presence of underground water, and most hollows still contain supplies of artesian water. In some instances (as, for example, the Qattara depression, and the Wadi Natrun, respectively south-west and south-east of Alexandria) the subterranean water is highly saline and consequently useless for agriculture; but in others—notably the oases of the Fayum, Siwa, Dakhlia, Behariya and Farafra—the water is sufficiently good to allow use for irrigation, and settlements have grown up within the desert.

CLIMATE

The main feature of Egyptian climate is the almost uniform aridity. Alexandria, the wettest part, receives only 200 mm of rain annually, and most of the south has 80 mm or less. In many districts rain may fall in quantity only once in two or three years, and it is apposite to recall that throughout most of Egypt, and even in Cairo itself, the majority of the people live in houses of unbaked, sun-dried brick. During the summer, temperatures are extremely high, reaching 38°C–43°C at times and even 49°C in the southern and western deserts. The Mediterranean coast has cooler conditions, with 32°C as a maximum; as a result the wealthier classes tend to move to Alexandria for the three months of summer. Winters are generally warm, with very occasional rain; but cold spells occur from time to time, and light snow is not unknown. Owing to the large extent of desert, hot dry sand-winds (called *khamsin*) are fairly frequent particularly in spring, and much damage can be caused to crops; it has been known for the temperature to rise by 20°C in two hours, and the wind to reach 150 km per hour. Another unusual condition is the occurrence of early morning fog in Lower Egypt during spring and early summer. This, on the other hand, has a beneficial effect on plant growth in that it supplies moisture and is a partial substitute for rainfall.

IRRIGATION

With a deficient rainfall over the entire country, human existence in Egypt is heavily dependent on irrigation from the Nile;

in consequence it is now necessary to consider the regime of the river in some detail. It may be stated, in summary, that the river rises in the highlands of East Africa, with its main stream issuing from lakes Victoria and Albert. In southern Sudan it wanders sluggishly across a flat, open plain, where the fall in level is only 1:100,000. Here the shallow waters become a vast swamp, full of dense masses of papyrus vegetation, and this section of the Nile is called the Sudd (Arabic for 'blockage'). Finally, in the north of Sudan, the Nile flows in a well-defined channel and enters Egypt. In Upper Egypt the river is in the process of cutting its bed deeper into the rock floor; but in the lower part of its course silt is deposited, and the level of the land is rising—in some places by as much as 10 cm per century.

The salient feature of the Nile is, of course, its regular, annual flood, which is caused by the onset of summer rains in East Africa and Ethiopia. The flood travels northward, reaching Egypt during August, and within Egypt the normal rise in river level was at first 6.4 m, declining to 4.6 m as irrigation works developed. This cycle of flood had been maintained for several thousand years until, in 1969, construction of the Aswan High Dam made it a feature of the past (see below) so far as Egypt is concerned.

Originally, the flood waters were simply retained in specially prepared basins with earthen banks, and the water could then be used for three to four months after the flood. Within the last century, the building of large barrages, holding water all the year round, has allowed cultivation at any season. The old (basin) system allowed one or two crops per holding per year; the newer (perennial) system, allows three or even four. In the past, barley and wheat were the main crops; under perennial irrigation maize and cotton, which can tolerate the great summer heat, provided they are watered, have assumed equal importance.

The change-over from basin to perennial irrigation allowed a considerable population increase in Egypt, from about 2.5m. in 1800 to over 50m. in the 1990s, giving rural densities of over 2,500 per sq km in some areas; and, as 99% of all Egyptians live within the Nile valley (only 4% of the country's area), there is considerable pressure on the land.

With most Egyptians entirely dependent upon Nile water, almost all the water entering Egypt is fully utilized. However, there are enormous losses by evaporation which at present amount to some 70% of the total flow. Difficulties and opportunities over use of Nile water were exemplified by the High Dam scheme at Aswan, which created a lake 500 km (350 miles) in length and 10 km (6 miles) wide that extends southwards across the Sudanese frontier. The scheme necessitated the inundation of the Sudanese town of Wadi Halfa, whose 55,000–60,000 inhabitants were resettled at Kashm el-Girba, a district lying south-east of Khartoum, whilst displaced Egyptians were settled in 33 villages around Kom Ombo. Considerable Soviet financial assistance was secured for the scheme, and in May 1964 the first phase of the High Dam was inaugurated by President Nasser and Soviet leader Khrushchev. The High Dam is 3,600 m across, with a girth of 980 m at the river bed and 40 m at the top. It holds back one of the largest artificial lakes in the world (Lake Nasser), and makes possible large-scale storing of water from year to year, and a regular planned use of all Nile water independently of the precise amount of annual flood. Its irrigation potential is 2m. feddans for Lower Egypt alone, and the provision for the Nile valley (including Upper Egypt) was expected to add 30% to the total cultivable area of Egypt. Twelve generator units incorporated in the dam give considerable quantities of low-cost electric power. This power has been a most important aid to industrialization, especially for the new metal industries. The Dam was completed in July 1970 and officially inaugurated in January 1971.

However, adverse effects were soon noticed: scouring of the Nile bed below the dam; increased salinity in the lower stretches; reduced sedimentation below the dam and heavy deposition within the basin, resulting in the need for increasing use of artificial fertilizers, which must be imported; and, perhaps more seriously, the disappearance of fish (particularly sardines) off the Mediterranean coast of Egypt. Possibly the most serious effect of all was a notable rise in the water-table in some areas, owing to hydrostatic pressures, and the year-round presence of water. Besides disturbing irrigation systems (which are adapted to pre-existing conditions), salinity and gleying of a more permanent nature began to appear; reports of bilharzia and other parasitic diseases increased; and the appearance of the plant water hyacinth threatened to choke irrigation systems.

LANGUAGE

Arabic is the language of almost all Egyptians, though there are very small numbers of Berber-speaking villages in the western oases. Most educated Egyptians also speak either French or English, often with a preference for the former. This is a reflection of the traditional French interest in Egypt, which is reciprocated: governmental decrees are sometimes published in French, as well as Arabic, and newspapers in French have an important circulation in Cairo and Alexandria. Small colonies of Greeks and Armenians are also a feature of the larger Egyptian towns. It should perhaps be noted that the Arabic name for Egypt, Misr, is always used within the country itself.

History

Updated for this edition by MICHAEL JAMES DEN HARTOG

PRE-ARAB EGYPT

Egypt's relative isolation, with the majority of the population living in the Nile Valley and the Nile Delta, with desert on either side, has produced a high degree of cultural individuality. Pharaonic Egypt lasted from the end of the fourth millennium BC until conquest by the Assyrians in 671 BC. The building of the pyramids and other works in the third millennium BC indicate a powerful monarchy commanding great resources. After the rule of Rameses II (*c.*1300–1234 BC), Egypt passed into a decline but, after the Assyrian conquest in 671, native rule was soon restored until 525, when Persia conquered Egypt.

The Persian kings patronized the religion of their subjects and were officially regarded as pharaohs. Another change occurred in 332 when the Persian satrap surrendered to Alexander the Great, who was recognized as a pharaoh and founded the city of Alexandria. After Alexander's death Egypt fell to his General, Ptolemy, and his dynasty was Greek in origin and outlook.

On the death of Cleopatra in 30 BC Egypt passed under Roman rule and became a province of a great Mediterranean empire. Christianity was introduced, and the Coptic church of Egypt clung to its monophysite beliefs in the face of Byzantine opposition.

THE COMING OF THE ARABS

Except for a brief Sasanian (Persian) invasion in 616, Egypt remained under Byzantine rule until, with the birth and advance of Islam in the seventh century AD, the Arab army under 'Amr ibn al-As invaded Egypt from Syria. The conquest was virtually complete by 641, but for some centuries Egypt remained an occupied rather than a Muslim country. The Copts, who disliked Byzantine rule, had not opposed the conquest. In the course of time, however, Egypt became an Arabic-speaking country with a Muslim majority, but there remained a Coptic Christian minority. For over two centuries Egypt was administered as part of the Abbasid caliphate of Baghdad, but the Tulunid and Ikshidid dynasties functioned in virtual independence of the caliph between 868 and 969. Ikshidid rule was ended in 969 by a Fatimid invasion from Tunisia. The Fatimids were Shi'a Muslims and Egypt was to remain under Shi'ite (as opposed to orthodox Sunni) rule until 1171.

Under the early Fatimids, Egypt enjoyed a golden age. The country was a well-administered absolute monarchy and it formed the central portion of an empire which, at its height, included North Africa, Sicily and western Arabia. The city of Cairo was developed and the mosque of al-Azhar founded. But, by the long reign of al-Mustansir (1035–94) decay had set in, and when the Kurdish Salah ad-Din ibn Ayyub, known to Europe as Saladin, rose to prominence as he opposed the Syrian Crusader states in the 12th century, he was able to become sultan over Egypt and almost the whole of the former Crusader territory.

When Saladin died in 1193, his Empire was divided amongst his heirs, one branch of which, the Egyptian Ayyubids, reigned in Cairo. Louis IX of France led an attack on Egypt in 1249, but was stopped at the battle of al-Mansura in 1250. Thereafter Egypt was ruled by Mamluk sultans until the Ottoman advance at the beginning of the 16th century.

OTTOMAN EGYPT: 1517–1798

By the beginning of the 16th century the Ottoman Turks had made dramatic advances. Constantinople was captured by them in 1453, and early in the 16th century the Turks were threatening Vienna. In their expansion southwards the Turks defeated the Mamluks at the battle of Marj Dabiq, north of Aleppo, in 1516, and overthrew the last Mamluk sultan at a second battle, outside Cairo, in 1517. Egypt became a province of the Ottoman Empire, but the Turks usually interfered little with the Egyptian administration. From time to time Mamluk grandees were virtually sovereign in Egypt.

At the end of the 18th century Egypt became a pawn in the war between France and Britain. Napoleon wanted to disrupt British commerce and eventually overthrow British rule in India. He landed at Alexandria in 1798, but in 1801 the French were forced to capitulate by a British and Ottoman force. French interest in Egyptian affairs and Egyptian culture continued, however.

INCREASED EUROPEAN INFLUENCE

The expulsion of the French was followed by a struggle for power in which the victor was an Albanian officer in the Ottoman forces, Muhammad Ali. In 1807 he defeated a British force which had occupied Alexandria, and between 1820 and 1822 his army conquered most of northern Sudan.

In 1824 Muhammad Ali sent his son Ibrahim with an Egyptian force to help the Sultan suppress the Greek struggle for independence, but European intervention in 1827 led to the destruction of the Turkish and Egyptian fleets at Navarino. On the rejection by the Sultan of Muhammad Ali's demand that he should be given Syria in recompense, Ibrahim invaded Syria in 1831. Ibrahim was eventually defeated and Muhammad Ali's dominion was restricted to Egypt and the Sudan, but his governorship was made hereditary. He died in 1849, having been predeceased by Ibrahim. Muhammad Ali introduced many features of Western intellectual life into Egypt, and a Western-educated class began to emerge. Muhammad Ali was succeeded by his grandson, Abbas I (1849–54), under whom Westernization was reduced, and he by Said (1854–64), Muhammad Ali's surviving son.

In 1854 Said granted a concession to a French engineer, Ferdinand de Lesseps, to build the Suez Canal, but work did not begin until 1859 and the canal was opened in 1869. By this time Said had been succeeded by Ibrahim's son, Ismail. Ismail extended his Sudanese dominions, built railways and constructed telegraph lines. Moreover, his personal expenses were high, and between 1863 and 1876 Egyptian indebtedness rose from £7m. to nearly £100m. In 1875 Ismail averted a financial crisis by selling his Suez Canal shares to the British Government. As part of the Ottoman Empire, Egypt was bound by the Capitulations—treaties with European powers giving European communities in Ottoman territories a considerable degree of autonomy under the jurisdiction of their consuls, and, under conditions of indebtedness and the necessity of loans from the European powers, financial control by outsiders increased.

Ismail was succeeded by his son Tawfiq, who ostensibly governed through a responsible Egyptian ministry, but strict financial control was exercised by a French and a British controller. Meanwhile a nationalist outlook was developing among those Egyptians who had been touched by Western influences, many of whom regarded the Khedive, Tawfiq, as a puppet maintained by France and Britain. In 1881 a group of army officers, led by Arabi Pasha, forced Tawfiq to form a new ministry and to summon the Chamber of Notables, a consultative body originally set up by Ismail. France opposed any concessions to placate Egyptian opinion, and Britain concurred in this. Feelings in Egypt hardened, and in 1882 the Khedive had to appoint a nationalist ministry with Arabi as Minister for War. France and Britain sent naval squadrons, but France subsequently withdrew support and a British expeditionary force landed at Ismailia and routed the Egyptian army at Tel el-Kebir. Cairo was occupied and Tawfiq's prerogatives were restored, to be subsequently exercised under British control.

INCREASED BRITISH INFLUENCE

Britain hoped to set Egyptian affairs in order and then withdraw, but Egypt's financial difficulties contributed towards Britain prolonging its stay. From 1883 to 1907 the Egyptian Government was dominated by the British Agent and Consul-General, Sir Evelyn Baring, who in 1891 became Lord Cromer. Tawfiq was succeeded by his son Abbas II in 1892. He resented Cromer's authority and a new nationalist movement developed under Mustafa Kamil, a young lawyer. A series of puppet governments preserved a façade of constitutionalism, but educated youth turned increasingly to opposition. British officials increased from about 100 in 1885 to over 1,000 in 1905, and were out of touch with the growing strength of nationalist feeling.

Cromer was succeeded in 1907 by Sir Eldon Gorst, who established better relations with the Khedive, and Gorst was in turn followed by Lord Kitchener in 1911. When Turkey entered the First World War in November 1914 on the side of Germany, Egypt was still nominally a province of the Ottoman Empire. Egypt was declared a British protectorate, with a British High Commissioner, and Britain assumed responsibility for the defence of the Suez Canal. In December Abbas II was deposed and the British Government offered the title of Sultan to Hussain Kamil, the brother of Tawfiq. When Hussain died in 1917 he was succeeded by his brother Fouad. The nationalist movement flourished under wartime conditions, and in November 1918 the nationalist leader Saad Zaghloul presented the High Commissioner, Sir Reginald Wingate, with a demand for autonomy, which Britain refused. The nationalists became known as the *Wafd* (Delegation), but a negotiated settlement was not forthcoming and on 28 February 1922 Britain unilaterally abolished the protectorate and recognized Egypt as an independent sovereign state. Britain, however, reserved to itself the security of the Suez Canal and the defence of Egypt. In March 1922 Fouad took the title of King of Egypt.

INDEPENDENCE

The years between independence and the Second World War brought a triangular struggle between the King, the Wafd and the British Government. The Wafd wanted a revolution, but the King owed his throne to the British. Elections usually gave the Wafd a majority, but a Wafd ministry was unacceptable to King Fouad, who normally had the concurrence of the British Government. In 1935 Fouad was succeeded by his son Farouk, and in 1936 an Anglo-Egyptian treaty of 20 years' duration was signed which terminated British occupation but empowered Britain to station forces in the Suez Canal Zone until the Egyptian army was in a position to ensure the security of the canal.

During the Second World War Egypt was a vital strategic factor as the British base in the Middle East. Egyptian support for the Allied cause was by no means total. The Wafd favoured co-operation with the British, and Britain forced Farouk's acquiescence in the formation of a Wafdist Government under Nahas Pasha in 1942. Nahas became increasingly enthusiastic about Arab unity and was instrumental in establishing the League of Arab States (Arab League — see p. 264). In 1944 his Government fell.

Egypt joined Iraq, Syria and Jordan in military action following the declaration of the State of Israel in May 1948. Military failure resulted. The King's early popularity had vanished; the *Ikhwan al-Muslimun* or Muslim Brotherhood, a puritanical religious body, had become a threat, and communism

had gained new adherents. The discredited regime made a last bid for royal and popular support when Nahas, again in power, abrogated the 1936 Treaty with Britain. Terrorism and economic sanctions were then employed in an attempt to compel the British forces to withdraw from the Canal Zone.

THE REVOLUTION: 1952–56

On 23 July 1952 a group of young army officers, the 'Free Officers', who had long been planning a *coup d'état*, seized power in Cairo. They invited the veteran politician, Ali Maher, to form a government under their control, and secured the abdication of King Farouk in favour of his infant son, Ahmad Fuad II, on 26 July. Farouk sailed to exile.

Gen. Muhammad Neguib, an associate of the Free Officers who had incurred the enmity of King Farouk and who had earlier made himself popular by his condemnation of the British action in 1942, was made Commander-in-Chief of the Armed Forces and head of the military junta. A Council of Regency was formed in August. On 7 September, after an attempt by the Wafd and other parties to resume the political battle on their own terms, a new Cabinet, with Gen. Neguib as Prime Minister, was substituted for that of Ali Maher. Real power, however, lay with the nine officers who formed the Revolutionary Command Council (RCC).

The Revolution soon gained momentum. In September 1952 land ownership was limited to 300 acres in any one family and the power of the feudal class, which had for so long dominated Egyptian political life, was destroyed. Land owned by the royal family was confiscated. On 10 December the Constitution was abolished, and on 16 January 1953 all political parties were dissolved. It was announced that there would be a three-year transition period before representative government was restored. On 18 June the monarchy was abolished and Egypt declared a republic, with Neguib as President and Prime Minister as well as Chairman of the RCC. Col Gamal Abd an-Nasser, who, although leader of the Free Officers, had hitherto remained in the background, became Deputy Prime Minister and Minister of the Interior, and Abd al-Hakim Amer was appointed Commander-in-Chief of the Armed Forces.

A struggle for power soon developed between Gen. Neguib, whose personal tendencies were Islamic and conservative, and Col Nasser. On 25 February 1954 Neguib was relieved of his posts as President, Prime Minister and Chairman of the RCC and accused of having attempted to concentrate power in his own hands. Nasser became Prime Minister and Chairman of the RCC in his place for a few days but Neguib was restored as President and reassumed both the other posts, only to be ousted again as Prime Minister by Nasser in April. Neguib had suffered a defeat and his liberal measures were rescinded. When in October a member of the Muslim Brotherhood attempted to assassinate Nasser, its leaders and several thousand alleged supporters were arrested and in subsequent trials a number of death sentences were passed. On 14 November 1954 Neguib was relieved of the office of President and accused of being involved in a Muslim Brotherhood conspiracy against the regime. He was placed under house arrest and Nasser became acting Head of State.

A settlement of the Sudan and Suez problems had been facilitated by the expulsion of King Farouk. The claim to the joint monarchy of Egypt and Sudan was dropped and negotiations with Sudanese leaders were facilitated because Neguib himself was half-Sudanese and popular in Sudan. An Anglo-Egyptian agreement, signed on 12 February 1953, ended the Condominium and offered the Sudanese the choice of independence or union with Egypt. Egyptian expectation that they would choose the latter was disappointed; the overthrow of Neguib and the suppression of the Muslim Brotherhood fed the century-old suspicion of Egyptian motives.

An Anglo-Egyptian agreement on Suez was signed on 19 October 1954; this provided for the withdrawal of British troops from the Canal Zone within 20 months. The agreement recognized the international importance of the Suez Canal (which was described as 'an integral part of Egypt') and expressed the determination of both parties to uphold the 1888 Constantinople Convention.

Under Nasser Egypt began to assert its importance in world affairs. He sought influence in three circles: the Islamic, the African and the Arab, and his visit to the Bandung conference in 1955 added a fourth: the 'non-aligned'. Egypt led the opposition among certain Arab states to the Baghdad Pact (later to become the Central Treaty Organization). In October 1955 Egypt concluded defence agreements with Syria and with Saudi Arabia and in April 1956 a military pact was signed between Egypt, Saudi Arabia and Yemen. Tension with Israel remained high, and raids and counter-raids across the border of the Gaza Strip called for unceasing vigilance on the part of the UN observers stationed on the frontier. In September 1955 Nasser announced an arms deal with Czechoslovakia which was to supply large quantities of military equipment, including Soviet tanks and aircraft, in return for cotton and rice.

In 1956 a constitutional basis for Col Nasser's authority was established. A new Constitution providing for a strong presidency was proclaimed in January and on 23 June approved in a plebiscite in which the citizens of the Egyptian Republic also elected Nasser as President.

THE SUEZ CRISIS AND ITS CONSEQUENCES: 1956–57

President Nasser's policy of non-alignment, which implied willingness to deal with both power blocs, was followed by the Egyptian attempt to obtain funds for the ambitious High Dam project at Aswan. By this project the Egyptian Government aimed to increase cultivable land and generate electricity for industrialization, which was seen as the main solution to Egypt's increasing population problem. Following offers of assistance from the USA and Britain and, separately, from the USSR, the International Bank for Reconstruction and Development (IBRD) offered a loan of \$200m. in February 1956, on condition that the USA and Britain lent a total of \$70m. and that the agreement of the riparian states to the scheme was obtained; Egypt was to provide local services and material.

The last British troops were withdrawn from Egypt in June 1956, in accordance with the 1954 agreement. Relations with the West were impeded, however, by Egyptian opposition to the Baghdad Pact and strong propaganda attacks on Britain, France and the USA. On 20 July the USA and Britain withdrew their offers of finance for the High Dam, noting that agreement between the riparian states had not been achieved and that Egypt's ability to devote adequate resources to the scheme was doubtful. The USSR made no compensating move. On 26 July President Nasser announced that the Suez Canal Company had been nationalized and that revenue from the Canal would be used to finance the High Dam.

Britain, France and the USA protested strongly at this action, and, after an international conference had met in London in August, a committee, under the chairmanship of the Prime Minister of Australia, went to Cairo to submit proposals for the operation of the Canal under an international system. These were rejected by the Egyptian Government. At a second London conference, in September, a Suez Canal Users' Association was formed and was later joined by 16 states. On 13 October the UN Security Council voted on an Anglo-French resolution embodying basic principles for a settlement agreed earlier between the British, French and Egyptian Ministers of Foreign Affairs in the presence of the UN Secretary-General. The first part of this, outlining the agreed principles, was adopted unanimously; the second, endorsing the proposals of the first London conference and inviting Egypt to make prompt proposals providing no less effective guarantees to users, was vetoed by the USSR.

Britain and France, thus frustrated in their attempts to retain some measure of control over the Suez Canal, at this stage reached a secret understanding with Israel involving military action. Following the disclosure on 24 October that a unified military command had been formed by Egypt, Jordan and Syria, Israeli forces crossed into Sinai on 29 October, ostensibly to attack Egyptian *fedayin* bases, and advanced towards the Suez Canal. On 30 October France and Britain called on Israel and Egypt to cease warlike action and withdraw their forces from either side of the Canal; Egypt was requested to agree to an Anglo-French force moving temporarily into key positions at Port Said, Ismailia and Suez; Israel agreed but Egypt refused. The same day, at a meeting of the UN Security Council, Britain and France vetoed US and Soviet resolutions requesting an

immediate Israeli withdrawal and calling on all UN members to refrain from the use of force or the threat of force.

Anglo-French air operations against Egypt began on 31 October but paratroops and seaborne forces landed in the Port Said area only on 5 November. Meanwhile, on 2 November, the UN General Assembly called for a cease-fire and two days later adopted a Canadian proposal to create a UN Emergency Force to supervise the ending of the hostilities. On 6 November, following considerable US pressure, the British Prime Minister, Sir Anthony Eden, announced that, subject to confirmation that Egypt and Israel had accepted an unconditional cease-fire, the armed conflict would end at midnight.

The organization of the UN force was rapidly undertaken and the first units reached Egypt on 15 November. The withdrawal of the Anglo-French forces was completed the following month. Israeli forces, which had occupied the entire Sinai peninsula, withdrew from all areas except the Gaza Strip, which they wished to prevent becoming a base for more raids, and Sharm esh-Sheikh at the entrance to the Gulf of Aqaba, which commanded the seaway to the port of Eilat. These areas were returned to Egyptian control in March 1957 after pressure on Israel by the USA.

The Suez Canal, which had been blocked by the Egyptians, was cleared by a UN salvage fleet and reopened at the end of March 1957. The terms under which the Canal reopened were full control by the Egyptian Canal Authority and respect for the Constantinople Convention of 1888, which provided that the Suez Canal should be open to vessels of all nationalities, in war and peace. Disputes would be settled in accordance with the UN Charter or referred to the International Court of Justice.

UNION OF EGYPT AND SYRIA

Elections to the Egyptian National Assembly, provided for in the 1956 Constitution, were held in July 1957. Only candidates approved by President Nasser and his colleagues were permitted to stand and it was clear that the 350 members elected (who included women) were not expected to exert much influence on the Government.

Following the defence agreement in 1955, discussions had been held in the following two years on union between Egypt and Syria. Both countries were aligned against the West and looked to the USSR and other communist states for support, and in Syria pro-Egyptian elements were in the ascendant. On 1 February 1958 the union of Egypt and Syria, under the title of the United Arab Republic (UAR), was announced, but it was not until 21 July 1960 that the first National Assembly of the UAR, consisting of deputies from both Egypt and Syria, was opened in Cairo by President Nasser.

EXTERNAL RELATIONS: 1958–61

During this period President Nasser was actively concerned with changes in the rest of the Arab world.

An invitation was extended to other Arab states to join the new union and in March 1958 the UAR and Yemen entered into a loose association referred to as the United Arab States. This association did not prosper, however, and was terminated by the UAR in December 1961.

President Nasser's hostility to the West found favour with the USSR, with which the UAR established closer ties during these years. Soviet military and industrial aid was granted and in December 1958 an agreement was concluded which ensured Soviet assistance for the building of the Aswan High Dam. Work on the first stage of the High Dam began in January 1960.

Relations with the West improved during 1959 and 1960. Through the mediation of the IBRD an agreement with Britain was signed on 1 March 1959 providing for the payment by the UAR of £27.5m. as compensation for British private property taken over at the time of the Suez crisis in 1956. Diplomatic relations with Britain were resumed at chargé d'affaires level in December 1959 and raised to ambassadorial level early in 1961. A $56.5m. loan to improve the Suez Canal was obtained from the World Bank in 1959, and other aid came from the USA in 1960.

SYRIAN WITHDRAWAL FROM UAR

President Nasser replaced the two Regional Executive Councils and the Central Cabinet of the UAR with a single central government in August 1961. Syria had by now become dissatisfied with the union and on 28 September the Syrian army seized control in Damascus and Syria withdrew from the UAR. President Nasser at first called for resistance to the Syrian *coup d'état* but, when the rebels were seen to be in firm control, said on 5 October that he would not oppose recognition of Syria's independence. The loss of Syria was a bitter blow to President Nasser and his Egyptian colleagues who now set about a re-examination of their policies which resulted in a renewal of revolutionary fervour.

The UAR Government (Egypt retained the full title) was re-formed on 18 October and a National Congress of Popular Forces, consisting of 1,750 delegates, representing economic and professional interests and other social groups, rather than geographical areas, met in Cairo on 21 May 1962. President Nasser presented the National Congress with a draft National Charter outlining his programme for developing the UAR according to Arab socialist principles. A new democratic system of government was introduced, based on the Arab Socialist Union (ASU) (replacing the National Union) and including popular councils of which at least one-half of the members would be workers or *fellahin*.

MORE ATTEMPTS AT UNION

The Syrian *coup d'état* had been preceded by the overthrow in February 1963 of the regime of Gen. Kassem in Iraq. These changes in power brought Syria and Iraq into closer alignment with Egypt and it was announced on 17 April that agreement had been reached on the formation of a federation of the three countries under the name of the United Arab Republic. Rivalries, however, arose in both Baghdad and Damascus between supporters of the Baath Party and 'Nasserists', and by August President Nasser had withdrawn from the agreement, claiming that the Baathists had established one-party dictatorships in Syria and Iraq and ignored his insistence on wider nationalist representation.

A month later President Aref of Iraq called for a Baathist union of the three countries but, after the expulsion of Baath leaders from Iraq in November 1963 and the consolidation of power in Aref's hands, the unity movement between Iraq and Syria fell apart and Iraq and Egypt again moved closer together. A Unified Political Command between Iraq and Egypt began work in early 1965, but progress towards unity was slow.

During 1964 President Nasser took an important initiative in Arab League affairs by calling two Arab summit meetings in Egypt, which determined Arab policy on the use of water from the River Jordan and also strengthened the armies of Syria, Lebanon and Jordan. A further £E1m. was set aside for the formation of the Palestine Liberation Organization (PLO).

The Arab reconciliation and presentation of a united front lasted until the spring of 1965. Iraq, Kuwait, Yemen (Arab Republic), Algeria and Lebanon continued to follow President Nasser's lead, only Syrian critics complaining that UAR policy was not sufficiently anti-Israeli. Relations between the UAR and Jordan improved strikingly and, after a conference of heads of Arab governments in Cairo in January 1965 to discuss co-ordination of Arab policies, King Hussein, previously the object of UAR attacks and derision, himself paid a visit to Cairo.

In Yemen, despite Egyptian support, the republican regime seemed no closer to victory over the royalists, who held the mountainous regions of the north-east and were assisted by Saudi Arabian finance and supplies of arms. This military stalemate and the financial burden of maintaining some 50,000 troops in Yemen moved President Nasser to attempt to disengage, but negotiations ended in deadlock and Egyptian troops remained in Yemen. On 22 February 1966, the day the British Government announced that British forces would leave Aden and South Arabia when that territory became independent in 1968, President Nasser stated that Egyptian troops would not be withdrawn until the Revolution in Yemen could 'defend itself against the conspiracies of imperialism and reactionaries'.

CHANGES OF INTERNATIONAL ALIGNMENT

The years 1964 and 1965 saw a deterioration of UAR relations with the West, in particular the USA and Britain, and increasing dependence on the Soviet Union. Relations with the USSR had been strengthened in May 1964 when the Soviet Premier, Nikita

Khrushchev, made a 16-day visit to Egypt to attend the ceremony marking the completion of the first stage of the Aswan High Dam, being built with Soviet aid. President Nasser paid his third visit to the USSR in August 1965 and (Khrushchev having been overthrown) the new Soviet Premier, Alexei Kosygin, visited the UAR in May 1966, expressing support for UAR policies and again demonstrating Soviet interest in the Middle East.

DOMESTIC TROUBLES

Although President Nasser obtained over 99% of the votes cast in the presidential referendum in March 1965, there were subsequently more signs of discontent in the UAR than at any time since he had come to power. In a speech to Arab students during his visit to Moscow in August 1965, he disclosed that a plot against his life had been discovered, in which the prohibited Muslim Brotherhood was thought to have been involved.

In September 1965 a new Government headed by Zakaria Mohi ed-Din replaced that of Ali Sabri, who became Secretary-General of the ASU. Thereafter, administrative changes were made and the security system was improved. Taxation was increased and measures of retrenchment were introduced because of increasing economic difficulties, particularly the acute shortage of foreign exchange. US wheat supplies were continued, credits from France, Japan and Italy and a loan from Kuwait were obtained and there were increased drawings from the International Monetary Fund (IMF). Nevertheless the level of imports, particularly food to feed the growing population, and the debt-service burden resulting from the first Five-Year Plan caused a continuing drain on foreign exchange reserves and the UAR faced a balance of payments crisis. The second Five-Year Plan was revised and extended over seven years and President Nasser gave public warnings that sacrifices were necessary in every field as Egypt lacked the foreign currency to pay for imports. He refused, however, to abandon the expensive commitment in Yemen. Zakaria Mohi ed-Din's replacement in September 1966 by Sidki Sulaiman (a technocrat who retained his post as Minister of the High Dam) was seen as the outcome of disagreement over retrenchment measures. When the UAR defaulted on repayments due to the IMF in December 1966, the country was on the verge of bankruptcy.

WIDENING RIFT WITH SAUDI ARABIA

The rift between the UAR and Saudi Arabia widened. President Nasser in February 1966 expressed opposition to an Islamic grouping which King Faisal was promoting, and in the succeeding months propaganda warfare between the two countries was intensified. In the middle of the year the President stated that he would not attend an Arab summit conference with Saudi Arabia and Jordan, both of which he criticized for obtaining British and US military aid, and advocated for the indefinite postponement of the conference planned for September. A majority of Arab states agreed, but in October Tunisia severed relations with the UAR over continued differences on Arab League policies.

In Yemen, Egyptian forces had been withdrawn from northern and eastern areas and concentrated in the triangle between San'a, Hodeida and Taiz. Egyptian control over the republican armed forces and administration was increased and when, in September 1966, after President Sallal had returned to Yemen from a year's absence in Cairo, the republican Prime Minister, Hassan al-Amri, and seven senior members of his Cabinet visited Egypt to make a plea for greater independence, they were arrested and detained there. The following month, about 100 senior Yemen officials were dismissed and arrests and executions were carried out.

WAR WITH ISRAEL

The events of May 1967 were to transform the Middle East. There had been an increase in Syrian guerrilla activities in Israel during the previous six months and in April the tension led to fighting in the Tiberias area, during which six Syrian aircraft were shot down. Israeli warnings to the Syrian Government, culminating on 12 May in the threat by Prime Minister Eshkol of severe reprisals if terrorist activities were not controlled, prompted Syrian allegations that Israel was about to mount a large-scale attack on Syria. President Nasser, who had been reproached for not aiding Syria in the April fighting in accordance with the mutual defence agreement, responded immediately, moving large numbers of troops to the Israeli border. He secured the dissolution of the UN Emergency Force, which depended on Egyptian permission for its presence on the Egyptian side of the frontier, and reoccupied the gun emplacement at Sharm esh-Sheikh on the Straits of Tiran. He later justified these steps by claiming that he had received Syrian and Soviet warnings that Israeli troops were concentrated on the Syrian border (an allegation subsequently disproved by reports of UN truce observers) and an invasion of Syria was imminent.

When on 23 May President Nasser closed the Straits of Tiran to Israeli shipping, thereby effectively blockading the Israeli port of Eilat, his prestige in the Arab world increased considerably. Britain and the USA protested that the Gulf of Aqaba was an international waterway; Israel regarded the blockade of the Straits as an unambiguous act of war. As tension increased, King Hussein of Jordan concluded a mutual defence pact with the UAR and was immediately joined by Iraq.

On 5 June Israel launched large-scale air attacks on Egyptian, Jordanian, Syrian and Iraqi airfields, and Israeli ground forces made rapid advances into the Gaza Strip, Sinai and western Jordan; there was also fighting on the Israeli-Syrian border. The outcome was decided within hours by the air strikes, which destroyed the bulk of the Arab air forces, and the Israeli ground forces were everywhere successful. By 10 June, when all participants had accepted the UN Security Council's demand for a cease-fire, Israeli troops were in control of the Sinai peninsula as far as the Suez Canal (including Sharm esh-Sheikh), the West Bank of the Jordan (including the Old City of Jerusalem), the Gaza Strip and Syrian territory extending 12 miles from the Israeli border. The Suez Canal was blocked by Egypt in the course of the fighting. President Nasser offered to resign, but popular support led him to withdraw his resignation. He dismissed a number of senior army officers and took over himself the duties of Prime Minister and Secretary-General of the ASU.

The implications of the catastrophe were only gradually realized. It was estimated that the loss of revenue from the Suez Canal, from oil produced in Sinai and from tourism amounted to some £E12.5m. per month, or almost half Egypt's foreign currency earnings. Also, the withdrawal of a large part of the Egyptian force in Yemen reduced Nasser's ability to influence affairs both in that country and in Aden and South Arabia (which became independent as the Republic of Southern Yemen on 30 November 1967, after the withdrawal of British troops).

The USSR, which had given the Arab cause strong verbal support throughout the crisis, continued to take a strong pro-Arab stand at the UN and President Podgorny paid a lengthy visit to Cairo to discuss future Egyptian policy. The USSR replaced about half the lost Egyptian aircraft and provided other military supplies and instructors.

After repeated violations of the cease-fire by both sides, the UN Security Council, on 22 November 1967, adopted a British resolution laying down the principles for a just and lasting peace in the Middle East and authorizing the appointment of a UN special representative to assist in achieving a settlement. This was Resolution 242 (see Documents on Palestine, p. 105), which has subsequently formed the basis of most attempts to restore peace to the Middle East. Dr Gunnar Jarring was appointed UN Special Representative to the region and quickly began discussions with Arab and Israeli leaders which continued for a number of years.

THE UAR AFTER THE JUNE WAR

Meanwhile President Nasser faced daunting economic difficulties and a disturbed political situation in Egypt. An austerity budget had been framed in July 1967. The cost of re-equipping the armed forces required reductions in investment, in spite of Soviet aid and assistance from other Arab governments. Socialist policies were still pursued, as demonstrated by the decision, announced in October, to nationalize the wholesale trade. The continuing shortage of foreign exchange made it desirable to improve the UAR's relations with the West and in December diplomatic relations with Britain were resumed. A bridging loan from British, West German and Italian banks,

obtained in February 1968, enabled the UAR to make the repayments to the IMF which had been outstanding since the end of 1966, and in March the IMF approved further drawings.

Widespread demonstrations by students and workers took place in Cairo, Helwan and other centres, towards the end of February 1968. Initially organized to protest against the leniency of court sentences passed against senior air force officers for their failure to prevent the destruction of the UAR air force on 5 June, they revealed widespread discontent. Several people were killed in clashes with police, and the universities were closed; nevertheless President Nasser realized the need for immediate conciliatory action. Retrials were ordered and comprehensive changes to the Cabinet were announced, including the introduction of a number of civilian experts. Ali Sabri, who had been reinstated as Secretary-General of the ASU in January, was also included but Zakaria Mohi ed-Din left the Government. President Nasser retained the premiership.

Deprived of foreign exchange by the continued closure of the Canal and the reduction in the tourist trade, the UAR remained dependent on the regular aid payments from Saudi Arabia, Kuwait and Libya and on Soviet assistance. There were signs that the civilian economy ministers favoured some relaxation of over-rigid state control in industry and more encouragement of private enterprise and foreign investment. Meanwhile, military expenditure in 1968 and 1969 remained high; Soviet arms deliveries continued, as did the presence in Egypt of some 3,000 Soviet military advisers and instructors.

The efforts of Dr Jarring, the Special Representative of the UN Secretary-General, to reconcile Israel, the UAR and Jordan had, by the end of 1968, yielded little success. In April 1969, following initiatives by the USSR and France, those two countries, together with Britain and the USA, as permanent members of the UN Security Council, embarked on a series of discussions in an unsuccessful attempt to promote a settlement.

A pattern of sporadic action, involving artillery duels across the Suez Canal, commando raids and air combat developed throughout 1969 and into 1970, with growing Soviet involvement in Egypt's defence. In the summer of 1970 the US Secretary of State, William Rogers, presented a set of proposals for solving the continuing Middle East crisis. An uneasy cease-fire, but no permanent solution, resulted.

EGYPT AFTER NASSER

Although President Nasser had clear differences with the Palestinian guerrillas over their rejection of the US peace proposals and the hijacking of western airliners at the beginning of September 1970, one of his final acts was to secure agreement in Cairo between King Hussein of Jordan and the Palestinian leader, Yasser Arafat, for an end to the fighting between the Jordanian army and the guerrillas.

Nasser's sudden death on 28 September 1970 came as a profound shock, precipitating fears that peace prospects for the Middle East would now be jeopardized. A close associate of Nasser, and Vice-President at the time of his death, Col Anwar Sadat, was immediately appointed provisional President by the Cabinet and the ASU, being later elected President in a national referendum, and by mid-1971 he was firmly in control of the government of Egypt.

In November 1970 President Sadat had agreed to the creation of a federation with Sudan and Libya. Sudan, however, later postponed its membership of the union. In April 1971 Syria agreed to become the third member of the federation. The federation proposals, together with Sadat's plan for the re-opening of the Canal, precipitated a crisis in the leadership, which led to a comprehensive purge by Sadat of opponents at all levels of the Government, including Ali Sabri, one of the two Vice-Presidents. In July new elections were held, not only for all levels of the ASU, but also for trade unions and professional bodies. The first permanent Constitution since the 1952 revolution was approved in September. It contained important clauses governing personal freedoms and replaced the name of United Arab Republic with that of the Arab Republic of Egypt.

Egypt was becoming increasingly dependent on the USSR, both militarily and economically. Student riots at the beginning of 1972 prompted assurances from President Sadat that an armed confrontation with Israel was definitely intended. Against this background of increasing internal unease Egypt intensified efforts to diversify sources of development aid and armaments. The Suez–Alexandria (Sumed) pipeline received promises of Western backing and in May 1972 a five-year preferential trade agreement was concluded with the EC.

CRISIS IN EGYPTIAN–SOVIET RELATIONS

The most striking event of 1972 was the dismissal of Soviet military advisers from Egypt in July. This did not lead to a rupture in Egyptian–Soviet relations but neither did it result in any significant *rapprochement* with the West; anti-American feeling persisted. A new round of diplomatic visits to state Egypt's case, particularly in the West and the Far East, ensued and arms supplies were requested from France and Britain. With the announcement on 2 August 1972 of Egypt's plan to merge with Libya, France stated that supplies of *Mirage* fighters to Libya would continue, Libya not being in direct conflict with Israel.

Contacts with the USSR continued and economic relations appeared unaffected by the events of July but it was clear that the USSR was looking elsewhere to maintain its presence in the Mediterranean. It was unclear to what extent Sadat's hand had been forced in ordering the Soviet withdrawal.

INTERNAL UNREST

A law enacted in August 1972 provided for penalties as severe as life imprisonment for offences endangering national unity, including opposing the Government by force and inciting violence between Muslims and the Coptic minority. Clashes between these two communities were becoming more frequent and, along with increasing student unrest, were seen as an expression of dissatisfaction with the state of 'no-peace-no-war'. The Government resorted to repeated assurances of military preparations. Indeed, in December 1972 Sadat ordered preparations for war, after strong criticism in the People's Assembly (the new legislative body comprising 350 elected members and 10 presidential nominees–instituted by the new Constitution, and elected in October and November 1971) of the Government's policies. Another cause of uneasiness was the proposed merger with Libya, which many felt might give Col Muammar al-Qaddafi, the Libyan leader, excessive control over Egypt's destiny.

In January 1973 there were violent clashes between police and students. In February a number of left-wing elements, including several journalists, were expelled from the ASU; student unrest continued and in March President Sadat took over from Aziz Sidqi (who was appointed in January 1972 in succession to Dr Mahmoud Fawzi, 1970–72) as Prime Minister. The new administration's policies were approved by the People's Assembly but the Government was criticized for failing to follow a clear-cut economic policy, particularly with regard to the latest Five-Year Plan.

RELATIONS WITH LIBYA

Egypt and Libya had agreed a programme providing for full union by stages at a meeting between the two Heads of State in Benghazi, Libya, in August 1972, and a merger of the two countries was planned to take place on 1 September 1973. The Libyan leader, Col Qaddafi, demonstrated greater enthusiasm than President Sadat for total union, and in July 1973 Qaddafi organized a 40,000-strong Libyan march on Cairo, in order to bring pressure to bear on Egypt. The march was turned back about 200 miles from Cairo, however, and Sadat, although still supportive of eventual union, stated that 'enthusiasm and emotional impulses are not a sufficient basis for unity'. An agreement in principle was nevertheless signed on 29 August, but few practical steps were taken to ensure its prompt implementation.

Throughout 1974 and early 1975 relations between the two countries deteriorated to such an extent that President Sadat asserted in a press interview in April 1975 that Qaddafi was '100% sick'. At the time Libya had been threatening to take action against Egyptians working in Libya. Relations worsened when a large Soviet-Libyan arms agreement was revealed later in the month. President Sadat hastily accused Libya and the USSR of conducting an international campaign against him and his Middle East policy. Libya was among the Arab countries

severely critical of the Second Interim Disengagement Agreement between Egypt and Israel in September 1975. In July 1977 open warfare took place on the border between Egypt and Libya, and when Sadat visited Israel in November 1977 (see below), relations deteriorated even further, with Egypt severing diplomatic relations with Libya in December. Libya joined the rest of the Arab world in condemning the Egypt-Israel peace treaty in March 1979, and it was reported that renewed outbreaks of fighting on the Egypt-Libya border were prevented only by the intervention of the USA. In March 1980 Libya constructed airfields and fortifications on the border with Egypt, and in June 1980 Egypt declared martial law in the border area with Libya for a period of one year.

THE OCTOBER WAR AND ITS AFTERMATH

Between the June 1967 war and October 1973 Egyptian leaders frequently stated that the war against Israel would be resumed, but when Egyptian forces crossed the Suez Canal on 6 October 1973, it came as a surprise to Israel and to the rest of the world. For President Sadat the war was a considerable triumph; it appeared to end the years of stalemate with Israel, and his personal reputation was greatly enhanced. As a result of the Disengagement Agreement which Israel and Egypt signed on 18 January 1974, Egyptian forces regained a strip of territory to the east of the Suez Canal (see map on p. 110).

After the war extensive and far-reaching changes took place in Egypt. An amnesty was granted to many important political prisoners in January 1974, and in April was further extended to more than 2,000 persons who had been imprisoned for political or criminal offences. Press censorship was lifted in February, and in May, at a national referendum, some 8.5m. voters gave a 99.95% endorsement to a programme of economic and social reform which concentrated on reconstruction, attracting foreign investment, limiting police interference in everyday life, and the introduction of a private enterprise sector in the economy while still maintaining the public sector.

One result of the October War was Egypt's improved relations with the USA. Diplomatic relations between Egypt and the USA were restored in November 1973 and the US Secretary of State, Dr Henry Kissinger, maintained a cordial relationship with President Sadat during the disengagement talks. American initiatives in peacemaking were generally welcomed by Egypt, while the Americans became more conscious of the extent of their dependence on Arab oil. It was, therefore, in an atmosphere of *rapprochement* that President Nixon visited Cairo in June 1974.

RETURN TO STALEMATE

The euphoria which the crossing of the Suez Canal engendered began to dissipate during 1974. Increases in the cost of living, and the slow rate of progress of the promised economic reform provoked riots in Cairo on 1 January 1975, and further disturbances among textile workers in March 1975, when the textile complex at el-Mahalla el-Koubra was closed for several days after violent clashes over pay demands.

As a result of these disturbances Dr Abd al-Aziz Higazi, who had succeeded President Sadat as Prime Minister in September 1974, resigned the premiership and was replaced in April 1975 by Gen. Mamdouh Muhammad Salem, the former Minister of the Interior and Deputy Prime Minister. On 1 May 1975 President Sadat announced that all lower-paid public-sector employees would receive additional cost-of-living allowances equal to 30% of their pay, and later in May, in a speech to the People's Assembly, the Prime Minister, Salem, promised that steps would be taken to ensure that the economic programme of 1974 would be implemented and that foreign investors, whether from Western countries or from the Eastern bloc, would be given every facility.

During the first eight months of 1975 Dr Kissinger engaged in considerable 'shuttle diplomacy' and in September Egypt and Israel signed the Second Interim Disengagement Agreement (see Documents on Palestine, p. 111). In brief, Israel withdrew from the Giddi and Mitla passes and Egypt recovered the Abu Rudeis oilfield in Sinai, while Article I of the Agreement stated that Egypt and Israel agreed that 'the conflict between them and in the Middle East shall not be resolved by military force but by peaceful means'. This agreement brought upon President Sadat the strong disapproval of other Arab interests, particularly Syria, Jordan, Iraq and the PLO, as it appeared to them that Egypt was seeking to commit the whole Arab world to a policy of peace with Israel. The position had also been complicated by the fact that, at the Arab summit at Rabat in October 1974, the PLO had achieved the status of the sole legitimate representative of the Palestinian people. In May 1976 Egypt attempted to consolidate an improvement in relations with the PLO by asking the Arab League to admit the PLO as a full member. Relations with Syria, at a particularly low ebb during the Lebanese civil war, improved after the Riyadh and Cairo summits in October 1976.

The rest of the Arab world was also aware that Egypt was establishing closer links with the USA; certainly, Sadat was becoming disillusioned with the USSR. In March 1976 he abrogated the Treaty of Friendship with the USSR, which Egypt had signed in 1971. In a speech to the Egyptian People's Assembly, Sadat accused the USSR of exerting political, economic and military pressure on Egypt by criticizing his Middle East policies, refusing to reschedule Egypt's debts, and declining to provide supplies of weapons and spares. Egypt decided to expel about 40 Soviet diplomats in protest against the Soviet invasion of Afghanistan in December 1979.

POLITICAL ADVANCE AND DOMESTIC DIFFICULTIES

During 1976 and for most of 1977, President Sadat was forced to involve himself increasingly in domestic issues. In March 1976 three political 'platforms' were allowed to form within the ASU, and in the November 1976 elections to the People's Assembly the 'platforms' entered the contest as full-scale political parties. The Arab Socialists (a party of the centre, supporting Sadat) won 280 seats, while the Liberal Socialists (supporting political and economic liberalization) won 12 seats. The left-wing National Progressive Unionist Party (NPUP) won two seats. After the elections President Sadat announced that the ASU would take a less active political role in the future, acting more as a supervisory body for the three parties' activities.

During 1976 Egypt's economy was experiencing severe difficulty (see Economy), and when in January 1977 Sadat announced a budget which, because of the withdrawal of subsidies, outlined significant price increases, severe riots erupted in Cairo and other centres. Consequently Sadat revoked the price increases and in February he introduced a law which made a wide range of new offences (including some relating to industrial action) punishable by hard labour for life. The legislation was subsequently endorsed by a national referendum.

By June 1977 Sadat considered the internal situation in Egypt to be sufficiently under control to address the introduction of regulations to permit the creation of new political parties. A law was adopted by the People's Assembly stipulating that each prospective new party must include at least 20 members of the People's Assembly (existing parties excepted, and must have no history of political activity during the time of the monarchy). This effectively excluded the Communist Party, the Muslim Brotherhood and the New Wafd Party.

PROGRESS TOWARDS A PEACE TREATY WITH ISRAEL

In November 1977, however, domestic issues were completely overshadowed by Sadat's visit to Israel and his address to the Knesset, the Israeli legislature. It was by no means certain whether any definite peace proposals would result from Sadat's talks with Menachem Begin, the newly-elected Likud Premier of Israel, whose hitherto aggressive attitude did not seem to augur well for the cause of peace, but who might use his newly acquired power to promote a daring initiative. In the event, no significant breakthrough was made immediately. The status of any future Palestinian state presented the main obstacle. Talks continued in 1978, in spite of the opposition of much of the Arab world, which regarded Egypt's unilateral bid for peace with Israel as detrimental to Arab unity. Egypt had pre-empted action being considered by Syria, Libya, Algeria, Iraq and the People's Democratic Republic of Yemen, by severing diplomatic relations with these countries in December 1977. In September

1978 an unexpected breakthrough was achieved when, after talks at Camp David in the USA under the guidance of US President Carter, Sadat and Begin signed two agreements. The first was a 'framework for peace in the Middle East' (see p. 111) and the second was a 'framework for the conclusion of a peace treaty between Egypt and Israel'. The first agreement provided for a five-year transitional period during which the inhabitants of the Israeli-occupied West Bank of the Jordan and the Gaza Strip would obtain full autonomy and self-government, and the second agreement provided for the signing of a peace treaty within three months. In the event the signing of the peace treaty was delayed because of the question of whether there should be any linkage between the conclusion of the peace treaty and progress towards autonomy in the Israeli-occupied areas, but on 26 March 1979, after another intervention by President Carter, the signing took place. The treaty (see Documents on Palestine, p. 112) provided for a phased Israeli withdrawal from Sinai over a period of three years. This withdrawal went according to plan, and for the first time, diplomatic relations between Egypt and Israel were established on 26 February 1980 and the two countries exchanged ambassadors.

Proposals for Palestinian autonomy were contained in a separate letter published with the treaty, and provided for both sides to attempt to complete negotiations within 12 months. There would then be elections of Palestinian local councils and a five-year transitional period would follow during which the final status of the West Bank and Gaza would be negotiated. The autonomy negotiations began in May 1979, but the deadline of 26 May 1980 passed without agreement being reached. The main obstructions were the presence and growth of Israeli settlements on the West Bank, Israel's increasing insistence that Jerusalem was its eternal indivisible capital, and a fundamental difference between Egyptian ideas of Palestinian autonomy, which were tantamount to an independent state, and those of Israel, which envisaged a limited form of self-government.

The Camp David agreements and the subsequent peace treaty resulted in Egypt's isolation in the Arab world. Syria, Algeria, Libya and the PLO had met in Damascus in September 1978 and strongly condemned the Camp David agreements, and in March 1979, after the signing of the peace treaty, the Arab League Council met in Baghdad, Iraq, and passed a series of resolutions (see p. 114) comprising the withdrawal of Arab ambassadors to Egypt, the severing of economic and political links with Egypt, the withdrawal of Arab aid and the removal of the headquarters of the Arab League from Cairo to Tunis. Egypt had already been threatened with these sanctions at an earlier Arab summit in Baghdad in November 1978. Some Arab states were reluctant to honour these decisions, but when Saudi Arabia severed diplomatic relations with Egypt in late April, Egypt's isolation became potentially serious, although private Arab investment continued. (In the event, only Oman, Sudan and Somalia maintained diplomatic relations with Egypt.) As a result, Egypt became increasingly dependent on financial and military aid from the USA. During 1980 it became evident that Egypt's isolation was having little practical effect. The damage inflicted by the economic measures imposed against Egypt were offset by the growing strength of Egypt's own economy. The exchange of ambassadors between Egypt and Sudan and Egypt's sale of arms worth US \$25m. to Iraq in the same month were indicative of its reduced isolation.

INTERNAL POLITICAL CHANGE

Since 1976 President Sadat had been trying to allow the formation of political parties while at the same time ensuring that dangerous opposition did not achieve too much influence. In a law of June 1977 political parties were legalized. Disturbed by the revival of the Wafd Party (as the New Wafd Party) and the criticisms of the NPUP, Sadat won approval in a referendum for new regulations on political parties which resulted in the disbanding of the New Wafd Party and the suspension of the NPUP. In July Sadat announced the creation of a new political party, the National Democratic Party (NDP), with himself as leader, which in practice replaced the Arab Socialist Party. In September 1978 an official opposition party, the Socialist Labour Party (SLP), was formed.

The signing of the Camp David agreements in September 1978, although causing the resignation of the Egyptian Minister of Foreign Affairs, Muhammad Ibrahim Kamel, was popular in Egypt and in October Sadat appointed a new Government, designed to further the peace process, with Mustafa Khalil as Prime Minister. Khalil also became Minister of Foreign Affairs in February 1979. The signing of the peace treaty in March was followed by a referendum in April at which 99.95% of the voters approved the document. A simultaneous referendum gave Sadat a mandate for fresh general elections and for future constitutional changes. The elections, held in June, resulted in a convincing win for Sadat's NDP, which obtained 302 seats in the expanded 392-seat People's Assembly. On 30 April 1980 the People's Assembly approved a number of amendments to the Constitution (see p. 455), the most important of which provided Sadat with the opportunity to seek further terms as President and recognized that Islamic jurisprudence was the basis of Egyptian law.

On 12 May 1980 the Prime Minister, Mustafa Khalil, offered his resignation because Egypt was 'on the threshold of a new stage of national construction', which required a new government. Two days later, Sadat appointed a government in which he himself became Prime Minister. The constitutional amendments then received the approval of more than 98% of the voters at yet another referendum. One of these amendments provided for the election of a 210-member Majlis ash-Shura (Advisory Council) to replace the former Central Committee of the ASU. Elections took place in September 1980 and the NDP won all 140 elective seats. The remaining 70 members were appointed by the President. The NDP also gained more seats in the People's Assembly in 1980 and early 1981, as at least 13 members of the official opposition SLP defected to the NDP or became independents.

MUBARAK SUCCEEDS SADAT

Although political parties had been allowed by Sadat, power had remained with his own NDP, yet opposition was never far beneath the surface. In the summer of 1981 there had been clashes between Copts and militant Islamists, resulting in numerous arrests and the closure of various newspapers. Sadat was trying to stifle the opposition, of whatever religious or political persuasion.

On 6 October, however, Sadat was assassinated at a military parade by a group of militant Islamists led by Lt Khaled Islambouli, who was executed with four associates on 15 April 1982. An Islamist rebellion, which began in Asyout immediately after the assassination, was quickly suppressed, and Vice-President Muhammad Hosni Mubarak was confirmed as President at a referendum on 13 October.

Following his sudden rise to power, Mubarak demonstrated that he was not the nonentity which many believed him to be while he was Vice-President. Although many of Sadat's religious and political detainees were released, Mubarak continued to arrest Muslim fundamentalists, several hundred of whom were tried on charges of belonging to the al-Jihad organization which plotted to overthrow the Government in 1981. In September 1984, 174 of the 302 people arrested in connection with Sadat's murder were acquitted of plotting to overthrow the Government; 16 were sentenced to hard labour for life; and the remainder received prison sentences ranging from two to 15 years. The state of emergency that had been declared after the assassination of President Sadat was subsequently extended at regular intervals.

In his first government reshuffle, in January 1982, Mubarak replaced Dr Ali Abd ar-Razzaq Abd al-Majid (the architect of Egypt's 'open door policy') as Deputy Prime Minister for Finance and Economy, signalling a concern to correct the great inequalities of wealth in Egypt. A second reshuffle in August, including the dismissal of three Deputy Prime Ministers, was intended to secure an improved economic performance.

In foreign affairs, the early months of Mubarak's presidency were preoccupied with the question of the return of Sinai by Israel under the 'Camp David process'. After many last-minute snags, the last section was returned to Egypt on 25 April 1982—although a dispute persisted until 1989 concerning the 1 sq km of the Taba enclave on the Egypt-Israel border, north of the Gulf of Aqaba, which was still occupied by Israel. Relations

between the two countries were subsequently soured, most significantly, by Israel's invasion of Lebanon in June 1982, in protest at which Egypt withdrew its ambassador from Tel-Aviv; and by Israel's suppression of the Palestinian uprising in the Occupied Territories (see below). Of the formulae to secure the withdrawal of foreign forces from Lebanese territory, Mubarak urged Arab states to support the agreement between Israel and Lebanon which was sponsored by the US Secretary of State, George Shultz. Although, in so doing, Egypt was at variance with most of the Arab world, there were signs during 1983—such as the readiness of Iraq and the PLO to restore normal diplomatic links, the resumption of trade with Jordan, after four years, and with Iraq, and the increased flow of Arab money into Egyptian banks—that the period of the country's ostracism by other Arab states (with the exception of those with the most severe regimes, such as Algeria, Libya and Syria) was drawing to a close. President Mubarak had openly supported Yasser Arafat when a Syrian-inspired revolt against his leadership of the PLO erupted out in 1983, in the Beka'a Valley, in Lebanon. In recognition of Egypt's support, Arafat visited Mubarak for talks in Cairo in December 1983, his first visit to Egypt for six years, marking the end of the rift between Egypt and the PLO. Substantial proof of Egypt's rehabilitation was provided by its readmission to the OIC in March 1984, although several countries, notably Libya and Syria, opposed the move.

RELATIONS WITH SUDAN: 1982–87

A joint Egypt-Sudan Nile Valley Parliament, a Higher Integration Council and a Joint Fund, based on the two countries' common interests in the River Nile, were established by charter in October 1982. The Parliament, comprising 60 Egyptian and 60 Sudanese members, was inaugurated in May 1983. Relatively powerless in itself, it was designed to be the first step towards economic integration and an ultimate federation of the two states. The Higher Integration Council was to meet regularly to organize and review joint economic projects and to plan all aspects of the transition to the hoped-for federation. It was also to be used as a forum to co-ordinate policy on Pan-Arab questions and on matters of mutual concern such as the Iran–Iraq War, Lebanon, Palestinian autonomy, etc.

In October 1984 Egypt unilaterally withdrew from the confederation agreement for a 'Union of Arab Republics', which it had entered into with Syria and Libya in 1971, saying it was no longer relevant. In April 1985 President Nimeri of Sudan was deposed by Lt-Gen. Abd ar-Rahman Swar ad-Dahab in a bloodless coup, which was endorsed by Col Qaddafi of Libya, who urged Arabs to overthrow other 'reactionary' regimes, implicitly including Egypt. Lt-Gen. Swar ad-Dahab reaffirmed Sudan's commitment to the integration agreement of 1982 during a visit to Egypt in October, but the Sudanese Government, led by Sadiq al-Mahdi (who became Prime Minister in May 1986), sought to improve its relations with Libya. It was also feared that relations between Egypt and the new Sudanese regime would be embittered by the presence of ex-President Nimeri in Egypt, where he had been granted political asylum. (In July 1986 lawyers representing the Sudanese Government in Cairo requested Nimeri's extradition.) Bilateral links were placed on a more secure footing in February 1987, when Sadiq al-Mahdi and his Egyptian counterpart, Atif Sidqi (appointed in November 1986, see below), signed a 'Brotherhood Charter' in Cairo. This was understood to supersede the integration charter of October 1982 and to form the basis for future relations between the two countries. It was agreed in July 1987 that the issue of Nimeri's political asylum in Egypt should not be permitted to jeopardize bilateral links.

THE RE-EMERGENCE OF THE NEW WAFD PARTY

The right-wing New Wafd, as the Wafd Party, had led the Egyptian nationalist movement against Britain between 1919 and 1952. In the slightly more liberal atmosphere developing under Mubarak, the New Wafd reformed in August 1983, and Fuad Serag ed-Din emerged from political retirement to lead the party. Alarmed, as Sadat had been in 1978, at the New Wafd's potential for popular support, Mubarak's Government refused to recognize the party, but its legality was finally established by the courts in January 1984. In its modern guise, the New Wafd was more heterogeneous than before, comprising Copts, Nasserites, Muslim fundamentalists, former army officers (both pro- and anti-Nasser) and socialist and liberal businessmen.

THE GENERAL ELECTION OF 1984

In April 1984, in the hope that he could consolidate his authority and also (by restoring a measure of real democracy) establish himself as a popular leader, tolerant, within limits, of opposition, Mubarak promised the first 'free, honest and sincere' elections in Egypt for more than 30 years. Safe passage in these elections for his ruling National Democratic Party (NDP) had effectively been assured by an electoral law passed in July 1983, requiring parties to gain a minimum 8% of the total vote in order to be represented in the People's Assembly, which was to be increased from 392 elected seats to 448 from 48 constituencies. Elections to the People's Assembly took place on 27 May, and the NDP accordingly took 72.9% of the total vote (the turn-out was officially only 43.14% of those eligible to vote), entitling it to 389 seats. Of the four other participating parties, only the New Wafd, with 15.1% of the vote, crossed the 8% threshold, winning 59 seats in the Assembly. The opposition parties claimed that the elections had been undemocratic, accusing the Government of widespread fraud and intimidation of voters. The electoral alliance of the New Wafd and the fundamentalist Muslim Brotherhood was thought to have alienated many of Egypt's 6m. Copts, potentially a major constituency for the New Wafd.

The Assembly elections left Mubarak firmly in power, with a viable, yet politically brittle, opposition in the New Wafd, and the subversive Muslim Brotherhood in a relatively open political role, in which their activities could more easily be monitored. The Prime Minister, Fuad Mohi ed-Din, died on 5 June, and on 16 July Mubarak reshuffled his Cabinet.

DIPLOMATIC DEVELOPMENTS

As if to signal its progress back into the Arab fold, Egypt severed diplomatic relations with El Salvador and Costa Rica in May 1984, in response to a call from the Jerusalem Committee of the OIC, after both countries had transferred their embassies in Israel from Tel-Aviv to Jerusalem (see The Jerusalem Issue, p. 90). Egypt and Morocco agreed, in principle, to resume diplomatic relations, while President Mubarak and King Hassan discussed moves to end Egypt's suspension from the Arab League, the last major obstacle to Egypt's reintegration into the Arab community of states.

The full resumption of diplomatic relations with the USSR was also achieved during 1984, following the visit to Cairo in May of Vladimir Polyakov, the last Soviet Ambassador to Egypt, who had been expelled with 1,000 or more experts by President Sadat in 1981. Mubarak had previously allowed the experts to return, and had signed trade and cultural agreements with the USSR. Whilst it sought improved relations with the USSR, Egypt stood second only to Israel in the amount of economic and military aid which it received from the USA.

Relations with Israel became strained after the latter's invasion of Lebanon, but Egypt's renewed commitment to issues affecting the entire Arab community (in particular, as concerning its relations with Israel, the Palestinian question) gave it the confidence to use its influence with both sides in the Arab–Israeli conflict to try to achieve a general peace in the Middle East. Israel repeatedly accused Egypt of contraventions of the military provisions of the 1979 peace treaty, and the question of ownership of the disputed Taba region was a further obstacle to any improvement in bilateral relations. In January 1986 Israel agreed to submit the dispute to international arbitration, provided that this was preceded by a period of conciliation during which arbitrators would try to secure a compromise solution before delivering a binding decision. After the appointment of arbitrators (three independent and one each from Egypt and Israel) and the demarcation of the Taba enclave had been agreed, the arbitration document was finally approved by both countries on 10 September 1986. The process of arbitration began in December. In May 1987 each side presented its case for sovereignty to the arbitration panel, and, in September, a three-member 'conciliation chamber' was established. This failed to formulate a compromise solution in the 60 days allotted to it. In January 1988 Israel rejected a US plan, whereby Egypt would be granted sovereignty over Taba, while Israel was given

access to the area, and in July Egypt rejected further attempts at compromise which failed to establish Egyptian sovereignty. The arbitration panel effectively awarded sovereignty to Egypt on 29 September, but left a key border undefined. Discussions on the final arrangements for the Taba enclave were held in January 1989, and Egypt assumed control over the area in March.

EGYPT'S REHABILITATION AND MIDDLE EAST PEACE INITIATIVES

In September 1984 Jordan decided to resume diplomatic relations with Egypt. The gradual rehabilitation of Egypt as a political force in the Middle East was deeply frustrating to Libya and Syria, as it was progressing without Egypt's being required to renounce the Camp David agreements or the 1979 treaty with Israel, which had been the cause of its ostracism. Furthermore, Egypt's rehabilitation suggested the emergence of a moderate alignment in Arab politics which could bring its influence to bear on the seemingly intractable problems facing the region, in opposition to the particular aims of Syria. Egypt's confidence in its role in international affairs was demonstrated by Mubarak's active involvement in attempts to find a diplomatic solution to the Iran–Iraq War. (He made an unexpected visit to Baghdad in March 1985, despite the fact that diplomatic relations between Egypt and Iraq had been severed in 1979.) The division of loyalties in this conflict reflected the wider split in the Arab world, with Egypt, Jordan, Saudi Arabia and, less vocally, the remaining Gulf states supporting Iraq, while Libya and Syria, hoping to usurp Egypt's traditional role as leader of the Arab community, backed Iran. Egypt accused Iran and Libya of laying mines in the Red Sea and the Gulf of Suez in order to disrupt traffic through the Suez Canal, after explosions damaged 19 merchant vessels in the area between July and September 1984. Relations with Libya continued to deteriorate. In July 1985 Col Qaddafi barred Egyptian workers (of whom there were some 100,000 in the country at the time) from Libya, in retaliation against a similar Egyptian measure preventing Libyans from working in Egypt.

Consolidating the contacts first made between them after Yasser Arafat's expulsion from Lebanon at the end of 1983, following the revolt against his leadership of Fatah, the PLO leader, King Hussein of Jordan and President Mubarak continued their discussions on the Palestinian issue during 1984 and 1985, in Cairo and Amman. In February 1985 King Hussein and Yasser Arafat agreed, in principle, that a joint Jordanian-Palestinian delegation could take part in a Middle East peace conference that would include the members of the UN Security Council, though the questions of the composition of such a delegation and the basis on which peace talks would proceed were not resolved. The PLO rejected UN Resolution 242 as a basis for negotiation and it was not clear whether the Palestinian representation in the joint delegation would comprise members of the PLO. So that progress should not be brought to a complete halt, Mubarak suggested that, prior to direct negotiations with Israel, a joint Jordanian-Palestinian delegation (including PLO members, Mubarak finally conceded) should hold talks with the USA in Washington, after which Israel and other Arab parties would join the negotiations and make preparations for a full peace conference. The Reagan Administration in the USA, for its part, maintained that it would not negotiate with the PLO unless it accepted Resolution 242 and therefore, implicitly, Israel's right to exist; King Hussein, for his, voiced equivocal approval only, standing by the agreement he had made with Arafat. Mubarak's proposals were not adopted but he persisted in trying to facilitate ultimate negotiations between the Arabs and Israel.

A series of terrorist incidents during the second half of 1985, in which factions of the PLO loyal to Yasser Arafat were implicated, damaged the PLO's credibility as a participant in peace negotiations and virtually assured the failure of the Jordanian-PLO peace initiative. In November, in Cairo, Yasser Arafat, responding to pressure from King Hussein and President Mubarak for the PLO to renounce violence, reiterated a PLO decision of 1974 to confine military operations to Israel and the Occupied Territories; this was hardly the unequivocal statement that the two leaders had sought and was immediately repudiated by Arafat's aides.

In September 1986 President Mubarak of Egypt and Prime Minister Peres of Israel met in Alexandria, Egypt, to discuss ways of reviving the Middle East peace process. After the summit meeting (the first between Egypt and Israel since August 1981), and following the signing of the Taba arbitration agreement, President Mubarak appointed Muhammad Bassiouni, Egypt's former chargé d'affaires in Tel-Aviv, as ambassador to Israel. The previous Egyptian Ambassador had been recalled from Israel in 1982, following the Israeli invasion of Lebanon.

It was largely as a result of its links with Israel that a new rift occurred between Egypt and the PLO in 1987. The crisis in relations was precipitated by the reunification of the Palestinian movement that took place at a session of the Palestine National Council (PNC) in Algiers in April 1987. One of the conditions that dissident PLO factions exacted as the price for their return to the mainstream of the movement, under Yasser Arafat's leadership, was the reduction of Arafat's links with Egypt. The Popular Front for the Liberation of Palestine (PFLP) initially demanded the immediate severance of relations but the PNC finally adopted a compromise resolution, urging the reappraisal of PLO links with Egypt, and making future contacts dependent on Egypt's abrogation of the Camp David accord and the 1979 peace treaty with Israel. President Mubarak responded by closing all the PLO's offices in Egypt at the end of April 1987.

INTERNAL DISSENSION

At home, President Mubarak had to tread warily to avoid confrontation with sections of the Egyptian population. While conscious of the need to relieve the country's finances of the crippling burden of state subsidies, he was also aware of the dangers to social stability inherent in increasing the prices of basic commodities. These dangers were demonstrated by riots in the town of Kafr ad-Dawar in September 1984, which were prompted by modest price increases in staple foodstuffs. The Government, nevertheless, continued gradually to reduce subsidies on food, electricity and oil.

The campaign by Muslim fundamentalists for the legal system fully to adopt the principles of the *Shari'a* (Islamic holy law) intensified and became part of a wider resurgence of Islamic consciousness in Egypt. An amendment to the Constitution, endorsed by the People's Assembly in 1980, made Islamic law the basis of national law, and this was largely, but not fully, implemented. As well as taking account of the views of a potentially volatile puritan Islamic section of the community, Mubarak had to take care not to alienate the country's Coptic Christians (many of whom occupied important positions in commerce, industry and the professions). In May 1985 the People's Assembly rejected immediate changes in the legal system and advocated thorough study of the 2% of Egyptian law which did not conform to Islamic precepts before proceeding further. Mubarak did make concessions to purist doctrine by imposing tighter censorship on books and films and by restricting the progress of female emancipation. However, Mubarak continued to take measures to prevent agitation by fundamentalists from destabilizing the country: banning Islamic rallies, arresting militant Islamic leaders and, in July 1985, placing all mosques under the control of the Ministry of Awqaf (Islamic Endowments).

A further threat to public order arose from Egypt's poor economic state, which exaggerated the already wide discrepancy in living standards between the vast and growing numbers of people who lived in great poverty, and a rich minority. Seeking to prioritize this issue, President Mubarak appointed Dr Ali Lutfi, a former Minister of Finance under President Sadat, as Prime Minister on 4 September 1985, following the resignation of Gen. Kamal Hassan Ali and his Council of Ministers. Ali Lutfi presided over a Council of Ministers containing nine new appointments and three members who, while retaining their portfolios, were elevated to the rank of Deputy Prime Minister, making four in all.

On 25 February 1986, reacting to speculation that their period of service was to be extended by one year, to four years, some 17,000 poorly-paid conscripts to the Central Security Force (CSF) staged violent protests in and around Cairo, destroying two luxury hotels and damaging other buildings used by tourists in the Pyramids area of the city. The disturbances lasted for

three days and there were clashes between the conscripts and the Army, which was trying to regain control of the city. According to government figures, 107 people died as a result of the mutiny, and 1,324 members of the CSF were arrested. There were reports of violence in other cities, including Asyout, Ismailia and Suhag. The Minister of the Interior, Ahmad Rushdi, who was held responsible for the failure of the intelligence services to detect signs of unrest in the CSF, was dismissed and replaced by Maj.-Gen. Zaki Badr.

In November 1986 President Mubarak accepted the resignation of the Prime Minister, Ali Lutfi. A new Council of Ministers, containing, among 11 changes, a new Minister of Finance and three other new ministers in positions related to the management of the economy, was appointed under a new Prime Minister, Dr Atif Sidqi. President Mubarak was believed to have been critical of Ali Lutfi's apparent readiness to accede to demands from the IMF for the introduction of far-reaching economic reforms, in return for financial aid, and yet dissatisfied with the pace of reform to combat the continuing deterioration of the economy.

THE 1987 GENERAL ELECTION

Agitation by Islamic fundamentalists led to student riots in Asyout in October 1986 (in protest against the university authorities' refusal to allow women to veil their faces on university premises) and in February 1987. In December 1986 it was revealed that, three or four months earlier, four reserve army officers and 29 civilians, allegedly linked with the Islamic Jihad organization, had been arrested in Cairo, accused of plotting to overthrow the Government. This was the first known case of fundamentalist infiltration of the armed forces since the assassination of President Sadat in 1981. Another, communist-inspired, coup plot was reportedly foiled in December.

A referendum was held on 12 February 1987, to decide whether the People's Assembly should be dissolved, prior to the holding of a general election on the basis of a new electoral law, providing for a total of 48 seats for independent candidates in the 458-seat assembly. The new law had been quickly adopted in December 1986 to pre-empt a ruling by the Supreme Constitutional Court that the general election of 1984 had been unconstitutional, as independent candidates had not been allowed to stand. An overwhelming vote in the referendum in favour of the dissolution of the People's Assembly facilitated the holding of a general election on 6 April. Mubarak hoped that the election would establish his Government on a firm constitutional basis and effectively secure him a second term as President. The SLP, the Liberal Socialist Party (LSP) and the Muslim Brotherhood (which was legally barred from forming its own political party) decided to form an electoral alliance, principally in order to overcome the requirement for political parties to win at least 8% of the total vote before they qualified for seats in the People's Assembly, a requirement that effectively prevented a single opposition party from gaining significant representation. The influence of the Muslim Brotherhood was evident in the fact that the doctrine of wholesale application of Islamic law, the Brotherhood's principal tenet, was a prominent element in the alliance's campaign.

The election campaign was marred by sectarian clashes between Muslims and Christians in several towns, including Suhag and Beni-Suef, in February and March 1987, and the opposition parties accused the Government of electoral fraud, the intimidation of opposition candidates and other forms of corruption. On the eve of the election, hundreds of opposition party workers were arrested. They were understood to be mostly members of the Muslim Brotherhood, who, according to the authorities, were campaigning, illegally, on their own behalf.

The election resulted in a large, though reduced, majority for the ruling NDP in the People's Assembly. The NDP won 346 seats (compared with 389 at the previous election in 1984), the opposition parties won a total of 95, and independents seven. The SLP/LSP/Muslim Brotherhood alliance won a combined total of 60 seats, of which the Brotherhood took 37, making it the largest single opposition group in the new Assembly. The New Wafd Party, which, with 58 seats, had been the only opposition party to be represented in the previous Assembly, won only 35 seats.

In July 1987 Mubarak was nominated by the necessary two-thirds majority of the members of the People's Assembly to seek a second six-year term as President. The only candidate, Mubarak was duly confirmed in office by national referendum on 5 October, polling 97.1% of the votes cast.

The principal threat to Mubarak's position remained the activities of Islamist militants. More than 500 Islamic fundamentalists, mostly members of Islamic Jihad and Jama'ah al-Islamiyah, were reportedly arrested after the attempted assassination of the former Minister of the Interior, Maj.-Gen. Hassan Abou Basha, and two US diplomats in May 1987, and of a left-wing magazine editor in June. Egypt severed its remaining diplomatic ties with Iran in May, closing the Iranian interests section at the Swiss embassy, which, it was alleged, maintained contacts with Muslim extremists.

RELATIONS RESTORED WITH ARAB LEAGUE

President Mubarak and Yasser Arafat held two sessions of discussions in Addis Ababa, Ethiopia, in July 1987, beginning to heal the rift that led to the closure of the PLO's offices in Egypt in April. (They were reopened, unofficially, at the end of July and, formally, at the end of November.) Both leaders endorsed proposals (which were already supported by Egypt and Jordan) for the convening of an international peace conference on the Middle East, under UN auspices, involving the five permanent members of the UN Security Council and all parties to the conflict, including the PLO. President Mubarak and the Israeli Minister of Foreign Affairs, Shimon Peres, had agreed in principle on the need for an international conference when the latter visited Egypt in February, though the issue of PLO representation remained an obstacle to further progress. The Israeli Prime Minister, Itzhak Shamir, was opposed to a peace conference in any form, and suggested direct talks between Israel, Egypt, a Jordanian-Palestinian delegation, and the USA. President Mubarak urged the PLO to devise a formula for its inclusion in an international peace conference, and, during a visit to Israel in July (the first by a high-ranking Egyptian since 1982), the Egyptian Minister of Foreign Affairs, Dr Esmat Abd al-Meguid, appealed to the Israeli Government to participate in an international conference.

In November 1987, at a summit conference in Amman, Jordan, which was attended by the majority of Arab leaders (excluding Col Qaddafi of Libya), the Syrian President, Hafiz al-Assad, obstructed proposals to readmit Egypt to membership of the League of Arab States. However, recognizing Egypt's support for Iraq in its war against Iran and acknowledging the influence that Egypt (as the most populous and, militarily, the most powerful Arab nation) could bring to bear on the problems of the region, the conference approved a resolution putting the establishment of diplomatic links with Egypt at the discretion of member governments. One week after the end of the conference, nine Arab states (the United Arab Emirates, Iraq, Kuwait, Morocco, the Yemen Arab Republic, Bahrain, Saudi Arabia, Mauritania and Qatar) had re-established full diplomatic relations with Egypt. Of the remaining 12 members of the League, three (Sudan, Somalia and Oman) had maintained diplomatic links with Egypt throughout the period of the boycott, Jordan and Djibouti had re-established them in 1985 and 1986, respectively, and the PLO (to which the League accorded nation status) had recently begun to settle its differences with Egypt. In February 1988 the People's Democratic Republic of Yemen restored full diplomatic relations with Egypt, leaving Algeria, Lebanon, Libya and Syria as the only Arab League members not to have done so. Libya was the most outspoken critic of the change in the League's policy towards Egypt, complaining that the 1979 peace treaty with Israel, the original reason for Egypt's ostracism, remained in force. In November Algeria announced that it would re-establish diplomatic relations with Egypt, and in June 1989 full diplomatic relations with Lebanon were restored.

Following Jordan's decision, in July 1988, to sever its legal and administrative links with the West Bank region (annexed by Jordan in 1950 but, like the Gaza Strip, under Israeli occupation since 1967), President Mubarak urged the PLO to exercise caution in its plans to declare an independent Palestinian state and to form a government-in-exile. In September, however, during a tour of Western Europe, he sought support for proposals

to convene an international conference on the Middle East. In November Egypt granted full recognition to the newly-declared Palestinian state.

The visit of King Fahd of Saudi Arabia to Cairo in March 1989 was a further sign of the rehabilitation of Egypt's standing in the Arab world. In May President Mubarak represented Egypt at an emergency summit meeting of the League of Arab States in Casablanca, Morocco. The meeting, convened to rally support for the diplomatic initiatives of Yasser Arafat following the Palestinian declaration of independence, was preceded by a meeting of foreign ministers of the majority of the members of the League, which endorsed Egypt's formal readmission to the Arab League after an absence of 10 years. Despite Libya's opposition to Egypt's readmission to the League, Col Qaddafi attended the meeting, and held separate talks with President Mubarak. In June 1989 it was announced that Egypt was preparing to reopen its border with Libya, and in October Col Qaddafi visited Egypt, the first such visit for 16 years, for further discussions with President Mubarak.

MIDDLE EAST PEACE MOVES

Egypt was hopeful that its improved standing in the Arab world would enhance its role as a mediator in the Middle East peace process. In February 1989, during a tour of five Middle Eastern countries, Eduard Shevardnadze made the first visit to Egypt by a Soviet Minister of Foreign Affairs for 15 years, and held talks with both President Mubarak and Moshe Arens, the Israeli Minister of Foreign Affairs. In the wake of the Israeli peace initiative announced in April 1989 (see Documents on Palestine, p. 119), Egypt directed its diplomatic efforts towards activating preliminary negotiations between Palestinian and Israeli delegations. In September President Mubarak sought to persuade the Israeli Government to accept 10 points clarifying its peace initiative (the 'Mubarak plan') so that direct Palestinian-Israeli negotiations could begin. The 10 points in question were: a commitment by Israel to accept the results of the elections proposed under its initiative; the supervision of the elections by international observers; the granting of immunity to elected representatives; the withdrawal of the Israeli Defence Force from the balloting area; a commitment by Israel to begin negotiations within three to five years after the proposed elections; the ending of Israeli settlement of the West Bank; complete freedom as regards election propaganda; a ban on entry of all Israelis to the Occupied Territories on the day of the proposed elections; the participation of residents of East Jerusalem in the elections; a commitment by Israel to the principle of exchanging land for peace. An offer by President Mubarak to host talks between Palestinian and Israeli delegations was approved by the USA, but rejected by Israel's 'inner cabinet' in early October. In early December, following two months of US diplomatic support for (and development of) the 'Mubarak plan', Egypt accepted a five-point US framework for the holding of elections in the Occupied Territories. It was reported that the US Secretary of State would meet the Egyptian and Israeli Ministers of Foreign Affairs in January 1990, with the aim of facilitating direct discussions between an Israeli and a Palestinian delegation. By early 1990, however, there had been no appreciable progress in the peace process, which had been further complicated by Israel's apparent intention to settle in the Occupied Territories some of the Soviet Jewish immigrants who had arrived in the country in large numbers throughout 1989 and continued to do so in 1990.

Egypt's increasing frustration at the lack of progress in the peace process and its concern about the escalation of the Palestinian *intifada* (especially after the murder of seven Palestinians by an Israeli civilian at Rishon LeZiyyon in May 1990) led it to assume a more critical stance towards the Israeli Government in the first half of 1990. In May President Mubarak warned that the increased immigration of Soviet Jews into Israel threatened to destroy the whole peace process and could lead to a new war in the Middle East. In June, after the formation of a new Israeli Government by Itzhak Shamir, the Egyptian Government condemned Israel in even harsher terms, suggesting that it was preparing for war in the region. Following the suspension by the US Government of its dialogue with the PLO in June 1990, Egypt again attributed the disintegration of the peace process to 'Israeli intransigence' and urged the resumption of the US–PLO dialogue.

In March 1988 Egypt signed an arms co-operation agreement with the USA, replacing the memorandum of understanding signed in 1979. The new five-year agreement placed Egypt on the same footing with the USA as Israel and the members of NATO, giving it access to US defence contracts and to the latest weaponry, as well as exempting Egyptian military exports from US import duties. In April the US Government notified the Congress that it intended to proceed with controversial plans to sell 555 battle tanks to Egypt, at a cost of $2,000m. Three months later, similar intentions were announced regarding the sale of 144 US *Maverick* air-to-ground missiles, costing $27m. The arrest, in July, of an Egyptian with American citizenship, who was charged with stealing US missile parts and attempting to smuggle them to Egypt, placed these and further sales of US arms to Egypt in doubt. Egypt's embarrassment at this arrest was cited as the main reason for President Mubarak's decision, in April 1989, to transfer the influential Minister of Defence, Field Marshal Ghazalah, to the newly-created position of Presidential Assistant, which was widely regarded as a sinecure.

SOCIAL REPERCUSSIONS OF ECONOMIC CRISIS

The extreme caution with which Egypt implemented economic reforms was largely due to fears that they would provoke further social unrest and increase the threat to social stability posed by Islamist activists. In December 1988 it was reported that more than 500 militant Muslim students in Cairo and Asyout had been arrested on suspicion of involvement in 'anti-state activities'; and in April and May 1989, facing mounting popular discontent over price increases and food shortages, the Government acted to pre-empt disturbances during the month of Ramadan by detaining more than 2,000 Islamist extremists. In June elections to the 210-member Advisory Council were contested by opposition parties (the 'Islamic Alliance', consisting of the Muslim Brotherhood, the LSP and the SLP) for the first time since the establishment of the Council in 1980. Other political parties, however, boycotted the elections in protest at the prevailing state of emergency. None of the candidates from the 'Islamic Alliance' was elected, and it was subsequently alleged that the NDP had achieved its victory by fraudulent means.

In July and August 1989, in a further attempt by the Government to suppress political opposition, members of the proscribed Egyptian Communist Workers' Party and Shi'ite Muslims, including prominent members of the Muslim Brotherhood, were arrested on charges of subversion. By early September, following international protests, it was reported that most of the detainees had been released. In December there was speculation that Muslim fundamentalists had been responsible for the attempted assassination of the Minister of the Interior, Maj.-Gen. Zaki Badr, who had conducted the Government's ruthless campaign against political dissent. In January 1990 Badr was dismissed from his post and replaced by Muhammad Abd al-Halim Moussa. In the same month the Egyptian Organization for Human Rights (EOHR) condemned the violence which, it alleged, was routinely inflicted on political detainees by the Egyptian security forces.

In April three new political parties, the Green Party, the Democratic Unionist Party (DUP) and the Young Egypt Party (YEP), were legalized, bringing the total number of officially recognized political parties in Egypt to nine.

THE 1990 GENERAL ELECTION

In May a constitutional crisis arose after Egypt's Supreme Constitutional Court ruled that elections to the People's Assembly in 1987 had been unconstitutional because the electoral law promulgated in 1986 unfairly discriminated against independent candidates. Legislation which had subsequently been passed by the Assembly was deemed to be valid, but the Court declared that any new laws approved after 2 June 1990 could not be endorsed. In September President Mubarak announced that a popular referendum would be held on 11 October in order to decide whether the People's Assembly should be dissolved; and that the electoral law would be amended with regard to the limited number of independent candidates previously permitted to participate in elections. (The People's Assembly, in recess since 4 June, had granted the President

permission to legislate by decree in its absence.) Some 58.6% of the electorate subsequently participated in the referendum, and, of these, 94.34% voted for the dissolution of the Assembly. The People's Assembly was duly dissolved on 12 October.

Campaigning for the elections to a new Assembly took place amid tensions resulting from the crisis in the Gulf (see below) and from the threat to Egypt's security posed by Islamic extremists hostile to the Government's pro-Western stance over Iraq's invasion of Kuwait. The assassination of Dr Rifa'at el-Mahgoub, the Speaker of the People's Assembly, on 12 October in Cairo, increased tensions and led to the most comprehensive security operation since President Sadat's murder in 1981. Hundreds of Muslim fundamentalists were arrested and detained in the suburbs of Cairo and the cities of Asyout and Beni-Suef. The Ministry of the Interior claimed that eight members of an extreme Islamist group, Al-Jihad, had been responsible for the assassination.

At the legislative elections held on 29 November and 6 December 1990, the former requirement for political parties to win a minimum of 8% of the total vote in order to gain representation in the Assembly was abolished, and restrictions on independent candidates were removed. However, the Government refused to concede the opposition parties' demands that the elections be removed from the supervision of the Ministry of the Interior, and that the emergency regulations (in force since 1981) be repealed. The elections resulted in a clear victory for the ruling NDP: of the 444 elective seats in the new Assembly, the NDP won 348 (compared with 346 at the 1987 general election), the NPUP won six, and independent candidates (of whom 56 were affiliated to the NDP, 14 to the New Wafd Party, eight to the SLP and one to the LSP) won 83. Voting in the remaining seven seats was suspended. President Mubarak exercised his right to appoint 10 additional deputies, including five Copts. While the turn-out of voters was estimated at only 20%–30%, four of the main opposition groups, the New Wafd Party, the SLP, the LSP and the prohibited—but officially tolerated—Muslim Brotherhood, boycotted the elections after the Government refused their demands concerning the conduct of the elections (see above). Several opposition members who ignored the boycott were subsequently dismissed by their party organizations, leaving the NPUP, with its six representatives, as leader of the official opposition. The new People's Assembly convened on 13 December and elected Dr Ahmad Fathi Surur, formerly Minister of Education, as its Speaker.

THE CRISIS IN THE GULF IN 1990–91

In December 1989 Egypt and Syria restored full diplomatic relations after a break lasting 12 years. In May 1990 President Mubarak visited Damascus for talks with President Assad of Syria, and in July President Assad visited Egypt. The *rapprochement* between Egypt and Syria was widely regarded as signalling a shift away from the balance of power which had prevailed in the Arab world throughout the 1980s.

In November 1989 reports of widespread acts of violent discrimination against Egyptian expatriate workers in Iraq threatened the special relationship which had developed between Egypt and Iraq during the Iran–Iraq War, when Egypt provided Iraq with military equipment and advisers. Prior to the crisis in the Gulf precipitated by Iraq's invasion and annexation of Kuwait in August 1990, Egypt sought to mediate between Iraq and Kuwait, appealing for dialogue between the two sides in the interests of Arab solidarity. Following the invasion of Kuwait, Egypt sought initially to maintain its role as a mediator, immediately proposing the convening of—and subsequently hosting—a summit meeting of Arab leaders. At the summit meeting, held on 10 August, Egypt firmly demanded the withdrawal of Iraqi forces from Kuwait, and 12 of the 20 Arab League member states participating in the meeting voted to send an Arab deterrent force to the Gulf in support of the USA's effort to deter an Iraqi invasion of Saudi Arabia. By late August about 5,000 Egyptian troops were reported to be in Saudi Arabia.

Egypt's quick success in mobilizing the support of 'moderate' Arab states for the economic sanctions imposed on Iraq by the UN, and for the defence of Saudi Arabia, emphasized the extent of the improvement in relations with Syria. While Iraq called on the Egyptian people to overthrow the Egyptian Government, there was no evidence of widespread popular support in Egypt for President Saddam Hussain of Iraq, and the Government's action was judged to have bolstered its domestic popularity. While it condemned Iraq's invasion of Kuwait, however, the Muslim Brotherhood, demanded the immediate withdrawal of US forces from the Gulf and opposed the dispatch of Egyptian troops to Saudi Arabia as part of an Arab deterrent force. It was feared, too, that Egyptian expatriate workers (totalling some 800,000 in Iraq and some 100,000 in Kuwait before the Iraqi invasion), returning in large numbers from Iraq and Kuwait to almost certain unemployment in Egypt, might have a destabilizing effect. Some 85,000 were reported to have returned to Egypt by the end of August 1990, the total rising to more than 600,000, following the outbreak of hostilities between Iraq and the UN multinational force in January 1991.

On 28 August 1990 President Mubarak and President Assad of Syria met in Alexandria to discuss Arab efforts to avert war in the Gulf. An extraordinary meeting of Ministers of Foreign Affairs of Arab League member states took place in Cairo on 30 August, but it was attended by representatives of only 12 member states (those which had supported the proposal to send an Arab deterrent force to Saudi Arabia), reflecting the divisions which had arisen in the Arab world as a result of Iraq's invasion of Kuwait.

Following the outbreak of hostilities between Iraq and a UN multinational force in January 1991, the Egyptian Government continued to support the anti-Iraq coalition. Egypt's contingent within the multinational force, eventually boosted to 35,000 troops, sustained only light casualties in the fighting. On the domestic front, there were few disturbances during the war, and the opposition's predictions of popular unrest proved unfounded. In fact, Egypt emerged from the conflict in the Gulf with its international reputation enhanced, largely as a result of President Mubarak's firm leadership of 'moderate' Arab opinion. Moreover, the economy benefited from the waiving of almost US $14,000m. of Egypt's debts to the USA and other Western and Gulf states at an early stage in the crisis, and by the signing of an agreement with the IMF in mid-May 1991, which, later in the same month, led to the rescheduling of $10,000m. of Egypt's debt to the 'Paris Club' of Western creditors, and the cancellation of the remaining $10,000m. over a three-year period.

Following the conclusion of the war in February 1991, Egypt took part in a meeting of the eight Arab nations (the six GCC member states, Egypt and Syria) that had participated in the UN multinational force, held on 5–6 March in Damascus. The statement issued after the meeting, known as the 'Damascus Declaration', called for 'a new Arab order to bolster joint Arab action'. It proposed, *inter alia*, that Egyptian and Syrian troops already deployed in Saudi Arabia and the Gulf states should constitute the nucleus of an Arab regional security force. However, in early May Egypt unexpectedly announced that its forces in Saudi Arabia and Kuwait were to be withdrawn. No Arab regional security force has since been formed.

Representatives from all the Arab League member states met in Cairo on 30 March 1991 for the first regular meeting of the Arab League since the outbreak of the crisis in the Gulf. The meeting was conciliatory in tone and attempted to establish an Arab consensus. A further meeting took place on 15 May, at which Dr Ahmad Abd al-Meguid, hitherto Egypt's Minister of Foreign Affairs, was endorsed as the League's new Secretary-General, in succession to Chedli Klibi who had resigned in September 1990.

EGYPT AND THE MIDDLE EAST PEACE PROCESS

Since the end of the crisis in the Gulf in 1990–91, the Government's foreign policy has continued to focus on the twin themes of Arab reconciliation and a settlement of the Arab–Israeli dispute, with particular emphasis being given to the Palestinian dimension. Egypt participated in the inaugural meeting of the Middle East peace conference in Madrid in October 1991. In later stages it attended bilateral sessions as an observer and multilateral sessions as a participant. Despite the procedural delays and the slow progress of the negotiations, Egypt felt that the conference represented the best hope for a durable peace in the region and that it had an important role to play in co-ordinating Arab strategy and providing diplomatic expertise. The choice of Egypt's former deputy Prime Minister,

Dr Boutros Boutros-Ghali, as the new Secretary-General of the UN was regarded by Egypt as recognition of its moderating regional influence. President Mubarak welcomed the change of government in Israel in June 1992, and in July the Israeli Prime Minister, Itzhak Rabin, visited Cairo for talks with President Mubarak, who reportedly emphasized to him his opinion that progress in the peace process was dependent on a halt to Jewish settlements in the Occupied Territories.

Egyptian mediators played an active role during the secret negotiations which led to the Gaza-Jericho interim peace agreement between Israel and the PLO on 13 September 1993 (see Documents on Palestine, p. 120). The agreement made provision for limited Palestinian self-rule in the Gaza Strip and the town of Jericho on the West Bank. Once the agreement was announced, Egypt was the first Arab state that the PLO looked to for support. In October, PLO and Israeli negotiating teams began meeting regularly in Cairo, or at Taba on the Red Sea, to discuss the detailed implementation of the agreement. On the whole, the agreement was welcomed by the Egyptian press, although it was denounced by the Nasserites and the Muslim Brotherhood as a betrayal of the struggle for the Palestinians' homeland. In November King Hussein of Jordan visited Cairo for talks on the Middle East peace process, his first visit since the Gulf crisis of 1990–91 which had strained relations between the two countries. In December, when talks between the PLO and Israel became deadlocked, President Mubarak convened an emergency summit meeting in Cairo between the Israeli Prime Minister and the PLO leader, Yasser Arafat. However, the meeting failed to achieve an agreement on the withdrawal of Israeli armed forces from Gaza and Jericho which had been scheduled to start on 13 December.

The massacre of more than 40 Palestinians in Hebron on the West Bank by an Israeli settler on 25 February 1994 provoked several days of angry demonstrations in Cairo. Egypt withdrew its ambassador from Israel for consultations, but Egyptian diplomats tried to persuade both the PLO and Israel to resume their negotiations. Talks between Israel and the PLO recommenced in Cairo on 29 March. On 4 April President Assad of Syria visited Cairo for talks with President Mubarak, reportedly about Syria's dissatisfaction with Egypt's support for the Israeli-PLO agreement. On 4 May, after months of negotiations, an agreement on Palestinian self-rule in Gaza and Jericho was signed in Cairo by the Israeli Prime Minister and the PLO Chairman at a ceremony presided over by President Mubarak and attended by the US Secretary of State and the Russian Minister of Foreign Affairs. Under the terms of the agreement Israeli forces withdrew from Gaza on 13 May and from Jericho on 17 May.

Although the Middle East peace process continued to dominate Egyptian foreign policy, Egypt was also involved in mediation efforts involving Libya, Yemen and Somalia. Egypt's relations with Libya have been dominated by the repercussions of the 'Lockerbie affair' (see chapter on Libya). With an estimated 1m. Egyptians working in Libya, Egypt has used its diplomacy to try to avert a confrontation between Libya and the West which could not only threaten the jobs of its workers, but also undermine a steadily growing market for its exports. Egypt also regards the Qaddafi regime as a useful ally in its struggle against Islamist militancy in the region. At the beginning of November 1993, as the UN Security Council was being urged by the USA, the United Kingdom and France to impose tougher economic sanctions on Libya, President Mubarak met Col Qaddafi, but Egyptian mediation efforts failed to engineer a compromise. Egypt was deeply embarrassed when a former Libyan foreign minister and leading opponent of that regime, Mansour al-Kikhia, disappeared in Cairo in December 1993 during a human rights conference. There was speculation that al-Kikhia, who was living in exile in the USA, had been kidnapped by Libyan agents, despite assurances regarding his safety from senior Egyptian officials. (In 1997 the US Central Intelligence Agency claimed to have evidence that Egyptian agents had been involved in al-Kikhia's abduction and that he had subsequently been executed by the Libyan regime. In February 1999 an Egyptian Court of Appeal ordered the Ministry of the Interior to pay £E100,000 in compensation to al-Kikhia's widow.) In March 1994 Egypt attempted to mediate between rival Yemeni leaders, and hosted peace talks in Cairo between rival Somali factions. However, UN-sponsored talks in Cairo in June failed to achieve a cease-fire in the Yemeni civil war and Egypt was accused by the northerners of favouring the breakaway south. In May the 11th ministerial conference of the Non-Aligned Movement took place in Cairo and provided an opportunity for the Egyptian Minister of Foreign Affairs to meet his Iranian counterpart, Ali Akbar Velayati, who was the first senior Iranian minister to visit Egypt since the Iranian Revolution. However, there was no improvement in relations between the two countries; Egypt maintained that Iran was assisting Egypt's Islamist militants. Following an increase in commercial and economic exchanges during 1993, Egypt resumed diplomatic relations with South Africa in May 1994, one month before President Mubarak stood down as Chairman of the OAU. Egypt's relations with its southern neighbour, Sudan, deteriorated following the visit to Khartoum, in December 1991, of a large Iranian delegation led by President Rafsanjani. Acutely aware of the dangers posed by its own Islamist militants, Egypt was alarmed by Iran's support for Sudan's military regime, which is dominated by the National Islamic Front, and by the dangerous escalation of Islamist violence in Algeria, which virtually plunged that country into civil war. In June 1993 President Mubarak held private talks with the Sudanese President, Lt-Col al-Bashir, who was visiting Cairo for the annual meeting of the OAU, in an attempt to reduce tensions between Egypt and Sudan.

THE UPSURGE IN ISLAMIST VIOLENCE

Since the early part of 1992 militant Islamist groups have intensified their campaign to overthrow the Government and establish an Islamic state. Militant Islamists have been particularly active in Asyout Governorate in Upper Egypt, the traditional stronghold of Islamic militancy, and also in the poorer districts of Cairo, such as Imbaba. At the beginning of June 1992 some 5,000 members of the security forces were deployed in Asyout Governorate in the most extensive military operation against militant Islamists for many years, and at the end of July the People's Assembly adopted a new law to combat terrorism which imposed the death sentence for some crimes. In October it was reported that terrorists would be tried by military courts. In December an Egyptian military court sentenced to death eight militant Islamists, after finding them guilty of conspiring to overthrow the Government. It was reported that over the previous 12 months some 70 people had been killed as a result of Islamist violence, including several foreign tourists. The leader of the Jama'ah al-Islamiyah, one of the two main Egyptian Islamist groups, publicly attacked the very concept of foreign tourism in Egypt and threatened to destroy the country's major tourist attractions, the Pharaonic sites. Tourist numbers were reported to have fallen by 40% by the end of 1992, with a loss of foreign currency earnings of $1,500m. Among those killed during 1992 was the writer Farag Fouda, one of Egypt's most outspoken critics of militant Islam. He was murdered on 9 June by members of Islamic Jihad, the group believed to have been responsible for the assassinations of President Sadat and the Speaker of the People's Assembly, Rifa'at el-Mahgoub. A year later, at the trial of those charged with Fouda's murder, Sheikh Muhammad el-Ghazali, a leading Islamist scholar, claimed that it was legitimate to kill any Muslim who opposed the application of Islamic law.

The problem of Islamist violence became more acute in 1993 and attempts to control it came to dominate the domestic political agenda. After several car-bomb explosions in Cairo at the beginning of the year, a wave of attacks by militant Islamists ensued. In April 1993, Safwat Muhammad ash-Sharif, the Minister of Information, narrowly escaped death when his car was ambushed. Ironically, the Minister had been criticized by liberals for filling the television schedules with religious programmes, which was regarded as a crude and unconvincing attempt to appease Islamist opinion. The Minister of the Interior, Hassan Muhammad al-Alfi, was seriously wounded in an assassination attempt outside his office in the centre of Cairo in August. Officials stated that the attack had been carried out by the Vanguards of Conquest, a faction of Islamic Jihad. In November the Prime Minister, Atif Sidqi, escaped unharmed when a car-bomb exploded near his residence, killing a schoolgirl and injuring 18 other people. The police stated that the attack

was once again the work of the Vanguards of Conquest, although Islamic Jihad claimed responsibility. Attacks on foreign tourists occurred regularly during the year, damaging the country's vital tourist industry. The number of tourist nights fell by 30% during the first eight months of 1993 as a result of the Islamists' campaign of violence and many international tour operators withdrew from Egypt. Revenues from tourism fell by about $800m. in 1993, to $1,300m.

Harsh measures were employed by the security forces to counter the escalation in Islamist violence, and those arrested were increasingly tried by military courts which were seen as more effective than the civil courts in securing quick convictions. During 1993 military courts sentenced 38 militant Islamists to death and 29 were hanged. This was the largest number of political executions in Egypt's recent history.

In April 1993 President Mubarak had dismissed the Minister of the Interior, Muhammad Abd al-Halim Moussa, because he had indicated that he was willing to start a dialogue with imprisoned leaders of Islamic Jihad and Jama'ah al-Islamiyah. He was replaced by Gen. Hassan Muhammad al-Alfi (see above) who immediately reaffirmed the Government's uncompromising commitment to suppressing militant Islamist groups. However, the new Minister won approval in some quarters for favouring a more subtle approach to the security question. He pledged to stop the security forces carrying out indiscriminate mass arrests—a policy strongly criticized by human rights organizations—and stressed the need for greater efforts to improve social conditions. The crude methods employed by the police were revealed in August when a panel of eight judges found the 24 defendants on trial for the assassination of Rifa'at el-Mahgoub not guilty of murder. The court strongly criticized police practices and revealed that medical reports had shown that 16 of the defendants had been tortured. Safwat Abd al-Ghani, the political leader of Jama'ah al-Islamiyah, one of 10 defendants convicted of lesser offences, stated that the Mahgoub case highlighted the injustice of the military courts which accepted police evidence unchallenged. In December a civil court acquitted Abd al-Ghani on the charge of ordering the assassination of Farag Fouda from his prison cell. On his reappointment as Minister of the Interior in October 1993, al-Alfi stated that the new Government would confront terrorism 'with extreme force, resolution and firmness'. However, he denied that torture was used to extract confessions from Islamist suspects.

Policing methods and the use of military courts in the campaign against Islamist violence provoked widespread international criticism. In late May 1993 a human rights organization, Amnesty International, published a report in which it strongly condemned the 'frightening brutality' of the Egyptian security forces and alleged that, in response to the increased killings of police officers and others, the security forces appeared to have been given 'a licence to kill with impunity'. It labelled the military courts 'a travesty of justice'. In November the UN Committee against Torture accused the Egyptian security forces of carrying out systematic torture against suspects in security cases and in ordinary criminal cases. The Egyptian Organization for Human Rights (EOHR) issued a statement endorsing the UN's accusations and claimed that 13 people had died under torture in jails, police stations or state security headquarters during 1993. The EOHR also drew attention to the 221 cases of torture it had documented since July 1986 when Egypt ratified the UN convention on torture. Nevertheless, in January 1994 the EOHR admitted that the major responsibility for all acts of violence in the country lay with militant Islamist groups, and it produced figures which showed that Islamist groups were responsible for the deaths of 137 people in 1993. The EOHR also accused the Government of acceding to Islamist pressure to ban books and of permitting the state-controlled media and education system to promote Islamist ideas. In November the Advisory Council also warned that Islamist influence was increasing in the mass media and in the universities. Earlier in the year the leftist NPUP (Tagammu), the only opposition party represented in the People's Assembly, accused the Government of allowing the message of Islamic intolerance to be widely disseminated in the media. The Government moved to take some action in these areas. Already in February 1993 a trade union election law had been passed requiring the participation of at least 50% of the members for an election to be valid. Earlier, the Muslim Brotherhood had gained control of the Lawyers', Engineers' and Doctors' Syndicates. Press censorship was increased and a number of high-profile corruption cases were prosecuted. In order to demonstrate the Government's determination to expedite social spending programmes in low income areas, President Mubarak announced in December that governors would now be made accountable for progress in slum improvements in their governorates.

Following the bombing of the International Trade Centre in New York in February 1993, FBI investigations led to the dismantling of some of the Islamist networks in the USA and the arrest of the influential militant Islamist, Sheikh Omar Abd ar-Rahman. At the beginning of July the Government requested the extradition of Sheikh Abd ar-Rahman so that he could face charges of inciting violence in Egypt. Meanwhile, leaders of the Islamist militant groups continued to operate in some European countries. For example, it was reported that Tala'at Muhammad Tala'at, one of the leaders of the Vanguards of Conquest, was living in Denmark and that Egyptian requests for his extradition had been rejected. Ayman az-Zawari, the leader of Islamic Jihad, sentenced to death *in absentia* for his part in the assassination of President Sadat, was reported to be living in Switzerland and to have applied for political asylum. Az-Zawari was believed to be linked to Muhammad Mekawi, considered to be the field officer of the Vanguards of Conquest in Afghanistan, and responsible for the training of several hundred Egyptian militants there.

In November 1993 it was reported that a preliminary agreement had been reached between the leaderships of Islamic Jihad and Jama'ah al-Islamiyah, urging joint action and greater co-ordination between the two groups in confronting the security forces. It was also agreed that Sheikh Abd ar-Rahman should be the leader of the clandestine Islamic movement as a whole.

MUBARAK'S THIRD TERM

President Mubarak was formally nominated for a third six-year term of office in July 1993. Although his nomination was supported by 439 of 448 votes cast in the People's Assembly, none of the opposition parties, nor the prohibited but officially tolerated Muslim Brotherhood, endorsed his candidature, arguing that the people should be allowed to choose the President from a list of candidates and not just approve the decision of the Assembly. Mubarak's nomination was approved by nationwide referendum on 4 October. According to official figures, he gained 96.3% of the valid votes cast in an 84% turn-out. However, despite an intensive publicity campaign by the ruling NDP, independent observers commented on the small numbers of people voting. Mubarak immediately promoted the Minister of Defence, Gen. Muhammad Hussain Tantawi, to the rank of Field Marshal, an honour accorded to only four other generals since the revolution. Senior air force and air defence officers were also promoted. Some observers saw this as a move to placate the army, the ultimate power behind the regime, after Mubarak's refusal to appoint a Vice-President, a post that the military had traditionally regarded as its own. In a newspaper interview in October, Tantawi stated that he would deploy the army against Islamist extremists if they threatened the security of the state. This was the first time that the army had publicly declared its readiness to involve itself in the battle against militant Islamist groups. Hitherto the campaign against Islamist extremists had been carried out by forces under the command of the Ministry of the Interior.

There was considerable internal and external pressure for fundamental changes to the Government in order to meet the challenge of economic reform and to counter the Islamist threat. However, when the new Council of Ministers was sworn in on 14 October 1993, Dr Atif Sidqi—first appointed in 1986—was retained as Prime Minister and the key portfolios of foreign affairs, defence, the interior and information remained unchanged. Muhammad Salah ed-Din Hassab-Allah, the former general manager of Arab Contractors, Egypt's largest construction company, was appointed to the new post of Minister of Housing and Utilities, while Ministers of State were appointed with responsiblity for housing affairs and the family and for new communities, including the unprofitable new industrial cities built around Cairo during the previous 15 years. The President announced that the priorities of his third term would

be security and stability, economic reform, social justice, educational reform, combating unemployment, dealing with the problem of high population growth and improving Egypt's unwieldy bureaucracy. He made no reference to political reform.

However, Mubarak did propose a 'broad national dialogue' involving all parties which rejected violence and terrorism and supported democracy. The idea was first broached by the President at the end of September 1993 and at the beginning of December Egypt's 10 principal legal political parties, together with the Muslim Brotherhood and the Communists, issued a statement welcoming dialogue but insisting that the discussions should be comprehensive and focus on the question of political reform. Officials of the ruling NDP, headed by the Deputy Prime Minister, Yousuf Wali, eventually indicated that they would be willing to hold wide-ranging discussions covering political, social and economic reforms, but that the dialogue would be confined to the principal political parties in the first instance. There seemed little doubt that the decision not to include professional and trade unions was taken because several of them were controlled by the Muslim Brotherhood. The national dialogue meetings were scheduled to start in February 1994, but were postponed until April and then again until late May. In April President Mubarak stated that he would nominate a 25-member preparatory committee composed of party and trade union leaders to prepare a report on the terms of reference for dialogue. The Minister of Information indicated that the President had established three main guidelines for the proposed dialogue. These were that the discussions should include all legal political parties and forces, including the trade unions; that the NDP would not try to impose its views on other participants; and that the discussions would be wide-ranging and include political as well as economic and social issues. The reference to legal political parties indicated that the Muslim Brotherhood would remain excluded from direct participation in the deliberations. However, it was assumed that its views would be expressed through its electoral ally, the SLP, and by union delegates. Serious doubts remained, however, over whether the NDP was genuinely willing to share power.

When the President inaugurated the first session of the 40-member preparatory committee of the National Dialogue Conference it was heavily dominated by the NDP. The Communist Party, the Muslim Brotherhood and various Coptic groups were not allocated seats on the committee and the opposition parties claimed that the Government had no intention of seriously discussing political change, but was merely using the conference to isolate the main Islamist political movement. The New Wafd Party and the Nasserist Arab Democratic Party announced that they were withdrawing from the conference and the Chairman of the New Wafd Party, Fuad Serag ed-Din, accused the Government of monopolizing all aspects of the planning of the conference and of deliberately excluding important topics for discussion, such as constitutional reform.

Despite these criticisms the first session of the National Dialogue Conference took place on 25 June 1994. President Mubarak told the 276 participants—including delegates from 10 political parties, deputies in the People's Assembly, trade union leaders, journalists, academics, businessmen, economists and, predominantly, NDP members—that dialogue was necessary not only to forge a united front against terrorism, but also to make the opposition feel that it was part of the system of government and that its views would be taken into account. The conference's political, economic and social and cultural committees completed their deliberations on 7 July and recommended only limited changes, reflecting the Government's success in controlling the agenda.

In January 1995 the NDP announced that the parliamentary elections planned for November of that year would not be contested on the party list system as recommended by the National Dialogue Conference, but that the individual list system would be retained. Most opposition parties, including the banned Muslim Brotherhood, indicated that they would not boycott the elections as in 1990. Pope Shenouda III urged all Copts to vote in the forthcoming elections to the People's Assembly and to become more involved in the country's political life. In the approach to the elections, there was a government crackdown on the activities of the Muslim Brotherhood including the arrest of a number of prominent Brotherhood officials (see below). The Government also acted to reduce the Brotherhood's influence within key professional organizations. In his 1995 May Day speech, President Mubarak appeared to confirm his opposition to any further democratization of the political system.

At the beginning of November 1993 the US newspaper, the *Wall Street Journal*, alleged that over the previous two years two former Egyptian generals had received substantial commissions from major US corporations in connection with military sales to Egypt. *Ash-Shaab*, the newspaper of the pro-Islamist SLP, called for an investigation into the allegations. Over the previous two months, several journalists from *Ash-Shaab*, together with Helmi Murad, the Vice-President of the SLP, had been detained for alleging that the Mubarak regime was corrupt. *Ash-Shaab* later claimed that senior figures in the regime had received favours from property magnate Fawzi es-Sayyid which had enabled him to build several apartment blocks in Nasr City in violation of building codes. Following these allegations, the Prime Minister Sidqi, Omar Abd al-Akhter, the Governor of Cairo, and Zakaria Azmi, the head of the presidential office, filed libel suits against the SLP leader, Ibrahim Shukri, and the editor of *Ash-Shaab*, Magdi Hussein. In February 1994 the public prosecutor referred Shukri and Hussein to the criminal court to face charges of libel and slander. There were further reports in the US press at the end of 1994 alleging high-level corruption (see below), and the Egyptian opposition press continued to publish regular articles about the business activities of the 'sons of high officials'. The introduction of stringent amendments to the penal code, increasing the penalties for libel and aimed specifically at the media, was regarded by many observers as an attempt by the Government to protect senior officials from journalists investigating their private business affairs as well as to improve the Government's image in the approach to the November elections. The new measures were immediately condemned by the EOHR while the Press Syndicate launched a campaign against the new law and the regime, threatening to take strike action. At first President Mubarak insisted that the law would remain unchanged, but as opposition to it increased he agreed to refer the new law to the Supreme Constitutional Court. In addition, a committee, including representatives of the press, was set up to draft a replacement law for submission to the next session of the People's Assembly.

At the beginning of June 1995 the NDP won all but two of the 90 vacant seats in elections for the 210-member Advisory Council, which had failed to excite much public interest. The SLP and the LSP offered only 29 candidates and most of the remaining opposition parties decided not to contest the elections. Independent candidates won the two seats that did not go to the NDP.

THE CAMPAIGN AGAINST MILITANT ISLAMISTS INTENSIFIES

In February 1994 militant Islamist groups intensified their attacks on tourists and also targeted foreign investors. Jama'ah al-Islamiyah sent a series of warnings by fax to international news agencies warning that tourists and foreign investors should leave Egypt, and that anyone helping a regime that opposed Islam would receive 'the same punishment as the oppressors'. This policy, however, was condemned by the Vanguards of Conquest which, in a statement from Islamabad in Pakistan, declared that targeting foreigners and foreign investors would only increase the hardships of the Muslim people. Earlier there had been reports of differences between the two extremist groups and of their failure to establish a joint advisory council as agreed in November 1993. In February and March 1994 there were several attacks on tourist trains in Upper Egypt, and in early March a German tourist was killed when shots were fired at Nile cruise ships. Jama'ah al-Islamiyah also carried out a series of bomb attacks on banks in Cairo and towns in Upper Egypt. Jama'ah al-Islamiyah had issued a warning to Egyptians to close their accounts at banks practising *riba* (usury) by 22 February. On 9 April Maj.-Gen. Raouf Khairat, a prominent state security officer and a key figure in the campaign against Islamist violence, was assassinated. Jama'ah al-Islamiyah claimed responsibility for the attack. In February suspected militant Islamists had shot dead the chief prosecution witness in the trial against those arrested for the attempted assassination of the Prime Minister, Atif Sidqi.

The crackdown by the security forces was unrelenting. Figures released by the Ministry of the Interior showed that 29,000 Islamist militants had been jailed following mass arrests. The security forces claimed to have arrested 900 Islamist suspects in a single week in February 1994. The EOHR criticized police action during a raid on an apartment in Zawiya al-Hamra on 1 February after witnessess claimed that seven militants had been killed in cold blood. The police, however, stated that the men had been killed during a gun battle. The security forces claimed to have inflicted a serious blow against their opponents when they killed the military commanders of both Jama'ah al-Islamiyah and Islamic Jihad in April. Adil Awad Siyam, the military commander of Islamic Jihad, was killed during a security operation in Giza, while Tala'at Yasin Himam, believed to be the military commander of Jama'ah al-Islamiyah, was killed in a shoot-out in Asyout along with four of his comrades. In March two army officers were executed for their part in a plot to assassinate President Mubarak when he arrived at Sidi Barrani airport, near the Libyan border, on his way to visit Col Qaddafi.

On 10 April 1994 a new law was passed abolishing local elections and granting the Ministry of the Interior powers to appoint village *omdas* or mayors. In response to criticism from opposition deputies, the Government claimed that many *omdas* had refused to co-operate in security matters and were corrupt. The following day the emergency laws, which gave the security forces wide powers to arrest and detain suspects, were renewed for a further three years. The authorities also redoubled their efforts to curb the activities of leaders of extremist groups living abroad. In early April an extradition treaty was signed with Pakistan and there were reports that the authorities in Yemen and Saudi Arabia were co-operating with Egypt in security matters. Local and Western journalists were warned to ensure that their articles on the Islamist challenge conformed with official guidelines or they would face arrest or expulsion. A propaganda offensive against the Islamists was launched in the state-controlled media and included television broadcasts of confessions by former members of underground Islamist groups. Allegations that several senior police officers were being investigated for supplying arms to Islamist militants were strongly denied by the Minister of the Interior in March.

The major battle between the security forces and the armed Islamist movement continued unabated in the southern province of Asyout, one of the poorest in the country. The political violence there was believed to have intensified because of the widespread tradition of *thaar*, or blood feud, strongly rooted in local culture. Asyout became the scene of almost daily clashes between security forces and armed Islamists. The police claimed that 54 people had been killed in these clashes between January and March 1994—30 policemen, 13 civilians and 11 Islamists—and 67 wounded. In March an Islamist gunman fired into a crowd of Coptic Christians outside the Muharraq monastery near Asyout, killing five people and wounding three others in the most serious incident to date involving a Christian place of worship. In April the Minister of the Interior announced that the province was to be divided into four zones, each headed by a senior officer, in order to assist the security forces in controlling the area. At the same time, it was reported that several development projects were under way to improve basic services there. In mid-June the Minister of the Interior announced that the security forces had successfully infiltrated militant Islamist groups operating inside the country and abroad and that they were now under control. (His statement followed the police raids in April which resulted in the deaths of Tala'at Yasin Himam (see above) and Adil Awad Siyam.) Further raids in May led to the arrest of almost 100 Islamist cadres and the seizure of caches of arms. The police had also arrested Abd el-Harith Madani, a lawyer acting for the Islamist militants, and raided his offices. After Madani's death in police custody the Ministry of the Interior claimed that he was a 'terrorist' who had acted as an intermediary between imprisoned Islamist militants and those still at liberty, and as a channel for transferring funds raised abroad to Jama'ah groups inside the country. Madani's death provoked widespread protests and demands for a public inquiry and, following the threat of a general strike by several professional unions, the Government reluctantly agreed to investigate claims of torture.

Claiming to have won the battle against the armed movements, the Government moved to isolate the more moderate Muslim Brotherhood and to weaken its political influence in the approach to the parliamentary elections planned for November 1995. Several leading members of the Brotherhood were arrested in late January and both President Mubarak and the Minister of the Interior claimed that there was evidence of links between it and more extreme groups. At the end of March five members of the Doctors' Syndicate, which is controlled by the Muslim Brotherhood, were detained on charges of using medical relief operations as a cover for military training abroad. The Government acted to exert more control over other professional organizations, in order to counter Islamist influence within them. In February the People's Assembly passed an amendment to legislation governing professional organizations, giving the judiciary wide powers to intervene in trade union elections and to prevent Muslim Brotherhood members from standing.

However, Government claims that the security forces had suppressed the Islamist groups responsible for the violence proved premature. Towards the end of the year the Jama'ah al-Islamiyah appeared to have regrouped and to have renewed its attacks, but, owing to tight police control over its traditional stronghold in Asyout province, the conflict moved to the neighbouring provinces, in particular the areas around the towns of Mallawi and Samalut in Menia province, much of which was under curfew. In October 1994, after Egypt's internationally renowned novelist and Nobel Prize winner, Naguib Mahfouz, had been stabbed in Cairo, the Ministry of the Interior announced that the attack had been ordered by the leadership in exile of the Jama'ah al-Islamiyah. The 82-year-old Mahfouz, who had been denounced as an 'infidel' by the extremists, survived the attack which was condemned by intellectuals of all political tendencies. Clashes between militant Islamists and the security forces in Upper Egypt claimed 87 lives in January 1995, the highest figure for any month in three years. Security officials announced that 123 people had been killed in Menia province alone in the first three months of 1995, compared to 77 in the whole of the previous year. In August 1994 the Jama'ah al-Islamiyah resumed its attacks on foreign tourists, striking for the first time at the country's Red Sea resorts. A massive security campaign was mounted in early September when Cairo hosted the controversial UN International Conference on Population and Development which was attended by more than 10,000 delegates from 156 countries and the world's press corps. The conference's draft resolution incensed many Muslims in Egypt and beyond; Islamist extremists warned delegates against attending a 'conference on licentiousness' and the Muslim Brotherhood condemned the conference as unislamic for condoning abortion and encouraging sexual promiscuity. Egypt's most celebrated cleric, Sheikh Muhammad Metoualli Charaoui, stated that he was 'scandalized' by the draft resolution and declared that the meeting was 'hostile to Islam'. President Mubarak criticized those Muslim countries that refused to participate—they included Saudi Arabia—and argued that it was in the interests of the Islamic nation that Muslim representatives attended in order to oppose any interpretation contrary to religion and Islamic law. The conference proceeded without incident and the Egyptian Government even won praise from the Muslim Brotherhood for its 'commendable role' in ensuring that the final declaration did not offend Muslim values.

RENEWED CRITICISM OF THE SECURITY FORCES' METHODS

Harsh security measures remained in force and the continued use of special military courts to try suspected Islamists was criticized by human rights groups. Some 62 Islamists had been sentenced to death by military courts since 1992. Mass arrests continued. Among those arrested in December 1994 was the Secretary-General of the pro-Islamist SLP, Adel Hussein, a former Marxist turned Islamist, who was accused of having links with militant extremist groups and of supporting the Jama'ah al-Islamiyah in its efforts to overthrow the Government. A prominent journalist, Hussein had written several articles vigorously denouncing official corruption. He was detained for one month and only released after strong protests from journalists, intellectuals and opposition party leaders. In the early months of 1995 some 20 members of the SLP were

arrested in Menia and charged with distributing anti-government leaflets and of supporting the Jama'ah al-Islamiyah. In September 1994 Amnesty International stated that Egypt's record on human rights was at an all-time low, and in December the EOHR warned that harsh security measures would not solve the problem of violence; only freedom of opinion and organization and democratic access to power would prevent the same kind of conflict developing in Egypt as in Algeria. The security forces were accused of torture and summary executions, and of intimidating the relatives of suspected Islamists. According to the US-based Middle East Watch, more than 8,000 political prisoners were being held in detention, most of them accused of being Islamist militants. In February 1995 the US Department of State published a highly critical report on the methods employed by the Egyptian security forces and concluded that, faced with the regime's strict control over the country's political life, Egyptians despaired of seeing greater democracy. The pro-government press was quick to interpret US attacks on Egypt's human rights record as an attempt to persuade the Government to abandon its stand on the Nuclear Non-Proliferation Treaty (NPT, see below).

On 26 June 1995 President Mubarak escaped an assassination attempt in Ethiopia while he was travelling from the airport in Addis Ababa to attend the opening session of the OAU summit meeting. Mubarak, who was being driven in his own bullet-proof car, was unharmed and returned immediately to Cairo. On 29 June, before a meeting of workers in Cairo, the President claimed that Sudan was responsible for the attempt on his life and denounced the Sudanese regime. Sudan strenuously denied the allegation. In early July Jama'ah al-Islamiyah claimed responsibility for the assassination attempt. Two of the President's assailants who were killed during the attack, and a further three who were killed in subsequent raids by Ethiopian security forces, were believed to be Egyptians. In September the Ethiopian authorities stated that nine members of Jama'ah al-Islamiyah formed the team which had planned to kill the President and a further two members had controlled the operation from Sudan. Ethiopia accused the Sudanese security forces of complicity in the attack, claiming that the assailants had safe houses in Sudan and that they had received training in special camps near Khartoum. The Ethiopian authorities also alleged that some of the equipment used in the attack had been traced to purchases made by the Sudanese security services. Egypt has long claimed that Egyptian Islamist militants are being armed and trained in Sudan. Mounting evidence of Sudan's complicity in the assassination attempt against the Egyptian President was one of the factors which led the UN to impose sanctions against Sudan in 1996 (see below).

By the end of 1995 the militants appeared to be under strong pressure from the security forces. In August it had been reported that the Jama'ah al-Islamiyah was planning to revive its terrorist campaign in Cairo, which had been largely unaffected by Islamist militancy for more than a year, and in the following months several groups of militants were arrested, allegedly for planning to assassinate leading politicians. It was repeatedly claimed that Jama'ah militants were receiving weapons and training in Sudan. At the end of November security forces arrested a large group of alleged militants belonging to Islamic Jihad who were accused of planning to explode a car bomb in the Khan al-Khalili, Cairo's main tourist bazaar, and to assassinate leading public figures. There were further arrests of alleged Jihad militants in December, and the Ministry of the Interior claimed that they were being organized, funded and supplied with weapons by exiled Islamic Jihad leaders in the United Kingdom and Sudan. In November, during a visit to Paris, France, President Mubarak deplored the fact that certain European countries, including the United Kingdom and Germany, had offered political asylum to Islamist 'criminals', stating that in the future they would be punished for their action. The Egyptian Government accused the United Kingdom of harbouring two of the main leaders of Islamic Jihad. In January 1996, after a US court sentenced Sheikh Omar Abd ar-Rahman, a spiritual leader of the Jama'ah al-Islamiyah, to life imprisonment for conspiracy to blow up the UN and FBI buildings in New York, the Jama'ah threatened revenge attacks on US interests.

In February 1996 violence erupted once again in Asyout province, which had been relatively quiet for some two years, when the Jama'ah al-Islamiyah launched a violent campaign in revenge for the killing of two of its members by the police in the neighbouring province of Menia. Observers remarked that some four years of political violence had intensified local feuds and that, as a result, the periodic upsurge of violence was virtually impossible to control. By the end of February some 24 people had died in the province in clashes between the police, Jama'ah militants and rival families supporting either the security forces or the militant Islamists. In contrast, in mid-March the Government felt sufficiently confident that the security situation in and around Mallawi in Menia province was under control to lift a 20-month curfew imposed on the town. Mass arrests by the security forces across the country were reported in March and April, including the detention of some 245 men alleged to be members of the extremist Takfir wal-Higara group which had not been active since the 1970s, but which the Ministry of the Interior claimed to be regrouping and planning a campaign of violence. In September 1995 the EOHR issued a report condemning the harsh conditions under which Islamists were being detained in certain desert prisons, claiming that almost 20 had died in two prisons in less than a year. The allegations were dismissed by the Ministry of the Interior. In an interview in Paris, France, in November, President Mubarak denied allegations by Amnesty International of human rights abuses in Egypt and the growing number of deaths in detention, accusing the organization of making propaganda to destabilize the country. He claimed that all those in prison had been arrested according to the law and that his Government did not interfere in the judicial system. However, the Government continued to prefer using military courts to try Islamist militants rather than civilian courts.

Beginning with the attempt on President Mubarak's life in Addis Ababa in June 1995 (see above), Islamist militants have carried their struggle abroad. In October the Jama'ah al-Islamiyah claimed responsibility for a car bomb explosion in the Croatian port of Rijeka, while just before the legislative elections in Egypt in November an Egyptian diplomat was assassinated in Geneva. A few days later a suicide bomber killed 16 people, including five Egyptians, and wounded 60 in an attack on the Egyptian embassy in Islamabad, Pakistan. The Group for International Justice (GIJ), believed to be part of the Jama'ah al-Islamiyah, claimed responsibility for the murder of the Egyptian diplomat, while the GIJ, Jama'ah al-Islamiyah and Islamic Jihad all claimed responsibility for the bombing of the Egyptian embassy.

In November 1995, as Egypt's peak winter tourism season began, militants from Jama'ah al-Islamiyah advised all foreign tourists to leave the country and resumed their attacks on trains carrying tourists to sites in the south. In April 1996 four gunmen perpetrated the first major attack on tourists in the Cairo region since 1993 after they opened fire on a group of Greek tourists outside the Europa Hotel in Cairo, killing 17 of them and one Egyptian, and wounding another 15. The Jama'ah al-Islamiyah claimed responsibility for the attack, stating that it had planned to strike at a group of Israeli tourists in revenge for Israeli attacks on Hezbollah bases in Lebanon. In the aftermath of the attack, the security forces conducted raids on Islamist hide-outs in and around Cairo, arresting many alleged militants. In March three Egyptians had hijacked an EgyptAir aircraft carrying tourists from Luxor to Cairo and forced it to fly to Libya. None of the passengers was hurt and the hijackers were extradited at the end of March, but the breach in security was an embarrassment for the authorities.

In mid-1996 the Ministry of the Interior claimed that militant Islamist activities were now largely confined to parts of Menia, Asyout and Suhag Governorates in Upper Egypt where tight security measures remained in place. The security services reported that despite a series of violent robberies carried out by activists of the Jama'ah al-Islamiyah, a sharp decline in high-profile attacks on foreign tourists and senior government officials indicated that the group had been effectively isolated from its overseas leadership and funds. In early May the offer of a cease-fire by the Jama'ah was rejected by the Minister of the Interior, who insisted that there would be no dialogue with 'killers and assassins'. Later that month his ministry announced

that the security forces had killed one of the Jama'ah's leaders and arrested 33 of the group's activists. It was also announced that the security forces had killed a prominent member of Ash-Shawqiyun (a branch of the Jama'ah) and had arrested 13 of his supporters. Further arrests of Islamist militants were announced in June, and in September and October the police launched major operations in Asyout and Suhag Governorates to trace militants who had taken refuge there. The Government claimed to have made many arrests, but other sources reported that most of the militants had eluded capture. In September official sources announced the arrest of 16 leading members of the military wing of Islamic Jihad, and in October the detention of more than 50 members of a clandestine Shi'a group was reported. Earlier that month President Mubarak had accused Iran of both providing support for Egyptian Islamist militants and of involvement in his attempted assassination in June 1995. Iranian officials rejected the President's allegations and claimed that he was attempting to transfer responsibility for Egypt's internal problems. As the Government continued its campaign to subdue Islamist militancy, the large number of political prisoners held in Egyptian jails provoked criticism from human rights groups. The Arab Organization for Human Rights claimed that 17,000 political prisoners, most of them Islamist, had been detained since 1991. By January 1997, 83 Islamist militants had been sentenced to death by military courts since 1992, of whom 54 had been executed.

In September 1996 Egypt urged the British Government to prohibit the organization of a large international conference of militant Islamist groups, due to have been held in London that month, claiming that the United Kingdom was indirectly supporting international terrorism. The Egyptian media also criticized the United Kingdom for harbouring Islamist extremists, including Yasser Tawfiq as-Sirrim, alleged to be a leading strategist of Islamic Jihad.

At the end of February 1997 the People's Assembly approved a presidential decree whereby emergency law provisions were extended for a further three years. According to the Prime Minister, such an extension was necessary in order to prevent terrorists from disrupting the country's economic reform programme and discouraging urgently needed foreign investment. Human rights groups, however, insisted that the law was being used not only to counter Islamist militancy but also to undermine support for political groups opposed to the regime. In the early months of 1997 there were a number of reports of attacks by militant Islamist groups against Coptic Christians in Upper Egypt. In February guerrillas attacked a church in the village of Al-Fikriya, in Menia Governorate, killing several Christian worshippers. Copts were also murdered in a nearby village. Although the Jama'ah al-Islamiyah denied responsibility for the attack, the group's leader stated that the Christian inhabitants of the village were no longer 'protected non-Muslims', prompting speculation that they had been attacked for failing to pay protection money to the Islamist militants. Indeed, militant groups were believed to be targeting the Christian minority in Upper Egypt as a source of funds in order to maintain their armed struggle against the Government. In another attack, in March, Islamist militants killed eight Christians and four Muslims in the village of Izbat Dawud, and shortly afterwards guerrillas fired on the Aswan–Cairo train in the same area. The Jama'ah al-Islamiyah was suspected of both incidents but again denied responsibility. In the same month Islamic Jihad and the Vanguards of Conquest announced that they had merged and proclaimed their commitment to continuing a campaign of violence. In April Mustafa Mashhour, a leader of the Muslim Brotherhood, stated that Copts, as non-Muslims, should pay a special tax and should not be allowed to serve in the armed forces, as their loyalty could not be depended upon. His comments provoked public outrage and were later withdrawn.

ATTACKS ON FOREIGN TOURISTS IN CAIRO AND LUXOR

Despite the extension of Egypt's emergency law provisions for a further three years in February 1997, a number of people were killed by Islamist militants in Upper Egypt in the following month and, again, in August. In mid-September a military court in Haekstep, north of Cairo, held Egypt's largest trial to date of suspected Islamist militants; 98 people were convicted on charges of subversion, four of whom were sentenced to death and eight to life imprisonment. A few days later, in the first such attack for almost 18 months, suspected Islamist militants attacked a tourist bus in Cairo, killing nine German tourists and injuring 11 others. Although the perpetrators were widely believed to be members of the Jama'ah al-Islamiyah, the Government, in an apparent attempt to protect the country's vital tourist industry, claimed that the attack was an isolated incident and denied any connection with terrorism. The reports of eye-witnesses to the attack, which differed from the Government's account in some respects, were dismissed, and military prosecutors subsequently prohibited the publication of articles which challenged the official version of events. In May 1998 two brothers were hanged, having been convicted in October 1997 of conducting the attack.

In November 1997 the Government's campaign against the armed Islamist movement suffered a devastating reversal when 70 people, including 58 foreign tourists, were massacred by members of the Jama'ah al-Islamiyah near the tomb of Queen Hatshepsut in the ancient city of Luxor. The damage to the Egyptian tourist industry was apparent in the immediate aftermath of the attack as foreign tour operators cancelled bookings and foreign governments advised their citizens to leave the country. It was generally agreed that the armed Islamist movement in Egypt was profiting from the deadlock in the Arab–Israeli peace process, from frustrations felt in Egypt at the lack of legitimate means to express political opposition, from economic hardship which had resulted from the country's programme of fiscal reform and from the corruption which had resulted from that programme. A spokesman of the Egyptian Muslim Brotherhood condemned the attack at Luxor but emphasized the need for the Government to engage in dialogue with those among its political opponents who rejected violence, as part of a wider process of political, economic and social reform.

Following the attack at Luxor, President Mubarak criticized the security forces for failing to protect tourists and publicly discredited the Minister of the Interior, Hassan Muhammad al-Alfi, who had conceived the Government's uncompromising strategy to eradicate Islamist militancy; al-Alfi was replaced by Habib Ibrahim el-Adli, hitherto the head of the state security services. President Mubarak ordered a heightened security presence at all tourist sites and placed the Prime Minister at the head of a special committee, which was to devise a plan to safeguard the lucrative tourist industry. In June 1998 two senior police officers (the first to stand trial for 18 years) who had been responsible for security at Luxor's tourist sites were dismissed and fined, after a police disciplinary hearing found them guilty of gross negligence.

Prior to the attack at Luxor, evidence had emerged of a willingness among the jailed leadership of both the Jama'ah al-Islamiyah and Islamic Jihad to cease the movements' armed operations. In early December 1997 a statement that had apparently been approved by an exiled leader of the Jama'ah al-Islamiyah condemned the attack at Luxor, thereby fuelling speculation that a rift had developed between the exiled leadership and those in command of armed units within Egypt. It also undermined the Government's claim that exiles had been responsible for planning the attack at Luxor. It was not, therefore, clear whether an order to cease all attacks on foreign tourists, reportedly issued in early December by the exiled leadership, would be observed by all Jama'ah armed units. In May 1999 security officials in Switzerland alleged that the massacre had been organized and financed by the Afghan-based Saudi militant Islamist Osama bin Laden.

ELECTIONS TO THE PEOPLE'S ASSEMBLY

As elections to the People's Assembly in November 1995 approached, the opposition remained weak and divided. After many months of negotiations the different parties were unable to agree on terms for a united front against the ruling NDP, failing to draw up an 'opposition charter' that was to have demanded the right for political parties to organize and campaign without hindrance, that elections be placed under judicial scrutiny, and that legal controls placed on the media be ended. The main disagreement appeared to be between the secular and pro-Islamist opposition parties. The Muslim Brotherhood spokesman, Maamoun al-Hodaiby, for example, had insisted

that his party would only support a common agenda that explicitly demanded the application of *Shari'a* law by the government in power.

Despite the opposition's outspoken lack of confidence in the electoral process, on 20 August 1995 the New Wafd Party formally announced that it would participate in the elections and the other parties quickly followed its example. Following the attempted assassination of President Mubarak in June, the pre-election security operation against the Muslim Brotherhood intensified. In the months preceding the election 19 members of the Brotherhood's consultative council were arrested and accused of colluding with Sudan to promote terrorism. In a separate raid a further 200 members were arrested in several cities, representing the largest single operation against the movement since the assassination of President Sadat in 1981. At the end of August 1995, President Mubarak's decision to refer 49 leading members of the Brotherhood for trial by military courts attracted widespread criticism, even from the movement's political opponents. Tagammu, the Nasserist Party and the New Wafd Party, among others, endorsed a statement of protest against the military trials, observing that the Muslim Brotherhood was committed to dialogue. Some commentators argued that the government crackdown had not targeted the Brotherhood's Supreme Guidance Council for fear that the arrest of the leadership might result in younger, more uncompromising activists taking their place; instead it had targeted the movement's most effective principal organizers, including many professional people, in order to destroy the party's structure. Just days before the election, some 54 of the Brotherhood's members, including many parliamentary candidates, received prison sentences of three to five years for 'unconstitutional activities' from a military court which also closed down the movement's headquarters in central Cairo. In November the Minister of the Interior repeated his claim to have evidence of close links between the Brotherhood and the Islamist militants, and accused the Brotherhood, Jama'ah al-Islamiyah and Islamic Jihad of being, ultimately, part of one single organization. Earlier in the month, in an interview in Paris, France, President Mubarak had referred to the Muslim Brotherhood's assassination of two Egyptian Prime Ministers and a Minister of Finance before the revolution, its attempt to assassinate Nasser and the killing of Sadat. He also claimed that there was no difference between the Muslim Brotherhood and the Islamist extremists and insisted that their behaviour was contrary to the fundamental principles of Islam. Over 1,000 Brotherhood members, including several hundred due to monitor the polls and witness the counting of votes, were arrested on the eve of the elections. The SLP also complained that the police had arrested some of its members in the approach to the elections and accused the regime of intimidation.

An unprecedented number of candidates—more than 4,000, approximately 10 for each seat—contested seats in the first round of voting, with more than two-thirds of them standing as independents. Only the ruling NDP was able to present candidates for all 444 seats, while the New Wafd Party contested 182 seats, the Muslim Brotherhood 150, the SLP 120 and Tagammu a mere 40. The combined results of the first and second rounds of voting, held on 29 November and 6 December respectively, were announced by the Minister of the Interior on 7 December. The ruling NDP won 316 of the total 444 seats, independent candidates 115 and the opposition parties only 13—the New Wafd Party six, Tagammu five, and the LSP and the Nasserist Party one each. For the first time, the NDP pitted powerful government ministers against prominent Islamist candidates, most of whom were defeated in the first round. After the vote 99 independent deputies were reported to have joined the NDP, giving the ruling party an overwhelming victory with 93% of all parliamentary seats. Five women won seats, all of them candidates of the NDP. The Independent Commission for Electoral Review (ICER) noted that 56 Coptic candidates contested the elections, but that no Copts were included on NDP nomination lists. No Copts were elected, but of the 10 deputies appointed by the President six were Copts. Voter attendance was officially registered at 50% in the first round of voting—out of 21m. registered voters—and 49.73% in the second round; the ICER claimed that fear of violence and lack of faith in the fairness of the elections after criticism in the opposition press, had resulted in a considerable increase in voter abstention in the second round. Despite government assurances that the elections would be fair, and official press releases during the elections confirming the Government's neutrality and the efficiency of the police in securing and regulating the electoral process, they were widely denounced as the most fraudulent in Egypt's recent history. Furthermore, the ICER claimed that they had been characterized by unprecedented violence and bloodshed. This was confirmed by other sources. Figures for casualties varied, but the Egyptian Centre for Human Rights and Legal Aid recorded that 51 people were killed and 878 injured during the electoral campaign. The ICER attributed the violence to popular feeling that the Government had been indifferent towards irregularities committed, while other reports stated that some of the violent incidents were armed exchanges between supporters of rival candidates. Prior to the first round of the elections, the ICER, which employed some 600 volunteers to monitor 88 electoral districts, received numerous complaints about faulty voting lists—many included names repeated up to 20 times, and the names of deceased people—and about the illegal, but widespread practice of mass registration. Some opposition candidates complained that they had been assigned negative symbols, such as a sword or a pistol, so that voters would think that they supported the Islamists. On the first day of voting the ICER received 1,240 complaints of irregularities from candidates, election agents and voters, more than one-half of them from Muslim Brotherhood and SLP members. They reported ballot-box stuffing, refusal to admit election agents into polling areas and, in some cases, physical abuse. Particularly disturbing were complaints by Coptic candidates citing examples of the NDP urging people not to vote for Christians. The revival of old traditions of tribalism among the supporters of various candidates and their re-emergence in the country's major cities was identified as perhaps the most dangerous outcome of the elections.

The ICER, which had been formed in October 1995 in a pre-election initiative by a group of prominent Egyptians and organizations active in civil society, was vigorously attacked by the Prime Minister. Its Chairman and Secretary-General were pressured to disband the organization by the security services, and its members were subjected to state harassment. Other observers, however, believed that the Commission reflected the vitality of Egypt's civil society and saw its creation as possibly the most exciting development of the 1995 campaign.

AL-GANZOURI APPOINTED PRIME MINISTER

At the beginning of January 1996 President Mubarak replaced Dr Atif Sidqi, the long-serving Prime Minister, and appointed the Deputy Prime Minister and Minister of Planning, Dr Kamal al-Ganzouri, to head a new administration. After the parliamentary elections Mubarak had been under some pressure to improve the Government's image by creating a more efficient administration with less ministerial conflict. With the President maintaining firm personal control over the portfolios of defence, the interior and foreign affairs, the Prime Minister's role was to take charge of economic affairs, hasten economic reform, especially privatization, and to raise living standards. Although regarded as an economic conservative, international institutions expressed the hope that with strong support from the President, the new Prime Minister would prove more decisive than Sidqi in implementing reforms. Al-Ganzouri, who retained the planning portfolio, stated that he would give priority to job creation, to accelerating economic development and to encouraging foreign investment. In the reshuffle of the Council of Ministers that followed his appointment, the main changes were to the economic portfolios. As expected there were no changes at the key ministries of defence, foreign affairs, the interior and information, and long-serving technocrats retained the portfolios of oil, energy and electricity and social affairs. However, new appointments were made to the new Ministry of Health and Population, and to the Ministry of Awqaf (Religious Endowments). In January the President also replaced 17 of the country's 26 provincial governors, appointing new governors to Asyout and Menia, the strongholds of Islamist militancy, while retaining the governors of key provinces, such as Cairo, Giza and Alexandria.

After several cases in which Islamist lawyers had instituted legal proceedings against prominent Egyptians for contravening what they claimed to be Islamic morality, in January 1996 the People's Assembly passed a new *jesba* law to limit such claims of unislamic conduct. In March a new draft of the controversial proposed law governing the media was agreed which went some way towards reducing the harsh penalties for slander and libel proposed in the original draft; however, journalists expressed concern that the new version did not remove the threat of state intimidation of the press. In June, the decision of the Advisory Council to reintroduce the harsh penalties from the original press law into the new draft, encountered strong opposition from the Press Syndicate, prompting President Mubarak to intervene and annul most of the amendments by presidential decree. His decision was approved by the People's Assembly, which endorsed the revised press law on 17 June. With a few exceptions, including criticism of the President and his family, journalists no longer faced long prison sentences for libel and slander, although they continued to risk heavy fines. In September 1997 an Egyptian journalist at the Saudi Arabian-owned daily newspaper, *Asharq al-Awsat*, was sentenced to six months' imprisonment after having been convicted of libelling the President's two sons, and in October, following the attack on German tourists in Cairo (see above), strict controls were imposed on the reporting of attacks on tourists by both foreign and local journalists. In February 1998 Magdi Hussein, the chief editor of the Islamist newspaper, *Ash-Shaab*, and a journalist employed by the paper, were each sentenced to one year in prison, with hard labour, after having been found guilty on charges of libel, slander and defamation against two sons of the former Minister of the Interior, Hassan al-Alfi. In March the Government banned more than 30 foreign-registered companies from printing in industrial 'free zones' around Cairo. The prohibition was subsequently overruled by the Prime Minister, although restrictions remained on the printing of the *Cairo Times* and the *Middle East Times*. In March the Government ordered the closure of *Ad-Dustur* for publishing comments by a Jama'ah al-Islamiyah sympathizer. In July Magdi Hussein and his colleague were released from prison after their sentences were overturned. Further charges were brought against Hussein and three other *Ash-Shaab* journalists in April 1999 following accusations that they had libelled the Deputy Prime Minister and Minister of Agriculture and Land Reclamation, Dr Yousuf Wali, by claiming that his ministry was maintaining close links with Israel. In mid-August Hussein and two of the journalists were sentenced to two years' imprisonment with hard labour, while the other received a £E20,000 fine.

At the end of March 1996, after the death of Jad al-Haq, the Grand Sheikh of al-Azhar, who had been accused of being sympathetic to militant Islamist groups, President Mubarak appointed Muhammad Sayed Tantawi, formerly the Grand Mufti, to the post. In contrast to Jad al-Haq, Tantawi was widely considered to take a more liberal approach to religious issues. In November, Nasr Wassel, also regarded as a liberal, was appointed to succeed Tantawi as Grand Mufti.

The Government's intimidation of the Muslim Brotherhood continued after the parliamentary elections. In April 1996 12 leading members of the Brotherhood were arrested and charged with trying to re-establish the movement's clandestine activities and its links with extremist groups. For the first time, the authorities arrested a member of the movement's Supreme Guidance Council. Three of those arrested were founder members of a new political grouping, the Al-Wasat (Centre) Party, and included Abu-Ela Mada, a former Deputy Secretary-General of the Engineers' Syndicate, who had campaigned to obtain official recognition of the new party. Mada was accused of trying to use Al-Wasat as a cover for Brotherhood activities, but the founders of the new party, including young Islamist, Christian, leftist and Nasserist activists, claimed that they were trying to create a political movement occupying the middle ground between the state and the Islamist militants. (In May and September 1998, and again in June 1999, Al-Wasat was denied legal status on the grounds that the party's political agenda was not sufficiently different from that of existing political groups.) In April 1996 the Government moved once again to reduce Islamist control over professional associations. The Bar Association, which had been dominated by members of the Muslim Brotherhood, was placed under the control of court-appointed custodians following allegations of financial mismanagement, leaving the Doctors' Syndicate as the only major professional union controlled by Islamists. In May the Supreme Constitutional Court upheld a decree, issued by the Minister of Education in July 1994, prohibiting girls from wearing the *niqab* (veil) in schools. Also in May 1996 the Advisory Council's Political Parties' Committee rejected Al-Wasat's application for a political licence, but in August Mada and the two other founder members of Al-Wasat were acquitted after trial by a military court. In contrast, seven members of the Muslim Brotherhood were sentenced to up to three years' imprisonment for supporting the new party. Some observers argued that the authorities were trying to exacerbate existing divisions within the Muslim Brotherhood between the young reformers of Al-Wasat and the older, more conservative, leadership. In October the three founder members of Al-Wasat were among 13 members who resigned from the Brotherhood. In December the People's Assembly made it an offence to preach in a mosque that had not been licensed by the Ministry of Awqaf. The Government thereby intended to extend its control over the country's many private mosques which it claimed were used by militant Islamist groups, such as the Brotherhood, for their political activities. There were further arrests of Brotherhood supporters in December, including members of the SLP who were accused of using the party's headquarters in Helwan for subversive activities. This latest round of arrests was regarded as a government attempt to weaken the Brotherhood before local elections took place in April 1997. In March 1997 the Brotherhood announced that it would not contest the forthcoming elections because it did not expect them to be free or fair. The other main opposition party, the New Wafd, also indicated that it would boycott the elections.

Predictably, at the local elections held on 7 April the ruling NDP won the vast majority of seats. In fact, official sources indicated that the NDP gained 44.4% of the 47,382 seats unopposed. The Minister of Information expressed the opinion that, as a result of the violence surrounding the 1995 parliamentary elections, potential opponents had declined to come forward, while local human rights organizations suggested that the electorate had simply lost faith in the electoral process. The elections attracted little interest among voters. Although the Government declared that attendance was 40% in urban areas and 75% in the countryside, independent sources maintained that it was much lower: between 5% and 20%. Although the ruling NDP faced little or no opposition, there were widespread claims of electoral fraud. Two days before the elections, the State Security Prosecutor ordered the arrest of 27 members of the Muslim Brotherhood which claimed that hundreds of its followers had been detained to prevent them from participating. No comprehensive monitoring of the voting took place, but human rights groups and opposition sources claimed that electoral malpractice had once again been widespread.

A reshuffle of the Council of Ministers took place in July 1997. Three new full ministerial appointments were made: Mahmoud Abu Zeid as Minister of Public Works and Resources, Mervat Talawi as Minister of Social Insurance and Social Affairs, and Mufid Shehab as Minister of Higher Education. The other significant change was Yousuf Boutros-Ghali's reappointment to ministerial office.

In June 1998 the NDP secured 85 of the 88 contested seats at mid-term elections to the Advisory Council. The remaining three seats were won by independent candidates. Most opposition parties had decided not to contest the election. In November 1998 Ahmad Fathi Surur, regarded as a close political ally of President Mubarak, was re-elected Speaker of the People's Assembly for the ninth time in succession.

In early June 1999 President Mubarak was formally nominated for a fourth six-year term of office. His nomination was endorsed by all 443 attending deputies in the People's Assembly, and was to be put to the electorate in a nationwide referendum. Of the four main opposition parties, only the Nasserist Party refused to endorse Mubarak's candidature. In the referendum, held on 26 September, some 93.8% of voters approved Mubarak's re-election.

In early December 1998 the Egyptian Organization for Human Rights (EOHR) announced the suspension of its activi-

ties in protest at the arrest of its Secretary-General, Hafiz Abu Sa'ada. The arrest followed allegations made by the Egyptian weekly newspaper, *al-Usbu'*, that Sa'ada had been paid some US $25,000 by a British parliamentary human rights committee, via the British embassy in Cairo, to write a false report exposing alleged police brutality against Copts in Upper Egypt during August of that year. A British embassy official maintained that the payment was intended for a legal aid project which had been funded from Britain in this way since 1996. Human rights activists, meanwhile, claimed that the Government and security services (with which *al-Usbu'* has alleged connections) were seeking to punish the EOHR for having exposed institutionalized ill-treatment of Egypt's Coptic minority.

By early 1999 labour unrest in Egypt had reached its highest level since the 1952 revolution. Despite legal restrictions on strike action, an estimated 80 protests were staged by public sector workers in 1998, and 10 strikes were organized in February 1999 alone. This increase in industrial action, which affected the road and air transport and textiles sectors, as well as several state enterprises, was believed to reflect public concerns about a proposed labour law that would facilitate the termination of employment contracts. Meanwhile, legislation concerning the activities of non-governmental organizations (NGOs), approved by the People's Assembly in late May, attracted strong criticism from both the committee charged with preparing recommendations on the proposed law and from human rights groups who claimed that the legislation would compromise the independence of the organizations. The Law on Associations and Civil Institutions imposes stringent state regulation on such bodies, including the right of state intervention to dismiss board members and appoint government representatives in their place, and prevents NGOs from receiving funding from abroad.

Attempts by the Government to suppress the activities of Islamist groups intensified during 1998, with further arrests and security trials. By June of that year 106 death sentences had been received by militant Islamists since 1992, of which 72 had been carried out. However, new measures regarding state security, adopted by the Ministry of the Interior in 1998, included a relaxation of the criteria on which affiliation to Islamist groups was assumed, and the release of some 5,000 Islamist prisoners who had renounced connections with illegal organizations and the use of violence. The release of prisoners was interpreted by some observers as a goodwill gesture by the Government towards the Jama'ah al-Islamiyah, which appeared to be moving towards the declaration of a cease-fire.

Internal dissent within the Jama'ah al-Islamiyah remained evident during 1998: in October one of the group's imprisoned leaders urged all Islamist groups to form a 'world Islamic front', employing exclusively peaceful means; however, reports of a change in the group's political strategy were later denied by another senior member. During early 1999 one of Jama'ah al-Islamiyah's founders denied reports that the organization was planning to establish a political party. Nevertheless, speculation continued into mid-1999 and it was predicted that the political programme of the new party (reportedly to be called Al-Islah or Reform) would soon be presented to the Political Parties Committee. (Observers noted that the chances of the party receiving a licence were remote, considering the rejection of previous applications made by the more moderate Muslim Brotherhood and Al-Wasat parties.)

In late March 1999 the Jama'ah al-Islamiyah declared a unilateral cease-fire and announced a new strategy of exerting maximum political pressure on the Egyptian Government without the use of violence. The cease-fire had reportedly been endorsed by the organization's spiritual leader, Sheikh Omar Abd ar-Rahman, its Shura Council and the historical leaders in exile. However, despite the announcement and the lack of any denial from Jama'ah's military wing, it remained unclear whether its military commanders, led by Rifai at-Taha from his base in Afghanistan, would end their campaign of violence. Although the Government gave no formal acknowledgement of the cease-fire, there followed an acceleration in the release of imprisoned Islamist militants, in what appeared to be an attempt to consolidate the peace. In late April the Ministry of the Interior released some 1,200 Jama'ah al-Islamiyah prisoners (reportedly including two of the group's leaders who were involved in the assassination of President Sadat); government officials strongly denied that a deal had been concluded with the illegal organization and emphasized that it would not negotiate with Islamist militants.

Despite the apparent development of an unstable truce between the Government and Islamists, the arrest and trial of suspected Islamist militants continued in 1999. In February it was reported that, as a result of US intelligence, three men suspected of belonging to the Jama'ah al-Islamiyah and of involvement in the 1997 Luxor attack were arrested on the Uruguayan-Brazilian border; the Egyptian authorities subsequently demanded their extradition in order to face trial in Cairo. Also in early February proceedings began against 107 alleged members of Islamic Jihad who were charged with conspiring to overthrow the Government, in the largest security trial in Egypt since militant Islamist groups launched their campaign against the state in 1992. (The trial was based partly on the confessions of an Islamic Jihad member who had been extradited from Albania and had already received a death sentence *in absentia* in 1997 for his part in a plot to bomb the Khan al-Khalili bazaar in Cairo.) In mid-April 1999 nine of the defendants were sentenced to death for having led an illegal organization and for plotting attacks on state officials and the police, 78 received prison sentences of between one year and life, all with hard labour, while 20 were acquitted. Among those sentenced to death, having been tried *in absentia* (as were most of the defendants), was a senior leader of Islamic Jihad, Ayman el-Zawahri. In response to the verdicts, the group pledged to continue its actions against the state, despite the Jama'ah al-Islamiyah's cease-fire declaration in March. The EOHR, meanwhile, claimed that there had been insufficient evidence for the defendants to be sentenced. In May 1999 the security services detained 23 suspects on the grounds that they were seeking to revive the activities in Egypt of the Jihad splinter group, Vanguards of Conquest, and were recruiting new members. In June 20 members of the Jama'ah al-Islamiyah were given prison sentences for a planned bomb attack on President Mubarak's Alexandria residence in 1996. However, the organization's lawyers welcomed the military court's decision not to impose the death sentence, a move which was interpreted as a positive response to the Jama'ah's recent cease-fire declaration.

EGYPT STRIVES TO REASSERT ITS REGIONAL STATUS

While the Middle East peace process continued to dominate Egypt's foreign policy, there was growing concern that as more Arab states established relations with Israel, Egypt's dominant regional role might be threatened. As the contours of a Middle East at peace were unclear, it was suggested that Egypt and Israel, allies in the Middle East peace negotiations, could become rivals, as both competed for the leading role in the region.

Egypt's diplomatic efforts to promote the Arab–Israeli peace process continued. In July 1994 President Mubarak travelled to Damascus in an effort to break the deadlock in the negotiations between Syria and Israel, and before returning to Cairo he met the Israeli Prime Minister, Itzhak Rabin, at Taba. Mubarak reportedly urged Rabin to effect a full Israeli withdrawal from the occupied Golan Heights. In August the Syrian Minister of Foreign Affairs, Farouk ash-Shara', held talks with President Mubarak in Alexandria, while the Egyptian Minister of Foreign Affairs, Amr Moussa, made his first official visit to Israel. In October the US Secretary of State, Warren Christopher, took part in talks with the Chairman of the Palestinian National Authority (PNA), Yasser Arafat, and President Mubarak in Alexandria. Despite the first official visit to Egypt by the Israeli President, Ezer Weizman, in December relations between Egypt and Israel began to deteriorate. Egypt was concerned that the peace process might collapse unless Israel showed more flexibility in the negotiations and the Palestinians secured some real benefits from the peace agreement as quickly as possible.

In December 1994 and February 1995 Egypt hosted two mini-summit meetings which some observers regarded as an attempt by the Government to demonstrate its continuing role as the key intermediary in the region and to counter the view, expressed by some members of the new Republican majority in the US Congress, that Egypt no longer deserved substantial US aid. A

meeting between President Assad of Syria, King Fahd of Saudi Arabia and President Mubarak took place on 28–29 December 1994 in Alexandria and, according to some reports, was convened in response to Syrian anxiety about the number of Arab states seeking to normalize their relations with Israel before significant progress had been made in peace negotiations between Syria and Israel. The final communiqué of the meeting expressed support for a comprehensive settlement based on the exchange of land for peace. The Israeli Government interpreted the summit as a move hostile to Israel and as a negative response to President Weizman's invitation to Mubarak to make a reciprocal visit to Israel. Moreover, Shimon Peres, the Israeli Minister of Foreign Affairs, expressed his fear of the re-emergence of an Arab alliance hostile to Israel. During a visit to Cairo in January 1995 Peres was informed that Egypt had no desire to obstruct the normalization of relations between Israel and the Arab states. However, tension between the two states remained as Mubarak reiterated his threat that Egypt would not sign the Non-Proliferation Treaty (NPT), which was due for renewal in April, unless Israel also agreed to sign it; and urged other Arab states to do likewise. Egypt refused to accept Israeli claims to 'special status' and viewed Israel's nuclear capability as a threat to its own regional position.

President Mubarak met King Hussein of Jordan at Aqaba in January 1995, his first visit to Jordan since the Gulf crisis of 1990–91. The visit was regarded as a sign of an improvement in relations between the two countries now that Jordan had signed a peace treaty with Israel. King Hussein, together with Yasser Arafat and Itzhak Rabin, attended a hastily convened meeting in Cairo in early February 1995 after another suicide bomb attack on an Israeli civilian target threatened to halt the peace process. Although US officials described the summit meeting as 'historic', little was achieved beyond the participants' agreement to take part in a further meeting. Tensions between Egypt and Israel over the NPT continued, with Israel accusing Egypt of attempting to use the issue to disrupt its efforts to normalize relations with other Arab states. In March Israel offered to sign the NPT once it had concluded peace treaties with all the Arab states and Iran; and to allow Egypt to inspect its research nuclear reactor at Nahal Shorek, but not the nuclear facility at Dimona. Egypt rejected both offers, but adopted a more conciliatory line on the issue. Both states appeared anxious to avoid a major crisis in their relations. At the end of March Egypt failed to obtain agreement on a common approach to the issue among Arab League member states. It was reported that the USA had brought strong pressure to bear on the Gulf states to ensure that no united Arab stance should emerge.

Egypt's position regarding the NPT antagonized the USA, which insisted that the continuation of US aid depended on Egypt signing it. This was just one of the issues which had strained US–Egyptian relations. In late 1994 a number of US newspapers and journals published articles criticizing Mubarak's links with Col Qaddafi of Libya, pointing to corruption in high office, including the presidential family, and the lack of genuine political reform. They questioned whether Egypt should continue to receive substantial US economic aid. There was an angry response in the Egyptian press, which accused the USA of betraying a loyal ally which had supported it throughout the Gulf crisis. The US Administration assured Egypt that the press campaign had not been mounted with official approval, praised Egypt's role in the Middle East peace process and insisted that relations with Egypt were excellent. However, Egypt remained concerned about its relations with the USA and feared that, weakened as he was after the Republican victory in the US Congress, President Clinton might become even more dependent on the support of the pro-Israel lobby. It was also reported that Egypt suspected that President Clinton had been advised to establish contact with the Islamist opposition in order to avoid making the same mistakes that the USA had made in Iran. When President Mubarak visited Washington in April 1995 Egypt's relations with the USA had reached their lowest level for many years. The dispute with Israel over the NPT dominated discussions during the visit, at the end of which President Mubarak pledged that Egypt would not withdraw from the Treaty nor persuade other states to suspend their membership. However, the possibility of a reduction in US aid to Egypt continued to be openly discussed.

As the dispute over the NPT came to a head at the UN in New York in May 1995, Egypt led the Arab states in demanding a resolution requiring Israel to sign the Treaty. However, under pressure from the USA, the Arab states agreed to a resolution which did not mention Israel by name, but instead urged all states in the Middle East without exception to sign the NPT and accept inspection by the International Atomic Energy Agency (IAEA) of their nuclear facilities. Egypt also led the Arab states in condemning Israel's plan to confiscate Palestinian land in occupied East Jerusalem and demanded the convening of an emergency Arab League summit meeting on the question. However, at the end of May the Israeli Government decided to suspend the confiscation, and at the beginning of June, after a meeting in Cairo between President Mubarak, Itzhak Rabin and Warren Christopher, the US Secretary of State claimed that relations between Egypt and Israel had been 'rejuvenated'. However, relations deteriorated again in August when it was revealed that Israeli soldiers had killed large numbers of Egyptian prisoners of war during the Suez crisis in 1956 and the Six-Day War in 1967. After the discovery of mass graves in Sinai, President Mubarak demanded that the Israeli Government investigate these crimes. At first Israel refused, offering instead to pay compensation to the families of the victims. In spite of this dispute, Egypt continued its intermediary role in the complex negotiations which eventually led to signing of the Israeli-Palestinian Interim Agreement on the West Bank and the Gaza Strip in Washington, DC, in September 1995 (see Documents on Palestine, p. 127). On 6 November Mubarak made his first visit to Israel as President of Egypt to attend the funeral of Itzhak Rabin. Egypt also participated in meetings which led to the start of more substantive talks between Israel and Syria at the end of 1995. However, disputes over Israel's nuclear capability and the execution of Egyptian prisoners of war continued, with the Egyptian Minister of Foreign Affairs, Amr Moussa, taking a tough line on both issues when Israel's new Prime Minister, Shimon Peres, visited Cairo in December 1995. After the visit Peres reversed a decision by his predecessor and announced the appointment of an investigatory commission into past war crimes. He subsequently stated that Israel would be prepared to relinquish its nuclear capability if a comprehensive Middle East peace settlement were achieved. In April 1996, following reports of a possible leak of nuclear waste from Israel's Dimona reactor, Amr Moussa urged that the reactor should be dismantled and rejected any co-operation on security with Israel while it retained a nuclear capability. On 11 April the African Nuclear Weapon Free Zone Treaty was signed in Cairo. At the signing ceremony, President Mubarak urged all Middle Eastern countries to make the region a nuclear-free zone by signing the NPT.

After a number of devastating suicide bomb attacks in Israel, Egypt, together with the USA, co-hosted a one-day 'Summit of Peacemakers' in March 1996 at the Red Sea resort of Sharm esh-Sheikh, which was attended by 29 world leaders. Little of substance was achieved at the hastily organized meeting. Israel and the USA wished to address ways of combating terrorism involving greater regional and international co-operation, but President Mubarak, together with other Arab leaders, preferred to concentrate on preventing the collapse of the Middle East peace process. Many regarded the meeting as simply a move to reassure Israel and to lend support to Prime Minister Peres during the approach to the Israeli legislative elections in May. Egypt's relations with Israel quickly deteriorated again in April when Israeli forces began air and artillery attacks on Hezbollah bases in Lebanon, inflicting heavy casualties on Lebanese civilians. In mid-April the Lebanese Prime Minister, Rafik Hariri, visited Cairo to seek assistance against Israeli aggression. Diplomatic efforts by the Egyptian Minister of Foreign Affairs to achieve a cease-fire were unsuccessful and in exasperation he complained that Israel's actions threatened the credibility of the entire peace process. Relations did not improve when it was announced, in April, that Israel and Turkey had concluded a military agreement in February allowing Israeli aircraft to fly from Turkish airbases and Israeli warships to use Turkish ports during joint naval manoeuvres. The Egyptian Minister of Foreign Affairs denounced the agreement, arguing that it did not serve the interests of peace or stability in the region. Military strategists in Egypt regarded it as the creation of 'a second front

against the Arabs', while other observers maintained that a new strategic partnership was emerging in the region between Israel, the USA, Jordan and Turkey that could only serve to increase Egypt's marginalization. Egypt remains distrustful of military co-operation between Israel and Turkey, in spite of an assurance, made by President Demirel of Turkey during a visit to Egypt in September 1997, that such co-operation poses no threat to Egypt. In October 1998 cross-border military exchanges between Turkey and Syria over alleged Syrian support for Kurdish separatists operating in Turkey and Syria's suspicions regarding Turkish-Israeli co-operation were narrowly averted, largely owing to mediation efforts by President Mubarak and the Iranian Minister of Foreign Affairs, Kamal Kharrazi.

THE PEACE PROCESS STAGNATES

During the approach to the Israeli elections at the end of May 1996, President Mubarak did not disguise his preference for a Labour victory, while the semi-official *Al-Ahram* newspaper warned that the Arabs should prepare for tough negotiations in the event of a Likud victory. After the victory of Likud leader Binyamin Netanyahu was confirmed on 30 May, it was reported that President Mubarak had telephoned the new Israeli Prime Minister and invited him to visit Cairo. On 1 June the President stated that the new Israeli administration had to be given time 'to clarify its viewpoints and intentions towards the peace process'. The Minister of Foreign Affairs took a harder line, however, declaring that peace required a complete Israeli withdrawal from occupied territory and insisting that he would only be satisfied by the creation of a Palestinian state and a solution to the issues of Jerusalem, refugees, settlements and water. At the end of June, however, after Netanyahu had repeated his rejection of the principle of 'land for peace', President Mubarak convened an emergency summit meeting of the Arab League in Cairo—the first full-scale summit meeting for six years. (Iraq was not invited because of what President Mubarak referred to as 'continuing sensitivities'.) The summit reaffirmed Egypt's central role in the Arab world. Egyptian efforts at reconciliation created a semblance of unity in the Arab ranks, with President Mubarak attempting to mediate in disputes between some Arab leaders. The summit's final communiqué reaffirmed the Arabs' commitment to peace, but warned that peace and any further *rapprochement* between the Arabs and Israel depended on Israel's returning all of the Arab land occupied in 1967. Israel immediately rejected all of the resolutions adopted at the summit meeting, and Netanyahu declared that unilateral demands had to cease if the peace process was to continue successfully.

Although Netanyahu was invited for talks with President Mubarak in Cairo in July 1996, relations with Israel became increasingly strained. The Egyptian Government argued that it had worked hard to restrain some of the more militant Arab states, but that the Israeli Prime Minister had not responded: he had neither moderated his uncompromising stance nor fulfilled Israel's commitments to the Palestinians under the Oslo accords. In August President Mubarak threatened to cancel the third Middle East and North Africa economic conference, due to take place in Cairo in November, unless Israel agreed to move forward on the Palestinian peace track. However, in September, in response to pressure from the USA and from the Egyptian business community, the President indicated that the summit would proceed as planned. Relations between Egypt and Israel deteriorated further when Egypt carried out large-scale military manoeuvres near the Suez Canal in early September. Later that month there were popular demonstrations in Egypt after the Israeli Government opened an ancient tunnel in East Jerusalem, close to Muslim religious sites. Violent clashes erupted between Israeli troops and Palestinians and public anger prevented Egypt from acting as mediator in the crisis. Although Prime Minister Netanyahu, King Hussein of Jordan and the Palestinian leader, Yasser Arafat, attended a summit meeting in Washington, DC, to try to defuse the crisis, President Mubarak resisted US pressure to participate, stating that an immediate resolution was unlikely to be achieved. Despite a goodwill visit to Cairo by the President of Israel, Ezer Weizman, in October, his reassurances about Israel's peace commitments failed to ease tensions between the two countries. In December a new dispute arose when the Israeli Minister of Foreign Affairs accused Egypt of interfering in talks between Israel and the Palestinians on the partial withdrawal of Israeli troops from the town of Hebron on the West Bank. President Mubarak insisted that Prime Minister Netanyahu had invited Egypt to act as mediator in the talks, but David Levy, the Israeli Minister of Foreign Affairs, stated that Egypt's involvement would only complicate the negotiations. Nevertheless, in early January 1997 a series of meetings on Hebron took place in Egypt between Yasser Arafat, Dennis Ross—the US Middle East peace co-ordinator—and Abd al-Karim Kabariti, the Jordanian Prime Minister. President Mubarak also sent a team of legal experts to assist the Palestinian negotiating team. However, it was the intervention of King Hussein of Jordan that eventually secured an agreement on the redeployment of Israeli forces in Hebron and other areas of the West Bank.

Despite the collapse of the peace process in late February 1997, after Israel announced its determination to proceed with the construction of a new Jewish settlement at Har Homa on the outskirts of Arab East Jerusalem, Prime Minister Netanyahu made a second visit to Cairo at the beginning of March. Little was achieved in his talks with President Mubarak, and it was suggested that the Egyptian President had only allowed the visit to proceed in order not to alienate the USA, where he was due to meet President Clinton a few days later. When Netanyahu addressed a meeting of Egyptian businessmen and intellectuals he received a hostile reception. As unrest erupted in the West Bank and Gaza Strip, President Mubarak held talks about the crisis in late March with Rafik Hariri, the Lebanese Prime Minister, Farouk ash-Shara', the Syrian Minister of Foreign Affairs, Yasser Arafat and Dore Gold, the Israeli premier's foreign policy adviser. When the Ministers of Foreign Affairs of the Arab League member states met in Cairo at the end of March, it was decided to reintroduce the economic boycott of Israel and to halt the normalization of relations. Egypt was exempt from the boycott, however, because of its peace treaty with Israel. In early April President Mubarak insisted that relations with Israel would remain secure. Indeed, Egypt wished to maintain its intermediary role and its economic links with the country. Nevertheless, there were many signs of popular dissatisfaction with the normalization of relations with Israel. On 24 April a large political rally in Cairo was attended by representatives from across Egypt's political spectrum in protest against Israeli policies in Jerusalem.

At the end of May 1997 President Mubarak met the Israeli Prime Minister at Sharm esh-Sheikh in order to try to reactivate the peace process. President Mubarak agreed to contact the Palestinian leader, Yasser Arafat, who had refused to meet with Netanyahu after Israel announced its decision to proceed with the new settlement in East Jerusalem. On 8 June Osama el-Baz, President Mubarak's senior adviser, conferred with Israeli and Palestinian negotiators in Cairo. Despite el-Baz's claims of a positive atmosphere during the talks, Israel's continued building of settlements in East Jerusalem seemed likely to prolong the deadlock. For the remainder of the year the Egyptian Government, in its role as principal mediator, attempted unsuccessfully to revive the peace process. Increasingly, official announcements on the stalled negotiations were made in a tone of desperation, not least because Israel's intransigence, to which the Government frequently referred, strengthened the position of the armed militant Islamist opposition in Egypt.

In September 1997, in a personal message to the Israeli Prime Minister, President Mubarak warned of the possibility of strategic changes in the Middle East, with negative consequences for all moderate forces, if there was no movement towards peace in the coming months. In the same month Egypt's relations with Israel were further impaired when an Egyptian state security court sentenced an Israeli Arab, Azam Azam, to 15 years' imprisonment, with hard labour, having convicted him of spying for the Israeli intelligence services. The Israeli Government denied that Azam had been involved in espionage and described the sentence as an 'outrage'. In October Egypt announced a prohibition of imports of Israeli goods produced in the Occupied Territories. In the same month President Mubarak stated that the peace process had never before 'reached such an impasse'. In November Egypt, together with several other Arab countries, boycotted the fourth Middle East and North Africa economic conference in Doha, Qatar, in protest at Israel's failure

to honour its commitments to the Palestinians under the terms of the 1993 Oslo peace agreements. (It was not clear to what extent Egypt's abstention was responsible for a subsequent deterioration in relations with Qatar. In November Qatar accused Egypt of involvement in an attempted *coup d'état* against the Qatari Government in 1996. After Saudi Arabia had apparently mediated a reconciliation between the two countries in December 1997, it was reported in February 1998 that Qatar had dismissed all Egyptians employed in the Qatari Ministry of the Interior and planned to expel them from the country.)

In April 1998, in their first meeting for 11 months, President Mubarak and Prime Minister Netanyahu of Israel held talks in Cairo. The focus of their discussions was reportedly a US initiative to restart the peace process, which proposed that Israel should withdraw from a further 13.1% of West Bank territory. Prior to his meeting with President Mubarak, Netanyahu had rejected the US proposal, and the renewed strain in Israeli–Egyptian relations became increasingly apparent. In Mubarak's view, Israel's acceptance of the proposal would facilitate the resumption of permanent status negotiations between Israel and the Palestinians, and of Israel's negotiations with Syria and Lebanon. In June, after talks were held with Yasser Arafat to discuss an Israeli proposal for a new Madrid peace conference, President Mubarak accused Netanyahu of 'destroying the peace process', by seeking to annul the first Madrid agreement. By July, bilateral relations were reported to have deteriorated to their worst level since 1979. President Mubarak cautiously welcomed the Wye River Memorandum signed by Arafat and Netanyahu in Maryland, USA in October 1998 (see Documents on Palestine, p. 134). However, in January 1999 the Egyptian Government froze all contacts with Israel's Likud Government over its decision to suspend the implementation of the agreement.

President Mubarak attended the funeral of King Hussein of Jordan in February 1999. In March, following a trilateral meeting with Palestinian representatives, Egypt and Jordan made a joint declaration in support of the Palestinians' right to declare an independent state after the expiry of the Oslo agreements (which they believed Israel had undermined) on 4 May. However, in the light of an increasingly volatile security situation in the Occupied Territories and Israeli general elections scheduled for 17 May, the EU, the USA and other countries including Egypt and Jordan subsequently urged the Palestinian leadership to postpone its planned 4 May declaration of statehood. The election of the Labour-dominated One Israel alliance's leader, Ehud Barak, as Israel's new Prime Minister was generally welcomed in Egypt. Shortly afterwards, President Mubarak held talks with Yasser Arafat in Cairo, hoping to devise a formula to restart the peace process, and at the end of May Mubarak met Jordan's new King, Abdullah. In July the Egyptian Minister of Foreign Affairs, Amr Moussa, stressed that there could be no normalization of Egyptian–Israeli relations before the resumption of peace talks on all tracks. In what was widely considered to be a successful tour of those countries with interests in the region, Ehud Barak held talks with Egyptian, Jordanian, Palestinian and US leaders in early July, to seek to advance the peace process. It was considered to be a clear sign of Egypt's crucial role in the negotiations — especially after the death of King Hussein — that President Mubarak should be chosen as the first Arab leader to meet the new Israeli premier. After meeting Barak, Mubarak announced that he had 'great hopes' that the Israeli Prime Minister could revitalize the stalled peace process.

Relations with the USA remained strained, with Egypt convinced that the Clinton administration had forfeited its role as impartial mediator in the region because of its close alliance with Israel. The US Secretary of Defense, William Perry, visited Cairo in April 1996 and denied rumours that the USA had signed a secret defence agreement with Israel. He was reported to have shown President Mubarak firm evidence that Libya was building a huge chemical weapons factory at Tarhuna. However, the President remained unconvinced by the US claims and, while offering to mediate with Col Qaddafi on this issue, warned against any new US military action against Libya. Perry did, however, announce that the USA would supply advanced military equipment to Egypt, including 21 F-16 fighter aircraft, in acknowledgement of its key role in the peace process. In September 1996 US missile attacks against military targets in southern Iraq provoked criticism from the Egyptian authorities. Egypt indicated that it strongly opposed moves to partition Iraq and condemned Turkish attempts to establish a security zone inside the northern region. In December, the US veto of a second term of office for Boutros Boutros-Ghali, the UN Secretary-General, provoked widespread outrage in the Egyptian media. The USA was accused of removing Boutros-Ghali, formerly a senior Egyptian minister, because he had tried to maintain the UN's independence in the face of US pressure.

In August 1998 Egypt was highly critical of US military air strikes against alleged terrorist strongholds in Afghanistan, and a pharmaceutical factory in Khartoum, Sudan, which the US Government claimed was being used by associates of the Saudi militant Islamist, Osama bin Laden (in exile in Afghanistan), to manufacture chemical weapons' components. Moreover, air strikes against Iraq, undertaken by US and British forces in the Persian (Arabian) Gulf in December 1998, exacerbated existing tensions between Egypt and the USA, since Mubarak had consistently urged a diplomatic solution to the crisis. Tensions persisted as the US Secretary of Defense, William Cohen, visited Cairo and other regional capitals in March 1999 to seek support for a renewed military campaign against Iraq's air defences. During his visit to Egypt, Cohen agreed to supply Egypt with US \$3,200m. of US weaponry, including a further 24 F-16 fighter jets, a *Patriot* missile battery and 200 M1-A1 battle tanks. President Mubarak visited Washington in late June — his first visit to the USA for two years — and the two countries made significant progress on proposals for the resumption of the Middle East peace process, although differences remained over the issue of sanctions imposed against Iraq and Libya.

Egypt has sought to mediate in disputes between Iraq and the UN since 1991. In September 1997, in a joint declaration with Russia, Egypt urged the restoration of Iraq's status as a full member of the international community, while insisting that it should comply with relevant UN resolutions. In February 1998, following consultations with other Arab leaders, President Mubarak presented the US Secretary of State, Madeleine Albright, with an 'integrated' Arab plan to resolve Iraq's latest conflict with the UN over weapons inspections. Mubarak subsequently warned the US Secretary of State that further military action against Iraq might provoke Islamist militancy against secular Arab governments and thus destroy the Arab–Israeli peace process. Despite strong criticism of US and British air strikes carried out against Iraq in December 1998, President Mubarak has maintained that the Iraqi leader, Saddam Hussain, is responsible for the crisis between the UN and Iraq. In January 1999 the Egyptian Minister of Foreign Affairs, Amr Moussa, accused Hussain of urging the Egyptian people to overthrow their Government. In the same month Arab League foreign ministers, meeting in Cairo, made a formal request for Iraq to comply with all pertinent UN Security Council resolutions and apologize to Kuwait for the 1990 invasion.

Egypt's relations with Libya have improved in recent years, and Egypt has played an important role as mediator in Libya's discussions with the USA and Britain over the Lockerbie affair (see chapter on Libya). In April 1999, following further mediation by Saudi Arabia and South Africa, the two Libyans suspected of organizing the Lockerbie bomb were extradited to the Netherlands to stand trial. In the same month, as a result of this development, UN sanctions imposed against Libya in 1992 were suspended indefinitely.

Egypt's relations with Jordan, strained since the 1990–91 Gulf crisis, deteriorated in August 1995 when King Hussein changed policy on Iraq, granted asylum to Saddam Hussain's two defecting sons-in-law and their wives, and broke decisively with the Iraqi leader. King Hussein's appeal for political change in Iraq was strongly criticized by the Egyptian regime, which expressed its opposition to any kind of outside intervention to depose Saddam Hussain. In reply, Jordan claimed that Egypt resented the more active role that Jordan was now playing in the Middle East region. Addressing an economic summit meeting in Amman in October, the Egyptian Minister of Foreign Affairs criticized Jordan for proceeding too quickly towards a peace treaty with Israel.

There was surprise in some quarters when it was announced in November 1994 that Egypt had applied for permanent observer status and possible membership of the Union of the Arab Maghreb (UAM), a regional economic and security grouping of Mauritania, Morocco, Algeria, Tunisia and Libya. Egypt had collaborated for some time with Algeria and Tunisia in the struggle against Islamist militancy, but the reasons behind the application appeared to be linked to its desire to reassert its central role in the Middle East as Israel successfully normalized its relations with a growing number of Arab states; and, by emphasizing its Mediterranean role, to give a higher priority to diplomatic relations with Europe in the hope of securing economic benefits from the EU. In April 1999 Egypt, Morocco and Tunisia announced that they were discussing the establishment of a free-trade area.

Relations with neighbouring Sudan, always uneasy, deteriorated in August 1994, when each side accused the other of mistreating its nationals. In the following month Sudan alleged that Egyptian troops had entered the disputed border area of Halaib and, in response, impounded the ferry from Aswan to Wadi Halfa, claiming that it was carrying troops. Relations worsened sharply in June 1995, after the unsuccessful attempt to assassinate President Mubarak in Addis Ababa (see above). The Egyptian Government accused Sudan of complicity in the attack, and Egypt immediately strengthened its control of the Halaib triangle. In July, in contravention of an agreement concluded with Sudan in 1978, Egypt imposed visa and permit requirements on Sudanese nationals visiting or resident in Egypt. Relations deteriorated further in September 1995, when the Organization of African Unity (OAU) accused Sudan of direct involvement in the attempted assassination, and in December, when it demanded that Sudan should immediately extradite three individuals who were sought in connection with the attack. In February 1996 Sudan introduced permit requirements for Egyptian nationals resident in Sudan. Presidents Mubarak and al-Bashir met at the Arab League summit meeting in Cairo in May. In July, however, Egypt accused Sudan of harbouring Egyptian terrorists, contrary to an agreement concluded at the summit meeting. None the less, Egypt opposed the imposition of more stringent economic sanctions against Sudan by the UN (in addition to diplomatic sanctions and an embargo on international flights operated by Sudan Airways), on the grounds that they would harm the Sudanese people more than the Sudanese regime.

In January 1997 Egypt refused to provide the Sudanese Government with military support in its struggle against rebel advances in southern Sudan. In June Sudan accused Egypt of providing the opposition with military training, and in October the Sudanese press reported that Egypt was obstructing the import of medical supplies to Halaib. Despite such accusations, there was evidence, from mid-1997, of attempts to improve bilateral relations. In August security talks between the two countries resumed after a year-long suspension, and in October the Sudanese First Vice-President, Maj.-Gen. Zubair Muhammad Salih, visited Egypt to discuss the normalization of relations. Egypt has stated its opposition to the potential partition of Sudan that it fears might result from an eventual conclusion of the conflict in southern Sudan, and in November John Garang, the leader of the Sudan People's Liberation Movement, the principal rebel faction opposing the Sudanese Government, made a visit to Cairo for talks with President Mubarak. In January 1998 elements of the Sudanese opposition expressed their concern at the ongoing improvement in Egyptian–Sudanese relations, claiming that the Sudanese regime continued to lend support to the armed Islamist movement in Egypt. In February, as part of the process of normalization, river transport resumed between the Egyptian port of Aswan and the Sudanese port of Wadi Halfa. In April an agreement to form a joint ministerial committee, comprising each country's Ministers of Higher Education, Defence and Irrigation, was announced. An increase in diplomatic activity was evident in 1999. Although Sudan considered the presence of Sudanese opposition leaders in Egypt an obstacle to the normalization process, a meeting in Cairo, in May, between Sudan's former President Nimeri and a Sudanese government delegation to discuss arrangements for his return from exile, represented significant progress on this issue.

There were signs, from late 1997, of a possible improvement in Egypt's relations with Iran. In December the Egyptian Minister of Foreign Affairs attended an OIC meeting in Teheran and met Iranian President Khatami. It was reported that Egypt had stipulated no conditions for the restoration of diplomatic relations with Iran, which had been severed in 1979. However, this process of normalization appeared to suffer a set-back in early 1998 when Egypt described Iranian criticism of the Algerian regime as 'blatant interference in the affairs of a fraternal Arab country'. By early 1999 there were signs of an improvement in bilateral relations, with both sides declaring their readiness to restore full diplomatic ties.

Economy

Updated for this edition by MICHAEL JAMES DEN HARTOG

INTRODUCTION

Over the last few decades, Egypt's economy has been fundamentally influenced by various political vicissitudes. In particular, relations with Israel have had major repercussions on the nature of expenditure and foreign aid, while in recent years the Government has moved away from state socialism and towards a market economy. Underneath these changes of direction, however, lie the important physical constraints of a large and rapidly growing population, and the dearth of land available for agriculture and water for irrigation.

The total area of Egypt is 1,002,000 sq km, but more than 90% of the country is desert. With no forested land, and hardly any permanent meadows or pastures, the arable land available is greatly overcrowded. Relating the population, numbering 38.2m. at the 1976 census, to the inhabited area (about 35,200 sq km), a density of 1,085 persons per sq km gave 5.7 persons per acre of arable land, representing one of the highest man/land ratios in the world. Since then, the root of Egypt's poverty has remained the rapid rise in the population, of 2.8% per annum between 1976 and 1986, which added about 1.3m. people per year. According to the results of the 1986 census, the population had risen to 48.2m., and only 4% of the land area was occupied. The average annual rise in population in the 1980s was 2.4%, compared with 2.1% in 1965–80, but this was projected to fall to 1.8% in the decade to 2000. World Bank figures estimated an average annual rate of increase in population of 2.0% during 1990–96, and 2.3% during 1980–97. The census of December 1996 recorded a permanently-resident Egyptian population of 59,272,382. According to official end-of-year estimates, this population was 62,056,000 in 1998. Family planning has been heavily promoted by the Government since the establishment of a National Population Council in 1985. An estimated 48% of families were practising contraception in 1992, when the average number of births per mother fell below four for the first time since records have been kept. The Government's long-term aim is to extend the practice of contraception to 70% of Egyptian families by 2010.

Lack of employment opportunities drove people from the country into already overcrowded cities, which grew at a rate of 3.4% per annum in the late 1970s (the population of Greater Cairo increased from 7m. in 1976 to more than 10m. in 1985), and hastened the emigration of qualified personnel the country could ill afford to lose. In 1983 3.28m. Egyptians were working abroad. Many originally went to much better-paid jobs in the rich Gulf states and Libya, although a considerable number were forced to return from the former in the 1980s, owing to a

downturn in the oil industry, and from the latter because of a government order of 1985, prohibiting the employment of Egyptian workers. Poor job prospects were not improved by the return of thousands of expatriate workers (including about 5,000 from Libya in 1985, and about 250,000 who left Iraq in the first half of 1986, when new restrictions were imposed on the amount of money they were allowed to send home). This trend also helped swell the bureaucracy, since the Government had been committed to giving a post to every Egyptian graduate who could not find other employment. By the time of the census in late 1996 the number of Egyptians living abroad had fallen to an estimated 2.18m. In February 1998 the Egyptian Mobilization and Statistics Agency estimated that there were 3.0m. Egyptians living abroad, 720,000 of whom were permanent immigrants. In mid-1991 government officials estimated that the number of unemployed was in the range of 20%–22% of the total labour force. The urban population was believed to have peaked in 1990 at 47%. According to the 1996 census, 43% of the population was estimated to be urban, compared with the 44% comprising the urban population at the 1976 census and 41% in 1965. In 1990, according to estimates by the World Bank, Egypt's gross national product (GNP) per head was US $600, having increased at an average rate of 4.1% per year, in real terms, since 1965. The average annual growth of overall gross domestic product (GDP), measured in constant prices, was 7.3% in 1965–80, slowing to 5.0% in 1980–90. The World Bank estimated Egypt's GNP per head in 1992 as $650 on a conventional exchange-rate basis, or as $3,670 using an 'international dollar' calculation based on a current Egyptian rating of 15.9 in the World Bank's international 'purchasing power parity' (PPP) index (USA = 100). The Bank's estimates for 1997, at average 1995–97 prices, gave GNP per head as $1,200 on the standard calculation and as $3,080 on the PPP basis.

In 1990/91 the crisis in the Gulf had a damaging short-term effect on the Egyptian economy, due in particular to a decline in tourism and the return of hundreds of thousands of Egyptian nationals from Iraq and Kuwait, which was only partially offset by higher revenues from oil exports. However, the Government's political and military alignment with the anti-Iraq coalition brought important post-war benefits in the form of generous debt relief and increased aid from major donors (see below). Tourism recovered strongly in 1991/92, but underwent a new decline in 1992/93 when foreign tourists were among the targets of a terrorist campaign by militant Islamist elements. At the end of 1993 the level of unemployment in Egypt was officially estimated to be between 1.4m. and 1.5m. (about 10% of the labour force), significantly below the lowest estimates of most independent analysts. Up to 3m. Egyptians were estimated to be working abroad in mid-1995, including about 1.2m. in Saudi Arabia, 70,000 in Kuwait, 50,000 in Iraq and up to 500,000 in Libya. In late 1997 the official unemployment rate was 9.4% of the labour force; this rate was reported to have decreased to 8.3% in 1998. In early 1998 the Government was requested to review its policy on child labour, after a report, compiled by the National Centre for Social Research, claimed that children comprised 70% of the rural workforce. Although it is illegal to employ children under the age of 14, the report found that many employers were exploiting a rule allowing children to be trained from the age of 12 years.

Population growth averaged 2.1% per annum between 1986 and 1996, according to the 1996 census. The population of Cairo (excluding Giza) rose from 6,068,695 in 1986 to 6,789,479 in 1996. The number of Egyptians resident in new industrial cities rose from 200,214 (in nine cities) in 1986 to 618,665 (in 19 cities) in 1996. One of the objectives of a long-term development strategy proposed by the Government in 1997 was to reduce the undeveloped proportion of Egypt's land area (used neither for habitation, agriculture nor industry) to 75% by 2017, compared with more than 95% in 1997. According to Egyptian government estimates, GDP per head at current prices in 1997 was US $1,256. An increasingly effective programme of structural economic reform had by 1996/97 improved Egypt's annual rate of real economic growth to around 5.9%, according to the IMF (compared with 2.9% in 1992/93), providing a sound basis for a government initiative to generate higher levels of private investment in future years. The IMF estimated real economic growth of 5.6% in 1998.

During the 1960s Egypt, under Nasser, followed an economic policy which was based on socialist planning. However, the wars with Israel in 1967 and 1973, and Nasser's death in 1970, heralded a major period of change in Egypt's economic relations, both with its Arab neighbours and with the 'superpowers'. Since 1973 great efforts have been made to repair the war damage, and Sadat's Law No. 43 of 1974 led to the replacement of Nasser's socialist planning by an 'open door policy' (*infitah*), encouraging foreign investment. The economic implications of Sadat's assassination in October 1981 were slight at first, but his successor, Hosni Mubarak, gradually encouraged the private sector. Basic tax on company profits was reduced from 40% to 32% in early 1982, while the enactment in 1990 of Law No. 230, a revised and refined version of the 1974 Law, was regarded as a sign of the Government's commitment to the growth of private enterprise and deregulation. This shift from an essentially centrally controlled economy to one that is much more open to private enterprise and foreign investment has itself caused considerable strain on, and problems in, the economy. Private investment increased sharply following the institution of the 'open door policy': it totalled £E1,025m. in 1983, compared with £E443m. in 1982, and by 1990 it had reached £E10,700m., of which 64% was Egyptian, 19% Arab and 17% from other sources. The 1970s also saw a great increase in aid from the oil-rich Arab states. In 1967–73 Arab aid to Egypt was estimated at an annual average of US $310m. In 1973 this increased to $720m., and in 1974 it rose to $1,260m., while by 1977 it had risen to between $1,700m. and $2,000m. Much of this aid came from the Gulf Organization for the Development of Egypt (GODE), set up by Saudi Arabia, Kuwait, the United Arab Emirates and Qatar in 1977. Saudi sources, in fact, claimed in May 1979 that Egypt had received more than $13,000m. from the four GODE countries in the preceding six years.

By signing the peace treaty with Israel in March 1979, however, Sadat undertook the risk of losing this Arab aid. The Arab League Council which met in Baghdad immediately after the signing of the peace treaty, agreed on a policy of economic and political isolation of Egypt. At first it seemed unlikely that the economic sanctions would be stringently carried out by some of the Arab countries, but, when, in late April, Saudi Arabia severed diplomatic relations with Egypt, some of the more 'moderate' Arab states implemented the boycott. The Arab Fund for Economic and Social Development suspended all future aid and credit relations with Egypt, although honouring transactions already in progress, and in May Saudi Arabia, Qatar and the United Arab Emirates withdrew from the Arab Organization for Industrialization (AOI), which was an Egypt-based Arab arms enterprise, causing its collapse. Egypt, however, responded by planning to establish its own arms industry with Western capital (see Manufacturing Industry, below). During 1980 Egypt and Israel signed agricultural, trade, aviation and health agreements, and their common border was opened to commercial and tourist traffic towards the end of the year. While the loss of Saudi military aid, estimated at an annual rate of just under US $2,000m., was undoubtedly significant, the fact that only about 7% of Egypt's total trade was with Arab countries implied that the Arab trade boycott would probably not be of major importance. The loss of Arab aid from the GODE was significant, however, although Egypt ceased to pay interest due on sums already loaned in 1979. By 1987 the resulting arrears in interest on GODE loans totalled almost $2,000m. Sadat hoped that Egypt's economic difficulties would be alleviated by the 'Carter Plan', which he saw in the same light as the 'Marshall Plan', by which Egypt would receive $12,250m. over a period of five years, mainly from the USA, Western Europe and Japan. The USA promised that it would be no less generous to Egypt after the peace treaty with Israel than it was to Israel itself in terms of economic aid; as a result, Egypt became the second largest recipient of US aid, after Israel. The return of multinationals such as Coca-Cola and Cadbury Schweppes, associated with the normalization of relations with Israel, clearly demonstrated the increased readiness of foreign capital to invest in Egypt. Between 1975 and 1985, according to USAID, US economic assistance to Egypt totalled $10,897.8m. In June 1988, in order to comply with a congressional mandate which required the suspension of aid to countries failing to meet terms imposed by the IMF as conditions for a debt-rescheduling agreement, the

USA halted the disbursement of $230m. of financial aid allocated to Egypt in 1988/89. Egypt's total debt to the USA was by then estimated at $10,000m., of which $4,500m. was military debt. In April 1989, following the Government's decision to raise energy prices to industry by 30%–40%, the US Administration agreed to release the $230m. and several other categories of aid. In 1990 Egypt received a total of $5,604m. (or 15.9% of its GNP) in official development aid from OECD members, Arab countries and multilateral organizations, compared with $1,568m. in 1989, $1,537m. in 1988, $1,774m. in 1987 and $1,716m. in 1986. The principal OECD donors, apart from the USA, were the Federal Republic of Germany and Japan. In the 1989/90 US fiscal year USAID allocations to Egypt amounted to $815m.

In February 1989 Egypt was a founder member of the Arab Co-operation Council (ACC), together with Jordan, Iraq and the Yemen Arab Republic (YAR), and in May, Egypt was formally readmitted to the Arab League and its various economic committees. However, hopes that the ACC would provide a framework for increased economic co-operation were dissipated, at least temporarily, by the impact of the Gulf crisis of 1990–91. Egypt's bid for membership of the Union of the Arab Maghreb (UAM) appears to be a more promising option, especially since in April 1999 Libya was invited to join the EU's Euro-Mediterranean initiative (see Foreign Trade and Payments, below). (Since 1995 Egypt has sought to coordinate tax policies with Libya.) Participation in the EU-Mediterranean free-trade area planned for 2010 would offer Egypt good prospects for economic integration with both Europe and neighbouring countries.

ECONOMIC POLICY AND PLANNING

Between 1918 and 1939, when the Egyptian pound was tied to sterling and a fairly free trade policy was being pursued, manufacturing industry had little chance of developing and agricultural production, though expanding, could not sustain the rapidly rising population. A gradual deterioration of living standards ensued. This trend did not change direction until the immediate post-war period, when cotton prices improved. These reached their greatest heights during the Korean boom of 1951–52, when 'soft-currency cotton', including Egyptian cotton, enjoyed high premia over dollar-cotton. But the collapse of the boom, the easing of the world dollar scarcity and the beginning of American subsidization of cotton exports in the mid-1950s, marked a turning point in raw cotton terms of trade which, until quite recently, showed a declining trend.

The regime which assumed power in 1952 and ended the monarchy gave urgent attention to Egypt's economic problems. Its policies included measures of agrarian reform, land reclamation, the Aswan High Dam scheme, and a programme of industrialization which was accelerated in 1960 by the formation of a comprehensive social and economic development plan.

According to the Permanent Constitution of 1971 the economy of Egypt was to be based on socialism with the people controlling all means of production. In practice this meant that the Government took ownership or control of practically every unit in the economy worth controlling. Although the doctrine of socialism was invoked from the first land reform in 1952, the economy remained largely in private hands until 1961, except for the nationalization of the Suez Canal Company in 1956 and that of British and French property during the Suez attack. During 1961 all cotton exporting firms were nationalized, and the Alexandria futures market was closed. Other nationalization measures followed, so that the only sectors of the economy remaining outside complete government ownership were agriculture and urban real estate, but even these were overwhelmingly regulated by laws and decrees. In June 1991 the Government introduced new legislation to reform public-sector companies, with the aim of reducing state intervention in such companies to a minimum. The reforms envisaged the establishment of state-owned holding companies to replace the general bodies hitherto in control of groups of state-owned companies. By May 1993 a total of 16 state-owned holding companies controlled a total of 317 subsidiary companies, grouped together in such a way as to minimize functional duplication and maximize adminstrative efficiency within the public sector.

Egypt's first Five-Year Development Plan aimed to increase real national income by 40% between 1960 and 1965. The five-year growth target was virtually fulfilled, so that the second Plan was replaced by a more ambitious Seven-Year Plan (1965–72), which aimed to double real income by its end. Lack of finance, however, frustrated this new plan and after two years of uncertainty, a three-year 'accomplishment' plan, beginning July 1967, was proclaimed. This plan was abandoned as a result of the 1967 war and was substituted by annual development appropriations.

After 1967 the Government introduced yet more restrictive measures aimed at curbing consumer demand, including a variety of taxes, forced savings and compulsory contributions out of wages and salaries. Following Nasser's death in 1970, however, President Sadat embarked on a gradual retreat from old-style socialist economic policies. Under what was termed 'denasserization', the sequestrations of the 1960s were ruled illegal, new laws were passed to allow private-sector participation in former state preserves such as exporting and importing and transport, and foreign investment was seen as the key to development.

In 1971 President Sadat proclaimed a decennial plan which aimed to double the national economy by 1982. This, however, was never fully implemented, and it was soon replaced by a transitional 18-month plan, to be followed by a more thorough five-year plan to cover the years 1976–80. Owing to the financial problems of 1976, this new plan was then postponed to cover 1978–82. It foresaw total expenditure at some £E12,000m. (US $17,000m. at the parallel rate), and its main objective was to achieve annual economic growth rates of 8%. However, this was, in its turn, replaced by the 1980–84 Five-Year Peace Plan with planned investment of £E25,185m.; according to figures provided by the World Bank, the average annual growth of GDP in 1965–80 was 6.8%.

Under Mubarak, economic policy sought to increase exports and employment through meticulous planning for the public, private and co-operative sectors. Particular attention was to be paid to social problems. Investment resources were to be increased through new channels for private investment, increasing the contribution of the banking sector, improving the efficiency of the tax system, increasing indigenous financial resources, reducing government expenditure, and limiting the consumption of imported goods. The Government's aim was to use the public sector as the main prop of production, regarding manpower as the real wealth of the country. The negative effects of subsidies (mainly on food, but also on oil, petrol, gas and electricity) were acknowledged, but the Government regarded the sole remedy to be increased rates of development and the promotion of productivity. It committed itself to strenuous efforts to reduce the level of imports, and all import operations in the future were to be undertaken through the banks without the transfer of currency. The Government planned to increase its export earnings, particularly through sales of petroleum, and the expansion of the war production sector. In agriculture, it envisaged reclamation as continuing to play an important role. Transport, communications, housing, tourism, health and education were also all to be boosted.

At the end of 1982 proposals were put forward for the next Five-Year Plan (1982–87), with a target for GDP growth in real terms of 7.9% per annum. The strategy behind the Plan was to reduce the proportion of private consumption and of imports in total expenditure, so as to mobilize domestic resources for investment and to reduce the growing trade deficit, which had developed as a result of the policy of *infitah*. Planned investment was to be £E27,216m. (US $32,790m.) in the public sector and £E8,271m. ($8,965m.) in the private sector. The Plan's objectives could be achieved, however, only if there was an improvement in Egypt's balance of payments. In this regard, the progressive decline in world oil demand (oil being Egypt's principal export commodity) undermined the viability of the Plan's targets. These doubts were confirmed by the collapse in the price of oil in 1986, when Egypt's net revenues from oil sales declined to less than $1,000m. The annual rate of growth of GDP during the Plan reached only about 5%, well short of its target of 7.9%. It was reported that only 15% of projects outlined in the Plan had actually been carried out when it ended in June 1987, owing to inadequate funding.

The next Five-Year Plan, which began in July 1987, provided for investment of £E46,500m. The Plan was designed to encourage public-sector production, to increase the manufac-

turing of commodities and to raise the level of exports. It also devoted more resources to the development of the private sector, which was to receive 39% of total investment (£E18,000m.), compared with 23% under the 1982–87 Plan. It was hoped to achieve annual growth in GDP of 5.8% during the Plan. Another important feature of the new Plan was the improvement of agricultural output, so as to minimize food imports, which accounted for 60% of Egypt's requirements. To this end, it was intended to bring an extra 100,000 feddans of land into production during each year of the Plan. However, even before the onset of the Gulf crisis in 1990, the Plan's targets had been placed in serious doubt by the lack of funds available to finance development projects. According to one Egyptian newspaper, the shortage of foreign currency reserves forced the Government to order the National Investment Bank to halt financing of the Plan in March 1988 and to cancel imports of a number of foodstuffs.

Despite the non-fulfilment of the 1987–92 Plan and the general move to a market economy, a further Five-Year Plan was drawn up for the period beginning 1 July 1992. This document envisaged a 4% growth in GDP in the 1992/93 financial year, to £E131,000m., and thereafter by 5.1% per annum, to £E161,000m. in 1996/97 (at constant 1991/92 prices). Total investment of £E154,000m. was projected for the Plan period, of which 58% would come from the private sector, and it was envisaged that 2.5m. new jobs would be created (the current work-force numbering 14m., of whom 5.3m. were in the state sector).

Draft planning proposals for the 1997–2002 period, outlined in a cabinet document published in April 1997, envisaged total investment of around £E400,000m. over five years, including £E58,000m. (60% from the private sector) during the fiscal year beginning July 1997. The target rate of economic growth for the 1997–2000 period was an average 6.8% per annum. At the same time the Government outlined targets for the 20 years up to 2017. These envisaged a doubling of GDP between 1997 and 2007 and the same rate of increase between 2007 and 2017, eventually totalling £E1,100,000m. The target for GDP per head in 2017 was 'at least £E13,750'. It was hoped that economic growth would average 7.6% per annum after 2002, while the rate of price inflation was to be kept below 5% from 1997 to 2017. The budget deficit was to be eliminated and, if possible, replaced by a surplus before the end of the 20-year period, while the target rate for the creation of new jobs was 550,000 per year throughout this period. In the event, the target rate of economic growth for 1997–2000 was overly-ambitious. Annual growth has been around 5%, largely owing to the economic crisis in Asia, the decline in world prices for petroleum and reduced revenues from tourism following the 1997 terrorist attack at Luxor. Nevertheless, the rate of growth has been considerably higher than the 1990–97 average of 4.0%. In an attempt to boost economic growth, the Government plans to raise Egypt's investment ratio from 18% of GDP (in 1997) to 23% in the near future by encouraging a higher level of savings. In 1997 gross domestic savings were only 13% of GDP. World Bank figures show that private consumption has risen from 69% of GDP in 1980 to 77% in 1997.

ECONOMIC REFORM 1986–90

In June 1986 the Egyptian Government made renewed efforts to deal with the burden of subsidies. The new Prime Minister, Dr Ali Lutfi, proposed a system of cash benefits for those most affected by a 15% reduction in food subsidies under the 1986/87 budget, which set total expenditure for subsidies at £E1,746m. (US $802m.) for the year, 12% less than the previous year. However, Dr Lutfi resigned as Prime Minister in November 1986, owing to President Mubarak's opposition to his apparent willingness to accede to proposals by the IMF for the introduction of economic reforms, in return for a stand-by credit arrangement. The IMF's demands included the adoption of a unified exchange rate (meaning an effective substantial devaluation), the progressive elimination of state subsidies, increases in real interest rates, tax reforms, and increases in customs duties as a means of reducing the level of imports.

The new Prime Minister, Dr Atif Sidqi, rejected the IMF's demands as too extreme, particularly those referring to the unification of the exchange rate system and a 75% reduction in subsidies. By May 1987, however, Dr Sidqi was himself beginning to yield to IMF pressure. Domestic energy prices rose by 60%–85% on 1 May, thereby reducing the 'hidden' energy subsidy. The exchange rate was allowed, partially, to 'float' in mid-May, with a daily rate, competitive with the 'black'-market rate, being fixed by a panel of commercial banks in order to attract remittances. Plans were also announced to reduce the budget deficit to 13% of GDP in 1987/88, compared with 15% in 1986/87, and to cut expenditure on subsidies to £E1,650m. In mid-May, following its approval of the Egyptian Government's programme of economic reform, the IMF indicated its support for the programme's aims by according Egypt a stand-by credit of US $325m., of which $150m. was made available immediately. At the end of May an agreement was reached with the 'Paris Club' of Western creditor nations to reschedule, over 10 years, payments of $12,000m. in civilian and military debt from Egypt's estimated $44,000m. of foreign debt. One month earlier, the USSR had agreed to reschedule, over 25 years, without interest, more than $3,000m. in military debt outstanding since 1977. Military debt totalled an estimated $13,500m. in February 1988, including $4,500m. owed to the USA. In November 1987 Egypt signed an agreement rescheduling the payment of $1,600m. in military and civil debt to the USA. Similar agreements, covering debt repayments of $8,000m. up to the end of June 1988, had been concluded with the remaining 17 'Paris Club' members by the end of July 1988.

By mid-1988, however, the Egyptian Government was concerned that the pace of economic reform required by the IMF was such as to risk a repetition of earlier riots over increases in the price of food, and it urged the introduction of a new reform programme, which would be implemented at a more gradual rate and supported by financial assistance for the balance of payments. The Government opposed further reductions in state subsidies which, it claimed, would fuel an inflation rate that was already as high as 30%; it was resolved to maintain the artificially high fixed Central Bank exchange rate of US$1 = £E0.70 (used for imports of basic commodities), which acted as an indirect subsidy on food prices and which the IMF wished to be abolished. The Prime Minister, Dr Atif Sidqi, said that increases in energy prices of between 30% and 40% required by the IMF, were too great; that the Government refused to raise interest rates to 20%–25%; and that the budget deficit would not fall to the IMF's target of 10% of GDP in 1988/89 (in which year, budgeted expenditure on subsidies rose to £E1,813m.). The IMF conceded that a shortfall of about $1,400m. in the aid allocations needed to support a reform programme was a hindrance to its implementation. However, Egypt's request for further balance-of-payments support for the duration of a long-term programme of economic reform did not meet with a favourable response. The IMF's stand-by credit of $325m. was, accordingly, frozen after only one disbursement of $150m. in May 1987, owing to IMF dissatisfaction with the pace of reform in Egypt.

By June 1988 the Government's wages bill was estimated to have increased by 25%, and to have contributed greatly to a budget deficit equivalent to 16%–17% of GDP in 1987/88, compared with the IMF's target of 13%. The Government's public sector salary commitments were expected to rise by a further 42% in 1988/89. Negotiations between the Government and senior IMF officials, regarding the elaboration of a new economic reform programme, recommenced in mid-1988 and continued intermittently for the remainder of the year without success. While the Government argued that it had made significant achievements in its reform of the exchange rate and prices, the IMF pressed for faster, more wide-ranging reform, including an increase of 30%–40% in energy prices to industry.

Further negotiations between the Government and the Fund in January 1989 remained deadlocked over the timing of the economic reform programme. While the Government argued that it should be allowed four years to implement the Fund's demands, the Fund refused to concede any more than two years for their implementation.

Technical discussions, as distinct from negotiations proper, between the IMF and the Government resumed in June 1990. In the first half of the year the Government had taken some steps towards fulfilling the conditions stated by the Fund; in particular, subsidies applicable to a wide range of basic commod-

ities had been reduced, causing sharp price increases. Despite these steps, and provision for a budget deficit again within 10% of the country's GDP for 1990/91, the IMF remained dissatisfied with the level of interest rates, the size of the budget deficit provision and the slow speed at which energy prices were being raised. Further discussions were overtaken, however, by the onset of the Gulf crisis, precipitated by Iraq's invasion of Kuwait in August 1990.

THE GULF CRISIS AND THE 1991 IMF AGREEMENT

Egypt's economic reform programme was disrupted by the 1990–91 Gulf crisis, which reduced foreign exchange earnings from tourism and remittances from Egyptian nationals working in Iraq and Kuwait. Losses in these two areas were officially estimated by the Government at, respectively, US $1,500m. in the 1990/91 tourist season (see Transport and Tourism, below) and $2,400m. in the 1990 calendar year. After a decline in the mid-1980s, a new boom in the oil-producing Gulf states had resulted in total remittances increasing to $4,235m. in 1989, a large proportion of which derived from the estimated 1.5m. Egyptians then working in Iraq and Kuwait. By late 1990 about 400,000 workers had returned to Egypt (the total rising to more than 600,000 following the outbreak of hostilities between Iraq and the US-led multinational force in January 1991); their return caused serious social problems for the Egyptian authorities and led to an increase in the existing level of unemployment of around 20%. On the other hand, an anticipated fall in Suez Canal revenues in 1990, due to the UN embargo on trade with Iraq, failed to materialize; instead, earnings increased by 14% over 1989 (see Suez Canal, below). Moreover, increased world oil prices in the third quarter of 1990 almost doubled Egypt's revenues from oil exports to $210m. per month (compared with average monthly receipts of $138m. in 1989/90), thereby offsetting losses from suspended trade with Iraq and Kuwait. One further consequence of the crisis was an increase in the budget deficit, to 17% of GDP in 1990/91.

The Iraqi invasion of Kuwait did, however, result in a sharp increase in aid to Egypt, in addition to the waiver or rescheduling of certain Egyptian debts to other countries. Emergency aid was allocated through the Gulf Financial Crisis Co-ordinating Group (GFCCG), which by March 1991 had arranged funding amounting to US $11,741m. for Egypt, Turkey and Jordan. Saudi Arabia, Japan and Kuwait were the largest donors, while Saudi Arabia, which in 1990 made its first development loans to Egypt since the resumption of bilateral relations in 1988, also announced that it had written off outstanding Egyptian debts of $4,000m. Moreover, in November 1990 the US Congress finally consented to waive some $7,000m. in Egyptian debts for arms purchases in the 1970s (comprising $4,500m. in principal and $2,500m. in interest and penalties). With smaller amounts being written off by other Western and Gulf states, Egypt's debt was reduced from some $50,000m. before the Gulf crisis to around $36,000m. by early 1991.

The agreement of Western nations to reschedule Egypt's remaining debts depended on a new accord being concluded with the IMF. Negotiations resumed after the end of the Gulf war, and were conducted in a more sympathetic climate in view of Egypt's active participation in the anti-Iraq coalition. Progress was also expedited by the following factors: the introduction in February 1991 of new market-related currency exchange arrangements, as a prelude to a single unified rate and full convertibility no later than February 1992; trade liberalization measures, under which most existing tariff and other barriers were to be phased out over three years; publication in April of a further list of 60 state-owned enterprises which the Government sought to privatize; price increases in April, ranging from 14% to 66% on petroleum products, gas and electricity; the introduction in May of new sales taxes of between 5% and 30% on most goods and services (although certain basic items such as bread, meat, fish, petrol and gas were exempted); and the adoption of a budget for 1991/92 providing for a deficit of 9.3% of GDP, falling to 6.5% in 1992/93 and to 3.5% in 1993/94 (see National Budget, below). The new exchange rate arrangements resulted in an effective devaluation of some 38% by May 1991, while interest rates underwent a consequential significant rise (see 'Banking', below).

Against this background, a new stand-by facility was formally approved by the IMF in mid-May 1991, under which some US $372m. would be made available to Egypt over a period of 18 months to provide balance-of-payments assistance for its economic reform programme. This was rapidly followed by a decision of the 'Paris Club' of Western creditors to write off, over a three-year period, $10,000m. of the $20,000m. owed by Egypt to creditor nations and to reschedule repayment of the remaining $10,000m. on favourable terms. Defending the IMF agreement in a speech to the Egyptian people on 1 May, President Mubarak said that it provided the opportunity to put the country's economy in order and stressed that the required restructuring would be fully under Egyptian control.

In early 1992 the World Bank concluded that the Egyptian economic reform programme was broadly on course. Their report noted: that real GDP had risen by 2% in 1990/91; that the current account was set to record a surplus in 1991/92; that inflation and the budget deficit were within the prescribed parameters; and that trade liberalization and subsidy reductions were on target. Remaining obstacles were the slow pace of privatization, investment authorization and deregulation. In March the General Authority for Investments, in response to the World Bank criticism, introduced five new measures to facilitate investment. An initial 15% of Egypt's US $20,000m. 'Paris Club' debt was cancelled shortly after the formal announcement of the 1991 IMF stand-by arrangement, with cancellation of a further 15% scheduled to take effect at such time as the IMF formally approved the terms of a follow-up arrangement. (The remainder of the promised write-off, amounting to 20% of the original debt, was scheduled to take effect half-way through the duration of such a follow-up arrangement, provided that the IMF was broadly satisified with government economic policy at that point.)

Notwithstanding Egypt's announcement that it did not intend to draw on the final US $180m.-tranche of the 1991 stand-by facility because of strong growth in the country's foreign-exchange reserves during 1992, formal expiry of the facility (originally set for the end of November 1992) was postponed by the IMF for two successive periods of three months.

The World Bank, for its part, delayed from June 1992 to March 1993 the release of the second half of a US $300m.-structural–adjustment loan, eventually announcing the release of the funds shortly after the Government had announced the start of the active phase of its long-awaited privatization programme. The 20 firms whose shares were offered to local and foreign private investors in this initial privatization exercise included hotels, a cement company, beverage producers and vineyards. Other liberalization measures announced in the first quarter of 1993 included a cut from 100% to 80% in Egypt's top rate of import tariffs.

On 19 March 1993 (one week after the World Bank's release of funds) the IMF's executive board formally declared that Egypt had fulfilled its commitments under the 1991 stand-by arrangement. This opened the way for negotiations on the terms of a follow-up arrangement. In July the Government announced that it would undertake to achieve a further reduction in the budget deficit, to maintain exchange-rate stability and to keep the annual rate of inflation below 8%. It would aim eventually to privatize public-sector assets with an estimated market value totalling £E40,000m., and it hoped to be able to complete around 25% of the privatization programme within three years. On trade liberalization (reportedly the most contentious issue in negotiations with the IMF), the Government's declared aim was to reduce Egypt's maximum import tariff from 80% to 50% over a four-year period. As an apparent gesture to IMF negotiators who had sought a much swifter cut in the top rate, the Government acted in mid-July to lift certain import restrictions (on timber, paints and household appliances) and to abolish preferential tariffs for public-sector industries. In September the IMF's executive board approved an extended fund facility of US $560m., to be drawn down in six-monthly tranches over a period of three years. Earlier in September, the Egyptian Government had reached 'substantial agreement' with the World Bank on the monitoring of the process of structural economic reform over the same period. In view of the recent strengthening of the country's balance-of-payments position (attributed mainly to the attractive rates of return on local

currency deposits), no new World Bank loan was associated with this agreement.

Having secured implementation of the second phase of the 'Paris Club' debt waiver in September 1993, the Egyptian Government was in mid-1994 seeking formal IMF/World Bank approval for the current economic position and outlook in order to activate the final phase of the promised debt write-off. The only perceived obstacle to the early achievement of this goal was a difference of opinion between the Government and the IMF on the currency exchange rate (which stood at US $1 = £E3.38 in May 1994). In the Fund's economic judgement, some devaluation was desirable, whereas the Government regarded exchange-rate stability as an important factor in maintaining investor confidence in the economy.

In other respects, the Government's monetary and fiscal policies were broadly on course to satisfy IMF targets, while the World Bank-monitored restructuring programme was gathering momentum, with up to £E3,200m. of public-sector assets scheduled for sale during the second half of 1994. Privatization deals approved by mid-1994 involved the sale of two bottling companies and a boiler-making company (in each case to consortia of foreign and local interests and on terms which included guarantees to maintain employment levels for agreed periods), while negotiations for the sale of a large state-owned hotel were well advanced.

Many of the businesses offered for sale in the initial privatization exercise had, however, failed to attract adequate bids from single buyers, prompting the Government to modify its privatization strategy to include sales of shares in state enterprises through the local securities market. It was also decided that 10% of the shares in about 100 public-sector companies should be earmarked for sale to employee shareholders' associations over a period of years. The Government's overall target for sales of shares in the 1994/95 fiscal year was £E9,000m. The state shareholding in the Commercial International Bank (Egypt) was reduced from 70% to 43% in September 1993 as a result of a heavily-oversubscribed issue of new shares. State-owned banks were recommended to reduce their shareholdings in joint-venture banks (i.e. those with mixed public and private ownership) to 25% by the end of 1995.

The maximum import tariff was cut to 70% in February 1994 as part of a wide-ranging reform package which included substantial tariff reductions for many raw materials, coupled with various fiscal incentives to exporters. Further trade liberalization measures, including cuts in import tariffs on capital goods, were due to come into effect in December 1994. By mid-1994 price subsidies had been eliminated or substantially reduced throughout the public sector, and timetables existed to remove the remaining subsidies.

In 1991 the Government established a Social Development Fund (SDF) in order to alleviate the impact of the economic reforms. The initial phase of the project, from 1992–96, received funding of some US $746m., which was channelled into community development, enterprise development and vocational training schemes. Over this period the SDF has created 250,000 permanent jobs and 110,000 temporary jobs. Donors have pledged some $710m. for the 1997–2000 second stage of the SDF's operations.

The pace of the Government's privatization programme remained very slow throughout the 1994/95 fiscal year, when investors were able to purchase minority stakes in a small number of companies whose shares were offered through the local securities market. It was unusual for more than 10% of a company's shares to be placed on the market at one time, and none of the companies concerned disposed of more than 20% of their total shares during the course of 1994/95. Six of the 17 holding companies within the public sector—those responsible for metallurgy; engineering; mining and refractories; chemicals; public works and land reclamation; and housing, tourism and cinema—had privatization units in place in 1994, and four more holding companies were due to establish their own units before the end of 1995. By mid-1995 share offers were being brought to the market at the rate of about two per month, the Government's aim being to achieve a total of 50 such disposals during the course of the year. The Government strongly defended its gradualist approach to the privatization process, which had attracted public criticism from representatives of the World Bank and other interested organizations at a Cairo conference on private-sector development in October 1994. With the Government also maintaining its resistance to IMF pressure for a currency devaluation of around 30%, Egypt did not secure a formal IMF/World Bank endorsement of its economic policy in the 1994/95 fiscal year, with the result that the final phase of the Paris Club debt write-off remained in abeyance in July 1995. The World Bank estimated Egypt's total external indebtedness in 1994 as US $33,358m. and its 1994 debt-service burden as $2,279m. (a debt-service to export ratio of 14.6%).

In October 1995 the IMF withdrew its objections to the Government's exchange-rate policy following the release of trade statistics showing strong export growth in the first nine months of the 1994/95 fiscal year. A senior IMF official stated that 'there is nothing in the Egyptian economy now that indicates the need for a change in the exchange rate'. No formal IMF review of the economy was undertaken at this point, however, nor was any such review completed in the remainder of the 1995/96 fiscal year. (Egypt, for its part, had by mid-1996 made no drawings under its 1993 extended fund facility agreement with the IMF.) The new Egyptian Government appointed in January 1996 undertook to accelerate the process of structural economic reform by introducing measures to stimulate private investment in new projects (including major industrial developments) while setting revised targets for the sale of shares in state enterprises. The new Government aimed to generate up to £E27,000m. of privatization revenues in 1996, £E20,000m. of this to come from asset sales by state holding companies (mainly through the stock market) and the balance from sales of public-sector shares in joint-venture banks. Cumulative receipts from earlier privatizations amounted to an estimated £E5,500m. at the end of 1995. Of the 314 companies within the public sector at the end of 1995, 224 were trading profitably in the 1994/95 fiscal year, when the combined operations of all 314 companies showed an overall net profit of £E1,500m. However, the aggregate liabilities of public-sector companies at the end of 1995 amounted to £E70,000m., settlement of which was a high priority in the Government's spending plans for projected privatization receipts. As part of its drive to stimulate industrial investment, the Government cut import tariffs on capital goods (hitherto between 20% and 40%) to 10% in January 1996. In the same month the Investment Authority approved 131 mainstream projects involving total investment of US $7,790m. and 13 free-zone projects involving total investment of $2,025m. By September 1998 some 113 of the 314 companies had, at least partly, come under private ownership, although the pace of privatization has since slowed; the Government is likely to fall short of its objective to privatize 68 companies during 1998–99. However, the privatization of one of Egypt's four major public-sector banks, as well as Telecom Egypt and insurance and electricity companies is envisaged for the near future, and is expected to reactivate the programme. An estimated £E18,000m. had been generated by the divestment programme by May 1999.

In October 1996 the IMF approved a US $391m. two-year, stand-by arrangement for Egypt (although in view of the strength of the country's reserves position the Government had no plans to make any drawings on it). This arrangement prompted renewed discussion on activating the final stage of the 'Paris Club' debt write-off. Egypt, meanwhile, repaid $300m. to 'Paris Club' creditors in January 1997, in accordance with existing arrangements. A total of $2,500m. ($1,500m. in grants and $1,000m. in long-term development loans) was pledged to Egypt for 1997/98 by major aid donors at a World Bank-sponsored meeting in May 1997. An IMF review in late January 1997 concluded that most aspects of Egypt's current economic performance were satisfactory, while some were 'more than satisfactory'. The maximum tariff applicable to the bulk of Egyptian imports was cut from 70% to 55% in October 1996 and to 50% in July 1997. A new investment law passed in May 1997 reaffirmed basic guarantees to investors and unified and rationalized the framework for investment incentives. Its provisions included 10-year tax exemptions for projects in designated 'new industrial areas' and 'remote areas' and 20-year tax exemptions for projects in the proposed New Valley development area (see The High Dam below). In 1998 Egypt decided not to renew its agreement with the IMF.

In May 1998 the IMF expressed concern that inefficient bureaucracy and inadequate industry and export facilities could result in a minimal rate of increase in GDP over the next five years. According to the IMF, an 8% increase in investment in these fields would yield a 6.9% increase in GDP by 2003. Following a subsequent review, in July 1998, the IMF urged the Government to increase exports, to attract further foreign investment, and to complete its structural reform. In early 1998 the Government announced that it was to facilitate the establishment of new companies: new legislation would allow new ventures to be automatically approved within 10 days of the founders' submitting an application, subject to the approval of the regulatory body.

Despite the Government's gradualist approach, the stock exchange has increased its trading volume from 200,000 investors in 1995 to 1.1m. in 1997. In late 1997 the Government announced that it was to invest its £E77,000m. state pension fund surplus on the stock market as part of a move to boost domestic sources of investment capital. The Government also launched reforms to computerize the stock exchange in order to create a real-time trading system, so as to accelerate trading.

THE NATIONAL BUDGET

The price increases and the new sales tax introduced in April–May 1991 (see above) were incorporated in the Government's budget for fiscal year 1991/92 (beginning 1 July), which provided for a gross deficit equivalent to 9.3% of GDP. In the event, the deficit was trimmed to 7.1% of GDP, compared with 17% of GDP in 1990/91. Budgeted expenditure in 1991/92 showed a notional increase of more than one-third compared with the previous year, but much of this rise reflected a 38% depreciation of the Egyptian pound since the move to market-determined exchange rates in February 1991 (a rate of US $1 = £E3.24 being used for the budget). The 1992/93 budget provided for total expenditure of £E62,533m. and total revenue of £E53,389m., the resulting deficit of £E9,144m. representing under 5% of GDP. This was to be achieved by measures affecting both revenue and expenditure sections of the budget, although ministers promised there would be no tax or customs increases. Calculated at an exchange rate of $1 = £E3.33 (virtually unchanged from 1992/93), the 1993/94 budget provided for expenditure totalling £E65,313m. and revenue totalling £E56,330m., leaving a gross deficit of £E8,983m. (3.5% of GDP). After financing, there remained a net deficit (to be covered by treasury bills) of £E1,338m., compared with £E2,298m. in 1992/93. Categories of expenditure in 1993/94 included public sector wages (£E11,300m.), defence (£E5,417m.), foreign debt servicing (£E4,850m.) and subsidies (£E3,600m.). Sources of budgeted revenue included general taxes (£E14,937m.), sales tax (£E8,000m.) and customs duties (£E6,070m.). By mid-1993 the annual inflation rate was around 9%, compared with an annual average of 11.8% in the decade to 1990 and a recent peak of over 20% in 1991. The Government's stated economic growth target for 1993/94 was 4%.

The 1994/95 budget (calculated at an exchange rate of US $1 = £E3.38) provided for an 8.4% increase in total expenditure to £E70,790m. (broadly in line with the rate of inflation), coupled with a 4.3% reduction in the gross deficit (to £E8,600m.) and a 63.5% reduction (to £E488m.) in the net budget deficit after financing. The Government's target for GDP growth in 1994/95 was 4.3%. Real GDP growth in 1993/94 was provisionally estimated as 2%, compared with 0.5% growth in 1992/93. As at February 1994, the year-on-year rise in consumer prices was 7.3%, while the average inflation rate over the previous 12 months was 11.3%. The 1995/96 budget provided for total expenditure of £E71,492m. (9.9% higher than actual expenditure in 1994/95) and a gross deficit of £E5,297m. (5.3% higher than the actual gross deficit in 1994/95). The net budget deficit after financing was expected to amount to £E407m. in 1995/96. The budget included social spending totalling £E24,997m. (with particular emphasis on education and health). Total public-sector wages were set to reach £E15,720m. in 1995/96, while just over £E2,000m. was budgeted for subsidies on basic goods. Revenue targets included £E18,262m. from general taxation, £E10,043m. from sales taxes and £E8,110m. from customs duties, the Government's objective being to achieve a current-account surplus of around £E4,000m. within the overall budget for 1995/96. The target for real GDP growth in 1995/96 was 5.4%. The overall investment target for 1995/96 was £E42,000m. (53% of this from the private sector), while the target for the creation of new jobs was stated as 498,000 (which would increase the officially estimated labour force to 16.9m.). The 1996/97 budget provided for total expenditure of £E77,400m. and total revenue of £E71,100m., leaving a gross deficit of £E6,300m., most of which was to be financed by domestic savings instruments and foreign loans. The 1997/98 budget provided for total expenditure of £E83,792m. and total revenue of £E76,398m. The gross deficit of £E7,394m. was stated to be equivalent to about 1.2% of GDP. The 1998/99 budget provided for an 8.8% increase in total expenditure to £E91,196m., whilst revenues were anticipated to increase by 8.9% to £E83,200m., leaving a gross domestic deficit of £E8,600m., equivalent to about 1% of GDP. The Government's forecast for GDP growth for the financial year 1998/99 was 6.2%. The budget included social spending totalling some £E34,500m. (with health and education being of central importance). Total public-sector wages were set to reach £E22,532m., whilst £E4,906m. was to be allocated for subsidies on basic goods. Revenue of some £E56,000m. was expected to be accrued through a 12% increase in total tax and customs. The 1999/2000 budget provided for a 9.0% increase in expenditure, to £E99,400m., and an 8.9% increase in revenues, to some £E90,600m. The deficit of £E8,800m. was, once again, expected to be equivalent to some 1% of GDP. Increased revenues were to be derived from an expanded tax base and from greater encouragement of investment and production. Social spending was forecast to increase by 11.3%, to £E38,400m. The budget proposals were based on estimates of economic growth of 6.0% for that fiscal year.

AGRICULTURE

Egyptian agriculture is dominated by the river Nile and the necessity for irrigation. The main summer crops are cotton, rice, maize and sorghum, and in winter the chief crops are wheat, beans, berseem (Egyptian clover, used for animal feed) and vegetables. While there is self-sufficiency in fruit and vegetables (some of which are exported to the EU), it is with the basic grains that shortages are encountered. During the 1970s agriculture's contribution to GDP remained fairly constant at just less than 30%, but fell steadily in the 1980s, to reach 17% by 1990. In 1978 the agricultural sector accounted for approximately 60% of total export earnings, but by 1979 this had fallen to 50%, and by 1990 to around 10%. During the 1970s the increase in agricultural production was clearly outstripped by population growth, and this reflected a diminishing emphasis on agriculture in government plans. Between 1970 and 1976 food imports, in terms of weight, more than doubled, and exports of rice declined to one-third of their former weight. Agricultural production averaged an annual increase of 2.6% in 1980–88 and this has meant a continued dependence on substantial imports of foodstuffs. From a position of self-sufficiency in food during the early 1970s, Egypt now has to import more than one-half of its food. The difficulties in the agricultural sector are well illustrated by the riots against the increases in the prices of basic foodstuffs in Kafr ed-Dawar in September 1984, and by the heavy subsidies on bread and flour. Although the riots were not as serious as those in Cairo in January 1977, they emphasized the critical problem which the Government faced in attempting to reduce basic subsidies (see Economic Policy and Planning, above). During 1990–97 agricultural GDP increased by an annual average of 2.9%. Agricultural GDP grew by 3.1% in 1995/96 and by 3.4% in 1996/97.

The increase in the rate of wheat consumption exemplifies the problems faced by the agricultural sector. The annual consumption of wheat by Egyptians rose from 80 kg per head in 1960, to 197 kg in 1970 and 300 kg in 1986/87, making Egyptians the world's biggest consumers of wheat per head of population. National consumption rates are also amongst the highest in the world: Egypt consumed 8,850,000 tons of wheat in 1986/87, compared with 4,154,000 tons in 1970, an annual rate of increase of 7%. On several occasions during the 1980s Egypt bought wheat and wheat flour from the USA on preferential terms, although it also buys subsidized grain from the EU. Other grain suppliers have included Australia and Canada. Egyptian wheat production totalled 4.62m. tons in 1992 (the third successive

record harvest), and was forecast to approach 5m. tons in 1993. The total wheat import requirement in 1992 was 5.9m. tons while the forecast requirement for 1993 was 5.5m. tons. In 1994 the Egyptian wheat harvest of 4.6m. tons supplied about 46% of consumption. Farmers were encouraged to expand the area under wheat to 2.45m. feddans in 1995 (an increase of about one-fifth compared with the previous year) as part of a drive to attain 60% self-sufficiency in wheat production. A harvest of around 6m. tons was achieved in 1995, when the yield per feddan stood at twice its 1980 level. A wheat import requirement of up to 6m. tons was forecast for 1996. In 1997/98 it was hoped to increase wheat production to 6.5m. tons through the wider use of high-yielding strains.

In July 1997 the Ministry of Health, in response to concerns about food safety, issued a decree which prohibited imports of genetically altered grain, soya beans and pulses, and stipulated that all other non-gene altered consignments must carry proof of their status. The decree was relaxed the following month, however, after exporters forecast widespread disruption to grain exports and the prospect of a wheat shortage. The modified legislation permits imports of genetically engineered crops which have been safely introduced into their country of origin, and non gene-altered products without certification. Consignments may, however, be subjected to inspection.

The overall value of Egyptian farm output was estimated by the US Department of Agriculture to amount to US $9,526m. in 1992, of which $6,309m. was contributed by crops, and the balance by livestock. The 1992 total represented an annual increase of 4%, compared with a 2.2% increase in 1991 and a 7.2% increase in 1990. Strong growth in crop production from 1990 onwards was attributed to changes in producer price policy, greater use of multiple cropping and a shift in land use from berseem to vegetables, while the relative stagnation of livestock output over the same period was linked to problems in introducing new supply and pricing arrangements for animal feedstuffs. The Egyptian Ministry of Agriculture estimated the value of farm output in the 1994/95 fiscal year at £E32,500m. ($9,587m.). The value of agricultural exports in that year was $615.5m. (representing about 14% of Egypt's total export earnings).

The arable area is about 5% of the total land area, and not much more than two-fifths of this is serviced by main and secondary drains. This deficiency is significant because an unforeseen effect of the High Dam (see below) has been to make the water-table rise (because of more abundant water and more intensive cropping) and led to widespread waterlogging and high soil salinity. Insufficient attention to drainage has therefore been a serious problem with agricultural planning.

The extension of the cultivable area through reclamation has been slow, difficult and costly, but remains at the forefront of government policy. The increasing pressure of people on the land has led to an intensification of cultivation almost without parallel anywhere. Dams, barrages, pumps and an intricate network of canals and drains bring perennial irrigation to almost the whole area. The strict pursuit of crop rotation, lavish use of commercial fertilizer and pesticides, and the patient application of manual labour not only make multiple cropping possible, but also raise land yields to high levels. Despite the difficulties concerning reclamation, early in 1981 the Government announced plans to reclaim 1.2m. ha of land at a rate of 63,000 ha per year over the next 20 years. The largest planned development was at West Nuberiya near Alexandria where, in the first phase, 10,100 ha of land were to be irrigated and drained. A second major agricultural reclamation project has been in progress in the northern Tahrir region; a third project was intended for the region south of Port Said, and further long-term plans included the New Valley project from Aswan to the Qattara depression. While these developments look promising on paper, there is nevertheless much scepticism over official figures relating to the amount of land which has so far been reclaimed. Moreover, the reclamation programme is counterbalanced by the fact that about 20,000 ha of agricultural land are being lost every year owing to urban growth and the depredations of the red clay brick manufacturing industry which pays farmers large sums for the rich, red topsoil from their fields, to be used as raw material. A ban on the manufacture of red bricks was introduced in August 1985. In June 1989 the Government announced plans, within the framework of the socio-economic development plan for 1989/90, to reclaim a further 175,000 feddans of land for agriculture. A record cereal harvest in 1991 was officially attributed, in part, to the reclamation of some 125,000 feddans of land in Sinai and the Alexandria region. In 1995 the total area under cultivation was 7.6m. feddans (3.2m. ha), including 1.4m. feddans (588,100 ha) of reclaimed desert land.

The bulk of agricultural production from reclamation is intended for the market place and not for subsistence. Nearly three-quarters of agricultural income comes from field crops, the remainder deriving from fruit, vegetables, livestock and dairy products.

Long-staple cotton is the most important field crop but the area under cultivation has declined since the late 1960s. Egypt produces about one-third of the world crop of long-staple cotton (1.125 in and longer) and is the world's largest exporter of the premium grades that have been least affected by competition from man-made fibres. Cotton provides 15% of all agricultural employment and helps to support a substantial textile industry. Many factors combine to give the high yields and excellent quality of Egyptian cotton. Among these are climatic, soil and labour conditions, and a long experience of careful planting, watering and picking. Government assistance and supervision have always been important. Fertilizers and pesticides are distributed through the government-sponsored agricultural credit banks and agricultural co-operatives. However, investment in cotton has been inadequate to develop the full potential of the industry. Plans were announced at the beginning of 1993 to liberalize Egypt's internal trade in cotton and to end the public-sector monopoly of cotton exports which had been in force for over 30 years. Forming part of a deregulation programme agreed with the World Bank, the cotton industry reforms were designed to improve the crop's financial appeal to farmers and to encourage wider use of high-yield cultivation techniques. Total production in 1992 amounted to 348,000 tons. During recent years the Egyptian textile industry has absorbed about 80% of the country's cotton crop, and the volumes available for export have often fallen some way short of the prevailing levels of world demand.

Production of cotton in the 1993/94 marketing season (ending in August) was expected to be more than 25% higher than in the previous year, while the volume of cotton contracted for export was by early May 1994 over five times higher than the export volume for the entire 1992/93 season. The relevant export contracts—accounting for almost one-third of the season's forecast production—were worth an estimated £E700m. Draft legislation was introduced in mid-1994 to revive the Alexandria Cotton Exchange, which had been closed down in 1961. The 1994/95 cotton season saw year-on-year reductions of about 18% in the area planted, about 40% in the tonnage produced and about 43% in the tonnage exported. Adverse weather and pest infestation coincided with the application of market reforms, the impact of which was not clear in these circumstances. Following allegations that raw cotton prices (initially driven up by the production shortfall) were being further inflated by speculative hoarding of stocks, the Government in October 1995 imposed a price ceiling on ginned cotton supplied to local textile mills. At the same time it banned the export of cotton until domestic demand had been met. This temporary export ban was lifted in February 1996, while in the following month the cotton export trade was opened up to the private sector. At the same time Egypt's cotton import trade was opened up to all countries, with all shipments to be fumigated and sterilized at the point of entry into Egypt. Egyptian textile mills were expected to turn increasingly to competitively priced imports of short-staple cotton from such suppliers as Turkey and Syria, leaving the bulk of Egypt's long-staple crop available for export to Japan, Switzerland, Italy and other markets with a strong demand for premium-grade cotton. Production of at least 7m. kantars (350,000 metric tons) of cotton from a planted area of more than 1m. feddans (420,000 ha) was forecast for the 1996/97 season, compared with production of around 4.8m. kantars from 700,000 feddans planted in 1995/96. Production of cotton lint in the 1996 calendar year totalled 5.7m. kantars (an increase of 42% over 1995). The cotton crop for the 1997/98 season was forecast to reach 8m. kantars.

Rice is another important crop and is now, after cotton, almost as important as fruit in the agricultural sector as a foreign currency earner. Production of rice in 1992 was a record 3.91m. tons, compared with the wheat harvest of 4.62m. tons and a maize harvest of 4.5m. tons. The total area planted with cereals in 1992 was approximately 3m. feddans. Rice output in 1993 amounted to 4m. tons, compared with local consumption of 2.2m. tons. Rice exporters were among the main beneficiaries of a lifting of export licensing regulations for farm produce in late 1993. In 1998 rice exports generated an impressive £E242m., following a significant increase in productivity in recent years.

Another high yielding crop is sugar cane. In 1992 the state-owned sugar refining company (which currently supplies two-thirds of Egypt's annual consumption of 1.5m. tons) was 90% reliant on cane as a raw material, the balance of its input being beet and corn. Although the company's plans for the future expansion of sugar production were mainly based on beet rather than cane, it was also planning to add new value to its cane-based operations by developing a plant to manufacture newsprint from *bagasse* (cane waste). Total production of sugar cane in 1995 was 1.1m. tons, including 400,000 tons for export. Other crops include lucerne (alfalfa), a nitrogen-fixing fodder, beans, potatoes and onion and garlic. A pilot project to produce palm oil in the Western Desert (currently imported from Malaysia and Indonesia) began in 1993.

The many kinds of fruit, vegetables and horticultural products grown are capable of some expansion and are increasingly important as exports. Particular efforts are being made to promote the production of these items, especially citrus fruit, and special areas are being allocated along the Mediterranean coast for their cultivation. Output of fruit totalled 3.5m. tons (including a record 2.2m. tons of citrus) in 1992, while tomato production totalled 4.3m. tons and other vegetable production 4.45m. tons. There was particularly rapid growth in production of high-value items for which there was strong export demand, such as peaches (over 35,000 tons) and strawberries (around 50,000 tons). The value of fruit exports totalled US $23m. in 1996.

Recent attention has been given to animal husbandry in an attempt to raise dairy and meat production, but there has so far been little increase in either number of livestock or productivity. Egypt is a net importer of meats to supplement its own output of around 800,000 tons per year. Increases in animal feed prices to world levels were partly responsible for some well-publicized problems in 1992/93, including a fall in poultry production to as little as 55% of capacity as the industry adjusted to a new cost structure. In early 1996 the Social Fund for Development allocated £E100m. for livestock development projects designed to boost annual output of red meat and dairy products by more than 20m. tons. In August 1997 the Government ended a 10-year prohibition on poultry imports but placed an 80% tariff on a minimum price of $1,600 per ton of the produce, to be reduced at a rate of 2.4% per year. Importers will be charged duties totalling some $1,200 per ton of poultry.

In May 1988 measures were announced to conserve water supplies owing to the fall in the level of the Nile. These included a reduction in the area planted with rice to 900,000 feddans; a moratorium on the allocation of land for the cultivation of sugar cane; and a ban on the extension of the area planted to crops requiring large amounts of water. Major irrigation and drainage projects in preparation in 1992 included the 'Suez Siphon', which was intended to convey Nile water under the Suez Canal into the Sinai desert, and a scheme to update the drainage of about 720,000 feddans of existing cultivated land (about 10% of the country's total cultivable area). The Siphon project, which was expected to be completed in late 1996, involved the construction of a system whereby water (mostly recycled from agricultural drainage) would be pumped into North Sinai at a rate of 160 cu m per second over a distance of 150 km. In August 1997 the Government announced plans to convert 265,000 ha of orchards to drip irrigation from flood irrigation in an attempt to save 1,000m. cu m of water per year. Farmers making the conversions, costing £E1,500–£E4,000 per feddan, will be assisted by subsidized loans from the Government.

AGRARIAN REFORM

Immediately after the Egyptian Revolution of 1952 an experiment in land reform was initiated. This project achieved a degree of success, though only the very large estates were dismembered while medium-sized estates remained untouched. Among other measures, a limit of 200 feddans was imposed on individual ownership of land. This limit was lowered to 100 feddans in 1961 and again to 50 feddans in 1969. The primary aim of this reform was the destruction of the feudal power of the old politicians, an aim which was easily realized. In 1952, 5.7% of all landowners held 64.6% of the total area, but only a quarter of the country's cultivable land (i.e. some 1.25m. feddans of a total of about 5m. feddans) was in plots of over 100 acres each. By 1961, however, this area had dwindled to about 1m. feddans, nearly all of which had been appropriated by the Ministry of Agrarian Reform and redistributed to landless peasants. The 1969 land reform affected a further 1.13m. feddans owned by 16,000 land-owners.

By 1984 only 13.9% of the total cultivated area was held by owners with 50 feddans or more. However, since land reform affected only about one-sixth of the total land, the main structure of land-ownership remained unaffected; in 1984, 4.7% of the owners (i.e. those with more than 5 feddans) still held 47% of the land while 95.3% of the owners shared the remaining 53%. The fundamental land tenure problem is not so much one of distribution but of an overall scarcity.

Given the land shortage, special attention has naturally been paid to increasing the arable area. In view of the fact that the land to be reclaimed is often arid desert, reclamation is a costly process requiring substantial capital outlays, and the question has to be asked whether new investment should not be directed to the development of manufacturing industry instead, where returns to the scarce capital may well be higher. Between 1952 and 1976, 912,000 feddans were reported to have been reclaimed, 536,000 feddans being reclaimed during the 1960–65 Plan period. By 1985/86, 1,221,500 feddans were stated to have been reclaimed (though only one-half of this land is actually in production), and 1,072,000 feddans to have been redistributed to 440,000 families as a result of agrarian reform measures. Under the Five-Year Plan for 1982–87, only 325,000 feddans were reclaimed, compared with a target of 636,000 feddans. The 1987–92 Plan envisaged reclamation at a rate of not less than 150,000 feddans per year. At the end of 1996 Egypt's cultivated area was estimated to total 7.6m. feddans, including 2.4m. feddans of reclaimed land.

In November 1993 the Government rescheduled some £E200m. of debts owed to agricultural credit institutions as part of an initiative to deal with growing arrears in the farm sector. In March 1994 the World Bank approved US $121m. of financing (including $67m. in International Development Association credits) for a $269m. project designed to provide 250,000 farming families with improved access to agricultural credit facilities. It was announced in early 1997 that the Principal Bank for Agricultural Development was to provide seven-year concessionary loans to tenants wishing to purchase land from owners under a new land tenure law implemented in October of that year. The introduction of the new law, which has abolished both fixed rents and security of inherited tenure, has proved unpopular with many farmers, and a number of deaths and hundreds of arrests have resulted from clashes between farmers, landowners and police.

THE HIGH DAM

The decision to invest more than £E400m. in the Aswan High Dam project (including Soviet credits of £E194m.) was partly informed by the possibility of developing cheap hydroelectric energy for industry. The project was started in January 1960, completed in July 1970, and officially inaugurated in January 1971, with a generating capacity of 10,000m. kWh, compared with the 6,012m. kWh produced in all Egypt in 1967. By 1974 revenue from the dam had exceeded the cost of its construction. Transmission lines carry the current from the dam site to Cairo and further north, and a scheme aimed at the complete electrification of Egypt's villages is in progress. The Aswan II hydroelectric power station started up in early 1986, adding 270 MW of capacity to the national grid. In August 1991 a US $140m.-contract was signed with a west European consor-

tium for the renovation of the High Dam's older generating turbines and related installations.

The dam's primary purpose was to store the annual Nile flood which reaches its peak in August, allowing yearly control of the downstream flow, and, therefore, the possibility of perrenial irrigation and further land reclamation. Between 1964 and 1978 Lake Nasser (maximum capacity 169,000m. cu m) behind the dam gradually filled and ensured that Egypt did not suffer the worst effects of the drought experienced in much of north-east Africa. Under the terms of an agreement signed with Sudan in 1959, Egypt is allocated 55,500m. cu m of Nile water a year out of an estimated 84,000m. cu m annual average flow as measured at Aswan. Sudan receives 18,500m. cu m and the remainder is calculated to be the annual evaporation loss from Lake Nasser. By June 1988, more than 10 years of drought at the source of the Blue Nile in Ethiopia (which provides approximately 70% of the flow at Aswan), had reduced the water level in Lake Nasser to 153 m, just above the 150 m point at which the High Dam's hydroelectricity turbines would be affected, drastically reducing their generating capacity, and approaching the 147 m level at which they would have to be shut down completely. However, an exceptionally high flood after torrential rainfall on the Ethiopian plateau in August 1988 raised the water beyond the danger level. In September 1990 the water level in Lake Nasser was 167 m and live storage was calculated to be 83,700m. cu m. In October 1993, following inflows from an above-average flood, the water level reached 174 m, while storage behind the dam amounted to 116,110m. cu m of water. In September 1994 the water level reached 176.2m, and the stored volume 127,580m. cu m, when a very high Nile flood occurred in the aftermath of a reduction of 5m. cu m per day in farmers' irrigation requirements (a result of early planting in the previous growing season). The 500 km-long Lake Nasser is expected to become a major fisheries resource, the development of which would replace the sardine catch in the Mediterranean, lost as a result of the building of the dam.

During the 1996 Nile flood the water level behind the dam reached an unprecedented 178m, increasing storage in Lake Nasser to 137,000m. cu m by the start of October, at which point water from the lake began to overflow into the Toshka reservoir to the west. Early rains in Ethiopia in 1997 gave rise to expectations of a similarly high Nile flood in 1997. In January 1997 the Government inaugurated a 'New Valley' project to build a 30-m wide canal from Lake Nasser to the oasis regions in the central Western Desert. In March 1998 a contract was signed to build a new £E1,200m. pumping station to extract water from Lake Nasser, just north of the Toshka outfall, in order to fill the canal, which is to be the central feature of a scheme to irrigate up to 500,000 feddans (210,000 ha) of land and to open up adjacent areas for development. Overall, the Southern Egypt Development Project was designed to resettle 3m. Egyptians around the oases over the next 20 years at a cost of up to £E300,000m. A total of £E5,800m. in government funding was allocated to the project for 1997–2002. In addition to the Toshka project, two other schemes are underway: the Oweinat project aims to irrigate some 80,000 ha in the most southerly part of the Western Desert, while the as-Salaam canal will be used to irrigate at least 168,000 ha in the Sinai desert with water from the Nile Delta.

THE SUEZ CANAL

After the October 1973 war, the most pressing need was to restore and reopen the Suez Canal and, at Sadat's initiative, the Canal was reopened on 5 June 1975, the eighth anniversary of the outbreak of war which led to its closure in 1967. Expansion was made even more urgent because of the vast increase in oil-tanker sizes after June 1967 which the closure of the Canal helped to provoke. The Canal Authority set the dues for ships using the Canal 90%–100% higher than in 1967, and revenue in the first year of operation was US $230m. In December 1980 the first phase of work to widen and deepen the southern end of the Canal was completed at an estimated cost of $1,275m. Income reached $888m. in 1981, compared with $676m. in 1980. In 1982 Suez Canal revenue was reported to have reached $1,000m. for the first time, with $956m. being derived from transit tolls and $44m. coming from services to ships in transit. Earnings from Suez Canal tolls were reported to have been $974m. in fiscal 1983/84 (July–June) (other services raised the overall revenue to more than $1,000m.) but fell to $897m. in 1984/85. Despite an increase in transit rates in January 1984, revenue in 1984 totalled only $960m., $100m. less than had been projected, owing to reduced tanker traffic and the planting of mines in the Red Sea approaches to the Canal, which deterred shipping from using it in the summer of 1984. Transit rates were raised by an average of 5% in 1985 and 3.4% in 1986. In 1986 revenue totalled $1,107m., compared with $929m. in 1985. Transit rates were raised again on 1 January 1987, by 7.4% for the first 5,000 tons and by 3.8% for the next 15,000 tons and during the year total revenue from tolls and other services was a record $1,222m. (for fiscal 1988/89 the total was $1,340m., compared with $1,289m. in 1987/88). The Chairman of the Suez Canal Authority attributed the increase to the Authority's success in attracting large oil tankers and container vessels by offering them a 17% reduction in transit fees. A $400m.-development scheme, which was nearing completion in mid-1993, was designed to allow passage of vessels of 56 ft draught, or up to 170,000 deadweight tons (dwt), compared with 130,000 dwt previously. A further scheme to deepen the canal to 72 ft (to accommodate vessels of up to 300,000 dwt) remained in abeyance in 1993 after feasibility studies had shown it to be uneconomic at current levels of world trade.

Reconstruction of the canal cities, some of them up to 80% destroyed, was also put in hand and by 1979 more than 1m. Egyptians had returned to Port Said, Ismailia and Suez. In November 1979 construction of the as-Salaam canal, to take water from the East Nile to Sinai, was started and in October 1980 the 1.64-km Ahmad Hamdi tunnel was opened, thus providing the first road link under the Suez Canal.

Transit rates were increased by an average of 5% from 1 January 1990. Despite initial forecasts that the Gulf crisis of 1990/91 would adversely affect the Canal, revenue in 1990/91 increased by 14% compared with 1989/90, to reach US $1,664m. From 1 January 1991 transit tolls were increased by 6% (4% for dry bulk carriers), while an average 3% increase in 1992 was below the rate of inflation of the Suez Canal Authority's operating costs. A carefully structured programme of selective discounts—e.g. for southbound tankers in ballast—kept the Canal keenly competitive with rival shipping routes in the first half of 1993, when a total of 8,670 ships generated revenue totalling $981m., compared with the January–June 1992 figures of 8,353 ships generating revenue of $927m. The Suez Canal Authority's 1994 tariff schedule incorporated average toll increases of about 4%, coupled with further refinements of the structure of selective discounts. In addition to the commercially determined discounts for different categories of cargo vessel, a 35% discount was introduced for passenger cruise ships in support of the Government's campaign to bolster the tourism industry. The number of vessels using the Canal fell from 17,312 (including 3,185 tankers) in 1993 to 16,370 (including 2,722 tankers) in 1994. Transit tolls were frozen, and some new discounts offered, in 1995. In 1995 the Canal handled 15,051 vessels and generated total revenue of $1,942m. At the start of 1996 the Canal Authority responded to a decline in tanker traffic by introducing substantial discounts for northbound oil tankers which discharged part of their cargo at the Ain Sukhna terminal of the Sumed pipeline, later reloading it at the northern end of the pipeline. These vessels would benefit from a new charging system based on the tonnage of their residual cargo. Operators of tanker fleets were offered volume discounts linked to the total annual tonnage which they routed via the Canal. In mid-1996 the Canal Authority was finalizing a new discount scheme to attract iron-ore and coal carriers away from the Cape route. During 1996 the Canal was used by 14,731 vessels (a total of 355m. net tons). Revenue for the first 10 months of 1996 was 7.8% lower than in the corresponding period of 1995, and in November 1996 the Canal authority announced new discounts for oil tankers, LNG carriers and container vessels. Basic transit fees remained unchanged in 1997. The number of vessels using the Canal during 1997 was 14,430 (with net displacement totalling 369m. tons), generating a revenue of $1,822m. In 1998 the Government placed the Suez Canal Authority under the auspices of the Prime Minister as part of an initiative, the Government claimed, to improve the efficiency of the Canal. Notwithstanding the negative impact of the Asian economic

crisis in the late 1990s on the transport sector, greater efficiency is required since the Canal is experiencing a slow decline in revenue due to increased competition from pipelines as a means of transporting oil.

MANUFACTURING INDUSTRY

During the 1970s manufacturing industry suffered from a lack of foreign exchange, and some excess capacity resulting from shortages of spare parts and raw materials. Food processing and textiles have traditionally dominated the industrial sector, contributing 55%–60% of the total value of industrial output in the mid-1970s. With the growing importance of oil, though, this situation has changed. Provisional employment data for 1995 indicated a work-force of 2,224,200 in manufacturing and mining, 967,600 in construction, and 166,800 in electricity, gas and water, totalling 21.9% of employed labour. In the year ending June 1995 the manufacturing sector accounted for 26.6% of GDP, while industry as a whole accounted for 33.4% of GDP (compared with 45% in 1990 and 27% in 1965). In 1997 it was estimated that manufacturing accounted for 25% of GDP. The manufacturing sector has had a stabilizing effect on the Egyptian economy while industry as a whole has suffered the adverse effects of the decline in world oil prices in the late 1990s.

The manufacturing sector has long suffered from considerable inefficiency. A World Bank report, published in 1987, showed that returns on investment were low and that, despite considerable investment, the industrial sector was neither diversified nor efficient, and, therefore, was unable to compete in the international market-place. Among the problems identified by the report were overstaffing and excessive government protection from foreign competition. The Egyptian authorities have admitted that productivity is low, as is plant utilization (only 30% of capacity in some cases), but have blamed the international recession and the lack of foreign exchange, in addition to problems of poor incentives and low salary levels among the work-force. In addition, private sector investment has been attracted to service industries rather than manufacturing industry. Nevertheless, private firms were responsible for about 50% of Egypt's US $2,000m.-worth of manufactured exports in 1992.

In the manufacturing industry textiles, having once accounted for about one-third of total output, contributed only 16% in 1989. However, exports of textile fibres and products contributed about 27% of total export revenue in 1990, compared with 26% in 1984. The Government has embarked on a three-stage rehabilitation of the cotton-ginning industry costing US $40.4m. and assisted by an $18.5m. loan from the IDA. The Arab Fund for Economic and Social Development (AFESD) was to lend Egypt $40m. to finance a spinning and weaving project at Kafr ed-Dawar and Bayda. In 1994 finished garments accounted for nearly 30% of Egypt's total textile exports as the industry shifted increasingly towards value-added products. Private-sector manufacturers predominated in the dyeing, knitting and finished clothing industries in mid-1997, whereas the public sector was responsible for about 90% of the spinning industry and 60% of weaving activity (state textile enterprises having so far been a low priority for privatization because of widespread financial problems in this sector). Textile exports increased by 64% during 1995/96–1996/97, amounting to some £E900m. in the latter year. Recent developments in the food processing industry have included a major expansion of sugar refining, undertaken to reduce an import requirement of 600,000 tons per year, costing an estimated $60m. Annual consumption per head has more than doubled since the mid-1960s to 28 kg.

Within heavy industry the development of projects established in the 1970s has continued. The Egyptian Iron and Steel Co complex at Helwan, developed around a Soviet-built plant first opened in 1973, was by late 1993 producing at its design capacity of 1.2m. tons per year for the first time, following a 10-year upgrading programme financed by the World Bank and Germany. The Alexandria Iron and Steel Co complex at ed-Dikheila—a Japanese-built plant, in production since the end of 1986—produced 1.1m. tonnes of high-quality steel reinforcing bars and wire rods in 1993, when the company made a net profit of £E112m. on sales of £E1,300m. (including exports worth $70m.). Plans were announced in early 1994 for an expansion scheme to add 400,000 tons of additional production capacity at ed-Dikheila, one element in the proposed financial arrangements for the scheme being a fresh injection of private capital which would reduce the public-sector shareholding in the company from 87.4% to about 60%. Completion of the US $350m. expansion scheme was scheduled for 1997. In 1995 the Alexandria complex recorded a net profit of £E120.5m. on sales of £E1,530m. (including exports worth $71m.). Its output in 1995 was just over 1.2m. tons of steel bars. New steel industry projects under consideration in 1994 included a special products mill with a capacity of 140,000 tons per year, to be built at Sadat City, north of Cairo. Egypt's total manufacturing capacity in steel products in 1994 was around 3m. tons, compared with a total annual demand of about 4m. tons which was expected to rise sharply in coming years. A long-term growth strategy for the industry was under discussion by public- and private-sector experts in mid-1994. In October 1997 a contract was signed for the construction of a giant steel plant in Suez, to produce some 1m. tons of flat steel sheets annually, 40% of which will be exported. Investment in the plant is expected to total some £E2,000m. In June 1998 the Aswan Development and Mining Company (Adamco) signed an agreement to mine iron ore and construct an integrated iron and steel plant south of Aswan to produce 1.42m. tons per year of steel billets. In April 1998 the Government announced plans to establish a £E500m. company to develop iron ore deposits south of Aswan. The Aswan Iron and Steel Company subsequently began construction of a £E2,600m. plant.

The Aluminium Co of Egypt, whose complex at Naga Hammadi opened in 1975 (having been developed to take advantage of power supplied from the Aswan High Dam), was in 1993 in the process of upgrading its annual production capacity from 180,000 tons to 250,000 tons with no extra power use. Egypt exported £E405.4m. worth of aluminium rods and sections and £E94.4m. worth of unwrought aluminium in the 1994/95 fiscal year. The new 60,000 tons-per-year rolling mill began production in 1995. In 1997 the Aluminium Co of Egypt underwent a partial privatization, and in 1998 the US company ALCOA (Aluminium Co.) was studying the possibility of establishing a joint venture.

Egypt's cement industry underwent rapid expansion in the 1980s. Annual consumption of cement rose from 4.1m. tons in 1977 to about 16m. tons in 1986. Four cement works began production in 1985, adding 5.2m. tons per year and reaching an installed capacity of 7.7m. tons by 1987. Egypt produced 7.6m. tons of cement in 1985 but imported 9.1m. tons. The conversion of a Soviet-built cement works at Asyout created the largest production line in Africa, with a nominal output capacity of 5,000 tons per day. Under the 1987–92 Five-Year Plan, five new works were to be built, adding 5m. tons to Egypt's annual capacity, and steps have also been taken to expand output at existing plants. By the early 1990s local supply had been brought more closely into balance with demand, and, in mid-1993, an announcement of plans to triple the capacity of a Suez cement plant was coupled with plans to export part of the additional output. In early 1996 Egypt had an installed cement production capacity of 16.6m. tons per year and an import requirement of 2m. tons per year. By mid-1997 cement production had increased to 18m. tons per year, while imports remained the same. According to the Minister of Industry, Sulayman Reda Ali Sulayman, output was equivalent to 19.7m. tons per year by mid-1998. The construction of three new ventures was forecast to increase production by a further 4.2m. tons per year by 1999. The proliferation of new projects has been prompted by prospects of increased demand over the next few years, owing to construction projects such as the Toshka irrigation scheme and new tourist developments. In June 1998 Reda predicted that production would expand to 40m. tons per year by 2007. Financial analysts have been more cautious, however, and expressed concern that a surplus in capacity could appear in five to 10 years. A contract was awarded in 1995 for the construction in 10 Ramadan City of a float glass factory with an annual capacity of 100,000 tons of clear and coloured plate glass. The factory was scheduled for completion in 1998.

Partly due to surprisingly buoyant foreign exchange earnings in the early 1980s and the freer availability of raw materials, there were signs that the construction industry was beginning to expand rapidly. Indeed, housing dominated construction during the 1982–87 Plan, with investment set at £E4,600m.,

13.3% of the total. The private sector had been expected to provide 94% of investment in housing construction, itself 54% of total projected private-sector investment under the Plan. The housing programme constituted only about 25% of all construction activity, which has been dominated by the building of public utilities (mainly water and sewerage projects). The Plan provided for £E2,900m. to be invested in public utilities' construction but the projects involved, such as the Greater Cairo sewerage and the Alexandria waste-water schemes, are so vast that they are being funded outside the Plan and their duration will extend far beyond the Plan period.

Evidence of increased foreign investment in Egyptian industry was provided by the World Bank's loan of US $69m. towards the $109.3m. cost of the National Weaving and Spinning Co's building programme at Alexandria, the Japanese interest in the ed-Dikheila steel plant, and the World Bank's $50m. loan towards the cost of expanding the National Paper Co.

Within the field of the motor industry, Egypt has been assembling and manufacturing parts of Italian Fiat passenger cars since the early 1960s. The El-Nasr Automotive Manufacturing Co (NASCO) produces these cars at a rate of 12,000 per year, as well as buses, trucks and other vehicles. General Motors Egypt (GME, owned 31% by General Motors of the USA, 20% by Isuzu of Japan and 49% by private Egyptian and Saudi investors), was established in 1985 to build light commercial vehicles at 6 October City, south-west of Cairo. By 1993 GME was producing 10,000 such vehicles per year, 10% of which were exported to Syria, Jordan and the Gulf region, and was due to start assembling a passenger car (the Opel Vectra) later in the year. Other companies were meanwhile developing local assembly plants for various other makes of car, including Hyundai, Suzuki, Peugeot and Citroen, while Daimler-Benz was studying the feasibility of setting up a truck factory in Egypt.

In 1994 GME's output of Opel Vectras was running at the rate of 1,000 a month, while Suzuki Egypt (51% owned by the local Suzuki dealer) was producing Suzuki Swifts at the rate of about 850 per month and Centre for Trade and Development (51% owned by Peugeot) was producing about 100 Peugeot 405s per month. Production of Hyundai Excels (licensed to the locally-owned bus and coach assembler, Ghabbour Brothers) was due to start in the last quarter of 1994 at an annual rate of 17,000 cars, some of them for export to neighbouring countries. Production of Citroen cars and vans (licensed to the locally-owned JAC Car Makers) was due to start at the end of 1994 at an initial annual rate of 4,000 AX models, to be increased to 24,000 vehicles (including other models) at the end of 1995. The local assembly of Nissan cars and vans was scheduled to begin at the end of 1995 at an annual rate of 10,000 vehicles. A plant to manufacture Pirelli radial tyres under licence was due to open in Alexandria at the end of 1994 with a workforce of 800 and a capacity of 350,000 tyres per year.

The local assembly of Mercedes trucks and utility vehicles was due to begin in 1996 and to build up to a level of 7,000 vehicles per year in 1998. A separate plant to produce E-class Mercedes cars began production in November 1997 at an initial rate of 2,500 cars per year; local component content would be 40% (the minimum local-content requirement under current Egyptian law). A plant to assemble Skoda cars was scheduled to begin production by 1997. In mid-1996 Egypt had about 100 motor component plants supplying a total of 12 vehicle assembly projects. The German-based Volkswagen Group announced in June 1996 that it was to open a purchasing office in Egypt with the aim of obtaining about 10 types of component from Egyptian suppliers. Plans to assemble Daewoo cars and pick-up trucks and BMW cars in Egypt were approved by the Investment Authority in September 1996.

In early 1997 Egypt had seven car assembly plants in operation with a total capacity of 85,000 units per year, although current output was only about one-third of capacity. In June 1997 BMW opened an assembly plant on the same site as a Nissan factory, as part of an unprecedented agreement in which both companies would share the paint shop in order to minimize costs. BMW predicted annual production of 2,000 units. In 1996 the Egyptian market for cars was around 65,000 units, of which about half were assembled locally. The export of locally-assembled cars was not permitted under licensing agreements between foreign parent manufacturers and Egyptian assembly plants, whose financial viability depended on substantial tariff protection in the Egyptian domestic market. Egyptian tariffs on vehicle imports—specifically excluded from the general reductions in tariffs in 1996 and 1997—ranged in mid-1997 from 40% on the smallest cars to 135% on cars with engine capacities of 1.6 litres or more. According to some industry estimates in 1996, a further 15 years of tariff protection would be needed for Egyptian vehicle plants to develop internationally-competitive cost structures.

Early in 1983 the Egyptian Chief of Staff of the Armed Forces stated that Egypt was interested in the joint manufacture of weapons with other countries, and in November 1987 Egypt began to press its former partners in the Arab Organization for Industrialization (AOI) (Saudi Arabia, Qatar and the UAE) to revive their involvement in a regional Arab defence industry. The AOI was funded in 1974 to provide an Arab challenge to Israel's advanced defence industry but Egypt's three co-founders withdrew from the organization in 1979, after Egypt signed a peace treaty with Israel. The armaments industry is being seen in Egypt as a possible source of revenue to offset the decline in receipts from the traditional revenue earners, and the decision of its former partners to re-establish diplomatic relations with Egypt after the Arab League summit meeting in Amman, in November 1987, gave rise to hopes that new Arab investment in the AOI might be forthcoming. Sales of armaments earned a reported US $1,000m. in 1982, when Iraq, at a critical stage in its war with Iran, turned to Egypt for spare parts and ammunition for its mainly Soviet-built equipment, and bought battle tanks from Egypt's strategic reserves. Egypt has acquired licences to rebuild and modify old Soviet tanks and its most ambitious project involves the assembly, under licence, of the US General Dynamics Land System's M1-A1 Abrams battle tank. Some 75 of the latter had been produced by the beginning of 1994, when production was proceeding at the rate of 10 tanks per month towards a cumulative target of 540 tanks (all intended for use by the Egyptian armed forces).

According to a report by the General Organization for Industrialization, private investment in new industrial ventures totalled £E1,889m. in 1993, creating 30,000 new jobs in 799 projects.

The needs of heavy industry, and the plan to extend electric power to all Egypt's rural communities underlined the need for more power generation than that supplied by the Aswan High Dam. The dam represented some 2,000 MW of total installed capacity of 3,700 MW at the start of the 1982–87 Five-Year Plan. The Plan provided for the expansion of installed capacity by 3,430 MW, of which 270 MW was to be obtained through the Aswan II scheme, and the remainder from thermal power stations and eight nuclear plants, which were to be completed by 2005, at a cost of US $36,000m. Total net installed capacity rose to 5,850 MW in 1985. However, the nuclear programme came under government reappraisal in the aftermath of the disaster at the Chernobyl plant in the USSR in April 1986, and the collapse of oil prices; while some of the thermal units, which were intended to be oil- and gas-fired, were redesigned to burn coal from Australia. It was proposed that a 2,600-MW plant, costing $1,800m. to construct, and ultimately using 15m. tons of Australian coal per year, would be built at Zaafarana on the Gulf of Suez during the 1987–92 Five-Year Plan, with an associated port, capable of handling 7m.–8m. tons of coal per year initially, rising to 12m.–15m. tons. Annual consumption of electricity was given at 34,000m. kWh in 1985 and was expected to increase threefold by the end of the century. Hence, plans to implement the Qattara depression scheme to generate energy by flooding the depression with waters from the Mediterranean were given the final go-ahead late in 1980, at an estimated cost of at least $2,600m. In August 1980 the USA agreed to provide a $102m. loan to modernize the electricity grid, and plans for the implementation of complete rural electrification are in an advanced stage. In May 1985 USAID also agreed to provide $55m. of an estimated $156m. required for the fourth 315-MW power unit at Shoubra el-Kheima power station in Cairo. The station, whose first three units, costing $604m., became operational in early 1986, provides up to 75% of Cairo's electricity. The fourth unit was completed in the late 1980s, bringing total capacity to more than 1,000 MW. Since 1981, Egypt's total installed capacity increased by 7,000 MW to reach 10,938 MW

in 1991. It is planned to add a further 6,000 MW by 2000, including the commissioning of a 400-MW combined cycle plant at Damietta, east of Alexandria, and the rehabilitation of an old Soviet plant at Suez which will boost capacity by 185 MW. Annual output of electricity totalled 84,870m. kWh in 1997 and was expected to reach 100,000m. kWh in 1998. Power supplies were priced at about 90% of cost in mid-1994, a level of subsidy which the Government was pledged to eliminate by the end of 1996 as part of its economic reform programme. A further aim of the sector is to reduce oil consumption. In 1990 the sector accounted for 8.3m. tons of oil, equivalent to 16% of total production. Where possible, power stations were being converted to use natural gas in the early 1990s, the Government's target being to increase the contribution of gas to thermal power generation from 60% in 1992 to 80% by 1997 (thus minimizing domestic use of petroleum that could be used to generate valuable export revenue). (In 1997 thermal power stations accounted for 79% of electicity output.) Plans were being drawn up in 1993 to link the Egyptian and Jordanian electricity grids as part of a regional inter-connection project to be financed by the Arab Fund for Economic and Social Development. The US $229m. combined electricity grid was inaugurated at the Jordanian port of Aqaba in March 1999, work having been completed in 1998.

In June 1981 the USA signed an agreement for nuclear co-operation with Egypt, which was to lead to the construction of two nuclear power stations. More recently, Egypt turned to France for additional assistance with its nuclear projects, and also to Italy, with whom a nuclear co-operation agreement was signed in March 1984. A Franco-Italian consortium was to build Egypt's first nuclear plant at ed-Daba, 160 km west of Alexandria but the French withdrew in early 1987, owing to export-credit problems. The Government initially planned to build eight nuclear power units at a cost of US $36,000m., with a total capacity of 8,000 MW, to meet 40% of Egypt's energy needs by the year 2005, buying uranium from Niger. However, in April 1986, the Government announced that only three nuclear power units would be built up to the year 2005, the first of which, at ed-Daba, was under review in early 1991.

To guard against severe power shortages arising from low water levels at the Aswan High Dam (see above), the Government announced, in January 1988, that 20 thermal power plants, with a combined capacity of 5,500 MW, would be built by the end of 1992. Four 300-MW plants were to be built at Abu Qir (No. 5), Asyout, Suez (No. 4) and Damanhour; a 270-MW hydroelectric plant is under construction at Esmat, on the upper Nile; and a gas-fired plant, with a capacity of 700 MW, was planned for Damietta. It was subsequently announced that four plants, at Ayoun Mousa, Zaafarana, Sidi Krier and Kurimat, each of 1,200 MW generating capacity and originally designed to be coal-fired, would be oil- and gas-fired. In May 1989 the USSR granted Egypt a 'soft' loan (repayable over 12 years) for the construction of a 600-MW power station in the Sinai desert. In February 1991 it was confirmed that USAID funds of US $200m. would be allocated to the Kurimat project, the total cost of which was estimated at $1,000m., and an initial consultancy contract was signed with a US firm, Ebasco Overseas, in October 1991. In mid-1995 Egypt's total installed electricity generating capacity of 13,068 MW comprised 7,246 MW of steam plant, 2,805 MW of hydroelectric plant, 1,574 MW of combined-cycle plant and 1,443 MW of gas plant. Power stations consumed 2.17m. tons of fuel oil and 7.788m. cu m of natural gas in the 1994/95 fiscal year. In March 1998 a contract was signed for the construction of five new power transformer stations with a total capacity of 250,000 kW. The £E56m. project will provide electricity in rural areas of Abu el-Matamir, Motobus, Tel el-Kebir, Dekernes, and Samalout.

Major urban redevelopment schemes are also under way. The first stage of an urban mass-transit railway system was completed in Cairo in August 1987 by a French consortium (see 'Transport and Tourism'). At the end of 1982 the first contract, worth US $55m., was awarded for the Greater Cairo sewerage renewal scheme. The $3,000m. scheme involves the digging of a 10-mile tunnel which will connect Cairo's drains to the largest sewage-pumping station in the world in the northern suburb of al-Ameriya. Elsewhere, there are plans to build new towns to accommodate 5m. people by 2000 and relieve the pressures on existing urban centres of a rapidly increasing population, although these provisions are already in danger of becoming obsolete in the face of an ever accelerating birth rate. The Egyptian telephone network, controlled by the National Telecommunications Organization (Arento—subsequently Telecom Egypt), had a total installed capacity of about 2.8m. lines at the end of 1994. In 1995 Arento was finalizing an expansion programme to add a further 500,000 lines over five years with the support of $200m. in grant aid from the US Agency for International Development. At the beginning of 1984 a 20-year Master Plan for Alexandria was announced. It envisaged growth of the city's population to 4.75m. by 2005. The urban development schemes which have so far been undertaken have not, however, been as successful as was anticipated. An example of this is the new town of 10 Ramadan, 30 km from Cairo, begun in 1978, which was estimated to have as few as 100,000 residents (a quarter of its intended residential population) by 1993. To provide for the large number of Egyptians returning from the Gulf in 1990–91, the Government announced the creation of eight project zones, some of them free zones for tariff purposes, designed to provide factory employment for displaced workers. By March 1994, the total population of new industrial cities around Cairo was officially given as 265,000, and plans were announced to encourage their further growth by providing incentives for workers to take up residence in them.

The Government's awareness that Egypt's urban slum areas were fertile breeding grounds for social unrest prompted a 1993/94 budget allocation of £E250m. to improve the housing conditions and basic amentities in such areas, the Government's eventual aim being to invest over £E3,000m. in a long-term development programme covering 404 districts in 10 provinces. New incentives for investment in the economically-deprived Upper Egypt region were announced in January 1995. Industrial zones in Beni-Suef (120 km south of Cairo) and five population centres further to the south (Menia, Asyout, Suhag, Luxor and Aswan) became subject to accelerated planning procedures and other measures to attract new investors. In December 1997 the International Development Association pledged credits worth US $15m. to settle 26,000 low-income families on reclaimed land east of the Delta. The Government's co-operative housing authority aims to attract new residents by subsidizing approximately 50% of the cost of a house with a loan to be repaid over a period of 30–40 years. The Government expects its investment in new towns to reach £E142,000m. by 2017.

Egypt's mineral resources are now being reappraised. Iron ore has traditionally been mined from the Aswan area, but new and better quality reserves have recently been discovered in the Bahariya Oasis region. Phosphate production from mines at Isna, Hamrawein and Safaga exceeded 600,000 tons per annum in the 1980s, and exports reached around 300,000 tons in 1992/93. A new phosphate mine at Abu Tartur in the Western Desert was due to be brought into production at a rate of 2.2m. tons per year at the end of 1994, rising to twice that rate by 1996, when 600,000 tons of its output would be earmarked for export. However, production had still not begun in 1997, when the Government announced that private-sector investment would be sought to complete the project. Manganese is being mined in the Eastern Desert and Sinai, there are chromium deposits in the Eastern Desert, and uranium has been discovered in Sinai. In 1985 a British company, Minex Minerals Egypt, was awarded concessions to prospect for gold in two areas at Barramiya and es-Sid. In 1997 an Australian company, Pharoah Gold Mines, was preparing to open a mine in the Eastern Desert, while a new gold discovery was announced in the far south-west of Egypt at Jabal Kamel, where Egyptian geologists had been prospecting for iron ore. There are extensive coal deposits in Sinai, including an estimated 21m. tons at Maghâra, where a deep mine (disused since 1967), was reopened in the mid-1990s. The company responsible, Sinai Coal Company, was under parliamentary investigation in 1997 following allegations of 'financial, operational and environmental shortcomings'.

In 1998 the Government announced plans to establish a 3,000-acre zone for technological production called the Sinai Technology Valley (STV). Immediate projects are to be established on a 250-acre site and are due for completion in late 1999. The Government expects the zone to increase technology exports from US $200m. per year in 1998 to $2,000m. per year

by 2002. Companies establishing in the STV will be entitled to tax incentives for a 10-year period.

PETROLEUM AND GAS

The development of Egypt's hydrocarbon sector has had a major impact on the economy, although petroleum production in Egypt remains relatively small by Middle Eastern standards. Production of crude petroleum at the end of 1980 averaged approximately 600,000 barrels per day (b/d), compared with 420,000 b/d in 1977, and continued to rise thereafter. Petroleum revenue rose to US $3,431m. in 1981/82 (representing about 60% of total export earnings), compared with $960m. in 1979. In 1982/83 gross revenue from petroleum sales fell to $2,977m. It rose to $3,127m. in 1983/84 and to $3,340m. in 1984/85. Overall production averaged 785,000 b/d in 1983/84, rising to almost 900,000 b/d in 1985/86, compared with capacity of 1m. b/d. Of average daily output, about 50% is used locally and between 25%–30% is taken by foreign oil companies, which leaves only about one-quarter of output or less available for export. In 1986 the effect of the collapse in oil prices, coupled with Egypt's decision voluntarily to reduce production, was to limit average output to about 770,000 b/d, while exports fell to a rate of only 150,000 b/d.

Domestic consumption of hydrocarbons, was, until 1984, rising at a rate of 12%–15% each year, while oil production was rising by only 7% annually. Subsidies on petroleum placed a considerable strain on the nation's finances: the estimated US $3,600m. spent on them in 1983 kept oil products at less than one-fifth of their price on the world market. Substitution of natural gas for fuel oil helped to slow the rate of increase in domestic oil consumption during the latter part of the 1980s, while sharp reductions in price subsidies in 1991 helped to stabilize domestic hydrocarbon consumption at just under 27m. tons in both the 1990/91 and 1991/92 fiscal years. In the calendar year 1995 total hydrocarbon consumption was 29.3m. tons, comprising 19.4m. tons of petroleum products and 9.9m. tons of natural gas. The most significant factors in explaining the great increases in oil production so far are the return by Israel of the Alma Oilfield, renamed the Shaab Ali field, in the Gulf of Suez, in November 1979 and, in 1982, the Sinai oilfields (notably the Abu Rudeis area), and the increase in concessions and finds particularly in the Gulf of Suez and the Western Desert. At the end of 1998 Egypt's proven oil reserves totalled 3,500m. barrels, equivalent to 11.4 years' production at 1998 output levels.

Egypt, not being a member of OPEC, is able to maintain a flexible pricing policy. In 1983 and 1984, by maintaining a higher price for its oil (as much as US $28.50 per barrel for the premium Suez 33° API oil blend, which accounts for about 60% of all oil exports), Egypt's policy was consistent with its support for OPEC's programme to prevent a collapse in world oil prices. In February 1985, however, Egypt dissociated itself from OPEC's policies, steadily reducing the price of its oil, as demand remained slack. A decline in the value of the US dollar and a reduction in Iranian oil exports led to increases in all blends (including the 26° API Belayim blend and Râs Ghârib, the heaviest Egyptian crude) during the last third of 1985. During 1986, however, the oil price, already weakened by the glut of oil on world markets, fell sharply after OPEC decided to increase production, in order to secure a 'fair' share of the reduced market. In order to remain competitive, Egypt was forced to cut production and make a series of reductions in the price of its oil. For the second half of July the Suez blend was valued at only $7.35 per barrel, compared with $11.30 in June and $26.70 in December 1985. Egypt's average output was cut by some 300,000 b/d in early 1986, and in April exports were reduced to about 50,000 b/d, compared with more than 250,000 b/d at the end of 1985. After OPEC decided in August 1986 to reintroduce a production ceiling, the price of petroleum on world markets began to increase again. Following several increases, the Suez and Ras al-Bihar blends were priced at $17.60 per barrel in the second half of January 1987. In February the price of Suez and Ras al-Bihar was reduced to $17.25 but there were no further alterations until July, when the prices rose to $17.75 per barrel. Egypt's production rose after August 1986, reaching 940,000 b/d in December, but it agreed to restrict its output to 870,000 b/d for the first half of 1987, in support of OPEC's new production and prices strategy. However, according to the Egyptian General Petroleum Corporation (EGPC), average output exceeded 900,000 b/d during this period, and reached 904,000 b/d in the year as a whole. By mid-July 1988, with the world market once more oversupplied with petroleum, the price of the Suez and Ras al-Bihar blends had been reduced to $12.75 per barrel. Net petroleum revenues, which totalled $2,630m. in 1985, declined to $704m. in 1986 and rose to $1,446m. in 1987, following an improvement in world oil prices; in the 1988/89 fiscal year they amounted to $1,451m., while in 1989/90 they rose to $1,651m. In 1990/91 oil exports totalled $2,539m. and oil imports $978m., making a surplus of $1,561m. In the calendar year 1992 Egypt's oil trade surplus totalled $1,258m., falling to $1,170m. in 1993 (when oil export earnings totalled $2,147m. and oil import costs totalled $977m.). In 1994 oil exports were valued at $2,148m. and oil imports at $819m., making a surplus of $1,329m. In 1995 Egypt had an oil trade surplus of $1,470m. (exports $2,430m., imports $960m.). In 1997 oil exports totalled $2,483m. and imports $1,606m., resulting in a surplus of $877m. In 1998 Egypt had an oil trade surplus of $113m. (exports $1,236m., imports $1,123m.)

The plan for the hydrocarbon sector in 1982/83–1986/87 envisaged an increase in oil and gas production by 85% from 34m. tons in 1981 to 63m. tons by 1987. However, these plans had to be revised owing to the crisis in the world oil market. Actual production totalled 48m. tons in 1985 (oil 44.3m. tons; gas 3.7m. tons), fell to 44.6m. tons in 1986 (oil 40.3m. tons; gas 4.3m. tons) but rose to 50m. tons in 1987 (oil 45.2m. tons; gas 4.8m. tons). Production amounted to 49.6m. tons in 1988 and rose to 50.4m. tons in 1989, 50m. tons in 1990 and 51.6m. tons in 1991. In 1992 total hydrocarbon production of 53.6m. tons comprised 44.2m. tons of crude oil, 7.6m. tons of natural gas, 1.1m. tons of condensates and 0.7m. tons of butane. Total output was 56.4m. tons in 1993 (oil 45.5m. tons, gas 8.8m. tons, condensates 1.3m. tons, butane 0.8m. tons); and 56.2m tons in 1994 (oil 44.8m. tons, gas 9.3m. tons, condensates 1.3m. tons and butane 0.8m. tons). The 1995 production total was 56.65m. tons (oil 44.6m. tons, gas 9.9m. tons, condensates 1.3m. tons and butane 0.85m. tons). Preliminary data for 1996 indicated a decline of 3% in oil production and an increase of 5.6% in oil consumption, while natural gas production rose by 4.7% and gas consumption increased by 4.1%. In 1997 oil production was recorded at 43.9m. tons and consumption at 25.9m. tons. Natural gas production totalled 10.5m. tons and consumption was 10.4m. tons. The Government reduced oil production levels from 850,000 b/d to 820,000 b/d in July 1998 in an attempt to stabilize oil prices. Consumption of petroleum products in that year was some 23.7m. tons.

Egypt has made numerous oil concession and exploration agreements with foreign companies. The US company, Amoco, was responsible for nearly 50% of all Egyptian crude output in the early 1990s. Exploration was greatly stimulated by the oil price rises of the early 1970s, leading to new oil finds in the Gulf of Suez, on the Red Sea coast and in the Eastern and Western Deserts. Western Desert oilfields contributed 6.5% of national output in 1987 (compared with more than 90% for the Gulf of Suez), when 41 of Egypt's oilfields were situated in the Gulf of Suez and 26 in the Western Desert. Twelve new finds were reported in the Gulf of Suez in 1980, leading to a doubling of Egypt's known oil reserves. These rates of discovery continued in 1981, when 12 main new oil discoveries, 10 of which were in the Gulf of Suez, were made.

Exploration continued in 1982, and early in 1983 four new major production sharing agreements were signed by the EGPC with Shell Winning, Getty Oil, Deminex, and a partnership of BP, Elf Aquitaine, Occidental Petroleum and IEOC. Expansion continued during 1984, with petroleum flowing ashore from the first of the Deminex Egyptian Oil Company's platforms in the Ras Fanar field, in the Gulf of Suez, in January. Further concessions were also signed with Deminex in the Zeit area; with Marathon, Aminoil and IEOC in the southern part of the Gulf of Suez; and with Shell Winning in the East Gamsa area of the Gulf of Suez and in the Qaraouan area of the Western Desert. The Zeit Bay oilfield came 'on stream' in 1984, with an initial output of 10,000 b/d, which had risen to 65,000 b/d by April 1985. The third oilfield in the Gulf of Suez to begin production during 1984 was Ras al-Bihar, the largest field yet struck by EGPC. With an initial output of 12,000 b/d, it helped

to push overall production up to the target of 1m. b/d in 1985. A consortium of Western oil companies, including Total-CFP and BP, discovered oil in Egyptian waters off the coast of North Sinai in early 1986; an exploration well yielded 5,000 b/d–10,000 b/d. Texas International Inc and Conoco made two discoveries of oil in a 200,000-ha concession 325 km west of Alexandria in mid-1985, one of which is of commercial quality. More than 350 exploratory wells have been drilled in the Gulf of Suez, and some 40 fields discovered. During 1986, new discoveries were reported in the Western Desert by Khalda Petroleum (a joint venture of EGPC, Texas International and Conoco). New exploration agreements were signed with BP, Shell, Amoco and Agip in mid-1987 for concessions in the Gulf of Suez and the Sinai desert, reflecting more advantageous production sharing terms being offered by EGPC to encourage foreign participation. In September 1987 the EGPC announced that 78 oil deposits had been discovered since 1982, of which 41 were in production and 31 were to begin production during the next five years. According to the EGPC, a record 49 exploration agreements with foreign oil companies were approved by the Egyptian Government in 1989.

The results of exploration in the late 1980s were generally disappointing, especially in the Western Desert, and a new round of invitations to bid for concessions, issued by the EGPC in 1990, elicited only a limited response. Partly as a result, BP announced in November 1991 that it would sell its 16.6% stake in the Suez Petroleum Company (SUCO), while other Western companies scaled down their activities in Egypt. Nevertheless, several new oil and gas finds were announced in 1990/92, one by British Gas in December 1990, in its offshore North Zaafarana concession in the Gulf of Suez, being described as 'the most significant in the area for nearly a decade'. Other finds announced in early 1992 included strikes of both oil and gas in the Western Desert, the Gulf of Suez and the Nile delta, close to existing fields. According to government sources, there was known potential for the proving of a further 2,000m. barrels of oil reserves in Egypt, although it was conceded that they were in relatively small pockets which would be difficult to exploit.

In June 1989 Egypt was readmitted to the Organization of Arab Petroleum Exporting Countries (OAPEC), and it has since sought to increase co-operation with Libya, Syria, Jordan, Oman, Yemen and the other Gulf states. Companies from Kuwait and the UAE have invested in exploration concessions in Egypt.

In 1993 the EGPC made strenuous efforts to revitalize oil exploration activity, concluding seven new agreements in February for blocks in the Western Desert and the Gulf of Suez; the companies involved included British Gas, Amoco, Mobil and Agip. Bids for a further five blocks (two of them in the Delta region) were being evaluated in mid-1993, while bidding for 15 more blocks (five of them in the Mediterranean region) was to close near the end of the year. Reported improvements in terms included increased block sizes, improved cost-recovery formulae and flexible withdrawal options. Production-sharing terms (which were negotiable on a case-by-case basis) reportedly envisaged a reduction in the EGPC's share of output to between 70% and 80%, compared with its entitlements of between 80% and 89% under existing production-sharing agreements.

Egypt's Minister of Petroleum and Mineral Wealth said that in order to attract exploration dollars it was essential to adopt a flexible negotiating stance in an environment of 'intense international competition'. In a further demonstration of its pragmatic approach to oil development, the Government agreed in 1993 to allow Agip's local affiliate to merge a total of 14 separate agreements, of widely differing terms and lengths, into one unified agreement with an extended expiry date, thereby improving the viability of the company's capital investment programme. (The Agip-affiliated International Egyptian Oil Company was Egypt's second largest oil producer and largest gas producer in 1992.) Nine exploration blocks (including the last available blocks in the Gulf of Suez) were opened to bids in 1995, after which only 40% of Egyptian territory (including the 15% without any sedimentary rocks) would remain unallocated for exploration. The Government's intention was to have exploration agreements in place in every geologically appropriate area by 1998. Having concluded concession agreements in respect of eight of the nine blocks offered in 1995, the Government opened a further nine blocks to bids in 1996. In 1997 the EGPC offered 12 exploration blocks, 11 of which were awarded in mid-1998. Participating companies envisage drilling 63 wells in total, with total investment of US $208m. Nine exploration blocks were opened to bids in early 1998, and bids for a further nine blocks were to be opened later in the year.

A 320-km Suez-Mediterranean (Sumed) crude pipeline, operated by the Arab Petroleum Pipeline Co (owned 50% by Egypt and 50% by Saudi Arabia, Kuwait, Qatar and Abu Dhabi, mostly through state oil companies), opened in 1977 with a throughput capacity of 1.6m. b/d. An expansion of capacity to 2.3m. b/d was due to be completed in March 1994. Terminals at Ain Sukhna (near Suez) and Sidi Krier (near Alexandria) can accommodate tankers otherwise too large to navigate the Suez Canal. Oil storage capacity at these terminals in 1993 totalled 2.4m. barrels, which many users considered to be insufficient to ensure efficient utilization of the forthcoming increase in the throughput capacity of the pipeline. Proposals to build as much as 4.5m. barrels of additional storage capacity were under consideration in mid-1993. In 1998 the Sumed pipeline transported 2.4m. b/d, and revenues earned by the Arab Petroleum Pipeline Co totalled US $235m. As well as providing an oil transit service, the Sumed company does some trading on its own account (buying crude at the Red Sea terminal for resale at the Mediterranean terminal).

Egypt has oil refineries at Suez (two), Mosturud (near Cairo), Ameriya and Mex (near Alexandria), Tanta and Wadi Feirân. Annual output of refined products totalled 23.3m. tons in 1992, 24.6m. tons in 1993, 25.4m. tons in 1994 and 26.3m. tons in 1995. The main population centres are served by an extensive network of product pipelines. Downstream development initiatives for the mid-1990s are expected to include refinery modernization to bring the local industry's product mix more closely into line with the pattern of domestic demand (e.g. by adding the capability to produce diesel fuel, one of several categories of oil product that were still being imported in 1993). Plans were also well advanced in 1995 to construct a largely export-oriented 100,000 b/d refinery next to the Sumed pipeline terminal at Sidi Krier. Scheduled for completion in 1999 at an estimated cost of more than US $1,000m., the proposed plant would be 80% owned by Israeli/Swiss and Egyptian private citizens and 20% by EGPC.

Having brought its first natural gas field 'on-stream' in 1974 at a rate of 3.5m. cubic metres per day (cu m/d), Egypt was producing around 6m. cu m/d by the early 1980s, when the country's proven gas reserves totalled around 85,000m. cu m. Substantial new discoveries in succeeding years helped to boost proven reserves to 400,000m. cu m by the end of 1992, during which year Egyptian gas output averaged 31.15m. cu m/d (having increased by nearly 25% since 1990 and by nearly 50% since 1987). Until the late 1980s gas pipelines were developed primarily to serve industrial plants (including the Helwan iron and steel complex). Thereafter, power stations became the largest consumers of Egyptian gas, most of the steep rise in gas consumption in the early 1990s being attributable to a national strategy to substitute gas for oil wherever possible.

Almost 40% of Egypt's gas output in 1992 came from the Abu Madi and El Qara fields in the Nile Delta (foreign participant Agip), while about 25% came from the Badr ed-Din field in the Western Desert (foreign participant Shell). The most important new gas discovery of 1992 was made by Shell Egypt in the coastal region of the Western Desert, involving the Obaiyed field, which was expected to add between 40,000m. cu m and 250,000m. cu m to the country's proven reserves when fully appraised. Other companies with major Egyptian gas interests include BP Amoco and Phillips Petroleum. Having significantly improved its financial terms for gas development and production in 1988, the Government further enhanced the return to producing companies in 1993, when it raised its main reference price by 12.5%, bringing it roughly into line with European gas prices. Egypt's gas production averaged 36.83m. cu m/d in 1994. At the end of 1994 EGPC, Amoco and the Agip-affiliated International Egyptian Oil Co signed an agreement to establish an Egypt Trans-Gas Co to take charge of a project to build a 500-km gas pipeline from Port Said to Gaza and Israel, to handle proposed exports of gas to these markets, and to assess the potential for the eventual development of further markets in Lebanon and Turkey. An exportable surplus of gas was

expected to become available from 1997/98 when new offshore fields north of the Nile Delta were brought into production. In 1995 Egypt's gas production averaged 39.19m. cu m/d, while its year-end gas reserves (including recent discoveries in the Nile Delta and eastern Mediterranean) were estimated to exceed 630,000m. cu m. At the end of 1998 Egypt's proven gas reserves totalled 890,000 cu m. In 1998 all the natural gas produced (about 1,600m. cu ft per day) was consumed locally. Levels of gas production are expected to double by the year 2000 and the Government plans to begin exporting in 2001. During 1998 considerable progress was made by the EGPC and Italy's ENI on development proposals for a pipeline linking the Nile Delta with El-Arish on the border with Palestinian-controlled Gaza. A provisional agreement with the Palestinian authorities on the delivery of gas to the region was signed in October, although this will ultimately depend on the future political situation in the region.

There are five main fertilizer plants using Egypt's hydrocarbon feedstocks: Talkha I in Lower Egypt, which began in 1976 and produces 380,000 tons per year of nitrogenous fertilizers; Talkha II opened in 1979 and produces 396,000 tons per year of ammonia, which is then used for making urea (both plants use gas from the Abu Madi field); Suez, producing 250,000 tons per year of nitrogenous fertilizer, using gas from Abu Gharadeq; the plant at Dikheila, using Abu Qir gas, which has a capacity of 500,000 tons per year of urea and 100,000 tons per year of ammonium nitrate; and the Abu Qir fertilizer works, in Alexandria, which produces 450,000 tons per year of ammonia/urea. An extension to the Abu Qir plant, which is being built by a German company, Uhde, will have a daily production capacity of 1,000 tons of ammonia, 1,800 tons of nitric acid, and 2,300 tons of ammonium nitrate. In January 1998 a contract was signed for the construction of a fertilizer complex in Suez, to produce 1,200 tons per day of urea and 1,925 tons per day of ammonia. A project to develop a major ethylene-based integrated petrochemicals complex on the Gulf of Suez was under discussion in 1996. In April 1998 a contract was signed for the 120,000-tons-per-year polypropylene plant at Alexandria to produce feedstock for the local manufacture of synthetic textiles. In 1997 bids were invited for the development of Egypt's first polyethylene complex, to produce 200,000 tons per year, using feedstock from an ethylene plant already under construction.

BANKING

In late 1971, reorganization of the banking system resulted in the merger of three of the banks into others, with each of the rest being entrusted with specialized functions. The National Bank of Egypt was entrusted with foreign trade, the Bank of Port Said merged into Misr Bank which was to deal with home trade, including agricultural finance, the Industrial Bank merged into the Bank of Alexandria which was to deal with manufacturing, the Mortgage Credit Bank merged with the Crédit Foncier Egyptien and was to deal with construction and housing and the Bank of Cairo was left to deal with operations of the public sector. In 1975, in line with the liberalization of the banking system, these restrictions on the sectoral operations of the major banks were removed. A new bank, the Nasser Social Bank, was created to deal with pensions and other forms of social security. The Egyptian International Bank for Foreign Trade and Development was also created in 1971 to promote foreign trade and attract foreign investment but was later transformed into the Arab International Bank for Foreign Trade and Development with Egypt, Libya and other Arab investors holding shares. These banks are additional to the Central Bank of Egypt, which was created from the issue department of the National Bank of Egypt in 1960, and the Public Organization for Agricultural Credit and Co-operatives, which the Crédit Agricole became in 1964.

Foreign banks have been welcome in Egypt since it began liberalizing its economy in earnest in 1974, and about 50 of them now operate in the country. The biggest impact on the Egyptian banking system from foreign banks, however, has come from the joint ventures established with Egyptian banks. These include Misr International Bank, which partners Misr Bank with First National Bank of Chicago, Banco di Roma and UBAF Bank (London); Egyptian-American Bank, which pairs American Express and Bank of Alexandria; Cairo Barclays International Bank, a venture between Banque du Caire and Barclays Bank International; Misr-America International Bank, part-owned by Bank of America, the Kuwait Real Estate Bank and the First Arabian Corporation on the foreign partners' side, and by the Development Industrial Bank and Misr Insurance Company on the Egyptian side; and Banque du Caire et de Paris, a pairing of Banque Nationale de Paris and Banque du Caire. All these, with the exception of Cairo Barclays, were established as 51/49 ventures in favour of the Egyptian side. Cairo Barclays, being a 50/50 venture, was not permitted domestic banking activity under the banking regulations in force at the time of its establishment. Other developments included the opening in Cairo in July 1979 of the Faisal-Islamic bank, with 49% Saudi and Gulf equity participation. This was the first Egyptian bank to do business according to the *Shari'a* (Islamic Law). By 1987, however, the major public-sector banks (National Bank of Egypt, Banque Misr, Banque du Caire, and Bank of Alexandria) all had Islamic banking facilities. Some Islamic investment companies also appeared, although they encountered problems owing to excessive dividend payments. As a result, the Central Bank tightened its control over the banking sector in early 1987.

During 1980 a number of changes took place in the banking structure. In December Egypt's first international bank, the Egyptian International Bank, was opened with a capital of US $100m. Of this capital 50% was subscribed by the country's four main banks: the National Bank of Egypt, Bank of Alexandria, Banque de Caire, and Banque Misr, with the other half being provided by the Central Bank of Egypt. In addition a National Investment Bank was established earlier in the year to monitor public investment, and there were also plans to establish an import-export bank. The fiscal year was also changed in 1980 to begin in July and not January.

An incentive exchange rate was introduced in December 1984 in an effort to check a slide in the value of the Egyptian pound against the US dollar and to undercut the 'black' market in currency, which had grown following a major devaluation of the Egyptian pound, by one-half, against the US dollar in 1979. (Egypt maintained different exchange rates for specific purposes, e.g. for basic commodity transactions, for workers' remittances, for public sector purchases etc.) A series of measures by successive finance ministers, including the authorization of preferential exchange rates at Egypt's four public sector banks, failed to attract remittances from Egyptians working abroad who preferred to deal on the 'black' market, where the rate of exchange on the US dollar remained above the official level. Only about 40% of the estimated US $4,000m. which is generated annually in remittances reaches Egyptian banks. In January 1985 the Minister of Finance, Dr Mustafa as-Said, established a 'floating' exchange rate to reflect more accurately the value of the Egyptian pound against the US dollar, to restrain rising imports, and to counter 'black' market transactions by attracting remittances to the banks. The official rate of exchange remained some 10% below the free market level and failed to divert remittances. Meanwhile, measures restraining imports, including the obligation to purchase letters of credit in Egyptian pounds, proved too restrictive, causing long delays for importers, particularly in the private sector, who were competing for short supplies of currency in the banks. Dr as-Said resigned at the end of March 1985 after a banking scandal, which was the direct result of his 1983 decree banning banks from dealing with certain 'black' market operators. His replacement, Dr Sultan Abu Ali, immediately withdrew the currency regulations of his predecessor: importers were once again able to fund imports by securing hard currency from the 'black' market without having to declare the source; and in June 112 items were removed from the list of restricted imports.

By 1987, Egypt was under considerable pressure, particularly from the IMF, to unify its multiple exchange rates. The IMF wanted the change to be effected within one year but the Government required 18 months. In May 1987, however, the Government acted to curb the 'black' market in currency and announced the partial 'flotation' of its currency, with a daily ('free pool') exchange rate being set by a panel consisting of representatives of eight banks, in order to attract foreign currency. The unofficial market rate persisted but the new 'floating' rate was much closer to it and made the federal banking system

more accessible to foreign exchange. The fixed Central Bank rate was adjusted from US $1 = £E0.70 to US $1 = £E1.10 in September 1989. However, the old rate was still applied to revenues from the Suez Canal and the EGPC. The commercial bank exchange rate ($1 = £E1.35 in May 1987), which was used to finance public sector imports and customs duties, was phased out by the end of March 1988, having been allowed to depreciate in order to merge with the 'free pool' rate, which was set every day by a committee of Central Bank and commercial bank officials ($1 = £E2.708 at 30 June 1990). Before the doubts expressed by the Egyptian Government over the reforms required of it, the IMF expected the unification of the remaining exchange rates (the Central Bank rate; the bank 'free pool' rate; the $1 = £E0.40 rate, used for barter deals with the Communist bloc; and a new rate of $1 = £E1.89, introduced in April 1988, for customs duties) to have been achieved by the end of 1988.

In May 1989, as part of a comprehensive adjustment of the interest rate structure, the Central Bank raised interest rates by three percentage points. The measure was designed to encourage savings in the local currency and facilitate a renewed agreement with the IMF. Under reforms agreed with the IMF, which became operative in late February 1991, a new currency exchange system was introduced. It provided for the determination by the commercial banks of a free-market rate of exchange, although an 'official' Central Bank rate continued to be set at not more than 5% less (in terms of the Egyptian pound's free-market value) than the commercial bank rate. This two-tier system resulted in an effective devaluation of nearly 40% compared with the official rate in the previous year, and was officially stated to be a prelude to a unified exchange rate and full currency convertibility commencing in February 1992. By May 1991 the exchange rate was US $1 = £E3.24. Moreover, the new exchange system also resulted in an increase in the Central Bank's interest rates, which rose from 16.2% to more than 20% by May 1991.

For some years the Government has been concerned about the growth of Islamic investment companies, which have been attracting a significant proportion of private savings, including remittances from Egyptians working abroad, and channelling domestic funds and vital foreign exchange away from the official banking system. According to the Islamic precepts under which these investment companies operate, they are not permitted to charge or pay interest. Instead, they pay depositors out of profits, at a high rate of return (up to 24%, compared with the 13% interest available from banks), from their speculations and investments at home and abroad. There are four or five major companies and more than 100 smaller ones, with 2m.–3m. customers (mostly small investors), which effectively constitute a large, unregulated financial sector in competition with the official banking institutions. The largest Islamic investment house, Ar-Rayan, holds deposits of US $2,000m.–$3,500m. (more than all but the largest banks), and estimates of the combined deposits of all the Islamic companies are in the range of $12,000m.–$20,000m., compared with total commercial bank deposits of $15,000m. at the end of 1987.

In 1987 the Government announced plans to regularize the activities of Islamic investment companies, and in June 1988 the Majlis passed a law requiring them to become regular shareholding companies (issuing share certificates in exchange for deposits, rather than simple receipts) and placing a limit of £E50m. on their authorized capital. All companies were forbidden to take new deposits for three months, while they decided whether to comply with the new regulations or to go into liquidation. The measures provoked strong resistance among the Islamic investment companies, and many leading executives protested that they would not be able to continue in business if they complied with them (see 'Islamic Banking and Finance', p. 189).

It was feared that the collapse of several of Egypt's Islamic investment companies in late 1988 would lead to the loss of several thousand depositors' funds. There was also evidence, by mid-1989, that the resulting loss of confidence in the economy had led to a sharp decline in Egyptian workers' remittances from abroad, which was exacerbated by Iraq's invasion of Kuwait in August 1990. A new banking law, presented to parliament in November 1991, tightened the financial regulations relating to banks and strengthened the supervisory powers of the Central Bank. Under the measure, Egyptian banks were required to have paid-up capital of at least £E50m. (as against £E500,000 previously), while foreign banks had to have at least US $10m.

An amendment was introduced in March 1993 to allow branches of foreign banks to take deposits and give loans in Egyptian pounds, regardless of whether they were locally incorporated or had local shareholders. A total of 22 foreign banks had branches in Egypt at this time, and several of them were expected to develop a full range of services, placing particular emphasis on the introduction of new products and the creation of modern capital market structures in Egypt.

Total deposits in the Egyptian banking system stood at £E159,000m. (nearly two-thirds of this in local currency) at the beginning of February 1993, an increase of almost 50% over the previous six months as depositors took advantage of the first opportunity for decades to earn a positive return on their money (Egypt's inflation rate having fallen to around 10% while bank deposit rates stood at 15%). The attractiveness of the local currency (which had maintained a stable exchange rate for over a year in conditions of virtually free convertibility) was such that the Central Bank was buying about US $1,000m. of 'surplus' foreign exchange each month—a development which helped to boost Egypt's foreign exchange reserves to a record $14,300m. during the first quarter of 1993. By mid-1994 the country's foreign-exchange reserves had reached $16,600m., and were forecast by the Government to rise to around $20,000m. by the end of 1995. The amount of surplus liquidity in the Egyptian banking system was estimated at around £E4,400m. in the first half of 1994. Surplus liquidity in the banking system was substantially reduced in April 1995 when a £E3,000m. issue of five-year treasury bonds was fully subscribed. A 49% ceiling on foreign banks' shareholdings in some local joint-venture and private banks was abolished in June 1995. The same amending legislation increased the maximum amount that any bank could lend to a single creditor (hitherto defined as a sum equal to 25% of the bank's capital) to a sum equal to 30% of its capital.

At the end of 1996 Egypt's official reserves exceeded US $18,000m., representing nearly 15 months' import cover. By the start of 1997 sales of state shares had reduced the number of joint-venture banks in majority state ownership from nine to four. A committee was formed in January 1997 to plan the establishment of a new bank to provide unsecured loans to families on very low incomes. The new bank (inspired by similar institutions pioneered in Bangladesh) was to be covered by a special law. In January 1998 the Government introduced a new law to prevent banks and businesses from securing a double tax exemption by taking out loans carrying tax relief to invest in treasury bills (t-bills) on which earnings are tax-free. The legislation, stipulating that banks and businesses can only purchase t-bills with their own funds, immediately prompted concern that profits would drop, owing to a significant increase in their tax burdens; share prices subsequently dropped as investors speculated on a decrease in earnings. Clarification of the law, issued in June, demonstrated that the effects of the new system were less severe than anticipated, and that banks which did not depend heavily on t-bills and corporate bonds would not be liable to large tax increases.

In May 1998 the Egyptian legislature adopted a law allowing the Egyptian or international private sector to invest in Egypt's four most prestigious wholly state-owned commercial banks. A similar law to privatize the four largest public insurance companies was also approved. In June 1998 the People's Assembly approved a draft law restricting private-sector shares in the state-owned banks to just 10%, in response to concerns that conflicts between multinational and Egyptian interests might arise. Total deposits in the Egyptian banking sector were recorded at £E206,000m. in 1997.

FOREIGN TRADE AND PAYMENTS

Despite careful government examination of all external payments, the pressure of population on resources is the crucial factor responsible for keeping the balance of payments in a precarious state. Although the development of the petroleum sector has alleviated the difficulties to some extent, food imports have continued to be substantial, accounting for 31% of the value of total imports in 1990 (compared with 26% in 1965),

while imports of machinery and transport equipment increased from 23% in 1965 to 29% in 1988, before falling back to 23% in 1990. Exports have traditionally been agricultural goods, with raw cotton accounting for almost one-third of the value in 1977. However, by 1979 a change was apparent, with crude petroleum accounting for 30% of the exports against raw cotton's 21%. By 1982 crude petroleum accounted for 55% of exports, but this proportion had fallen to 40% by 1990, as domestic requirements outstripped production.

The external trade deficit has persisted almost without interruption since before the Second World War. In 1991/92 there was a sharp rise in Egypt's current-account surplus to about US $3,737m., with income rising to some $18,779m. (including $1,727m. from tourism) while a $1,370m. fall in the value of imports (to $10,054m) helped to contain total expenditure. In 1992/93 the current-account surplus reached $4,774m. Visible export earnings totalled $3,417m. (53% of this from crude oil), while import spending totalled $10,732m. (one-fifth of this for foodstuffs), leaving a visible trade deficit of $7,315m. Income from services amounted to $9,173m. (21% of this from Suez Canal charges and 14% from tourism), while outgoings totalled $5,701m. (25% of this being interest payments and 18% repayments of principal under loan agreements). Inward private transfers, including both remittances from workers abroad and deposits attracted by high interest rates, totalled $7,260m. (almost enough to offset the visible trade deficit), while inward official transfers amounted to $1,357m.

In 1993/94 the value of visible imports totalled US $10,647.1m., while the value of visible exports totalled $3,337.3m. (40.8% of this from crude oil and petroleum products), leaving a visible trade deficit of $7,309.8m. Income from services in 1993/94 was $9,004m. (22% of this from Suez Canal charges and an estimated 20% from tourism), while outgoings totalled $5,489m. (25.2% of this being interest payments), leaving a surplus of $3,515m. on services. The remaining elements in the 1993/94 payments balance were inward private transfers of $6,164m. and inward official transfers of $829m., placing the current account in overall surplus by $3,198.2m, according to the Central Bank's established calculating methods. In 1996 the Central Bank recalculated the 1993/94 payments data using revised accounting procedures (notably for private transfers) which had the effect of reducing the recorded current-account surplus for 1993/94 to $191.4m.

The 1994/95 payments statistics (calculated on the new basis) showed a visible trade deficit of US $7,853.5m. (exports $4,957m., imports $12,810.5m.), a surplus of $4,286.4m. on services (payments $5,519.5m., receipts $9,805.9m.), and net inward transfers totalling $4,197.6m. (of which private transfers accounted for $3,279m.). The overall current-account surplus for 1994/95 totalled $630.5m. The value of non-oil exports showed a 68.5% rise in 1994/95, compared with a 19.6% rise in exports of crude oil and petroleum products, giving the non-oil sector a two-thirds share of Egypt's visible export earnings for 1994/95. Major export categories included textiles and garments ($1,077m.), agricultural commodities ($615.5m.) and products of the metallurgical and heavy industrial sector ($498m.). Suez Canal charges contributed 21% and tourism 23.4% of income from services in 1994/95. Interest payments accounted for 22.4% of expenditure on services, while foreign travel by Egyptians (not separately categorized in previous payments statistics) accounted for 20.5% of expenditure on services. Egypt's estimated net surplus on travel and tourism in 1994/95 was $1,169.9m. (income $2,298.9m., expenditure $1,129m.).

In 1995/96 there was a visible trade deficit of US $9,233m. (exports $4,593m., imports $13,826m.), a surplus of $5,376m. on services (payments $5,023m., receipts $10,399m.), and net inward transfers totalling $3,732m. (of which private transfers accounted for $2,799m.). There was an overall current-account deficit of $125m. Suez Canal charges contributed 18.1%, and tourism 28.9%, of income from services in 1995/96. Interest payments accounted for 23.8%, and foreign travel by Egyptians for 24.9%, of expenditure on services in 1995/96. Significant trends in 1995/96 included a decline in non-oil exports (attributable mainly to problems in the textile industry), strong growth in tourism receipts resulting in a 30% rise in the net surplus on travel and tourism, and increased spending on imports of machinery and transport equipment, attributable to a rise in investment in productive sectors of the economy. The 1996/97 payments statistics showed a visible trade deficit of $9,788m. (exports $4,930m., imports $14,718m.), a surplus of $6,193m. on services (payments $5,048m., receipts $11,241m.), and net inward transfers totalling $4,145m. (of which private transfers accounted for $3,256m.). The overall current account surplus totalled $550m. Non-oil exports were valued at $2,800m. in 1997.

Negotiations were in progress between Egypt and the European Union (EU) in early 1997 for a partnership agreement within the framework of the EU's Euro-Mediterranean initiative to phase out most trade barriers between the EU and Mediterranean countries, which would be eligible for EU grants and 'soft' loans during the transition period. The EU's reluctance to move towards completely free trade in agricultural produce as well as manufactures was strongly challenged by Egypt, which emphasized that it was currently the world's twelfth largest importer of European farm produce and had in 1995 recorded a deficit of US $685m. in agricultural trade with the EU (out of a deficit of $2,900m. in its overall trade with the EU). In March 1997 Egypt's negotiating demands included annual duty-free quotas of 750,000 tons of potatoes, 300,000 tons of oranges, 475,000 tons of rice and 30,000 tons of cut flowers, whereas the EU was understood to be offering import quotas of 220,000 tons of potatoes, 73,000 tons of oranges, 32,000 tons of rice and 2,000 tons of cut flowers.

TRANSPORT AND TOURISM

Egypt's principal ports are at Alexandria, Port Said and Suez. The Government is aiming to expand both the Mediterranean and Red Sea port capacities to cope with traffic passing through the Suez Canal. Alexandria port is being expanded, aided by a US $95m. loan from the World Bank, and a completely new port is planned, west of Alexandria, at ed-Dikheila, with a capacity of 20m. tons per year, compared with Alexandria's present capacity of 13m. tons. Safaga on the Red Sea is also being developed but mainly to handle mineral imports and exports. The first stage of a port situated 10 miles west of the Nile's Damietta tributary, and capable of handling up to 16m. tons of cargo per year, was opened in July 1986. A second stage will increase the port's capacity to 25m. tons per year. In 1998 the Government announced the formation of a new body, the Egyptian Company for Port Said Area Ports, to develop a huge hub port on the east bank of the bypass channel of the Suez Canal. The company will also be responsible for the construction of an industrial and storage zone in the area. The first 1.2-km section of container quay was due to open in early 2002. Plans for the construction of a port at Sharq et-Tafrea to provide transhipments to the eastern Mediterranean, and the construction of a port to cater primarily for industrial and distribution interests in the Suez zone, were also under discussion.

River transport is being expanded to relieve the load on roads and railways for internal distribution. Navigable waterways total about 3,100 km, of which about one-half is the Nile and the rest canals. Canals such as the Nubariya canal in the delta and the Bahr Yousuf, between Fayoum and Asyout, make it possible to link Alexandria with Upper Egypt through Cairo.

Egypt has over 5,000 km of railway and modernization is urgently needed. A project using loans from various sources is being undertaken to modernize the railway system and expand its carrying capacity, as well as to draw up a comprehensive national transport survey. This includes modernization of the line from Cairo to Upper Egypt, for which funding of US $300m. was sought from the World Bank in 1990. Earlier modernization plans have not been carried out. Plans are in hand to repair 300 km of the railway network in the south of the country and to replace all locomotives in the country with modern rolling stock. Under active consideration in late 1991 was a plan to upgrade the 160-km railway link between the Tabbia industrial zone to the south of Cairo and areas of mineral deposits in the Western Desert. Work began in mid-1995 on a project to create rail link from Ismailia across Sinai to the town of Rafah in the Palestinian-administered Gaza Strip. Construction of the first stage of the French-designed Cairo metro system, consisting of a 44-km line, which runs from el-Marg in the north to Helwan in the south, began in 1982. Incorporating 34 stations, including six underground, on a 4.2-km line tunnelled beneath the centre

of Cairo (the first underground transport system in the Middle East and North Africa), this section connected with an existing line to Helwan; it was completed in July 1987 (18 months later than originally planned) and was opened in September. Traffic on the metro reached a record 988,000 passengers per day in March 1993. Construction work began in 1992 on Cairo's second metro line (which will run north to the suburb of Shoubra el-Kheima, and, eventually, south to within a few hundred metres of the Greater Cairo ring road, south of Giza railway station). The second line will have a total length of 18.3 km, serving 18 stations. The first section started operating between Shoubra el-Kheima and Ramses Square in 1996, with a further section opening in 1997 and the final section scheduled to open at the end of 2000. The construction of a third line to run from Old Cairo to Imbaba was due to begin in 2001. The initial phase of construction of a new metro project in Alexandria began in 1999. The 55-km Alexandria Metro line is to be constructed in three phases; the first stage will be a 22-km line from Abu Qir in the east to Misr Station in the west, with the capacity to carry up to 60,000 passengers an hour. The second section, an 8-km tunnel connecting Misr Station to El-Mex, is due for completion in 2010. The final section, expected to be completed in 2015, will continue west from El-Mex for a further 15km.

Good roads connect Cairo with Alexandria, the canal towns and Upper Egypt. In 1997 international companies were invited to submit proposals for the design, construction and maintenance of six major new highways running from Alexandria to Aswan and serving oases in the Western Desert. The routes concerned were Alexandria to Fayoum (199 km), Fayoum to Dayrout (21) km), Dayrout to Aswan (433 km), Dayrout to Al-Farafra (263 km), Al-Khârga to East Oweinat (520 km) and As-Sallum to Wadi en-Nâtrun (508 km).

In 1998 construction work began on a 2.4-km suspension bridge over the Suez Canal, designed to relieve congestion and to improve infrastructure for repopulation and industrial purposes. The bridge is expected to be operational by 2002. The Government has also approved proposals to build two 2.6-km road tunnels beneath Old Cairo, again to facilitate the flow of traffic and to preserve the architecture in the city; the £E400m. project is expected to be completed in 2000.

EgyptAir, the state airline, operates a network of domestic and international routes. It made a profit of £E82.7m. in 1991/92, following a loss of £E257.3m. in 1990/91 because of severe problems caused by the regional security crisis. The company made a net loss of £E30.5m. in 1992/93 after experiencing a 50% fall in its Western tourist traffic which contributed to a decision in March 1993 to suspend its current five-year expansion plans. EgyptAir's existing debt in respect of past aircraft purchases amounted to US $545m. in early 1993. Following a loss of £E197m. in 1993/94, EgyptAir made profits of £E10.6m. in 1994/95, £E50.9m. in 1995/96 and £E253.6m. in 1996/97. In 1997 it announced plans to increase its capital from £E800m. to £E1,500m. by transferring funds from reserves. Cairo airport handled over 7m. of the 11m. passengers who travelled through Egyptian airports in 1995. Plans were announced in 1996 to build a third passenger terminal at Cairo to increase the airport's annual handling capacity from 9m. to 20m. passengers. In November 1997 the Government announced several measures to open up the aviation sector as part of an initiative to make the transport system more effective and improve services for exporters. The Government will abolish its 10% sales tax on imported aircraft and spare parts, no longer apply customs duties on imported aircraft, permit the private sector to utilize airports for ground services, and reduce its 45% customs duty on refrigerated airfreight to 5%. The number of tourists visiting Egypt reached 1.3m. in 1986 and rose to 2.5m. in 1990, slightly above the 1989 level, but below the original target of 2.9m. because of the impact of the Gulf crisis. Revenue from tourism was about $800m. in 1984/85, and rose to about $2,500m. by 1989/90, making tourism one of the most dynamic sectors of the Egyptian economy. The management of several public-sector hotels has been transferred to international groups, legislation to reduce land speculation enacted, and the aviation industry liberalized. However, the industry is one of the most immediately vulnerable to instability in the region. An increase in terrorist activity in the Middle East during the second half of 1985 and the anti-American reaction in the region, following the bombing of Libyan cities by US forces in April 1986, combined to deter tourists, particularly Americans, from visiting Egypt. The prospect of renewed and protracted instability in the region, following the Iraqi invasion of Kuwait in August 1990 and the subsequent international response, accordingly posed a serious threat to the sector's vital contribution to Egypt's limited supplies of foreign exchange. In February 1991 tourist arrivals slumped to 57,000, compared with 208,000 in February 1990. By April 1991, however, the resolution of the Gulf crisis had led to a recovery in the number of tourist arrivals, which increased to 276,000 in August 1991 and reached the record figure of some 3m. in the 12 months to June 1992, over which period tourism's total contribution to the economy (including the indirect benefits not quantified in simple balance-of-payments analyses) was officially estimated at US $3,500m.

Having planned for a 1m. rise in visitor numbers in 1992/93, the tourism industry instead experienced a sharp downturn when an Islamist terrorist campaign included foreign tourists as targets. The number of tourists visiting Egypt fell by about 22% in 1993, while revenue fell by 38% because the length of the average stay was shorter. Having failed to eliminate the problem of terrorism through its campaign against militant Islamists, the Government allocated US $25m. for a venture to promote tourism in 1994, with the aim of restoring revenue from this sector to its 1992 level. However, the number of visitors in the first three months of 1994 was 15% down on the 1993 level, while the average length of stay was rather shorter than in 1993. Upper Egypt (hardest hit by the terrorist campaign) reported little sign of a recovery, whereas Cairo hotels had a 60% occupancy rate and most Red Sea and Sinai resorts reported some upturn in tourist business. A similar pattern was evident in the first-half of 1995, when many Upper Egypt hotels were operating at one-third of capacity, as against a two-thirds occupancy rate in Cairo and virtually full utilization of the increasingly popular Sinai resorts. Total tourist arrivals in Egypt were around 2.5m. in both 1993 and 1994, compared with an estimated 3.3m. in the peak year of 1992. In 1995 there was a 24% increase in tourist arrivals to 3.205m. (with the sharpest upturn in the last quarter of the year), followed by further growth in the first quarter of 1996. The total number of nights visitors spent in the country rose by one-third, from 15.431m. in 1994 to 20.517m. in 1995. In 1996 Egypt's tourism industry recorded very strong growth, with some 3.9m. visitors spending a total of 23.8m. nights in the country and generating revenue of around $3,000m.

In January 1993 the World Bank approved a US $130m.-loan for the development of new tourism infrastructure within the framework of a $805m.-programme involving also $330m. of private-sector equity financing, $300m. of commercial bank lending, $40m. of Egyptian government funding and $5m. from the World Bank's global environment facility. The main focus of the programme was the development of new resorts on Egypt's Red Sea coast as part of a policy of diversification into the seaside holiday market. By mid-1995 work had begun on a major resort development in the Abu Soma area, while plans were well advanced for another development further up the Red Sea coast at Sahl Hashish. The Tourism Development Authority had meanwhile approved 27 new projects at locations on the south Sinai coast, where it was also inviting proposals for the development of a yacht harbour. A total of 89 tourism projects received government approval in January 1996.

Growth in the tourism industry suffered a dramatic reversal in late 1997. Fears for the safety of travellers after a terrorist attack on a German tour bus in Cairo in September, which resulted in the deaths of nine Germans and an Egyptian, were exacerbated the following month by the massacre of 58 tourists and four Egyptians in Luxor (see Recent History). Many travel companies cancelled operations to the region, while other travellers were advised to leave immediately. In response to the attacks, in December the Government inaugurated a '100-day plan' to encourage internal tourism in the region. EgyptAir, which lost 85,000 passengers owing to cancellations in the aftermath of the attack, reduced its domestic fares by 50%; the airline announced a loss of £E240m. in 1997/98. The Government also announced a three-month moratorium on debt-service repayments by tourist ventures. In January 1998 68,000 tourists visited Egypt, 55% fewer than in January 1997; however, the

number of visitors in October 1998 was 380,000, compared with 391,000 in October 1997. Tourism companies are presently offering discounted holidays in order to entice visitors back to the region. By 1999 the tourism sector was showing signs of recovery, with the construction of new hotels and resorts continuing. (In that year one of Egypt's leading attractions, the Great Pyramid of Cheops, was reopened after an expensive restoration.)

Finance

CURRENCY AND EXCHANGE RATES

Monetary Units

1,000 millièmes = 100 piastres = 5 tallaris = 1 Egyptian pound (£E).

Sterling, Dollar and Euro Equivalents (30 April 1999)

£1 sterling = £E5.476;
US $1 = £E3.396;
€1 = £E 3.599;
£E100 = £18.26 sterling = $29.45 = €27.79.

Note: From February 1991 foreign exchange transactions were conducted through only two markets, the primary market and the free market. With effect from 8 October 1991, the primary market was eliminated, and all foreign exchange transactions are effected through the free market. For external trade purposes, the average value of the Egyptian pound was 29.48 US cents in 1995, 29.49 US cents in 1996 and 29.51 US cents in 1997.

STATE PUBLIC BUDGET (£E million, year ending 30 June)

Revenue	1995/96	1996/97	1997/98

Directory

The Constitution

A new Constitution for the Arab Republic of Egypt was approved by referendum on 11 September 1971.

THE STATE

Egypt is an Arab Republic with a democratic, socialist system based on the alliance of the working people and derived from the country's historical heritage and the spirit of Islam.

The Egyptian people are part of the Arab nation, who work towards total Arab unity.

Islam is the religion of the State; Arabic is its official language and the Islamic code is a principal source of legislation. The State safeguards the freedom of worship and of performing rites for all religions.

Sovereignty is of the people alone which is the source of all powers.

The protection, consolidation and preservation of the socialist gains is a national duty: the sovereignty of law is the basis of the country's rule, and the independence of immunity of the judiciary are basic guarantees for the protection of rights and liberties.

THE FUNDAMENTAL ELEMENTS OF SOCIETY

Social solidarity is the basis of Egyptian society, and the family is its nucleus.

The State ensures the equality of men and women in both political and social rights in line with the provisions of Muslim legislation.

Work is a right, an honour and a duty which the State guarantees together with the services of social and health insurance, pensions for incapacity and unemployment.

The economic basis of the Republic is a socialist democratic system based on sufficiency and justice in a manner preventing exploitation.

Ownership is of three kinds: public, co-operative and private. The public sector assumes the main responsibility for the regulation and growth of the national economy under the development plan.

Property is subject to the people's control.

Private ownership is safeguarded and may not be sequestrated except in cases specified in law nor expropriated except for the general good against fair legal compensation. The right of inheritance is guaranteed in it.

Nationalization shall only be allowed for considerations of public interest in accordance with the law and against compensation.

Agricultural holding may be limited by law.

The State follows a comprehensive central planning and compulsory planning approach based on quinquennial socio-economic and cultural development plans whereby the society's resources are mobilized and put to the best use.

The public sector assumes the leading role in the development of the national economy. The State provides absolute protection of this sector as well as the property of co-operative societies and trade unions against all attempts to tamper with them.

PUBLIC LIBERTIES, RIGHTS AND DUTIES

All citizens are equal before the law. Personal liberty is a natural right and no one may be arrested, searched, imprisoned or restricted in any way without a court order.

Houses have sanctity, and shall not be placed under surveillance or searched without a court order with reasons given for such action.

The law safeguards the sanctities of the private lives of all citizens; so have all postal, telegraphic, telephonic and other means of communication which may not therefore be confiscated, or perused except by a court order giving the reasons, and only for a specified period.

Public rights and freedoms are also inviolate and all calls for atheism and anything that reflects adversely on divine religions are prohibited.

The freedom of opinion, the Press, printing and publications and all information media are safeguarded.

Press censorship is forbidden, so are warnings, suspensions or cancellations through administrative channels. Under exceptional circumstances, as in cases of emergency or in wartime, censorship may be imposed on information media for a definite period.

Egyptians have the right to permanent or provisional emigration and no Egyptian may be deported or prevented from returning to the country.

Citizens have the right to private meetings in peace provided they bear no arms. Egyptians also have the right to form societies which have no secret activities. Public meetings are also allowed within the limits of the law.

SOVEREIGNTY OF THE LAW

All acts of crime should be specified together with the penalties for the acts.

Recourse to justice is a right of all citizens. Those who are financially unable will be assured of means to defend their rights.

Except in cases of *flagrante delicto,* no person may be arrested or their freedom restricted unless an order authorizing arrest has been given by the competent judge or the public prosecution in accordance with the provisions of law.

SYSTEM OF GOVERNMENT

The President, who must be of Egyptian parentage and at least 40 years old, is nominated by at least one-third of the members of the People's Assembly, approved by at least two-thirds, and elected by popular referendum. His term is for six years and he 'may be re-elected for another subsequent term'. He may take emergency measures in the interests of the State but these measures must be approved by referendum within 60 days.

The People's Assembly, elected for five years, is the legislative body and approves general policy, the budget and the development plan. It shall have 'not less than 350' elected members, at least half of whom shall be workers or farmers, and the President may appoint up to 10 additional members. In exceptional circumstances the Assembly, by a two-thirds vote, may authorize the President to rule by decree for a specified period but these decrees must be approved by the Assembly at its next meeting. The law governing the composition of the People's Assembly was amended in May 1979 (see People's Assembly, below).

The Assembly may pass a vote of no confidence in a Deputy Prime Minister, a Minister or a Deputy Minister, provided three days' notice of the vote is given, and the Minister must then resign. In the case of the Prime Minister, the Assembly may 'prescribe' his responsibility and submit a report to the President: if the President disagrees with the report but the Assembly persists, then the matter is put to a referendum: if the people support the President the Assembly is dissolved; if they support the Assembly the President must accept the resignation of the Government. The President may dissolve the Assembly prematurely, but his action must be approved by a referendum and elections must be held within 60 days.

Executive Authority is vested in the President, who may appoint one or more Vice-Presidents and appoints all Ministers. He may also dismiss the Vice-Presidents and Ministers. The President has 'the right to refer to the people in connection with important matters related to the country's higher interests.' The Government is described as 'the supreme executive and administrative organ of the state'. Its members, whether full Ministers or Deputy Ministers, must be at least 35 years old. Further sections define the roles of Local Government, Specialized National Councils, the Judiciary, the Higher Constitutional Court, the Socialist Prosecutor-General, the Armed Forces and National Defence Council and the Police.

POLITICAL PARTIES

In June 1977 the People's Assembly adopted a new law on political parties, which, subject to certain conditions, permitted the formation of political parties for the first time since 1953. The law was passed in accordance with Article Five of the Constitution which describes the political system as 'a multi-party one' with four main parties: 'the ruling National Democratic Party, the Socialist Workers (the official opposition), the Liberal Socialists and the Unionist Progressive'. (The legality of the re-formed New Wafd Party was established by the courts in January 1984.)

1980 AMENDMENTS

On 30 April 1980 the People's Assembly passed a number of amendments, which were subsequently massively approved at a referendum the following month. A summary of the amendments follows:

(i) the regime in Egypt is socialist-democratic, based on the alliance of working people's forces.

(ii) the political system depends on multiple political parties; the Arab Socialist Union is therefore abolished.

(iii) the President is elected for a six-year term and can be elected for 'other terms'.

(iv) the President shall appoint a Consultative Council to preserve the principles of the revolutions of 23 July 1952 and 15 May 1971.

(v) a Supreme Press Council shall safeguard the freedom of the press, check government censorship and look after the interests of journalists.

(vi) Egypt's adherence to Islamic jurisprudence is affirmed. Christians and Jews are subject to their own jurisdiction in personal status affairs.

(vii) there will be no distinction of race or religion.

The Government

THE PRESIDENCY

President: MUHAMMAD HOSNI MUBARAK (confirmed as President by referendum, 13 October 1981, after assassination of President Sadat; re-elected and confirmed by referendum, 5 October 1987, 4 October 1993 and 26 September 1999).

COUNCIL OF MINISTERS

(September 1999)

Prime Minister and Minister for Planning and International Co-operation: Dr KAMAL AHMAD AL-GANZOURI.

Deputy Prime Minister and Minister of Agriculture and Land Reclamation: Dr YOUSUF AMIN WALI.

Minister of Transport and Communications: Eng. SULAYMAN MUTAWALLI SULAYMAN.

Minister of Defence: Field Marshal MUHAMMAD HUSSAIN TANTAWI.

Minister of Electricity and Energy: Eng. MUHAMMAD MAHER ABAZAH.

Minister of Information: MUHAMMAD SAFWAT MUHAMMAD YOUSUF ASH-SHARIF.

Minister of Foreign Affairs: AMR MUHAMMAD MOUSSA.

Minister of Supply and Trade: AHMAD AHMAD EL-GUEILY.

Minister of Finance: MOHI ED-DIN EL-GHARIB.

Minister of Awqaf (Islamic Endowments): MAHMOUD HAMDI ZAKZOUK.

Minister of Justice: FAROUK MAHMOUD SAYF AN-NASR.

Minister of Culture: FAROUK ABD AL-AZIZ HOSNI.

Minister of Cabinet Affairs and Monitoring: TALA'AT SAID AHMAD HAMMAD.

Minister of Rural Development: MAHMOUD SAYED AHMAD SHARIF.

Minister of Education: HUSSAIN KAMAL BAHA ED-DIN.

Minister of Petroleum: Dr Eng. HAMDY AL-BANBI.

Minister of the Interior: Gen. HABIB IBRAHIM EL-ADLI.

Minister of Housing, Utilities and New Communities: Dr Eng. MUHAMMAD IBRAHIM SULAYMAN.

Minister of Tourism: Dr MAMDOUH AHMAD EL-BELTAGI.

Minister of Economy: YOUSUF BOUTROS-GHALI.

Minister of Public Works and Water Resources: Dr MAHMOUD ABD AL-HALIM ABU ZEID.

Minister of Health and Population: ISMAIL AWADALLAH SALAM.

Minister of Higher Education and Minister of State for Scientific Research: Dr MUFID MAHMOUD SHEHAB.

Minister of Industry and Mineral Resources: Eng. SULAYMAN REDA ALI SULAYMAN.

Minister of Labour and Migration: AHMAD AHMAD EL-AMAWI.

Minister of Insurance and Social Affairs: MERVAT MIHANNA TALAWI.

Minister of the Public Enterprise Sector: Dr ATIF MUHAMMAD OBEID.

Minister of State for Parliamentary Affairs: KAMAL MUHAMMAD SHAZLI.

Minister of State for Administrative Development: MAHMOUD ZAKI ABU AMER.

Minister of State for Military Production: Dr Eng. MUHAMMAD EL-GHAMRAWI DAWOUD.

Minister of State for Environment: NADIA MAKRAM OBEID.

Minister of State for Planning and International Co-operation: ZAFER SALIM EL-BESHRY.

Legislature

MAJLIS ASH-SHA'AB

(People's Assembly)

There are 222 constituencies, which each elect two deputies to the Assembly. Ten deputies are appointed by the President, giving a total of 454 seats.

Speaker: Dr Ahmad Fathi Surur.

Deputy Speakers: Dr Abd al-Ahad Gamal ad-Din, Ahmad Abu Zeid, Dr Amal Uthman.

Elections, 29 November and 6 December 1995

	Seats
National Democratic Party*	316
New Wafd Party	6
National Progressive Unionist Party	5
Liberal Socialist Party	1
Nasserist Party	1
Independents	115
Total†	444

* Official candidates of the National Democratic Party (NDP) gained 316 seats in the two rounds of voting. However, after the elections it was reported that 99 of the 115 candidates who had successfully contested the elections as independents had either joined or rejoined the NDP.

† There are, in addition, 10 deputies appointed by the President.

MAJLIS ASH-SHURA

(Advisory Council)

In September 1980 elections were held for a 210-member **Shura (Advisory) Council**, which replaced the former Central Committee of the Arab Socialist Union. Of the total number of members, 140 are elected and the remaining 70 are appointed by the President. The opposition parties boycotted elections to the Council in October 1983, and again in October 1986, in protest against the 8% electoral threshold. In June 1989 elections to 153 of the Council's 210 seats were contested by opposition parties (the 'Islamic Alliance', consisting of the Muslim Brotherhood, the LSP and the SLP). However, all of the seats in which voting produced a result (143) were won by the NDP. NDP candidates won 88 of the 90 seats on the Council to which mid-term elections were held in June 1995. The remaining two elective seats were gained by independent candidates. On 21 June new appointments were made to 47 vacant, non-elective seats. Mid-term elections to the Council were held again in June 1998. The NDP won 85 of the 88 contested seats, while independent candidates won the remaining three seats. Most opposition parties chose not to contest the elections.

Speaker: Dr Mustafa Kamal Helmi.

Deputy Speakers: Tharwat Abazah, Ahmad al-Imadi.

Political Organizations

Democratic People's Party: f. 1992; Chair. Anwar Afifi.

Democratic Unionist Party: f. 1990; Pres. Muhammad Abd al-Moneim Turk.

Et-Takaful (Solidarity): f. 1995; advocates imposition of 'solidarity' tax on the rich in order to provide needs of the poor; Chair. Dr Usama Muhammad Shaltout.

Green Party: f. 1990; Chair. Abd al-Moneim el-Aasar.

Ikhwan (Brotherhood): f. 1928; officially illegal, the (Muslim) Brotherhood advocates the adoption of the *Shari'a*, or Islamic law, as the sole basis of the Egyptian legal system; Sec.-Gen. Maamoun al-Hodaiby.

Liberal Socialist Party (LSP): Cairo; f. 1976; advocates expansion of 'open door' economic policy and greater freedom for private enterprise and the press; Leader (vacant).

Misr el-Fatah (Young Egypt Party): f. 1990; Chair. Gamal Rabie.

Nasserist Party: Cairo; f. 1991; Chair. Diaa ed-Din Daoud.

National Democratic Party (NDP): Cairo; f. 1978; government party established by Anwar Sadat; has absorbed Arab Socialist Party; Leader Muhammad Hosni Mubarak; Sec.-Gen. Dr Yousuf Amin Wali; Political Bureau: Chair. Muhammad Hosni Mubarak; mems: Kamal Hassan Ali, Dr Mustafa Khalil, Dr Rifa'at el-Mahgoub, Dr Subhi Abd al-Hakim, Dr Mustafa Kamal Hilmi, Fikri Makram Obeid,

Dr Ismat Abd al-Meguid, Dr Amal Osman, Safwat ash-Sharif, Dr Yousuf Amin Wali, Hassan Abu Basha, Kamal Henry Badir, Dr Ahmad Heikal.

National Progressive Unionist Party (Tagammu): 1 Sharia Karim ed-Dawlah, Cairo; f. 1976; left-wing; Leader Khaled Mohi ed-Din; Sec. Dr Rifa'at es-Said; 160,000 mems.

New Wafd Party: Cairo; original Wafd Party f. 1919; banned 1952; re-formed as New Wafd Party Feb. 1978; disbanded June 1978; re-formed 1983; Leader Fouad Serag ed-Din; Sec.-Gen. Ibrahim Farag.

Social Justice Party: f. 1993; Chair. Muhammad Abd al-Aal.

Socialist Labour Party (SLP): 12 Sharia Awali el-Ahd, Cairo; f. 1978; official opposition party; Leader Ibrahim Shukri.

Judicial System

The Courts of Law in Egypt are principally divided into two juridical court systems: Courts of General Jurisdiction and Administrative Courts. Since 1969 the Supreme Constitutional Court has been at the top of the Egyptian judicial structure.

THE SUPREME CONSTITUTIONAL COURT

The Supreme Constitutional Court is the highest court in Egypt. It has specific jurisdiction over: (i) judicial review of the constitutionality of laws and regulations; (ii) resolution of positive and negative jurisdictional conflicts and determination of the competent court

between the different juridical court systems, e.g. Courts of General Jurisdiction and Administrative Courts, as well as other bodies exercising judicial competence; (iii) determination of disputes over the enforcement of two final but contradictory judgments rendered by two courts each belonging to a different juridical court system; (iv) rendering binding interpretation of laws or decree laws in the event of a dispute in the application of said laws or decree laws, always provided that such a dispute is of a gravity requiring conformity of interpretation under the Constitution.

COURTS OF GENERAL JURISDICTION

The Courts of General Jurisdiction in Egypt are basically divided into four categories, as follows: (i) The Court of Cassation; (ii) The Courts of Appeal; (iii) The Tribunals of First Instance; (iv) The District Tribunals; each of the above courts is divided into Civil and Criminal Chambers.

(i) Court of Cassation: Is the highest court of general jurisdiction in Egypt. Its sessions are held in Cairo. Final judgments rendered by Courts of Appeal in criminal and civil litigation may be petitioned to the Court of Cassation by the Defendant or the Public Prosecutor in criminal litigation and by any of the parties in interest in civil litigation on grounds of defective application or interpretation of the law as stated in the challenged judgment, on grounds of irregularity of form or procedure, or violation of due process, and on grounds of defective reasoning of judgment rendered. The Court of Cassation is composed of the President, 41 Vice-Presidents and 92 Justices.

President: Hon. ABD AL-BORHAN NOOR.

(ii) The Courts of Appeal: Each has geographical jurisdiction over one or more of the governorates of Egypt. Each Court of Appeal is divided into Criminal and Civil Chambers. The Criminal Chambers try felonies, and the Civil Chambers hear appeals filed against such judgment rendered by the Tribunals of First Instance where the law so stipulates. Each Chamber is composed of three Superior Judges. Each Court of Appeal is composed of President, and sufficient numbers of Vice-Presidents and Superior Judges.

(iii) The Tribunals of First Instance: In each governorate there are one or more Tribunals of First Instance, each of which is divided into several Chambers for criminal and civil litigations. Each Chamber is composed of: (a) a presiding judge, and (b) two sitting judges. A Tribunal of First Instance hears, as an Appellate Court, certain litigations as provided under the law.

(iv) District Tribunals: Each is a one-judge ancillary Chamber of a Tribunal of First Instance, having jurisdiction over minor civil and criminal litigations in smaller districts within the jurisdiction of such Tribunal of First Instance.

PUBLIC PROSECUTION

Public prosecution is headed by the Attorney-General, assisted by a number of Senior Deputy and Deputy Attorneys-General, and a sufficient number of chief prosecutors, prosecutors and assistant prosecutors. Public prosecution is represented at all levels of the Courts of General Jurisdiction in all criminal litigations and also in certain civil litigations as required by the law. Public prosecution controls and supervises enforcement of criminal law judgments.

Attorney-General: GAMAL SHOMAN.

Prosecutor-General: MUHAMMAD ABD AL-AZIZ EL-GINDI.

ADMINISTRATIVE COURTS SYSTEM (CONSEIL D'ETAT)

The Administrative Courts have jurisdiction over litigations involving the state or any of its governmental agencies. The Administrative Courts system is divided into two courts: the Administrative Courts and the Judicial Administrative Courts, at the top of which is the High Administrative Court. The Administrative Prosecutor investigates administrative crimes committed by government officials and civil servants.

President of Conseil d'Etat: Hon. MUHAMMAD HILAL QASIM.

Administrative Prosecutor: Hon. RIFA'AT KHAFAGI.

THE STATE COUNCIL

The State Council is an independent judicial body which has the authority to make decisions in administrative disputes and disciplinary cases within the judicial system.

THE SUPREME JUDICIAL COUNCIL

The Supreme Judicial Council was reinstituted in 1984, having been abolished in 1969. It exists to guarantee the independence of the judicial system from outside interference and is consulted with regard to draft laws organizing the affairs of the judicial bodies.

Religion

According to the 1986 census, some 94% of Egyptians are Muslims (and almost all of these follow Sunni tenets). According to government figures published in the same year, there are about 2m. Copts (a figure contested by Coptic sources, whose estimates range between 6m. and 7m.), forming the largest religious minority, and about 1m. members of other Christian groups. There is also a small Jewish minority.

ISLAM

There is a Higher Council for the Isamic Call, on which sit: the Grand Sheikh of al-Azhar (Chair); the Minister of Awqaf (Islamic Endowments); the President and Vice-President of Al-Azhar University; the Grand Mufti of Egypt; and the Secretary-General of the Higher Council for Islamic Affairs.

Grand Sheikh of al-Azhar: Sheikh MUHAMMAD SAYED ATTIYAH TANTAWI.

Grand Mufti of Egypt: NASR WASSEL.

CHRISTIANITY

Orthodox Churches

Coptic Orthodox Church: St Mark Cathedral, POB 9035, Anba Ruess, 222 Sharia Ramses, Abbassia, Cairo; telex 23281; fax (2) 2825983; f. AD 61; Leader Pope SHENOUDA III; c. 10m. followers in Egypt, Sudan, other African countries, the USA, Canada, Australia, Europe and the Middle East.

Bishop of Cairo: JOSEPH HANNOUCHE, Evêché Syrien Catholique, 46 Sharia Daher, 11271 Cairo; tel. (2) 5901234.

The Anglican Communion

The Anglican diocese of Egypt, suspended in 1958, was revived in 1974 and became part of the Episcopal Church in Jerusalem and the Middle East, formally inaugurated in January 1976. The Province has four dioceses: Jerusalem, Egypt, Cyprus and the Gulf, and Iran, and its President is the Bishop in Egypt. The Bishop in Egypt has jurisdiction also over the Anglican chaplaincies in Algeria, Djibouti, Eritrea, Ethiopia, Libya, Somalia and Tunisia.

Bishop in Egypt: Most Rev. GHAIS ABD AL-MALIK, Diocesan Office, POB 87, 5 Sharia Michel Lutfalla, Cairo (Zamalek); tel. (2) 3320313; fax (2) 3408941; e-mail diocese@intouch.com.

Other denominations active in Egypt include the Coptic Evangelical Church (Synod of the Nile) and the Union of the Armenian Evangelical Churches in the Near East.

JUDAISM

The 1986 census recorded 794 Jews in Egypt.

Jewish Community: Office of the Community, President ESTHER WEINSTEIN, 13 Sharia Sebil el-Khazindar, Abbassia, Cairo; tel. (2) 4824613; internet http://www.geocities.com/rain/forest/vines/5855.

The Press

Despite a fairly high illiteracy rate in Egypt, the country's press is well developed. Cairo is one of the region's largest publishing centres.

All newspapers and magazines are supervised, according to law, by the Supreme Press Council. The four major publishing houses of al-Ahram, Dar al-Hilal, Dar Akhbar al-Yawm and Dar at-Tahrir operate as separate entities and compete with each other commercially.

The most authoritative daily newspaper is the very long-established *Al-Ahram*.

Transport

RAILWAYS

The area of the Nile Delta is well served by railways. Lines also run from Cairo southward along the Nile to Aswan, and westward along the coast to Salloum.

Egyptian National Railways: Station Bldg, Midan Ramses, Cairo 11794; tel. (2) 5751000; telex 92616; fax (2) 5740000; f. 1852; length 8,600 km; 42 km electrified; a 346-km line to carry phosphate and iron ore from the Bahariya mines, in the Western Desert, to the Helwan iron and steel works in south Cairo, was opened in 1973, and the Qena–Safaga line (length 223 km) came into operation in 1989; Chair. M. M. MAREI.

Alexandria Passenger Transport Authority: POB 466, 3 Sharia Aflatone, esh-Shatby, Alexandria 21111; tel. (3) 5975223; fax (3) 5971187; e-mail chrmapta@ns-egypt.com; f. 1860; controls City Tramways (28 km), Ramleh Electric Railway (16 km), suburban buses and minibuses (1,688 km); 121 tram cars, 42 light railway three-car sets; construction of the Alexandria Metro (55 km) began in 1999; Chair. Eng. ESSAM HASBY; Tech. Dir Eng. MEDHAT HAFEZ.

Cairo Metro: National Authority for Tunnels, POB 466, Ramses Bldg, Midan Ramses, Cairo 11794; tel. (2) 5742968; telex 93547; fax (2) 5742950; construction of the first underground transport system in Africa and the Middle East began in Cairo in 1982; connects electrified Helwan line of Egyptian railways with the diesel el-Marg line, via a 4.2-km tunnel with five stations beneath central Cairo, making a 44-km regional line with a total of 34 stations; gauge 1,435 mm, electrified; work on the first stage of the system was completed in July 1987, and it was opened in September; the second stage was completed in 1989; work on a second line linking Shoubra el-Kheima with central Cairo and Giza commenced in 1992. This new line will have a total length of 18.3 km. (13 km in tunnel) and 18 stations, two of which will interconnect with the first line. The first stage started operating between Shoubra el-Kheima and Ramses Square in 1996, the service extending to Tahrir Square in 1997. By mid-1999 15.8 km of the line was operational; the rest of the line, extending to Cairo University, is under construction and is due to be completed at the end of 2000; work on a third line connecting Imbaba with Cairo International Airport was due to commence in 2001; Chair. Dr Eng. MOKBEL M. ESH-SHAFIE.

Cairo Transport Authority: POB 254, Madinet Nasr, Cairo; tel. (2) 830533; length 78 km (electrified); gauge 1,000 mm; operates 16 tram routes and 24 km of light railway; 720 cars; Chair. M. E. ABD ES-SALAM.

Lower Egypt Railway: El-Mansoura; f. 1898; length 160 km; gauge 1,000 mm; 20 diesel railcars.

ROADS

There are good metalled main roads as follows: Cairo–Alexandria (desert road); Cairo–Banha–Tanta–Damanhour–Alexandria; Cairo–Suez (desert road); Cairo–Ismailia–Port Said or Suez; Cairo–Fayoum (desert road); in 1997 there were some 41,300 km of roads, including 22,000 km of highways. The Ahmad Hamdi road tunnel (1.64 km) beneath the Suez Canal was opened in 1980. A 320-km macadamized road linking Mersa Matruh, on the Mediterranean coast, with the oasis town of Siwa was completed in 1986.

General Authority for Roads, Bridges and Land Transport—Ministry of Transport: 105 Sharia Qasr el-Eini, Cairo; tel. (2) 3557429; fax (2) 3550591; e-mail garb@idsc.gov.eg; Chair. MUHAMMAD NABIL ELKOUSSY.

SHIPPING

Egypt's principal ports are Alexandria, Port Said and Suez. A port constructed at a cost of £E315m. and designed to handle up to 16m. tons of grain, fruit and other merchandise per year (22% of the country's projected imports by 2000) in its first stage of development, was opened at Damietta in 1986. The second stage will increase handling capacity to 25m. tons per year. A ferry link between Nuweibeh and the Jordanian port of Aqaba was opened in 1985.

Alexandria Port Authority: 66 ave Gamal Abd an-Nasser, Alexandria; Head Office: 106 Sharia el-Hourriya, Alexandria; tel. (3) 4831640; fax (3) 4829714; f. 1966; Chair. Adm. HASSAN HOSNI AMIN; Vice-Chair. Adm. KAMAL A. EN-NAHTA.

Major Shipping Companies

Alexandria Shipping and Navigation Co: POB 812, 557 ave el-Hourriya, Alexandria; tel. (3) 62923; telex 54029; services between Egypt, N. and W. Europe, USA, Red Sea and Mediterranean; 5 vessels; Chair. Eng. MAHMOUD ISMAIL; Man. Dir ABD AL-AZIZ QADRI.

Arab Maritime Petroleum Co (AMPTC): POB 143, 9th Floor, Nile Tower Bldg, Sharia Giza, Cairo 12211 (Giza); tel. (2) 5701311; telex 92533; fax (2) 3496452; e-mail amptc09@rite.com; 9 vessels; Chair. Dr FAROUK KENAWI; Gen. Man. SULAYMAN AL-BASSAM.

Egyptian Navigation Co: POB 82, 2 Sharia en-Nasr, Alexandria; tel. (3) 4800050; telex 54131; fax (3) 4831345; f. 1930; owners and operators of Egypt's mercantile marine; services Alexandria/Europe, USA, Black Sea, Adriatic Sea, Mediterranean Sea, Indian Ocean and Red Sea; 24 vessels; Chair. ABDULLAH FAHIM; Man. Dir ABD AL-WAHAB YACOUT.

Memnon Tours Co: POB 2533, 18 Sharia Hoda Sharawi, Cairo; tel. (2) 3930195; telex 92489; fax (2) 3917410; 7 vessels.

Misr Petroleum Co: POB 228, Misr Petroleum House, 6 Sharia Orabi, Cairo; tel. (2) 5755000; telex 92005; fax (2) 5745436; 8 vessels; Chair. Eng. SALAH ED-DIN HASSAN.

Misr Shipping Co: POB 157, 29 Sharia Masgid en-Nasr, Soumoha, Sidi Gaber, Alexandria; tel. (3) 4206769; telex 54193; fax (3) 4218425; 8 vessels; Chair. Adm. REDDA RASHED; Man. Dir Adm. YOUSRI HANAFY.

National Navigation Co: 4 Sharia Ehegaz, Cairo (Heliopolis); tel. (2) 4525575; telex 21833; fax (2) 4526171; 11 vessels; Chair. and Man. Dir MUHAMMAD SHAWKI YOUNIS.

Pan-Arab Shipping Co: POB 39, 404 ave el-Hourriya, Rushdi, Alexandria; tel. (3) 5468835; telex 54123; fax (3) 5469533; f. 1974; Arab League Co; 5 vessels; Chair. Adm. MUHAMMAD SHERIF ES-SADEK; Gen. Man. Capt. MAMDOUH EL-GUINDY.

As-Salam Shipping & Trading Establishment: Apartment 203, 24 Sharia Ahmad Talceer, Cairo (Heliopolis): tel. (2) 908535; telex 94108; fax (2) 4175390; 6 vessels.

Samatour Shipping Co: As-Salam Bldg, 4 Sharia Naguib er-Rihani, Rami Station, Alexandria; tel. (3) 4822028; telex 55664; fax (3) 4832003; 5 vessels; Chair. SALEM A. SALEM.

Sayed Nasr Navigation Lines: 5 Sharia Dr Ahmad Amin, Cairo (Heliopolis); tel. (2) 2457643; telex 22022; fax (2) 2457736; 6 vessels.

Société Cooperative des Pétroles: Cooperative Bldg, 94 Sharia Qasr el-Eini, Cairo; tel. (2) 3560623; telex 92230; fax (2) 3557536; Chair. MAHMOUD M. RIZK; Gen. Dir OSAMA IBRAHIM.

THE SUEZ CANAL

In 1998 a total of 13,472 vessels, with a net displacement of 386m. tons, used the Suez Canal, linking the Mediterranean and Red Seas.

Length of Canal 190 km; maximum permissible draught: 17.68 m (58 ft); breadth of canal at water level and breadth between buoys defining the navigable channel 365 m and 225 m respectively in the northern section and 365 m and 205 m in the southern section.

Suez Canal Authority (Hay'at Canal as-Suways): Irshad Bldg, Ismailia; tel. (64) 330000; telex 63238; fax (64) 320784; Cairo Office: 6 Sharia Lazoughli, Cairo (Garden City); f. 1956; Chair. Adm. AHMAD ALI FADEL.

CIVIL AVIATION

The main international airports are at Heliopolis (23 km from the centre of Cairo) and Alexandria (7 km from the city centre). An international airport was opened at Nuzhah in 1983.

In the 12-month period ending 30 June 1997 an estimated 14m. passengers and 109,000 metric tons of cargo passed through Egypt's airports.

EgyptAir: Cairo International Airport, Cairo (Heliopolis); tel. (2) 2454400; fax (2) 2449727; f. 1932 as Misr Airwork; known as United Arab Airlines 1960–1971; operates internal services in Egypt and external services throughout the Middle East, Far East, Africa, Europe and the USA; Chair. Eng. MUHAMMAD FAHIM RAYAN.

Egyptian Civil Aviation Authority: Sharia Airport, Cairo; tel. (2) 2678544; fax (2) 2678542; Chair. ALI OSMAN ZIKO.

Tourism

Tourism is currently Egypt's second-largest source of revenue, generating around US $3,800m. in 1997. Traditionally the industry has attracted tourists to its pyramids and monuments. Recently the industry has diversified; the Red Sea coastline boasts 1,000 km of beaches along which developments, including two international airports at Taba and Suba Bay, are under construction.

Ministry of Tourism: Misr Travel Tower, Abbassia Sq., Cairo; tel. (2) 2828430; telex 94040; fax (2) 2829771; f. 1965; brs at Alexandria, Port Said, Suez, Luxor and Aswan; Minister of Tourism Dr MAMDOUH EL-BELTAGI.

Egyptian General Authority for the Promotion of Tourism: Misr Travel Tower, Abbassia Sq., Cairo; tel. (2) 2853576; fax (2) 2854363; Chair. ADEL ABD AL-AZIZ.

Egyptian General Co for Tourism and Hotels: 4 Sharia Latin America, Cairo (Garden City); tel. (2) 3026470; telex 92363; fax (2) 3024456; f. 1961; affiliated to the holding co for Housing, Tourism and Cinema.

Defence

Supreme Commander of the Armed Forces: President MUHAMMAD HOSNI MUBARAK.

Commander-in-Chief of the Armed Forces: Field Marshal MUHAMMAD ABD AL-HALIM ABU GHAZALAH.

Chief of Staff of the Armed Forces: Lt-Gen. SAFIY AD-DIN ABU SHINAF.

Commander of the Air Force: Air Marshal MUHAMMAD ABD AL-HAMID HELMI.

Commander of Air Defence: Maj.-Gen. MUSTAFA AHMAD ASH-SHADHILI.

Commander of the Navy: Admiral MUHAMMAD SHARIF AS-SADIQ.

Budgeted Defence Expenditure (1998): £E9,500m. (US $2,800m.).

Military service: Three years, selective.

Total armed forces (August 1998): 450,000; army 320,000; air defence command 80,000; navy (estimated) 20,000; air force 30,000. Reserves 254,000. Paramilitary forces: 230,000 (Central Security Forces 150,000, National Guard 60,000, etc.).

Education

Education is compulsory for eight years between six and 14 years of age. Primary education, beginning at six years of age, lasts for five years. Secondary education, beginning at 11 years of age, lasts for a further six years, comprising two cycles (the first being preparatory) of three years each. Enrolment at primary and secondary schools in 1996 was equivalent to 88% of children in the relevant age-groups (boys 94%; girls 82%). In that year primary enrolment included 80% of children in the relevant age-group (males 86%; females 74%), while the comparable ratio for secondary enrolment was 68% (males 71%; females 64%). More than 13.8m. people were receiving state education in 1993. There are 14 universities. The Al-Azhar University and its various preparatory and associated institutes provide instruction and training in several disciplines, with emphasis on adherence to Islamic principles and teachings. In 1996/97 some 166,000 students were enrolled at the University. Education is free at all levels. In 1998 the Government allocated an estimated £E13,700m. (19% of total spending) for education. The 1999/2000 budget forecast spending on education of £E16,100m. (some 16% of total expenditure). The 1996 census recorded the rate of adult illiteracy as 38.6%, compared with 49.6% in the 1986 census. By 1998 the rate of adult illiteracy was believed to have decreased to 37.8%, as a direct result of a government initiative to expand education. During 1986–96 the number of university graduates increased by 3%, to 7.3% of the population.

IRAN

Physical and Social Geography

W. B. FISHER

SITUATION

The Islamic Republic of Iran is bounded on the north by the Caspian Sea, Azerbaijan and Turkmenistan, on the east by Afghanistan and Pakistan, on the south by the Persian Gulf and Gulf of Oman, and on the west by Iraq and Turkey.

PHYSICAL FEATURES

Structurally, Iran is an extremely complex area and, owing partly to political difficulties and partly to the difficult nature of the country itself, complete exploration and investigation have not so far been achieved. In general, Iran consists of an interior plateau, 1,000 m to 1,500 m (3,000 ft to 5,000 ft) above sea-level, ringed on almost all sides by mountain zones of varying height and extent. The largest mountain massif is that of the Zagros, which runs from the north-west, where the frontiers of Iran, Azerbaijan, Turkmenistan, Turkey and Iraq meet, first south-westwards to the eastern shores of the Persian Gulf, and then eastwards, fronting the Arabian Sea, and continuing into Baluchistan (Pakistan). Joining the Zagros in the north-west, and running along the southern edge of the Caspian Sea, is the narrower but equally high Elburz range; whilst along the eastern frontier of Iran are several scattered mountain chains, less continuous and imposing than either the Zagros or the Elburz, but sufficiently high to act as a barrier.

The Zagros range begins in north-west Iran as an alternation of high tablelands and lowland basins, the latter containing lakes, the largest of which is Lake Urmia. This lake, having no outlet, is saline. Further to the south-east the Zagros becomes much more imposing, consisting of a series of parallel hog's-back ridges, some of which reach over 4,000 m in height. In its southern and eastern portions the Zagros becomes distinctly narrower, and its peaks much lower, though a few exceed 3,000 m. The Elburz range is very much narrower than the Zagros, but equally, if not more, abrupt, and one of its peaks, the volcanic cone of Mt Damavand, at 5,604 m (18,386 ft), is the highest in the country. There is a sudden drop on the northern side to the flat plain occupied by the Caspian Sea, which lies about 27 m below sea-level, and is shrinking rapidly in size. The eastern highlands of Iran consist of isolated massifs separated by lowland zones, some of which contain lakes from which there is no outlet, the largest being the Hirmand Basin, on the borders of Iran and Afghanistan.

The interior plateau of Iran is partly covered by a remarkable salt swamp (termed *kavir*) and partly by loose sand or stones (*dasht*), with stretches of better land mostly round the perimeter, near the foothills of the surrounding mountains. In these latter areas much of the cultivation of the country is practised, but the lower-lying desert and swamp areas, towards the centre of the plateau, are largely uninhabited. The Kavir is an extremely forbidding region, consisting of a surface formed by thick plates of crystallized salt, which have sharp, upstanding edges. Below the salt lie patches of mud, with, here and there, deep drainage channels—all of which are very dangerous to travellers, and are hence unexplored. Because of the presence of an unusually intractable 'dead heart', it has proved difficult to find a good central site for the capital of Iran—many towns, all peripheral to a greater or lesser degree, have in turn fulfilled this function, but none has proved completely satisfactory. The choice of the present capital, Teheran, dates only from the end of the 18th century.

Iran suffers from occasional earthquakes, which can cause severe loss of life, damage to property and disruption of communications. A particularly bad example occurred around Tabas in the north-eastern Khurasan province in September 1978, when an estimated 20,000 lives were lost; severe damage was inflicted, extending over 2,000 sq km. Even more devastating was the major earthquake which struck north-western Iran (principally the provinces of Gilan and Zanjan) in June 1990. Estimates put the number of those killed during the first quake and a series of severe tremors and aftershocks at some 40,000, while more than 60,000 were reported to have been injured in the disaster.

The climate of Iran is one of great extremes. Owing to its southerly position, adjacent to Arabia and near the Thar Desert, the summer is extremely hot, with temperatures in the interior rising possibly higher than anywhere else in the world—certainly a temperature exceeding 55°C has been recorded. In winter, however, the great altitude of much of the country and its continental situation result in far lower temperatures than one would expect to find for a country in such low latitudes. Temperatures of −30°C have been recorded in the north-west Zagros, and −20°C is common in many places.

Another unfortunate feature is the prevalence of strong winds, which intensify the temperature contrasts. Eastern Iran is subject to the so-called 'Wind of 120 Days', which blows regularly throughout summer, occasionally reaching a velocity of more than 160 km per hour and raising sand to such an extent that the stone walls of buildings are sometimes scoured away and turn to ruins.

Most of Iran is arid; but in contrast, parts of the north-west and north receive considerable rainfall—up to 2,000 mm along parts of the Caspian coast, producing very special climatic conditions in this small region, recalling conditions in the lower Himalayas. The Caspian coast has a hot, humid climate and this region is by far the most densely populated of the whole country. Next in order of population density comes the north-west Zagros area—the province of Azerbaijan, with its capital, Tabriz, the fourth city of Iran. Then, reflecting the diminished rainfall, next in order come the central Zagros area, and adjacent parts of the interior plateau, around Isfahan, Hamadan, Shiraz and Kermanshah, with an extension as far as Teheran. The extreme east and south, where rainfall is very scarce, were historically extremely lightly populated, except in the few parts where water is available, by nomadic groups. Over the past few years, however, a development programme has been initiated, and the effects are seen in the expansion of the towns, some of which have grown by 30%–40% since 1972.

ECONOMIC LIFE

Owing to the difficulties of climate and topography, there are few districts, apart from the Caspian plain, that are continuously cultivated over a wide area. Settlement tends to occur in small clusters, close to water supplies, or where there are especially favourable conditions—a good soil, shelter from winds, or easy communications. Away from these cultivated areas, which stand out like oases among the barren expanses of desert or mountain, most of the population live as nomads, by the herding of animals. The nomadic tribesmen have had great influence on the life of Iran. Their principal territory is the central Zagros, where the tribal system is strongly developed; but nomads are found in all the mountain zones, though their numbers are very few in the south and east. Reza Shah (see History) made considerable efforts to break the power of the nomadic tribes and to force them to settle as agriculturalists. Now, with the development of the economy, many nomads have moved into towns (though some still remain).

Economic activity has suffered from the handicaps of topography and climate, prolonged political and social insecurity (with constant pressure by foreign powers), and widespread devastation in the later Middle Ages by Mongol invaders. Agricultural methods in particular are primitive, so that yields are low; but the drawbacks to efficient production—archaic systems of land tenure, absentee landlords, lack of education, and

shortage of capital—are gradually being overcome. In the north and west, which are by far the most productive regions, a wide variety of cereals (including wheat, barley and rice) and much fruit are grown, but in the south and east dates are the principal source of food.

Iran has a number of mineral resources, some of which are exploited on a commercial scale. Copper deposits at Sar Cheshmeh are among the largest in the world. Iran also has very significant oil and natural gas resources; and there are large deposits of good-quality coal and iron ore near Kerman. Iranians have always had a good reputation as craftsmen—particularly in metalwork and in carpet making. Although Reza Shah attempted to develop modern mechanized industry by siting state-owned factories in most large towns—some of which proved successful, others not—bazaar manufactures have retained their importance. Teheran is now a major manufacturing centre, with a considerable spread of activities from the processing of foodstuffs to the manufacture of consumer and construction goods and an increasing range of more complex items: electronics, motor manufacturing and high-grade chemicals.

The adverse nature of geographical conditions has greatly restricted the growth of communications in Iran. The country is very large in relation to its size of population—it is 2,250 km from north-west to south-west—and, because of the interior deserts, many routes must follow a circuitous path instead of attempting a direct crossing. Then, too, the interior is isolated by ranges that are in parts as high as the Alps of Europe, but far less broken up by river valleys. Road construction is generally difficult, but since the mid-1960s increasing effort has been devoted to providing all-weather trunk routes between major cities for which special allocations have been made in the five-year plans. An important link is the railway constructed with great effort before the Second World War between the Caspian coast, Teheran and the Persian Gulf. Other rail links with bordering countries already exist or are under construction. Although there are mountain streams, many flowing in deep, inaccessible gorges, only one, the Karun river, is at all navigable. The Caspian ports are subject to silting, while most of the harbours in the south are either poorly sheltered or difficult of access from the interior. However, there has been a deliberate focusing of development on the Gulf, in response to the enhanced economic and political status of the region, now one of the wealthiest parts of the world. Development was undertaken in the region of the Shatt al-Arab in the last years of the Shah's regime. However, the war between Iran and Iraq, beginning in September 1980, greatly impeded economic prospects, both there and in the Persian Gulf. Overall, the effect of the Revolution of 1979 was to reduce, though not entirely to terminate, the sophisticated industrial developments that were initiated under the Shah, and to shift external trading more towards imports of basic raw materials and food, balanced (often by direct exchange approaching barter) by exports of petroleum which, though reduced (in part because of war in the Gulf), are still considerable.

RACE AND LANGUAGE

Iran has numerous ethnic groups of widely differing origin. In the central plateau there occurs a distinctive sub-race, termed by some anthropologists Iranian or Irano-Afghan. In the mountain districts there are many other smaller groups of separate racial composition. A number of nomads, including the Bakhtiari tribes, would seem to be of Kurdish stock; whilst Turki (Mongoloid) strains are apparent in others, such as the Qashqai tribes. Smaller groups from the Caucasus (Georgians and Circassians) are represented in Azerbaijan and the Caspian provinces, while Turki influence is again apparent in the racial composition of the eastern districts of Iran, especially round Meshed. The southern Zagros near the Arabian Sea has a small population that tends to be of mixed Iranian, Afghan and Hindu stock. Some observers have suggested that in this region there may also be representatives of a primitive negrito race, related to the hill-tribes of India and of south-east Asia.

Several languages are current in Iran. Persian (Farsi), an Indo-Aryan language related to the languages of western Europe, is spoken in the north and centre of the country, and is the one official language of the state. As the north is by far the most densely peopled region of Iran, the Persian language has an importance somewhat greater than its territorial extent would suggest. Various dialects of Kurdish are current in the north and central Zagros mountains, and alongside these are found several Turki-speaking tribes. Baluchi is spoken in the extreme south-east. English and French are spoken by most of the educated classes.

History

Updated for this edition by STEPHANIE CRONIN

EARLY HISTORY

The Achaemenid empire, the first Persian empire, was founded by Cyrus, who revolted against the Median empire in 533 BC. After the defeat of the Median empire, Babylon was taken in 529 BC, and in 525 BC under Cambyses, the successor of Cyrus, Egypt was conquered. The period of conquest was rounded off by Darius, who reduced the tribes of the Pontic and Armenian mountains and extended Persian dominion to the Caucasus. The main work of Darius, however, lay not in the conquest but in the organization that he gave to the empire. During his reign wars with Greece broke out and in 490 BC the Persian army suffered a major defeat at Marathon; an expedition under Xerxes, the successor of Darius, which set out to avenge this defeat was, after initial successes, defeated at Salamis in 480 BC. The empire was finally overthrown by Alexander, who defeated the Persian army at Arbela in 331 BC and then burnt Persepolis, the Achaemenid capital; the last Darius fled and was killed in 330 BC. Alexander thereafter regarded himself as the head of the Persian empire. The death of Alexander was followed by a struggle between his generals, one of whom, Seleucus, took the whole of Persia, apart from northern Media and founded the Seleucid empire. About 250 BC a reaction against Hellenism began with the rise of the Parthian empire of the Arsacids. Although by origin nomads from the Turanian steppe, the Arsacids became the wardens of the north-east marches and were largely preoccupied in defending themselves in the east against the Scythians who, with the Tocharians and Sacae, repeatedly attacked the Parthian empire, while in the west they were engaged in fending off attacks by the Romans.

The Arsacids were succeeded by the Sasanians, who, like the Achaemenids, came from Fars and, like them, were Zoroastrians. Ardashir b. Babak, after subduing the neighbouring states (*c.* AD 212), made war on the Arsacid, Artabanus V, whom he eventually defeated. The empire which he founded largely continued the traditions of the Achaemenids, although it never equalled the Achaemenid empire in extent. The monarchy of the Sasanian period was a religious and civil institution. The monarch, who ruled by divine right, was absolute but his autocracy was limited by the powers of the Zoroastrian hierarchy and the feudal aristocracy. In the reign of Qubad (AD 488–531) a movement of revolt, partly social and partly religious, led by Mazdak, gained ground. Under Qubad's successor Anushiravan (531–79) orthodoxy was restored, but at the cost of the imposition of a military despotism. Like the Arsacids before them, the Sasanians were occupied in the west with wars with Rome and in the east with repelling the advances of nomads from Central Asia.

MUSLIM PERSIA

By the beginning of the seventh century AD Persia had been greatly weakened by these wars, and when the Muslim Arabs attacked, little effective resistance was offered. The decisive battles were fought at Qadisiyya (AD 637) and Nihavand (*c.* AD 641). Persia did not re-emerge as a political entity until the

16th century AD, although with the decline of the Abbasid empire semi-independent and independent dynasties arose in different parts of Persia and at times even incorporated under their rule an area extending beyond the confines of present-day Iran. As a result of the Arab conquest Persia became part of the Muslim world. Local administration remained largely in the hands of the indigenous population and many local customs continued to be observed. In due course a new civilization developed in Persia, the unifying force of which was Islam.

With the transfer of the capital of the Islamic empire from Damascus to Baghdad (*c.* AD 750), Persian influence began to be strongly felt in the life of the empire. Islam had already replaced Zoroastrianism and by the 10th century modern Persian, written in the Arabic script and including a large number of Arabic words in its vocabulary, had established itself. Its emergence was of immense importance; the literary tradition for which it became the vehicle has perhaps more than any other factor kept alive a national consciousness among the Iranians and preserved the memory of the great Persian empires of the past.

By the eighth century AD the Abbasid caliphate had begun to disintegrate and when in the 11th century control of the north-eastern frontiers broke down, the Ghuzz Turks invaded Persia. This movement, of which the Seljuqs became the leaders, was ethnologically important since it altered the balance of population, the Turkish element from then on being second only to the Persian in numbers and influence. Secondly, it was in the Seljuq empire that the main lines of the politico-economic structure, which was to last in Persia in a modified form down to the 20th century AD, were developed. The basis of this structure was the land assignment, the holder of which was often virtually a petty territorial ruler, who was required, when called upon to do so, to provide the ruler with a military contingent.

The Seljuq empire itself broke up in the 12th century into a number of succession states; the 13th century saw the Mongol invasion and in 1258 Hulagu, the grandson of Chinghiz (Jenghiz) Khan, sacked Baghdad and destroyed the caliphate. For some years the Ilkhan dynasty, founded by Hulagu, ruled Persia as vassals of the Great Khan in Qaraqorum, but from the reign of Abaqa (1265–81) onwards they became virtually a Persian dynasty. Their empire, like that of the Seljuqs before them—and for very much the same reason—broke up at the beginning of the 14th century into a number of succession states. Towards the end of the century Persia again fell under the dominion of a military conqueror, when Timur, who had started his career as the warden of the marches in the Oxus-Jaxartes basin against the nomads of Central Asia, undertook a series of military campaigns against Persia between 1381 and 1387. The kingdom founded by him was short lived and rapidly disintegrated on the death of his son Shahrukh, the western part falling first to the Turkomans of the Black Sheep and then to the Turkomans of the White Sheep, while Transoxania passed into the hands of the Uzbegs.

THE PERSIAN MONARCHY

The 16th century saw the foundation of the Safavid empire, which was accompanied by an eastward movement of the Turkomans from Asia Minor back into Persia. For the first time since the Muslim conquest Persia re-emerged as a political unit. The foundations of the Safavid empire were laid by Isma'il Safavi (1502–24). He deliberately fostered a sense of separateness and of national unity *vis-à-vis* the Ottoman Turks with whom the Safavids were engaged in a struggle for supremacy in the west, and the main weapon he used to accomplish his purpose was Shi'ism. Not only the Turks but the majority of his own subjects were at the time Sunni Muslims—nevertheless he imposed Shi'ism upon them by force and created among the population of his dominions, many of whom, especially among his immediate followers, were Turks, a sense of national unity as Persians. Apart from a brief interlude under Nadir Shah, Shi'ism has since then remained the majority rite in Persia and is the official rite of the country at the present day. Under Shah Abbas (1587–1629) the Safavid empire reached its zenith, and Persia enjoyed a power and prosperity which it has not achieved since.

GREAT POWER RIVALRY

During the Safavid period, contact with Europe increased. Various foreign embassies interested mainly in the silk trade reached the Safavid court via Russia and via the Persian Gulf. In the latter area in the early years of the 16th century a struggle for supremacy developed between the British and the Dutch. 'Factories' were established by the East India Company in the Gulf from the early 16th century.

Under the later Safavids internal decline set in and from 1722–30 Persia was subject to Afghan invasion and occupation while in the west and north it was threatened by Turkey and Russia. After the death of Peter the Great there was a temporary slackening of Russian pressure, but the Turks continued to advance and took Tabriz in 1725, peace being eventually made at Hamadan in 1727. The Afghans were finally evicted by Nadir Shah Afshar, whose reign (1736–47) was remarkable chiefly for his military exploits. The Afsharids were succeeded by Karim Khan Zand (1750–79) whose relatively peaceful reign was followed by the rise of the Qajars who continued to reign until 1925. Under them the capital was transferred from Isfahan to Teheran. During the Qajar period events in Persia became increasingly affected by Great Power rivalry until not only Persia's foreign policy was dominated by this question, but its internal politics also.

With the growth of British influence in India in the late 18th and early 19th centuries the main emphasis in Anglo-Persian relations, which during the 16th and 17th centuries had been on commerce, began to shift to strategy. The region of Persia and the Persian Gulf came to be regarded as one of the main bastions protecting British India, and the existence of an independent Persia as a major British interest. In the early 19th century fear of a French invasion of India through Persia exercised the minds of the British in India and Whitehall. French envoys were active in Persia and Mesopotamia from 1796 to 1809, and to counter possible French activities Captain (later Sir) John Malcolm was sent to Persia in 1800 by the Governor-General of India. He concluded a political and commercial treaty with Fath Ali Shah, the main purpose of which was to ensure that the Shah should not receive French agents and would do his utmost to prevent French forces entering Persia. With the defeat of Napoleon in Egypt the matter was no longer regarded as urgent and the agreement was not ratified. Subsequently the French made proposals to Persia for an alliance against Russia, and in 1807 Persia concluded the Treaty of Finkenstein with France, after which a military mission under General Gardanne came to Persia. In 1808 another British mission was sent under Malcolm. Its object was 'first, to detach the Court of Persia from the French alliance and to prevail on that Court to refuse the passage of French troops through the territories subject to Persia, or the admission of French troops into the country. If that cannot be obtained, to admit English troops with a view of opposing the French army in its progress to India, to prevent the creation of any maritime post, and the establishment of French factories on the coast of Persia'. Malcolm's task was complicated by the almost simultaneous arrival of a similar mission from Whitehall. In 1809 after the Treaty of Tilsit, which debarred the French from aiding the Shah against Russia, Gardanne was dismissed.

WARS WITH RUSSIA AND TURKEY

Meanwhile the formal annexation of Georgia by Russia in 1801 had been followed by a campaign against Russia. This proved disastrous to Persia and was temporarily brought to an end by the Treaty of Gulistan (1813), by which Persia ceded Georgia, Qara Bagh and seven other provinces. British policy continued to be concerned with the possibility of an invasion of India via Persia and in 1814 the Treaty of Teheran was concluded with Persia, by which Great Britain undertook to provide troops or a subsidy in the event of unprovoked aggression against Persia. Although the treaty provided for defence against any European power, it was primarily intended to counteract the designs of Russia. In fact it proved ineffective; when the Perso-Russian war recommenced in 1825 Great Britain did not interfere except as a peacemaker and discontinued the subsidy to Persia, which was technically the aggressor. The war was concluded in 1828 by the Treaty of Turkomanchai, under the terms of which Persia ceded Erivan and Nakhjivan and agreed to pay an indemnity;

in addition, it was prohibited from having armed vessels on the Caspian.

During this period Persia was also engaged in hostilities with Turkey. Frontier disputes in 1821 culminated in the outbreak of war, which was concluded by the Treaty of Erzerum (1823).

By the 19th century the Persian Government had ceased to exercise effective control over the greater part of Khurasan. Russian policy, which became conciliatory towards Persia during the 25 years or so after the Treaty of Turkomanchai, encouraged the Shah to reimpose Persian rule on the eastern provinces. British policy, on the other hand, having come to regard Afghanistan as an important link in the defence of India, urged moderation upon the Persian Government. After the accession of Muhammad Shah in 1834, an expedition was sent against Herat. The siege of Herat began in 1837 but was raised when the Shah was threatened with British intervention. Subsequently local intrigues enabled the Persians to enter Herat. The seizure of the city by Persia led to the outbreak of the Anglo–Persian war in 1856, which was terminated by the Treaty of Paris (1857) after a British force had occupied the island of Kharg in the Persian Gulf.

In the second half of the century the subjection of the Turkoman tribes by Russia, its capture of Marv in 1854, and the occupation of the Panjeh, meant that Russian influence became dominant in Khurasan in the same way as the advance of Russia to the Araxes after the Persian wars in the early part of the 19th century had made Russian influence dominant in Azerbaijan.

INCREASED FOREIGN INTERVENTION

Internally, the second half of the 19th century was remarkable chiefly for the beginnings of the modernist movement, which was stimulated on the one hand by internal misgovernment and on the other by increased intervention in the internal affairs of the country by Russia and Britain. Towards the end of the century numerous concessions were granted to foreigners, largely in order to pay for the extravagances of the court. The most fantastic of these was the Reuter concession. In 1872 a naturalized British subject, Baron de Reuter, was given by the Shah a monopoly for 70 years of railways and tramways in Persia, all the minerals except gold, silver and precious stones, irrigation, road, factory and telegraph enterprises, and the farm of customs dues for 25 years. Eventually this concession was cancelled and permission instead given for the foundation of a Persian state bank with British capital, which was to have the exclusive right to issue banknotes: thus in September 1889 the Imperial Bank of Persia began business. In the same year Dolgoruki obtained for Russia the first option of a railway concession for five years. In November of the following year the railway agreement with Russia was changed into one interdicting all railways whatsoever in Persia. By the turn of the century there had been 'a pronounced sharpening of Anglo–Russian hostility as a consequence of a whole series of Russian actions, not only in northern Persia, where Russian ascendancy to a large extent had to be admitted, but as well in southern and eastern Persia which had hitherto been predominantly British preserves'. In 1900 a Russian loan was given. Subsequently various short-term advances and subsidies from the Russian treasury including advances to the heir apparent, Muhammad Ali, were made so that by 1906 some £7.5m. was owing to the Russians. Under the 1891 Russo-Persian tariff treaty, trade between the two countries had increased, and when, under the 1901 Russo-Persian commercial treaty, a new customs tariff was announced in 1903, Russian exports to Persia were considerably aided, and, up to 1914, Russian commerce with Persia continued to grow.

The grant of these various concessions to foreigners and the raising of foreign loans gave rise to growing anxiety on the part of the Persian public. Further, large numbers of Persians had fled the country and were living in exile. When a tobacco monopoly was granted to a British subject in 1890, various elements of the population, including the intellectuals and the religious classes, combined to oppose it. Strikes and riots threatened and the monopoly was rescinded. No effective steps, however, were taken to allay popular discontent. In 1901 protests were made against the loans and mortgages from Russia which were being contracted to pay for Muzaffar ud-Din Shah's journeys to Europe. Demand for reform grew in strength and finally on 5 August 1906, after 12,000 persons had taken sanctuary in the British legation, a constitution was granted. A long struggle then began between the constitutionalists and the Shah. The Cossack Brigade, formed during the reign of Nasir ud-Din Shah, which was under Russian officers and was the most effective military force in the country, played a major part in this struggle and was used by Muhammad Ali Shah to suppress the National Assembly in 1908. Civil war ensued, and Muhammad Ali Shah's abdication was forced in 1909.

Meanwhile in 1907 the Anglo-Russian convention had been signed. The convention, which included a mutual undertaking to respect the integrity and independence of Persia, divided the country into three areas, that lying to the north of a line passing from Qasr-e-Shirin to Kakh, where the Russian, Persian and Afghan frontiers met in the east, that lying to the south of a line running from Qazik on the Perso-Afghan frontier through Birjand and Kerman to Bandar Abbas on the Persian Gulf, and that lying outside these two areas. Great Britain gave an undertaking not to seek or support others seeking political or economic concessions in the northern area; Russia gave a similar undertaking with reference to the southern area. In the central area the freedom of action of the two parties was not limited and their existing concessions (which included the oil concession granted to D'Arcy in 1901) were maintained. The conclusion of this convention—which had taken place partly because of a change in the relative strength of the Great Powers and partly because the British Government hoped thereby to terminate Anglo–Russian rivalry in Persia and to prevent further Russian encroachments—came as a shock to Persian opinion which had hoped for much from the support which the British Government had given to the constitutional movement. It was felt that Persian interests had been bartered away by Great Britain for a promise of Russian support in the event of a European war. In fact, the convention failed in its object. Russian pressure continued to be exercised on Persia directly and indirectly. In 1911, as a result of Russian pressure, the National Assembly was suspended, and the resignation forced of the American Administrator-General of the Finances, Shuster, who had been appointed in the hope of bringing order to the finances of Persia.

THE FIRST WORLD WAR

During the First World War Persia was nominally neutral but, in fact, pro-Turkish. By the end of the war the internal condition of Persia was chaotic. To the British Government the restoration of order was desirable and with this end in view the Agreement of 1919 was drawn up whereby a number of men were to be lent to reorganize the Persian army and to reform the Ministry of Finance and a loan of £2m. was to be given. There was opposition to this agreement in the USA and France and in Persia, and the treaty was not ratified. A *coup d'état* took place in 1921, Reza Khan (later Reza Shah) becoming Minister of War. In February 1921 the Soviet-Persian Treaty was signed whereby the USSR declared all treaties and conventions concluded with Persia by the Tsarist Government null and void. Under Article VI the USSR was permitted 'to advance her troops into the Persian interior for the purpose of carrying out the military operations necessary for its defence' in the event of a third party attempting 'to carry out a policy of usurpation by means of armed intervention in Persia, or if such a Power should desire to use Persian territory as a base of operations against Russia. . .'

REZA SHAH, 1925–41, AND AFTER

In 1923 Reza Khan became Prime Minister, and finally in 1925 the crown of Persia was conferred upon him. His first task was to restore the authority of the central Government throughout the country, and the second to place Persia's relations with foreign countries on a basis of equality. All extra-territorial agreements were terminated from 1928. Lighterage and quarantine duties on the Persian littoral of the Persian Gulf, hitherto performed by Great Britain, were transferred to the Persian Government in 1930. The Indo-European Telegraphy Company, which had been in operation since 1872, had almost entirely been withdrawn by 1931, and the British coaling stations were transferred from Basidu and Henjam to Bahrain in 1935.

In 1932 the cancellation of the Anglo-Persian Oil Co's concession was announced by Persia. The original concession obtained by D'Arcy in 1901 had been taken over by the Anglo-Persian Oil Co (later the Anglo-Iranian Oil Co) in 1909 and the British Government had acquired a controlling interest in the company in 1914. The Persian Government's action in cancelling the concession was referred to the League of Nations. Eventually an agreement was concluded in 1933 for a new concession whereby the concession area was materially reduced and the royalty to be paid to the Persian Government increased. The concession was to run to 1993.

Internally Reza Shah's policy aimed at modernization and autarchy. In the later years of his reign the Government became increasingly totalitarian in nature. Compulsory military service was introduced and the army much increased in size. Communications were greatly improved; the construction of a trans-Persian railway was begun. Education was remodelled on western lines. Women were no longer obliged to wear the veil after 1936. Foreign trade was made a state monopoly, and currency and clearing restrictions were established. These arrangements were compatible with the economy of Germany, and, by the outbreak of the Second World War, Germany had acquired considerable commercial and political influence in Persia.

On the outbreak of war Persia declared its neutrality. In 1941 the Allies demanded a reduction in the number of Germans in the country, and when no satisfaction was obtained sent another communication demanding the expulsion of all German nationals, except such as were essential to the Persian economy and harmless to the Allies. This demand was not complied with, and on 26 August, Persia was invaded. Hostilities lasted some two days. On 16 September Reza Shah abdicated in favour of his son Muhammad Reza. In January 1942 a Tripartite Treaty of Alliance was concluded with Great Britain and the USSR whereby Great Britain and the USSR undertook jointly and severally 'to respect the territorial integrity, sovereignty and political independence of Persia' and 'to defend Persia by all means in their command from aggression'. The Persian Government undertook to give the Allies, for certain military purposes, the unrestricted right to use, maintain and guard, and in the case of military necessity, to control, all means of communications in Persia. Allied forces were to be withdrawn not later than six months after the conclusion of hostilities between the Allied Powers and Germany and its associates. In so far as the establishment of communications with the USSR was concerned the Treaty was effective; its operation in other respects was less satisfactory. In the Russian zone of occupation the Persian authorities were denied freedom of movement, and effective administration made impossible. American advisers were appointed by the Persian Government in 1942 and 1943, in the hope of reorganizing certain aspects of the administration, but little success was achieved.

In 1943 a British company applied for an oil concession in south-east Persia, and in 1944 the Socony Vacuum and Sinclair Oil Cos made various proposals to the Persian Government. In September the Persian Cabinet issued a decree deferring the granting of oil concessions until after the war. The USSR meanwhile asked for an oil concession in the north and brought heavy, though unavailing, pressure to bear on the Persian Government to accede to this demand. Persian security forces were prevented by Soviet forces from entering Azerbaijan or the Caspian provinces, and an autonomous government was set up in Azerbaijan, with Soviet support, in December 1945. In January 1946 the Persian Government had recourse to the UN Security Council. In March the Tripartite Treaty expired and British and US forces evacuated Persia, Soviet forces remaining. The Persian Government again presented a note to the Security Council. In April an understanding was reached whereby a joint Soviet-Persian company to exploit the oil in the northern provinces was to be formed. In May Soviet forces evacuated the country. Soviet pressure, however, continued to be exerted through the communist Tudeh party, the Democrat movement in Azerbaijan, and the Kurdish autonomy movement, and the Persian Government was unable to re-enter Azerbaijan until December. In October the Soviet Oil Agreement was presented to the National Assembly but was not ratified. In October 1947 an agreement was signed with the USA, providing for a US military mission in Persia to co-operate with the Persian Ministry of War in 'enhancing the efficiency of the Persian army'.

NATIONALIZING THE OIL INDUSTRY

Meanwhile unrest and discontent at internal misgovernment increased, culminating in the nationalist movement of 1950–51. In July 1949 a Supplemental Oil Agreement with the Anglo-Iranian Oil Co was initialled. Opposition to this agreement (whereby Persia was offered considerable financial gains) was strong. In November 1950 the oil commission of the National Assembly recommended its rejection. Meanwhile Persia had received a loan of $25m. from the Export & Import Bank of Washington and a grant of $500,000 under the Point IV allocation. Subsequently in 1952 the Point IV aid programme was expanded. In April 1951 the National Assembly passed a Bill for the nationalization of the oil industry, and in May Dr Muhammad Musaddiq, who had led the campaign for nationalization of oil, became Prime Minister. In spite of efforts to involve the International Court of Justice (ICJ), the *status quo* could not be maintained in Persia and the Anglo-Iranian Oil Co, unable to continue operations, evacuated the country.

In July the ICJ found that it had no jurisdiction in the oil dispute. This decision, however, was not a decision on the merits of the case. Anglo-Iranian accordingly maintained its claim to be entitled to all crude oil and oil products derived from the area covered by its concession agreement, and stated its intention to take such action as was necessary to protect its interests. US policy showed an increasing interest in Persian affairs. In subsequent weeks considerable correspondence passed between the British, US and Persian Governments in the oil dispute, culminating in a joint offer by Sir Winston Churchill and President Truman concerning proposals to assess the compensation to be paid to the Anglo-Iranian Oil Co and the resumption of the flow of oil to world markets. The Persian Government rejected these proposals and put forward counter proposals which were unacceptable. In October the Persian Government broke off diplomatic relations with Great Britain. Further Anglo-American proposals for an oil settlement were put forward in February 1953, which the Persian Government rejected. Meanwhile dissension between Musaddiq and some of his supporters broke out, and a rift also developed between him and the Shah. The economic situation of the country began to deteriorate rapidly, culminating in the overthrow of Musaddiq by General Zahedi in August 1953. Musaddiq was tried and sentenced to three years solitary confinement for allegedly trying to overthrow the regime and illegally dissolving the Majlis-e-Shura (Consultative Assembly).

The new Government resumed diplomatic relations with Great Britain in December 1953, and negotiations with British and American oil interests began for the solution of the oil problem. In September 1954 an agreement was signed, and ratified by the Majlis and Senate in October, granting a concession to a consortium of eight companies (subsequently increased to 17) on a percentage basis. It was also agreed that the claims of the Anglo-Iranian Oil Co and the Persian Government against each other were to be settled by the payment of a lump sum to the Company, which was also to receive compensation from the other members of the consortium. The profits arising within Persia from the oil operations were to be equally shared between the Persian Government and the consortium. The agreement was for a period of 25 years with provision for three five-year extensions, conditional upon a progressive reduction of the original area. The National Iranian Oil Co (NIOC) was to operate the Naft-i Shahr oilfield and the Kermanshah refinery, to meet part of Persia's own needs and to handle the distribution of oil products in Persia and be responsible for all facilities and services not directly part of the producing, refining, and transport operations of the two operating companies set up under the agreement. The greater part of the cost of these facilities and services, which would include industrial training, public transport, road maintenance, housing, medical care, and social welfare, would be recovered by the NIOC from the operating companies.

GROWING POWER OF THE SHAH

Internally, order was restored. The communist Tudeh Party was proscribed, but continued to exist underground. The failure

of the Government to push forward actively with reform, however, led in due course to a reappearance of unrest and discontent. In April 1955 Zahedi resigned and was succeeded by Hussein Ala, the Shah henceforward taking a more active part in the administration. In October Persia joined the Baghdad Pact. In November an attempt was made on the Prime Minister's life. The country had not recovered from the financial difficulties brought on by the Musaddiq regime, in spite of considerable financial aid granted by the USA to enable the country to carry on until oil revenues were received. More than US $800m. were poured into Iran between the end of the Second World War and September 1960. In March 1959 a bilateral defence agreement was signed in Ankara between the USA and Iran. Under the agreement, the Government of the USA would 'in case of aggression, take such appropriate action, including the use of armed force, as may be mutually agreed, and as envisaged in the Joint Resolution to promote peace and security in the Middle East'. (The Joint Resolution refers to the 'Eisenhower Doctrine'.)

Relations with the USSR in the years following the fall of Musaddiq were not cordial, but in December 1954 an agreement providing for the repayment by the USSR of its war debts to Persia for goods supplied and services rendered, and mapping of the revised frontiers, was signed.

In April 1957 Hussein Ala resigned; he was succeeded as Prime Minister by Dr Manoutchehr Egbal, who formed a new Government. Immediately after taking office Dr Egbal issued a decree ending martial law and declared his intention of forming a democratic two-party system, in accordance with the wishes of the Shah. In February 1958 a pro-government Nation Party was formed. An opposition People's Party had been formed in 1957. Elections contested by both these political parties disclosed electoral irregularities, and in August 1960 Jaafar Sharif-Emami replaced Dr Egbal as Prime Minister. In May 1961, however, Dr Emami resigned as a result of criticism of his handling of a teachers' strike, and the Shah called upon Dr Ali Amini, the leader of the opposition, to form a new government.

Dr Amini quickly took stern measures to halt the political and economic chaos in Iran. A drive against corruption in the government and civil service was coupled with policies of land reform, decentralization of administration, control of government expenditure and limitation of luxury imports. Both houses of Parliament were dissolved pending the passing of a new electoral law which would make free and fair elections possible. Postponement of elections, in July 1962, led to disorder in Teheran, and the added difficulty of producing a reasonably balanced budget led Dr Amini to tender his resignation.

A new Government was quickly formed by Assadollah Alam, the leader of the Mardom (People's) Party. Alam, one of Iran's largest landowners and administrator of the Pahlavi Foundation, had previously distributed much of his land voluntarily amongst the peasants. He stated that Iran would remain closely linked to the West, and that he would continue the land reform programme and the struggle against internal political corruption.

REFORMS OF THE SHAH

In 1950 the Shah had begun distributing his estate amongst the peasants. By the end of 1963 he had disposed of all his Crown Properties. The Pahlavi Foundation was established in 1958 and received considerable gifts from the Shah for the purpose of improving standards of education, health and social welfare among the poorer classes. In October 1961 the Shah created the £40m. Pahlavi Dynasty Trust, the income of which was used for social, educational and health services for the Iranian people. In January 1963 a referendum gave overwhelming approval to the Shah's six-point plan for the distribution of lands among the peasants, the promotion of literacy, the emancipation of women, etc. The break-up of great estates began almost immediately, and the programme was finally completed in September 1971. Another important measure was the formation of the Literacy Corps (and later of the Health Corps), in which students could spend their period of national service as teachers, working in the villages.

Elections in September 1963 resulted in an overwhelming victory for Alam's National Union. The elections, at which, for the first time, women were allowed to vote, were held in the face of strong opposition from the left-wing parties of Iran, notably the National Front and the Tudeh Party, which campaigned unsuccessfully for a boycott. The Shah called on the new Parliament to inaugurate a 20-year programme of economic and social reform and political development, and he also announced a second phase of the land reform programme, whereby it was hoped that another 20,000 villages would be added to the 10,000 already ceded to the tenants. The Alam Government continued until March 1964, when, without offering any reason, Alam resigned. The new leader was Hassan Ali Mansur, a former minister and founder of the Progressive Centre, which had played a prominent part in Alam's coalition the previous year. In December 1963 he had formed the New Iran Party, which by now had the support of some 150 members of the Majlis. The second stage of the land reform plan was placed before the Majlis in May, aiming to break down the great estates more thoroughly: the maximum permissible size was to range from 120 ha in arid regions to 30 ha in more fertile areas.

On 21 January 1965 Mansur was assassinated by members of the right-wing religious sect Fedayin Islam. The assassins were reportedly followers of the Ayatollah Ruhollah Khomeini, a Shi'ite Muslim religious leader who had been exiled in 1964 for his opposition to the Shah's reforms.

Amir Abbas Hoveida, the Minister of Finance, was immediately appointed Prime Minister, retaining his post at the Ministry of Finance. He pledged the continuation of his predecessor's policies, and was given the massive support of the Majlis. Elections took place in 1967, 1971 and 1975. Hoveida continued as Prime Minister until August 1977, when he was succeeded by Dr Jamshid Amouzegar.

FOREIGN RELATIONS

It had been an avowed part of Mansur's policy that Iran should be as much interested in maintaining links with the USSR as with the West. During 1964–65 various bilateral trade and technical agreements were signed, and a regular air service was established between Teheran and Moscow. In June 1965 the Shah visited Moscow, and in October an agreement was signed for the construction by Soviet engineers of a steel mill.

The coronation of the Shah in October 1967 seemed to augur forthcoming prosperity, and the apparent stability of Iran was emphasized not only by economic development and by the organization of international gatherings, but also by the formal ending in November of US economic aid under the Point IV allocation. Iran, which had been the first country to accept this aid in 1951, was now the second (after the Taiwan Province of China) able to dispense with it. Military aid, however, was to continue. At the same time economic co-operation with the USSR was developed, and an agreement was made for the purchase of £40m. of munitions, the first occasion on which the USSR had concluded an arms transaction with a member of the Western bloc.

In January 1968 the British Government announced its decision to withdraw all its forces from the Gulf by the end of 1971. Since these forces had apparently helped to preserve the local *status quo*, a revival of the ancient rivalry between Arabs and Persians over supremacy in the Gulf then seemed a likely prospect following their removal. The Iranian Government's reiteration of its claim to Bahrain in February 1968 did not facilitate relations with the Arab world, but Iran cautiously welcomed the proposed Federation of Arab Emirates (which it was thought would incorporate Bahrain). A UN Mission visiting Bahrain in early 1970 found that the large Arab majority overwhelmingly preferred full independence to joining Iran or remaining a British protectorate. Iran had previously agreed to accept the mission's findings, and it did so without complaint, though expressing concern for the future of Iranians in the Gulf states. In June 1970 a dispute with other Gulf states also arose over Iran's claim to the islands of Abu Musa and the Tunbs belonging to Sharjah and Ras al-Khaimah respectively. The dispute was only settled at the beginning of December 1971. The Sheikh of Sharjah agreed to share sovereignty of Abu Musa with Iran. The Sheikh of Ras al-Khaimah was less accommodating, so Iran invaded his possessions of the Greater and Lesser Tunbs and took them by force. After occupying Abu Musa and the Tunbs, Iran developed them as military bases to command the Strait of Hormuz at the neck of the Gulf. Iran regarded the

maintenance of freedom of passage through the Strait of Hormuz as vital to its strategic and economic interests.

Iran's relations with the more radical Arab states were less friendly under the Shah. These states had long been suspicious of Iran's close ties with the West, and especially of the generous US military aid to the powerful Iranian armed forces. Moreover, the Arab states distrusted Iran's attitude to Israel. Although no formal diplomatic links existed, trade, particularly in oil, was conducted with Israel. One of the first actions of the Khomeini regime in early 1979 was to end any ties with Israel and to align Iran firmly behind the Arab cause, by allowing, for example, the opening by the Palestine Liberation Organization (PLO) of an office in Teheran.

Iran's only frontier with an Arab state is with Iraq. Near the Gulf the border is delineated by the 185-km Shatt al-Arab waterway, the estuary of the Tigris and Euphrates, which flows into the Gulf. By the terms of the 1937 treaty, the frontier followed the eastern, i.e. Iranian, bank; thus, Iraq legally had sovereignty over the whole waterway. Iran resented this provision, and in 1966 a series of border incidents erupted. In April 1969 Iran decided to abrogate the treaty, sending Iranian vessels through the waterway while heavy naval forces stood ready to intervene. The aim was apparently to force a renegotiation of the treaty. In September 1969 there were further armed clashes on the border. In January 1970 Iraq accused the Iranian Government of supporting an abortive coup in Iraq, and diplomatic relations between the two countries were severed. Links were restored soon after the outbreak of the Arab–Israeli War in October 1973, but border incidents continued. In March 1975, however, it was announced at a meeting of the Organization of the Petroleum Exporting Countries (OPEC, see p.272) in Algiers that the Shah and Saddam Hussain (then Vice-President of the Iraqi Revolutionary Command Council) had signed an agreement which 'completely eliminated the conflict between the two brotherly countries'. Not only did this agreement settle the outstanding border differences, but it also deprived the Kurds in Iraq of the help that they had been receiving from Iran in their struggle against the Iraqi Government, thus causing a Kurdish collapse and a virtual end to the Kurdish War.

The border agreement provided that Iran and Iraq would define their frontiers on the basis of the Protocol of Constantinople of 1913 (which allowed the Ottoman Empire to retain control over the Shatt al-Arab but granted sovereignty over the east bank to Persia) and the verbal agreement on frontiers of 1914, and that the Shatt al-Arab frontier would be defined according to the Thalweg Line (i.e. the middle of the deepest shipping channel). The treaty giving effect to this agreement was signed on 15 June 1975 and later became one of the key issues of the war that broke out in September 1980 (see below).

INTERNAL PROBLEMS

Internally, signs of opposition to the Shah's regime, never far from the surface of Iranian life, became more and more evident as the celebrations for the 2,500th anniversary of the Persian monarchy were in preparation for October 1971. The combination of the very unequal distribution of the enormous earnings from oil and the suppression of any sign of dissent was made more politically explosive as the lavishness of the celebrations and the huge extent of the accompanying security precautions became apparent. From then until the final fall of the Shah in early 1979, there were countless stories of the stifling of opposition by the ruthless activities of SAVAK, the government security agency.

In March 1975 the Shah, dissatisfied with the current structure of party politics in Iran and seeking to weld together all those who supported the principles of his 'White Revolution' policy (later known as the 'Revolution of the Shah and People'), announced the formation of a single party system, the Iran National Resurgence Party (Rastakhiz), with the Prime Minister, Amir Abbas Hoveida, as Secretary-General. By 1978 it became clear that the single-party Rastakhiz system was not solving the problem of internal opposition in Iran, but few in early 1978 would have forecast that, within a year, a completely new political system would take its place.

FALL OF THE SHAH

During 1977 and 1978 demonstrations centred around the universities, and acts of political violence increased. Attempts by the Shah to control the situation, first by greater liberalization and then through firmer suppression, proved ineffective. In August 1977 Dr Jamshid Amouzegar, who had become Secretary-General of Rastakhiz, replaced the long-serving Amir Abbas Hoveida as Prime Minister, but he resigned a year later. In August 1978 Jaafar Sharif-Emami was appointed Prime Minister (an office he had previously held in 1960–61) and, in response to the emerging mood of the country, promised that his Government would observe Islamic tenets. However, unrest continued; martial law was introduced in September, and in November the Shah established a military Government headed by the army Chief of Staff, Gen. Gholamreza Azhari. Censorship was imposed, but industrial action undertaken by workers in the oil industry and public services left the Shah in a desperate situation, and in early January 1979 he charged Dr Shapour Bakhtiar, a former deputy leader of the National Front, with forming a 'last-chance' government. Dr Bakhtiar undertook to dissolve SAVAK, to halt the export of oil to South Africa and Israel, and to support the Palestinians. However, opposition to the Shah continued to such an extent that he left the country on 15 January, never to return.

The opposition within Iran had stemmed from two main sources, with little in common except their desire to overthrow the Shah. By the time of the Shah's departure, opposition from the left and the more liberal National Front had been overshadowed by the success of the opposition movement surrounding the exiled fundamentalist leader Ayatollah Khomeini. He conducted his campaign from France, where he had arrived in October 1978 after 14 years of exile in Iraq for opposing the Shah's 'White Revolution'.

In January 1979 Khomeini formed an Islamic Revolutionary Council from his base near Paris and pressure in Iran grew for his return. The Bakhtiar Government tried to delay his return for as long as possible, but on 1 February Khomeini arrived in Teheran from Paris to a tumultuous welcome from the Iranian people. Bakhtiar refused to recognize Khomeini but, after several demonstrations and outbreaks of violence, the army withdrew its support from Dr Bakhtiar and he resigned on 11 February. Dr Mehdi Bazargan, named 'Provisional Prime Minister' by Khomeini on 6 February, formed a provisional government later in the month; however, it was evident that real power rested with Khomeini's 15-man Islamic Revolutionary Council.

IRAN UNDER AYATOLLAH KHOMEINI

Although Khomeini became the *de facto* leader of Iran, the difficulties of putting into practice the ideals of the Islamic Revolution severely tested the Revolutionary Government. From the very outset conflict arose between the Islamic Revolutionary Council, which gave effect to its policies through a network of *Komitehs*, and the Prime Minister, Dr Bazargan.

Tension over Iran's ethnic minorities, either not in evidence or stifled under the Shah, became a problem after the Revolution. Most serious was the demand for autonomy from the Kurds in the north-west, which often led to open warfare in that area. Other minorities also demanded autonomy. These included the Baluchis in the south-east, the Turkomans in the north-east and the Azerbaijanis in the north-west. Conflict with the Arabs in the south-west also interacted with hostile relations with Iraq, which later developed into the Iran–Iraq War in September 1980 (see below). The position was complicated by the fact that these minorities were Sunni Muslims, while the Khomeini regime and the majority of Iranians were Shi'ite.

Khomeini's regime from the outset condemned previous US interference in Iranian affairs, and when, on 4 November 1979, Iranian students seized 53 hostages in the US Embassy in Teheran, Khomeini was quite ready to offer his support to the students who demanded the return of the Shah (then in the USA) to Iran to face trial. This problem dominated relations with the USA for the next 14 months, and was not resolved by the death of the Shah in Egypt on 27 July 1980. The USA launched an airborne military operation to free the hostages, landing a commando force in eastern Iran. The operation was aborted at an early stage, however, owing to equipment failure,

and eight men died when a helicopter collided with a transport aircraft as the force prepared to abandon the mission. Internal disagreements meant that the first Islamic Majlis, elected in March and May 1980, was slow to address the problem of the hostages, who were not released until 20 January 1981 (after Ronald Reagan succeeded Jimmy Carter as US President).

Another problem was the intensity of Islamic fervour in Iran. Ayatollah Khalkhali, at one time Chief Justice of the Islamic Revolutionary Courts, set about his task with extraordinary zeal, and by May 1980 claimed to have ordered more than 300 executions. Moreover, in May 1980 he destroyed the tomb of Reza Shah, an action which was later condemned by President Bani-Sadr, who pointed out that such actions were counter-productive to the Revolution. Not all Iranians approved of the ardour with which the 'Bureau to Stop Bad Acts' set about cleaning up the moral lapses in Iranian society.

CONSTITUTIONAL DEVELOPMENT

At the end of March 1979 Khomeini held a referendum to ascertain the level of popular support for the creation of an Islamic republic. The result was almost unanimously in favour, and on 1 April the Islamic Republic of Iran was declared. A draft constitution proposed that Iran be governed by a president, prime minister and a single-chamber Islamic Consultative Assembly (Majlis-e-Shura) of 270 deputies. Although there was pressure in Iran to submit the draft constitution to a newly-elected Constituent Assembly, Khomeini submitted it for revision to a 'Council of Experts', comprising 75 members who were elected on 3 August. After prolonged deliberations the revised Constitution was submitted to a referendum at the beginning of December. The most important change from the draft Constitution was provision for a *wali faqih* (religious leader), whose extensive powers (see The Constitution) accorded him the most important executive influence in Iran. Votes against the Constitution were negligible.

Presidential elections followed on 25 January 1980, and resulted in a convincing win for Abolhasan Bani-Sadr, with about 75% of the votes. All this time the Islamic Revolutionary Council had effectively been administering the country, although there was a Government headed by Dr Mehdi Bazargan until his resignation in mid-November 1979 over Khomeini's support for the retention of the US hostages. Thereafter the Islamic Revolutionary Council (chaired by President Bani-Sadr from February 1980) ruled more openly, and appointed ministers to run the country until elections to the Majlis, which took place, in two rounds, on 14 March and 9 May 1980. A total of 3,300 candidates contested 270 seats, 30 of which were in Teheran. Disturbances in Kurdish areas and various allegations of fraud resulted in the fact that, when the Majlis convened, in late May, only 234 deputies had been decided, and, of those, only 213 had received their credentials. It was clear, however, that the Islamic Republican Party (IRP), the party identified with the policies of Ayatollah Khomeini, was in a majority, claiming 130 seats. The IRP leader, Ayatollah Beheshti, was perceived as a threat to the leadership of President Bani-Sadr. On 7 May Khomeini had given Bani-Sadr authority to appoint a prime minister until the Majlis convened, but Beheshti successfully prevented this, insisting that this appointment be the responsibility of the Majlis.

The Islamic Revolutionary Council was dissolved on 18 July 1980, but there followed a delay in forming a government. Many of the candidates for ministerial office who were proposed by the Majlis and supported by the IRP were unacceptable to President Bani-Sadr. The President agreed to the appointment of Muhammad Ali Rajai as Prime Minister only with reluctance, doubting his competence. The ministries of finance and economic affairs, commerce and foreign affairs were left without ministers for some months, and a feud developed between President Bani-Sadr, on the one hand, and Rajai and the IRP, on the other. In June 1981 Khomeini dismissed Bani-Sadr as Commander-in-Chief of the Armed Forces; soon afterwards Bani-Sadr was deprived of the presidency, and he later fled to France, where he formed a 'National Council of Resistance' in alliance with Massoud Rajavi, the former leader in Iran of the opposition guerrilla group, the Mujahidin-e-Khalq. (Bani-Sadr left the council in 1984 because of his objection to Rajavi's increasing co-operation with the Iraqi Government. A three-man Presidential Council replaced Bani-Sadr until new presidential elections could be held. On 28 June, however, a bomb exploded at the headquarters of the IRP, killing Ayatollah Beheshti (the Chief Justice and head of the IRP), four cabinet ministers, six deputy ministers and 20 parliamentary deputies.

The presidential election, on 24 July 1981, resulted in a victory for the Prime Minister, Muhammad Ali Rajai. Muhammad Javad Bahonar then became Prime Minister. A further bomb, on 29 August, killed both the President and the Prime Minister. Ayatollah Muhammad Reza Mahdavi Kani became Prime Minister in September, and another round of presidential elections was held on 2 October. Hojatoleslam Ali Khamenei, a leading figure of the IRP, was elected President, winning more than 16m. of the 16.8m. votes cast. At the end of October, after the resignation of Ayatollah Muhammad Reza Mahdavi Kani, Mir Hossein Moussavi was appointed Prime Minister.

THE IRAN–IRAQ WAR

It was generally thought by outsiders at this time that the Iranian Islamic Revolution was about to disintegrate. In addition to internal troubles, Iran had been at war with Iraq for over a year. Fighting between the two countries had begun after Iran ignored Iraqi demands for the withdrawal of Iranian forces from Zain ul-Qos, in Diali province on the border between the two countries. Iraq maintained that this territory should have been returned to it under the 1975 agreement with Iran. Iraq therefore abrogated the 1975 Shatt al-Arab agreement and invaded Iran on 22 September 1980. Most observers now consider that this was no more than a pretext on Iraq's part, the real objective of its President, Saddam Hussain, being to topple what he regarded as the threatening but vulnerable Iranian regime.

Iranian resistance was spirited, and a position of stalemate was soon reached along a 480-km front. Various international peace missions failed, and in the spring of 1982 the Iranian forces broke the stalemate by launching two offensives, the first in the Shush-Dezful area in March, and the second on a 60-mile front south of Susangerd to the port of Khorramshahr at the end of April. Both offensives achieved considerable success, with Iran recapturing Khorramshahr in May. It then carried the war into Iraqi territory, but a speedy conclusion to the war, for which Iran had hoped, did not materialize. In February 1983 Iran began a major offensive in the area of Iraq's Misan province, but the impetus was soon lost, and a fresh Iranian assault in April similarly proved indecisive. A further Iranian offensive in July (combined with operations to suppress renewed activity by Kurdish guerrillas in the area) saw its forces entrenched 15 km within northern Iraq. The attack seemed to be consistent with Iran's policy of waging a war of attrition, keeping Iraq on a war footing and thereby exerting pressure on the weakening Iraqi economy which might topple the regime of Saddam Hussain. Action by Iran prevented Iraq from exporting oil through the Gulf, and a pipeline through Syria was cut off. Iraq was able to continue the war only with financial aid from Saudi Arabia and Kuwait.

During the second half of 1983 Iraq stepped up missile and aircraft raids against Iranian towns and petroleum installations, and, furthermore, took delivery of five French-built *Super Etendard* fighter aircraft. With these, and with the *Exocet* missiles already in its possession, Iraq threatened to destroy Iran's oil export industry, centred on Kharg Island in the Gulf, which financed the Iranian war effort. Iran countered by declaring its intention to make the Gulf impassable to all shipping (one-sixth of the Western world's petroleum requirement passed through the Gulf) if Iraqi military action rendered it unable to export oil from the Gulf via the Strait of Hormuz. In retaliation for the sale of *Super Etendard* aircraft to Iraq, Iran severed most of its economic ties with France.

In March 1984 a further Iranian offensive succeeded in taking part of the marshlands around the southern Iraqi island of Majnoun, the site of rich oilfields, though only at a great cost in lives. Iraq subsequently retook some of the territory which it had lost, but seemed more intent on consolidating its defences than making further ground. A team of UN observers, sent in at the request of the Iranian Government, found that Iraq had used mustard gas to counter the offensive. A long-awaited

Iranian offensive against Basra failed to materialize. While Iran delayed, Iraq developed a formidable network of defensive fortifications along its southern border.

Although it had earlier declared a maritime exclusion zone at the north-east end of the Gulf around Kharg Island and made sporadic attacks against shipping (not only oil-tankers), in some cases was well outside the zone, Iraq refrained from attacking tankers using the Kharg Island oil terminal until May 1984. Iran retaliated with attacks against Saudi and Kuwaiti tankers in the Gulf.

INTERNAL DEVELOPMENTS

At the time of the bomb outrages in mid-1981 the Iranian regime appeared to the rest of the world to be on the point of collapse. Subsequent events, however, demonstrated that it possessed greater resilience than was at one time thought possible. An extended, and often ferocious, campaign against the main anti-government guerrilla group, the Mujahidin-e-Khalq, eventually achieved some success, and in February 1982 the Mujahidin leader in Iran, Musa Khiabani, was killed.

In April 1982 an anti-government plot was uncovered in which Ayatollah Shariatmadari, one of Iran's leading mullahs, was accused of involvement. He denied this, but admitted knowledge of the plot, in which the former Minister of Foreign Affairs, Sadeq Ghotbzadeh, was deeply implicated. Ghotbzadeh was tried and executed in September. Ayatollah Shariatmadari died in April 1986, after two years of house arrest in Qom.

In 1983 the Iranian Government turned its attention to the communist Tudeh Party. The party had been banned under the Shah, but had come into the open after the 1979 Revolution. In February the party's Secretary-General, Nour ed-Din Kianuri, was arrested on charges of spying for the USSR. Kianuri was subsequently the first of a number of Tudeh members publicly to confess on television to this and other crimes against the state. Further arrests of Tudeh Party members followed, bringing the total of arrests to about 1,000, and 18 Soviet diplomats were expelled. The party was officially banned again in April.

An intense rivalry within the Government, reflecting a wider divergence of views in the country, became increasingly apparent after the Revolution. The two rival groups were the right-wing Hojjatieh, identified with the traditionalist clerical and merchant ('bazaari') communities, and the radical technocrats. The Hojjatieh were opposed, on grounds of religion and self-interest, to radical economic reforms such as the nationalization programme and the reform of the laws governing land ownership (the clergy are extensive landowners), as advocated by the technocrats—who were motivated by more secular, socialist concerns. The Hojjatieh had extensive representation in the first Majlis.

Elections to the second Majlis took place on 15 April and 17 May 1984, significantly altering the distribution of influence in the assembly. Slightly more than one-half of the outgoing Majlis were clerics, and that majority had given them the power to determine policy according to largely religious considerations. A high proportion of the 1,230 or more candidates who contested the elections were more secular: doctors, scientists, engineers; people with a practical economic background. The elections were boycotted by former Prime Minister Dr Mehdi Bazargan's Liberation Movement opposition party (the only party recognized by the ruling IRP), in protest against what he considered to be the undemocratic conditions prevailing in Iran. It was estimated that more than 50% of the seats in the new assembly were filled by new members, giving rise to speculation that a more sympathetic Majlis might allow Moussavi greater success in implementing his economic programme. However, the Council of Guardians, which exists to determine whether Majlis legislation is both constitutional and Islamic, was of a conservative, clerical nature and proved to be a major obstacle to economic reform.

Islamic codes of correction were introduced in 1983, including the dismembering of a hand for theft; flogging for more than 50 offences including forgery, consumption of alcohol, fornication and violations of the strict code of dress for women; and stoning to death for adultery. These began to be more rigidly enforced in 1985, in response to demonstrations in April by young fundamentalists demanding stricter adherence to Islamic law. There were clashes between opponents of the regime and fanatical *hezbollahi* (members of the Party of God) who supported the continuation of the Iran–Iraq War and the rigid observance of Islamic codes of behaviour. Widespread active opposition to the Teheran regime was not conspicuous until 1985. Dissatisfaction with the conduct of the war with Iraq and with austere economic conditions provoked demonstrations and rioting in several cities, including Teheran. Government supporters staged numerous counter-demonstrations.

Suppression of opposition to the Government continued. In 1985, according to Amnesty International, 399 people were executed in Iran in the period to the end of October, bringing the total to 6,426 since the Revolution. A report by the UN Commission on Human Rights, published in February 1987, estimated the number of executions at a minimum of 7,000 between 1979 and 1985.

President Ali Khamenei was due to complete his four-year term of office in September 1985, and a presidential election was held on 16 August, with only three candidates, including the incumbent, taking part. The Council of Guardians rejected almost 50 candidatures, including that of Dr Mehdi Bazargan. Ali Khamenei was re-elected President, with 85.7% of the votes cast.

Although 99 deputies either voted against him or abstained, Hossein Moussavi was confirmed as Prime Minister by the Majlis on 13 October 1985. A dispute over the composition of the new Council of Ministers, which President Khamenei considered to be too radical (he initially withheld approval of one half of Moussavi's appointees), was not resolved until the intervention of Ayatollah Khomeini on Moussavi's behalf, so that the list submitted to the Majlis contained only two changes. All but seven members of the new Council of Ministers had served in the previous Government.

DEVELOPMENTS IN THE IRAN–IRAQ WAR IN 1985–86

A resumption of Iraqi attacks on shipping in the Gulf in December 1984 had the effect of reducing Iranian oil exports to an estimated 1.1m. barrels per day (b/d) and causing the Teheran Government to suspend imports temporarily. Although Iraqi raids on Iranian petroleum installations and oil tankers in the Gulf undeniably affected the level of oil exports, they failed to halt them altogether: the Kharg Island oil terminal remained in operation, largely undamaged, and Iran's economy appeared to be capable of sustaining the cost of continuing the war, albeit under severe pressure. Iraq had an estimated 580 combat aircraft and 130 armed helicopters at the beginning of 1985, compared with Iran's 110 combat aircraft, of which only 50–60 were thought to be operational, but it failed fully to exploit its superiority. The People's Republic of China became the leading supplier of military equipment to Iran during the war, and it was estimated that businesses or governments in 44 countries, including both the USA and the USSR, had sold armaments to Iran during the war. Other major suppliers included the Democratic People's Republic of Korea and Israel.

Iran mounted an assault in the region of the al-Hawizah marshes in southern Iraq, east of the Tigris, in March 1985. This did not appear to be the long-awaited decisive thrust, as it involved, at the most, only 50,000 troops. The Iranian forces crossed the Tigris and succeeded, for a time, in closing the main road between Baghdad and Basra. The Iraqis launched a counter-offensive, repulsing the Iranians, with heavy casualties sustained by both sides. Iraq was again accused of using chemical weapons during this battle.

The UN had painstakingly engineered an agreement between Iran and Iraq in June 1984 to suspend attacks on civilian targets, but, after the failure of the Iranian offensive in March 1985, and with the war on the ground once more at stalemate, Iraq resumed its air attacks on Iranian cities from the ground and from the air. The first Iraqi air raid on Teheran in four years took place in March. Iran retaliated, shelling Basra and other Iraqi towns, and hit Baghdad with ground-launched missiles, but Iraq, in this instance making full use of its air superiority, hit more than 30 Iranian population centres by mid-1985, killing hundreds of civilians. President Saddam Hussain's stated intention was to carry the war to every part of Iran until Khomeini agreed to negotiate.

In April 1985 the UN Secretary-General, Javier Pérez de Cuéllar, visited both Teheran and Baghdad, in an attempt to

establish a basis for peace negotiations, but Iran's terms remained the same. The Iranian claim for Iraqi war reparations was US $350,000m., and, though there was less official insistence on the removal of Hussain and his Baathist regime from power as a condition of peace, it was accepted by the Iranian Government that, if all the other conditions (the payment of reparations, an Iraqi admission of responsibility for starting the war, and the withdrawal of Iraqi troops from all Iranian territory) were met, he would fall anyway.

Saddam Hussain ordered the suspension of air raids on Iranian towns in order to give Iran the opportunity to declare a cease-fire and begin negotiations. Iran did not respond. After six weeks, at the end of May 1985 Iraqi air raids resumed with greater intensity, prompting retaliatory air strikes by Iran. A 16-day moratorium in June achieved the same result.

Iraq had hitherto failed to launch attacks against the main Iranian oil export terminal on Kharg Island of sufficient frequency or intensity seriously to threaten the continuation of oil exports. In August 1985, however, Iraq made the first of a concentrated series of raids upon Kharg, causing a reduction in Iranian oil exports from 1.2m.–1.5m. barrels per day (b/d) in the months leading up to the raids to less than 1m. b/d in September. (Kharg's export capacity was 6.5m. b/d). By the end of 1985 it was reported that exports from Kharg had virtually ceased. In February 1986 Iraq announced an expansion of the area from which it would try to exclude Iranian shipping. Previously confined to the waters around Iran's Gulf ports, the area was broadened to include the coast of Kuwait. Attacks on tankers and other commercial vessels in the Gulf were increased by both sides during 1986, and Iran intensified its practice of intercepting merchant shipping and confiscating goods that it believed to be destined for Iraq.

The next important engagement, in terms of land gained, did not occur until 1986. On 9 February Iran launched the Wal-Fajr (Dawn) 8 offensive—so called to commemorate the month of Ayatollah Khomeini's return to Iran in 1979 from exile in France. Iranian forces (some 85,000 troops were thought to be involved in the operation) crossed the Shatt al-Arab waterway and, on 11 February 1986, occupied the disused Iraqi port of Faw, and, according to Iran, about 800 sq km of the Faw peninsula. From this position, within sight of the Kuwaiti island of Bubiyan, commanding the Khor Abdullah channel between the Faw peninsula and the island, Iran threatened Iraq's only access to the Gulf and, if it could extend the offensive to the west, Iraq's Umm Qasr naval base. However, the marsh and then desert terrain to the west was not conducive to further Iranian gains, and the position on the Faw peninsula was defensible only with difficulty, given the problem of maintaining supply lines across the Shatt al-Arab. At the same time as the assault on Faw, an operation along the Faw–Basra road was intended to divert Iraqi forces. When Iraq launched a counter-offensive on Faw in mid-February, Iran opened up a second front in Iraqi Kurdistan, hundreds of miles to the north, with the Wal-Fajr 9 offensive. Despite heavy fighting, Iraq's counter-offensive made little progress and failed to dislodge an estimated 30,000 Iranian troops, now firmly entrenched in and around Faw. At the end of February the UN Security Council, while urging a cease-fire, for the first time cited Iraq as being responsible for starting the war.

In May 1986 Iraq made its first armed incursions into Iran since withdrawing its forces from Iranian territory in 1982. About 150 sq km of land, including the deserted town of Mehran (about 160 km east of Baghdad), were occupied. (Iran recaptured Mehran in July.) Also in May, in the first Iraqi air raid on Teheran since June 1985, Iran's second largest oil refinery was bombed, signalling a renewal of reciprocal attacks on urban and economic targets, which continued for the remainder of 1986 and into 1987. According to the *Washington Post* in December 1986, for the previous two years Iraq had received US intelligence assistance in targeting attacks on Iranian oil terminals and power plants. However, US intelligence sources were subsequently reported as asserting that both Iran and Iraq had been supplied with deliberately distorted or misleading information to assist the policies of the Reagan administration.

On 24 December 1986 Iran mounted an offensive (named Karbala-4, after the holy Shi'ite city in Iraq) in the region of Basra but failed to penetrate Iraqi defences on four islands in the Shatt al-Arab waterway. On 8 January 1987 a two-pronged attack (Karbala-5) was launched towards Basra. Iranian forces, attacking from the east, established a bridgehead inside Iraq, between the Shatt al-Arab, to the west, and the artificial Fish Lake to the east, and advanced gradually towards Basra, sustaining heavy casualties, while an assault from the south-east secured a group of islands in the Shatt al-Arab. Iran opened a second front, 400 km to the north, with the Karbala-6 offensive on 13 January. By mid-February Iranian forces from the east had advanced to within about 10 km of Basra, but no further gains were made and the Karbala-5 offensive was officially terminated at the end of the month.

In November 1986 it emerged that the USA, despite its official discouragement of arms sales to Iran by other countries, had been conducting secret negotiations with the Islamic Republic since July 1985, and had made three shipments of weapons and spare parts (valued at an estimated $100m.) to Iran, through Israeli and Saudi intermediaries, in September 1985, and July and October 1986. The shipments were allegedly in exchange for Iranian assistance in securing the release of US hostages who had been kidnapped by Shi'ite extremists in Lebanon, and an Iranian undertaking to abstain from involvement in international terrorism. The talks were reportedly conducted on the Iranian side by the Speaker of the Majlis, Hojatoleslam Hashemi Rafsanjani, with Ayatollah Khomeini's consent but without the knowledge of other senior government figures, including the Prime Minister and the President.

THE IRAN–IRAQ WAR: 1987

Iran rejected the offer of a cease-fire and peace talks made by Saddam Hussain in January 1987, and in the following months demonstrated its ability to launch attacks from one end to the other of its 1,200-km frontier with Iraq. The Karbala-7 offensive, in March, penetrated north-eastern Iraqi territory to a depth of about 20 km in the Gerdmand mountains, near Rawanduz—itself only some 100 km from Iraq's largest oilfields, at Kirkuk. On the southern front, in April Iran launched the Karbala-8 offensive from the salient 10 km east of Basra, which had been secured in Karbala-5. The Iranians claimed to have established a new front line about 1 km towards Basra, west of the artificial Twin Canals water barrier, although Iraq claimed that the attack had been repulsed. An almost simultaneous offensive, Karbala-9, was mounted in the central sector of the Iran–Iraq border, from near the Iranian town of Qasr-e-Shirin.

The war entered a potentially explosive new phase in 1987. Once more, the danger of an escalation of the conflict was focused on the shipping lanes of the Persian Gulf. During 1986 there had been some 100 attacks by Iran and Iraq on shipping in the Gulf. Iran had begun to use squads of high-speed patrol boats, crewed by Islamic Revolutionary Guards (*Pasdaran Inqilab*), stationed on islands in the Gulf, in attacks on commercial ships. In reprisal for Kuwait's support for Iraq, Iranian attacks were concentrated on Kuwaiti shipping and on neutral vessels and tankers carrying oil or other cargoes to and from Iraq via Kuwait. Between October 1986 and April 1987 15 ships bound to or from Kuwait were attacked by Iran in the Gulf, and several Kuwaiti cargoes were seized. Alarmed by the repeated attacks on its merchant ships and by the apparent indifference of the outside world to the war, Kuwait sought the protection of the leading powers for its shipping in the Gulf, and, by involving them more closely, hoped to persuade them of the urgent need for international co-operation in achieving a peaceful end to the conflict. The USSR and, subsequently, the USA were asked to re-register Kuwaiti ships under their flags, which they would then be obliged to defend if they came under attack. On 24 March, the day after the USA had made its navy available to escort Kuwaiti tankers, Iran threatened to halt the traffic in oil through the Gulf. In April the USSR allowed Kuwait to charter three Soviet tankers, and proposed international talks on the protection of commercial shipping in the Gulf. The USA rejected the Soviet proposal, but in May agreed to re-register 11 Kuwaiti tankers under the US flag and to increase its naval presence in the Gulf in order to protect them. This decision followed the apparently accidental attack in the Gulf by an Iraqi *Mirage* F-1 fighter plane on the USS *Stark* on 17 May, only hours after one of the Soviet tankers chartered by Kuwait had struck a mine while approaching a Kuwaiti port.

Iraq desisted from attacks on tankers for the next five weeks. At the end of June, following a hiatus of five weeks, and one week after Iraq, Iran resumed its attacks on Gulf shipping using high-speed launches based on the islands of Minou, Farsi and Abu Musa. Iran made it clear that it considered the US naval presence in the Gulf to be provocative, and fears of a military confrontation grew.

The escalation of tension in the Gulf resulted in a rare display of unanimity in the UN Security Council, which adopted a 10-point resolution (No. 598) on 20 July 1987, urging an immediate cease-fire in the Iran–Iraq War; the withdrawal of all forces to internationally recognized boundaries; and the co-operation of Iran and Iraq in mediation efforts to achieve a peace settlement. Iraq said that it would abide by the resolution if Iran did so (Iraqi attacks on tanker traffic had been halted in mid-July). Iran criticized the resolution for failing to identify Iraq as the original aggressor in the war, and claimed that the belligerent US naval presence in the Gulf (which rose to a peak of 48 vessels in 1987) rendered it null and void, but failed to deliver an official, unequivocal response.

The USS *Bridgeton* and the USS *Gas Prince*, the first Kuwaiti tankers to be re-registered under the US flag, passed unharmed through the Strait of Hormuz with a US naval escort on 22 July 1987. However, on 24 July the *Bridgeton* struck a mine (probably Iranian) near the Iranian island of Farsi, and struggled to port in Kuwait. The US naval force in the Gulf was ill equipped to deal with mines and US Government requests for minesweeping assistance were initially refused by its main NATO allies, who were anxious to avoid a confrontation with Iran. In August, however, the United Kingdom and France announced that they were to send minesweepers to the Gulf region; these were followed in September by minesweeping vessels from Belgium, the Netherlands and Italy. Iran was believed to have laid mines on the shipping routes to Kuwait, including the al-Ahmadi channel, the approach to Kuwait's main oil ports.

POLITICAL AND DIPLOMATIC DEVELOPMENTS IN 1987–88

During 1987 the conviction grew among the international community that Iran was attempting to spread the Islamic Revolution through a network of agents operating in its diplomatic missions abroad, and controlled by the Iranian Ministry of Intelligence and Internal Security. In March Tunisia broke off diplomatic relations with Iran, accusing it of fomenting Islamic fundamentalist opposition to the Government, and of recruiting Tunisians for terrorist operations abroad through its embassy in Tunis. Eight suspected terrorists (six of whom held Tunisian passports) were arrested in Paris in March. They were believed to be members of a network of 'sleeper' terrorist cells co-ordinated by Iran and established several years before. In June the French authorities sought to interview Wahid Gordji, who was officially listed as a translator at the Iranian embassy in Paris, in connection with a bombing campaign in the city in 1986. Although Gordji did not have diplomatic status the Iranians refused to give him up, and armed French police surrounded the embassy. The Iranian Government retaliated by throwing a cordon of armed Revolutionary Guards around the French embassy in Teheran. On 17 July France severed its diplomatic relations with Iran. The embassy siege was lifted at the end of November, when Gordji was permitted to leave France. Two days after his release, two French hostages held by Iranian-backed groups in Lebanon were set free. The French Prime Minister, Jacques Chirac, denied that a ransom had been paid to the hostages' captors but admitted that negotiations were continuing between France and Iran over the repayment of the \$670m. balance on the \$1,000m. loaned by the Shah to France in 1978. It was also rumoured that France had agreed to supply arms to Iran in order to secure the hostages' release. France and Iran resumed diplomatic relations and exchanged ambassadors in June 1988.

In June 1987 Ayatollah Khomeini approved a proposal by Hashemi Rafsanjani, the Speaker of the Majlis, which was reluctantly supported by President Khamenei, to disband the IRP. In a letter to Khomeini, the two leaders stated that, the institutions of the Islamic Republic having been established, contrary to the IRP's intended function, 'party polarization under the present conditions may provide an excuse for discord and factionalism'.

On 31 July 1987 attention was diverted from the Gulf by the deaths in riots in Mecca of 402 people, including 275 Iranian pilgrims (the majority of them women) engaged on the *Hajj* (pilgrimage) to the city's Muslim shrines. The Saudi authorities maintained that most of the victims had been trampled to death when some 150,000 Iranians (who, in contravention of Saudi laws governing the *Hajj*, had been demonstrating in support of Ayatollah Khomeini) went on the rampage, attacking Saudi security forces. The Iranians alleged that the Saudi police had opened fire on the pilgrims, and accused Saudi Arabia and the USA of planning the incident. A 'day of hatred' was proclaimed by the Government on 2 August, and Hashemi Rafsanjani promised vengeance.

In August 1987 Hojatoleslam Mehdi Hashemi, a close associate of Ayatollah Ali Hossain Montazeri (Ayatollah Khomeini's designated successor), was tried by a specially-appointed Islamic court and convicted of murder, the kidnapping of a Syrian diplomat in Teheran, of forming a private army (with the aim of overthrowing the Government and installing a more rigorous Islamic regime), and of planning explosions in Mecca during the *Hajj*. It was Hashemi who, in an attempt to disrupt the planned sale of US arms to Iran, had revealed to a Lebanese magazine, *Ash-Shira'*, details of the secret visits of the then US National Security Adviser, Robert McFarlane, and Lt-Col Oliver North, a senior National Security Council adviser, to Teheran in May 1986. Hashemi was executed on 28 September 1987.

In April 1988, following further Iranian attacks on Saudi and other neutral shipping in the Gulf, Saudi Arabia severed its diplomatic relations with Iran. Iran had been insisting on sending up to 150,000 pilgrims on the *Hajj* to the holy places in Saudi Arabia in 1988 (the same number as in 1987), despite the events of July 1987 and the subsequent deterioration in bilateral relations. A meeting of the Organization of the Islamic Conference (OIC, see p. 269), in Amman, had agreed a formula for 1988, whereby each Muslim nation would be permitted to send 1,000 pilgrims per 1m. citizens, giving Iran a quota of 45,000. Finally, Iran decided that it would send no pilgrims on the *Hajj* at all.

THE UN FAILS TO ENFORCE RESOLUTION 598

Frustrated by Iran's temporizing over a definitive response to UN Security Council Resolution 598, on 29 August 1987 Iraq, contrary to advice from Western governments, resumed attacks on Iranian oil installations and industrial targets, and on tankers in the Gulf transporting Iranian oil. Iran had exploited the 45-day lull in Iraqi attacks by raising the level of oil production and exports. Resolution 598 made provision for unspecified sanctions in the event of the failure of either or both sides to comply with its terms for a cease-fire. However, the resumption of Iraqi attacks weakened the UN's position in its attempts to secure a cease-fire through diplomacy, and made it less likely that the USSR, if it would accept the principle at all, could be persuaded that the arms embargo proposed by the USA and the United Kingdom should apply only to Iran.

Iranian threats of reprisals against Saudi Arabia and Kuwait for their support of Iraq ceased to be purely rhetorical when Iran fired three *Silkworm* missiles into Kuwaiti territory at the beginning of September 1987 (and a further three before the end of the year). Kuwait expelled five Iranian diplomats on 5 September. The visit, in mid-September, of the UN Secretary-General, Javier Pérez de Cuéllar, to Iran and Iraq was preceded by an intensification of Iraqi attacks on Iranian economic targets. In Teheran Iranian leaders told Pérez de Cuéllar that they supported the provision in Resolution 598 for the setting up of an 'impartial body' to apportion responsibility for starting the war, but that Iraq's guilt in this matter had to be established before Iran would observe a cease-fire. For its part, Iraq was prepared to accept the ruling of a judicial body in determining responsibility for the war, but stated that a formal cease-fire, according to the terms of Resolution 598, should precede the establishment of such a body.

Signs of an apparent willingness on Iran's part to modify its stand on Resolution 598 forestalled attempts by the USA, the United Kingdom and France to promote their proposal of an arms embargo against Iran, and also pre-empted the adoption

of diplomatic or other sanctions by the League of Arab States (the Arab League, see p. 264) at its meeting in Tunis on 20 September 1987. On 25 September Iran presented a plan to the UN Security Council, according to which it would observe a *de facto* cease-fire while a UN-appointed commission of inquiry determined which side was responsible for starting the war. An official cease-fire would take effect when the commission had identified the aggressor (by implication, Iraq). Iraq rejected these proposals as being a deviation from the terms of Resolution 598.

By mid-October 1987 the number of tankers being employed by Iran to shuttle oil from Kharg Island to Sirri and Larak Islands had declined to an estimated 20 vessels, owing to damage sustained during Iraq's intensified campaign of attacks in the Gulf. On 19 October four US naval vessels destroyed Iran's Rostam and Rakhsh oil platforms, about 100 km east of Qatar, which were, the USA alleged, being used to launch military operations against shipping.

On 22 December 1987 the USSR proposed discussions within the UN Security Council to consider a mandatory ban on the sale of arms to Iran. According to the Soviet proposal, these talks would take place at the same time as discussions on the introduction of an international naval force in the Gulf, under the control of the UN, which would replace the various national forces patrolling the region. Although all the five permanent members of the Security Council subsequently agreed on the need for further measures to be taken to ensure the compliance of both combatants with Resolution 598, the USSR's insistence on the withdrawal of foreign navies and the deployment of a UN naval force in the Gulf as a complementary measure, and the USA's growing military involvement in the area during 1988 (see below), prevented the adoption of an arms embargo.

CEASE-FIRE AND NEGOTIATIONS: 1988–89

During the first half of 1988 Iran suffered a series of military reverses in the war with Iraq, offsetting the gains that it had made during the previous few years. Meanwhile, divisions within the Government over the conduct of the war became more apparent, as Ayatollah Khomeini grew more frail and the political struggle for the succession intensified. However, the world was taken by surprise in July 1988 when, after 12 months of prevarication, Iran agreed, unconditionally, to accept Resolution 598 in all its parts.

In January 1988 Ayatollah Khomeini had intervened in a debate over the role of the government in an Islamic Republic to reject a narrow interpretation of its competence by President Khamenei, who had said that the government operated 'within the limits of Islamic law and Islamic principles'. Khomeini had replied that, on the contrary, the government was the primary instrument of Islamic rule and was competent to override certain aspects of Islam, even such practices as prayer (*salat*), fasting and the *Hajj* (three of the five 'pillars' of Islam), if it was in the interests of the state. In asserting the primacy of the government, Khomeini was believed to have strengthened the position of reformers, identified with Hashemi Rafsanjani, the Speaker of the Majlis, and Prime Minister Moussavi, who were attempting to enact legislation hitherto obstructed by the conservative clerics on the Council of Guardians.

The elections to the third Majlis in April and May 1988 provided a further boost for the reformers. The elections were the first not to be contested by the IRP, which had been dissolved in June 1987. Instead, all 1,600 candidates for the 270 seats in the Majlis were examined for eligibility by local committees and sought election as individuals. A record 16,988,799 people (68% of the electorate) voted in the first round of the elections on 8 April (when the majority of seats were contested), compared with 15.8m. in 1984 and 10.8m. in 1980. In June Hashemi Rafsanjani was re-elected as Speaker of the Majlis and Hossein Moussavi was overwhelmingly endorsed as Prime Minister. He presented a new Council of Ministers to the Majlis in July.

In January 1988 Iraq resumed the so-called 'tanker war'. During 1987, according to Lloyd's of London, Iran and Iraq had damaged 178 vessels in the Gulf (34 in December alone), compared with 80 during 1986. Although the US Navy continued safely to escort reflagged Kuwaiti vessels, traffic not under its protection, including Kuwaiti shipping, remained a target for Iranian attack. (When a cease-fire was proclaimed in July, a total of 546 vessels had been attacked since 1981, when the 'tanker war' began in earnest.) At the end of February 1988 the so-called 'war of the cities' (which, apart from sporadic attacks, had not been pursued in earnest since early 1987) was reopened when Iraq bombed a petroleum refinery on the outskirts of Teheran. Iran retaliated by bombing a petrochemicals plant in Basra. This was the beginning of a series of reciprocal attacks on civil and economic targets in the two countries which lasted for several months.

During 1987/88, for the first time in six years, owing to poor mobilization, disorganization and a shortage of volunteers, Iran was unable to launch a major winter offensive and began to lose ground to Iraqi advances along the length of the war front. In mid-April 1988 Iraqi forces regained control of the Faw peninsula, where the Iranians, who had been unable to strike out to make further gains since capturing the area in 1986, had scaled down their presence. Iran accused Kuwait of allowing Iraqi forces to use Bubiyan Island during the offensive. In March the Mujahidin Iranian National Liberation Army (NLA), supported by Iraq, undertook a major offensive for the first time since its creation in 1987, attacking Iranian units in Iran's south-western province of Khuzestan. In May Iraq recaptured the Shalamcheh area, south-east of Basra, driving Iranian forces across the Shatt al-Arab into Iran.

Identifying military inefficiency as the principal cause of these reverses, Ayatollah Khomeini appointed Hashemi Rafsanjani as acting Commander-in-Chief of the Armed Forces on 2 June 1988 and gave him the task of unifying the command structure and improving co-ordination between the regular armed forces, the Revolutionary Guards Corps (*Pasdaran*) (with its own land, naval and air forces) and the Mobilization (*Basij*) Volunteers Corps. At the beginning of July Rafsanjani announced the creation of a general command headquarters to rationalize the disjointed military command structure, but a merger of the army and the Revolutionary Guards was ruled out.

The changes came too late to prevent further Iranian defeats. Having won back more territory from the Iranian army in the north of Iraq near Sulaimaniya, in mid-June 1988, at the end of the month Iraq recaptured Majnoun Island and the surrounding area (the site of one of the world's biggest oilfields) in the al-Hawizah marshes, on the southern front.

In the Gulf, fears of a serious military confrontation between Iran and the USA were realized on 18 April 1988, when the US navy destroyed two Iranian oil platforms (Sassan and Nasr) in the southern Gulf, and six Iranian warships (a guided-missile boat, three speedboats and two frigates) were either sunk or badly damaged, in retaliation for damage allegedly inflicted on a US frigate by an Iranian mine on 14 April. On 3 July the USS *Vincennes*, the US navy's most sophisticated guided-missile destroyer, which had only recently been deployed in the Gulf to counter the threat to shipping of Iran's *Silkworm* missiles (which, the USA believed, were soon to become operational from a permanent site near the Strait of Hormuz), mistakenly shot down an Iran Air Airbus A300B over the Strait of Hormuz, having assumed it to be an attacking F-14 fighter-bomber; all 290 passengers and crew were killed.

Iranian forces were expelled from more Iraqi territory in Kurdistan during June and July 1988. Iraqi troops forced Iranian units back over the international border in the central sector of the war front, crossing into Iranian territory on 13 July for the first time since 1986, and capturing the Iranian border town of Dehloran. Menawhile, the last pockets of Iranian occupation in southern Iraq were cleared by Iraqi troops. On 18 July Iran officially announced its unconditional acceptance of Resolution 598. The first clause of the Resolution required the combatants to withdraw to international borders and to observe a cease-fire. Iraqi troops advanced further into Iran before retiring behind the border on 24 July. On the other hand, the NLA, over which Iraq claimed to have no control, launched a three-day offensive on 25 July, penetrating as far as 150 km into Iranian territory before being forced to withdraw. Iraq professed to have no designs on Iranian territory, but was possibly using the NLA as a proxy to prevent the Iranian forces from regrouping during a cease-fire which might prove to be only temporary. The implementation of a cease-fire was delayed by Iran's refusal to accede to an Iraqi demand for direct peace talks, under UN auspices, to commence prior to a cessation of

hostilities. Iran protested that Resolution 598 did not require this. However, Iraq withdrew its demand and a cease-fire finally came into force on 20 August, monitored by a specially-created UN observer force of 350 officers, the UN Iran-Iraq Military Observer Group (UNIIMOG).

Negotiations between Iran and Iraq for a comprehensive peace settlement began at foreign ministerial level in Geneva, Switzerland, on 25 August 1988, under the aegis of the UN. One of the most contentious issues to be decided at these talks was the status of the Algiers Agreement of 1975 between Iran and Iraq, which Iran insisted should be the basis for negotiations, but which Iraq rejected. According to the terms of the Algiers Agreement, which defined the southern border between Iran and Iraq as running along the deepest channel of the Shatt al-Arab waterway (the Thalweg line), the two countries exercise joint sovereignty over the waterway. However, President Saddam Hussain of Iraq publicly tore up the agreement (to which he had been a signatory) immediately prior to the Iraqi invasion of Iran in 1980, demanding full Iraqi sovereignty over the waterway, which Iraq held under previous agreements in 1847, 1913 and 1937. The matter of determining responsibility for starting the war was another potential obstacle to the negotiation of a lasting peace. It was generally accepted that Iraq initiated the conflict by invading Iran on 22 September 1980. Iraq, however, maintained that the war began on 4 September with Iranian shelling of Iraqi border posts. Resolution 598 provided for the establishment of an impartial body to apportion responsibility for the war. Finally, Iraq rejected Iranian demands for the payment of reparations, for which Resolution 598 did not provide.

The peace negotiations soon became deadlocked in disputes concerning sovereignty over the Shatt al-Arab and the right of navigation in the waterway and the Gulf, the exchange of prisoners of war, and the withdrawal of troops to within international borders. By August 1989 progress in the negotiations, at least as far as the border issue was concerned, had been insignificant, although some exchanges of prisoners of war had taken place. In November, in an attempt to unblock the negotiations, Iran proposed an immediate exchange of prisoners of war, accompanied by the withdrawal of troops to within international borders. By the end of the year, however, the cease-fire remained the only element of Resolution 598 to have been successfully implemented.

THE RUSHDIE AFFAIR

On 14 February 1989 Ayatollah Khomeini issued a religious edict *(fatwa)*, pronouncing a sentence of death on a British writer, Salman Rushdie, and his publishers, and exhorting all Muslims to carry out the sentence. Khomeini's edict followed demonstrations in India and Pakistan in protest at the imminent publication in the USA of Rushdie's novel, *The Satanic Verses,* the content of which was considered to be blasphemous by some Muslims. (Rushdie, born a Muslim himself, was therefore guilty of apostasy, an offence punishable by death under *Shari'a* law.) The novel had first been published in the United Kingdom in September 1988. The *fatwa* led to a sharp deterioration in relations between Iran and the United Kingdom and other Western countries. On 20 February Khomeini's sentence on Rushdie was condemned at a meeting of the ministers responsible for foreign affairs of the 12 member states of the European Community (EC, now European Union—EU). Senior-level diplomatic contacts between the member states and Iran were suspended, while the United Kingdom announced the withdrawal of its diplomatic representatives and personnel in Teheran. Iran, in turn, announced the withdrawal of all diplomatic representatives and staff in EC member countries, and on 7 March severed diplomatic relations with the United Kingdom.

While the significance of the Rushdie affair was initially defined in terms of its effect on Iran's foreign relations, it soon became apparent that the issue was being used tactically by vying factions within the Iranian leadership. In a speech on 22 February 1989 Khomeini referred explicitly to a division in the Iranian leadership (between 'liberals' who sought Western participation in Iran's post-war reconstruction, and 'conservatives' who opposed Western involvement) in terms which implied that *The Satanic Verses* was the culmination of a Western conspiracy against Islam, and declared that he would never allow the 'liberal' faction within the leadership to prevail.

By late March 1989 it was clear that Khomeini's intervention had decisively strengthened the hand of the 'conservatives'. In early April Ayatollah Montazeri, regarded as a 'liberal' (who had been elected as successor to Ayatollah Khomeini by the Council of Experts in 1985), resigned. It was reported that, in the absence of any individual with sufficient authority to assume the role, the Council of Experts had established a five-member leadership council to replace Montazeri as Khomeini's successor. On 24 April a 20-member council was appointed by Ayatollah Khomeini to draft amendments to the Iranian Constitution.

IRAN AFTER KHOMEINI

Ayatollah Khomeini died on 3 June 1989. In an emergency session on 4 June the Council of Experts elected President Khamenei to succeed Ayatollah Khomeini as Iran's spiritual leader, and on 5 June Prime Minister Hossein Moussavi declared his support, and that of all government institutions, for Khamenei. On 8 June Hashemi Rafsanjani reiterated his intention to stand as a candidate at the forthcoming presidential election, and on 12 June he was re-elected for a further one-year term as Speaker of the Majlis.

Despite the apparent intensification in the struggle for power within the Iranian leadership in the months preceding Ayatollah Khomeini's long-anticipated death, both 'conservatives' and 'liberals' gave their support to the candidacy of Hashemi Rafsanjani for the Presidency. The presidential election, held on 28 July, was contested by only Rafsanjani and Abbas Sheibani, a former minister who was widely regarded as a 'token' candidate. According to official figures, Rafsanjani received some 15.5m. (95.9%) of a total 16.2m. votes cast. At the same time 95% of voters approved 45 proposed amendments to the Constitution, the most important of which were the elevation of the President to the Government's Chief Executive and the abolition of the post of Prime Minister. Rafsanjani was sworn in as President on 17 August. The new Council of Ministers was regarded as a balanced coalition of 'conservatives', 'liberals' and technocrats, and its endorsement by the Majlis was viewed as a mandate for Rafsanjani to conduct a more conciliatory foreign policy towards the West (in particular with regard to the Western hostages held captive by pro-Iranian Shi'ite groups in Lebanon) and to introduce reforms designed to stimulate economic reconstruction.

While the amendments to the Constitution increased the power of the Presidency, it was anticipated that Rafsanjani's leadership would be challenged by several factions, including Ahmad Khomeini, son of the late Ayatollah Khomeini, and by the Minister of the Interior, Ali Akbar Mohtashami, and the Minister of Intelligence, Muhammad Muhammadi Reyshahri, both of whom were known to be advocates of a doctrine of 'permanent revolution' and to accept international terrorism as a means to achieve this aim. Both Mohtashami and Reyshahri were excluded from the new Council of Ministers.

While Western support was regarded as vital to Iran's economic reconstruction by Rafsanjani and his supporters within the Iranian leadership, it was regarded as anathema by his opponents, who feared that it would lead to the erosion of Islamic values and the betrayal of the Revolution. Rafsanjani's fundamental problem on assuming the presidency was to find a way of securing Western support without alienating the 'conservative' faction within the leadership, which remained too powerful to be directly confronted. The urgency of the need for economic reform was demonstrated by increased incidents of popular protest against food shortages and high prices in early 1990. In May 1990 an 'open letter' was addressed to Rafsanjani by 90 prominent clerics, professionals and retired soldiers associated with the Liberation Movement of Iran, which was legal but did not enjoy official approval. The 'open letter' criticized government policies, complained of massive corruption and regretted Iran's international isolation. It led to widespread arrests, which appeared to indicate that Rafsanjani was unable to control his 'conservative' opponents. Divisions within ruling circles were exemplified by the dispute between Rafsanjani and his opponents over whether to accept Western aid following an earthquake in Gilan and Zanjan provinces in June 1990, in which some 40,000 people died. After initial hesitation, in what

was regarded as an important victory for Rafsanjani, Western aid was accepted.

FOREIGN RELATIONS

Although the death sentence on Salman Rushdie remained in force, the tension created by its initial pronouncement in February 1989 lessened somewhat in the ensuing months. In March EC ministers of foreign affairs agreed that member states should be allowed to reinstall their ambassadors in Teheran. There was evidence, too, of an improvement in relations between Iran and the communist bloc. In late June Rafsanjani visited the USSR, where he and the Soviet leader, Mikhail Gorbachev, signed a 'declaration on the principles of relations' between Iran and the USSR. These relations were strained in January 1990, however, when Iranian politicians voiced support for the Muslim Azerbaijani revolt against the Soviet central Government in the Nakhichevan enclave on the Iranian border.

In mid-July 1989 the USA unexpectedly offered to pay compensation directly to the families of the 290 passengers and crew of the Iran Air Airbus mistakenly shot down by the USS *Vincennes* in July 1988. However, the Iranian Government insisted that the compensation should be distributed through its agencies, rather than privately, and took the dispute to the ICJ. The fragility of Iran's relations with the USA was underlined in early August when, in response to the abduction by Israeli forces of the Lebanese Shi'a Muslim leader, Sheikh Abdul Karim Obeid, a US hostage in Lebanon, Lt-Col William Higgins, was executed by his captors, who threatened the execution of more hostages if Sheikh Obeid was not released. While Iran denied any involvement in the death of Lt-Col Higgins, it was widely suspected of complicity. Whatever its role, the USA immediately engaged in urgent negotiations with Iranian leaders in order to prevent further killings. In November 1989 the USA agreed to release US $567m. of the total of $810m. of Iranian assets that had been seized 10 years previously, at the time of the siege of the US embassy in Teheran, in order to secure US bank claims on Iran.

In April 1990, following the release of two US citizens who had been held hostage by pro-Iranian groups in Lebanon, the USA thanked both the Syrian and the Iranian Governments for the part that they had played in securing the hostages' release. In March 1990 a report in an Iranian newspaper had assured the USA that Iran would do what it could to secure the release of hostages, while elsewhere it had been reported that indirect contacts between the USA and Iran were taking place with regard to their release. Two Iranian diplomats were reported to be acting as liaison officers between Teheran and the pro-Iranian Hezbollah. In May 1990 the USA and Iran concluded a 'small claims agreement', whereby US claimants were to be repaid for losses incurred during the Iranian Revolution in 1979. In June 1990 Iran agreed to pay the US company Amoco $600m. in compensation for US oil operations which had been expropriated during the Revolution.

Relations between Iran and the United Kingdom fluctuated during the first half of 1990. In February the United Kingdom expelled nine Iranian diplomats for reasons of national security, and, as a retaliatory gesture, Iran closed the office of the British Broadcasting Corporation in Teheran. In the same month, however, President Rafsanjani described the *fatwa* against Rushdie as an exclusively Islamic issue (implying that it ought not to interfere with the re-establishment of normal relations between Iran and the United Kingdom), while trade between the United Kingdom and Iran was reported to be increasing. In May it was reported that the United Kingdom was involved in indirect contacts with Iran concerning four British nationals held hostage by pro-Iranian groups in Lebanon, and the United Kingdom announced that it was prepared to resume direct talks with the Iranian Government. In June, however, Ayatollah Khamenei declared that the *fatwa* could never be repealed.

Iran's position of strict neutrality during the Kuwait conflict (see below) brought rapid dividends. On 27 September 1990 Iran and the United Kingdom resumed diplomatic relations after, in an exchange of letters, Iran had assured the United Kingdom of its respect for international law and of its commitment to achieving the release of Western hostages held in Lebanon. The United Kingdom assured Iran of its respect for Islam, and stated that it understood the offence that Rushdie had caused to Muslims. In October the EC revoked its ban on senior-level diplomatic contacts with Iran.

In May 1990, during a meeting with EC officials in Dublin, Ireland, an Iranian delegation reiterated Iran's pledge to work towards securing the release of Western hostages in Lebanon. A diplomatic initiative by the Irish Government was believed to have brought about the release, in August, of an Irish citizen held hostage for four years by a pro-Iranian group in Lebanon.

IRAQ CONCEDES IRAN'S PEACE TERMS

In early 1990 Iran and Iraq agreed to resume negotiations in the USSR, at the invitation of the Soviet Ministry of Foreign Affairs. In July the Iraqi and Iranian Ministers of Foreign Affairs conferred at the UN in Geneva. It was the first such direct meeting between them since the cease-fire in the war had taken effect, and had been facilitated by an exchange of letters between Presidents Saddam Hussain and Rafsanjani in May. However, this breakthrough in the peace process was quickly overtaken by the consequences of Iraq's invasion and annexation of Kuwait in August 1990.

On 16 August 1990 Saddam Hussain abruptly sought an immediate, formal peace with Iran by accepting all the claims that Iran had pursued since the declaration of a cease-fire, including the reinstatement of the Algiers Agreement of 1975 dividing the Shatt al-Arab. While these concessions were transparently dictated by expediency (on 17 August Iraq began to redeploy in Kuwait troops hitherto positioned on its border with Iran) and thus left the conflicts underlying the Iran–Iraq War unresolved, they were welcomed by Iran—which none the less insisted that the issue of peace with Iraq was separate from that of Iraq's occupation of Kuwait. Exchanges of an estimated 80,000 prisoners of war commenced on 17 August, and on 18 August Iraq began to withdraw troops from the central border areas of Ilam, Meymak, Mehran and Naft Shahr. On 11 September Iran and Iraq re-established diplomatic relations.

The withdrawal of all armed forces to the internationally recognized boundaries was verified and confirmed as complete on 20 February 1991 by UNIIMOG, whose mandate was terminated on 28 February 1991 by the UN Security Council. Iran and Iraq subsequently initiated a 'confidence-building' process of reducing the levels of troops and military equipment in the border areas. Exchanges of prisoners of war continued until 16 January 1991, when the multinational force commenced military operations to expel Iraqi armed forces from Kuwait. At this time Iran still held 30,000 Iraqi prisoners of war. Preliminary negotiations on the full implementation of Resolution 598 were also curtailed.

The publication in August 1991 of the report of a UN delegation sent to Iran—in accordance with the terms of Resolution 598—to assess the level of human and material damage caused by the war with Iraq seemed to indicate that the UN was once again considering the need for a comprehensive peace settlement. The Iranian Government released its own assessment of the damage caused by the war with Iraq. It estimated that during the war Iran experienced direct damage amounting to IR 30,811,000m.; that 50 towns and 4,000 villages were destroyed or badly damaged; and that 14,000 civilians were killed, and 1.25m. people displaced.

IRAN AND THE CONFLICT OVER KUWAIT

Iran condemned Iraq's invasion of Kuwait in August 1990 and offered to defend other Gulf states from Iraqi aggression, but it welcomed Iraq's offer of a formal settlement of the Iran–Iraq War on Iran's terms (see above). While Iran stated that it would observe the economic sanctions imposed on Iraq by the UN, Iraq was believed to have tried to persuade Iran to trade oil for food. However, the Iranian Government adhered to its pledge to implement economic sanctions for the duration of the conflict over Kuwait, sending only supplies of food and medicine to Iraq on a humanitarian basis.

As the deployment of a multinational force (assembled in accordance with Article 51 of the UN Charter) for the defence of Saudi Arabia gathered pace, Iran urged the simultaneous and unconditional withdrawal of Western—above all of US—armed forces from the Gulf region, and of Iraqi armed forces from Kuwait. In September 1990 Ayatollah Khamenei almost endorsed the demands of 'conservatives', such as Hojatoleslam

Ali Akbar Mohtashemi, for Iran to ally itself with Iraq in a *jihad* (holy war) against Western forces in the Gulf. President Rafsanjani's position was that the presence of these forces was tolerable on condition that they withdrew as soon as the conflict in Kuwait had been resolved.

Following the outbreak of military hostilities between Iraq and the multinational force in January 1991, Iran attempted, unsuccessfully, to intercede. After having consulted with Algeria, Yemen, France, the USSR and the Non-aligned Movement, Iran urged an 'Islamic solution' to the conflict. On 4 February 1991 President Rafsanjani announced that the terms of an Iranian peace proposal had been conveyed to Saddam Hussain during the visit to Teheran, on 1–3 February, of Iraq's Deputy Prime Minister, Dr Sa'adoun Hammadi; and claimed that the terms of the proposal were consistent with resolutions adopted by the UN Security Council. An immediate cease-fire was to be followed by the simultaneous and complete withdrawal of Iraqi armed forces from Kuwait, and of all foreign forces from the Gulf region. In deference to Iraq's insistence on the 'linkage' of the conflict in Kuwait with other conflicts in the Middle East (in particular the continuing Israeli occupation of the West Bank and the Gaza Strip), Iran also urged the immediate cessation of new Israeli settlements in the Occupied Territories.

While the Iranian peace proposal was welcomed by the USSR, it was rejected by the USA, and on 8 February 1991, in a letter to President Rafsanjani, Saddam Hussain dismissed it, stating that Iraq had no intention of withdrawing from Kuwait, and accusing the USA of seeking to dominate the Middle East by destroying Iraq. There was no clear expression of support for the Iranian peace proposal at a closed session of the Non-aligned Movement, held in Belgrade, Yugoslavia, on 11–12 February, and thereafter Soviet diplomacy came to the fore in attempting to find peace terms which might avert a ground war. Iran claimed some of the credit for the concessions offered in an Iraqi peace proposal on 15 February, and urged the multinational force not to initiate hostilities on the ground until the limits of Iraq's flexibility had been determined. However, the countries contributing to the multinational force were unwilling, by this stage, to allow Iraq the opportunity to procrastinate.

As the air bombardment of Iraq and occupied Kuwait continued, Iran accused the multinational force of exceeding the terms of resolutions adopted by the UN Security Council by seeking to destroy Iraq's military and industrial facilities. However, when, in late January 1991, more than 100 Iraqi fighter aircraft landed in Iran without having sought permission to do so, Iran lodged a protest with Iraq and impounded both the aircraft and their pilots for the duration of the conflict.

Relations between Iran and Iraq deteriorated after the conclusion of hostilities between Iraq and the multinational force. In response to the suppression, by Iraqi armed forces loyal to President Saddam Hussain, of a Shi'a-led rebellion against the Baath regime in southern and central Iraq, Iran declared its commitment to the territorial integrity of Iraq, but demanded the resignation of Saddam Hussain and protested at the damage inflicted by Iraqi armed forces on Shi'a shrines at Najaf, Karbala and Samarra. Iraq accused Iran of providing material and human support for the southern and central rebellions, citing the involvement of the Teheran-based Supreme Council of the Islamic Revolution in Iraq. In a clear indication of deteriorating relations, Iraq later resumed support for the military activities of the largest Iranian dissident groups, the Mujahidin-e-Khalq and the Kurdish Democratic Party (KDP). Iraq's suppression of the internal rebellions led to a mass flight of Iraqi Kurds and Shi'a Muslims across the Iranian border. By May 1991 more than 1m. Iraqi Kurds had fled to Iran, while the number of Shi'a refugees in Iran was estimated at 65,000.

Iran supported the Western initiative to establish 'safe havens' for Iraqi Kurds in northern Iraq, and urged, unsuccessfully, similar support for Iraqi refugees in Iran. Throughout June and July 1991 Iran accused the Iraqi armed forces of harassing Iraqi Shi'a Muslims who had fled into the marshes of southern Iraq after the defeat of the southern rebellion in March. There were conflicting reports regarding the accuracy of these allegations and of the number—estimated by Iran at 600,000—of Shi'a Muslims who had sought refuge in the marshes.

DOMESTIC REFORM UNDER RAFSANJANI

While the onset of the crisis in the Gulf in August 1990 led to further friction between the rival factions in the Iranian leadership, President Rafsanjani gradually asserted his authority and began the long process of seeking to reduce the power of the 'conservatives'. At times his relationship with Ayatollah Khamenei became tense, especially with regard to foreign policy issues. However, in October 1990 they formed an alliance to prevent the election of many powerful 'conservatives' to the 83-seat Council of Experts, which chooses Iran's supreme leader and interprets the Constitution. Hojatoleslam Ali Akbar Mohtashemi and Ayatollah Khalkhali were among those rejected as candidates by Khamenei, on the grounds that their expertise in the Koran was inadequate. In December 1990 the Majlis enacted legislation to allow defendants legal representation. The new legislation was thought to signal a move towards the less rigorous application of Islamic law.

In April 1991 it was announced that Iran's internal security services—the police, the gendarmerie and the Islamic *Komitehs*—were to be merged. The *Komitehs* had hitherto acted as the chief enforcers of 'Islamic behaviour' within post-revolutionary Iranian society. In the same month the release of a British businessman, Roger Cooper, who had been imprisoned without trial since 1985 for alleged espionage, was regarded as a further sign of Rafsanjani's ascendancy. In May 1991 Amnesty International was allowed access to Iran for the first time since the Revolution.

Disturbances and demonstrations in Teheran and other parts of the country in August 1991 indicated significant levels of popular discontent. In April and May 1992 further demonstrations occured, most notably in Teheran and Mashad. Eight protestors were executed by the authorities. An important factor in the unrest was municipal action in many cities against squatter settlements.

Elections to the fourth Majlis in April and May 1992 seemed to provide Rafsanjani with the opportunity further to shift the balance of power against the 'conservatives'. It was estimated that about 70% of the deputies elected to the new Majlis were supporters of Rafsanjani. The incoming deputies appeared to be more highly educated, younger and more technocratic in orientation than their predecessors. Rafsanjani installed a new Speaker of the Majlis, Ali Akbar Nateq Nouri, who replaced the 'conservative' Mahdi Karrubi. However, it subsequently became clear that assessments predicting the support of the majority of the new deputies for Rafsanjani's policies were incorrect.

The new Government indicated that it wished to proceed rapidly with measures to end all subsidies and the system of multiple foreign exchange rates; and to allow full foreign ownership of companies. In fact, the pace of economic reform in the months following the election to the fourth Majlis remained cautious, and Rafsanjani remained constrained not least by the fact that economic reform was lowering the standard of living of the traditional constituency of the Islamic regime, the urban lower classes. The middle classes, supposedly one of the engines of reform, remained deeply distrustful of the regime. Rafsanjani quickly discovered, too, that the nominally reformist deputies in the new Majlis were far from uncritical in their support for his policies.

The extent to which Rafsanjani had lost popular support became clear when he stood for re-election to the presidency on 11 June 1993. Competing against three supposedly 'token' candidates, Rafsanjani received 63.2% of the vote in a low electoral turn-out of 56%. His nearest rival, former Minister of Labour, Ahmed Tavakkoli, received 24% of the vote, a performance widely attributed to his stringent criticisms of state corruption, social injustice and economic mismanagement.

During 1994 there were numerous signals that the problems encountered by Rafsanjani in implementing his reform programme were emboldening 'conservative' forces, encouraged by Ayatollah Khamenei, to challenge the President more directly. In February there was an attempt on his life during a speech he made at Khomeini's tomb. Responsibility for the attack was later claimed by the self-styled 'Free Officers of the Revolutionary Guards'. Later in the month the President was obliged to replace the Minister of Culture and Islamic Guidance after Ayatollah Khamenei had approved the appointment of the incumbent minister, Ali Larijani, to replace the President's

brother, Muhammad Hashemi, as director-general of the national broadcasting authority. For several months prior to his dismissal Muhammad Hashemi Rafsanjani had been criticized by 'conservatives' within the Majlis for mismanagement and for encouraging immoral broadcasts. While President Rafsanjani denied that the dismissal of his brother reflected on him, it was perhaps significant that, shortly afterwards, he announced that he would not seek a constitutional amendment which would allow him to serve a third term as President. Opponents of the President in the Majlis also sought to modify economic reforms proposed by the Government. In May the Government indicated that it would proceed more cautiously with a plan to reduce economic subsidies applied to basic commodities. (Muhammad Hashemi Rafsanjani was appointed Vice-President in charge of Executive Affairs and War Reconstruction in August 1995.)

The atmosphere of political malaise was further deepened in June 1994 by the bombing of the Imam Reza shrine in Mashad, which left at least 24 dead. The Government blamed the Mujahidin-e-Khalq; others speculated that it might be the work of militant members of the Sunni minority in Iran, angered by the destruction of a Sunni mosque earlier in the year. A crisis threatened in the following month when, in the space of a few days, two Iranian Christian leaders were assassinated in Teheran and bombs wrought havoc against Jewish targets in London, United Kingdom, and Buenos Aires, Argentina.

Riots were reported in August 1994 in the cities of Qazvin and Tabriz. In Qazvin they were caused by the defeat in the Majlis of a government proposal to separate the city from the province of Zanzan and to establish it as the capital of a new province. In response to the riots the Government announced that Qazvin would immediately be incorporated into Teheran province, a decision which was formally approved in September. In April 1995 riots in Islamshahr, a suburb of Teheran, were interpreted as a protest against the Government's programme of economic reforms, which had led to shortages of some consumer goods during the previous 12 months, and had caused the price of petrol to double in the previous month.

In August 1995 members of the special commission for monitoring political parties were reported to have stated that political parties, associations and groups were free to conduct political activities in Iran on condition that they honoured the country's constitution. At the same time, however, it was reported that Nehzat-Azadi (Liberation Movement of Iran) had been refused permission formally to register as a political party, despite its hitherto quasi-legal status. Earlier in the month representatives of Nehzat-Azadi had criticized new legislation granting the 12-member Council of Guardians the power to approve election candidates.

Elections to the fifth Majlis in March and April 1996 provided another important gauge of the shifting balance of power between 'liberals' and 'conservatives' in Iranian politics. The 'liberals' were grouped around a political faction named the Servants of Iran's Construction, which enjoyed the tacit support of President Rafsanjani. Its 'conservative' counterpart was the Society of Combatant Clergy, of which the unofficial patron was Ayatollah Khamenei. While a total of 10 political groups were acknowledged to have presented candidates for election, official disapproval of such groups was reflected in the authorities' refusal to publish the political affiliations of successful candidates. According to unofficial sources, however, the Society of Combatant Clergy was expected to enjoy the support of 110–120 deputies in the new Majlis, and the Servants of Iran's Construction that of 90–100.

FOREIGN RELATIONS UNDER RAFSANJANI

Efforts at domestic reform under Rafsanjani were accompanied by periodic diplomatic initiatives by Iran, aimed at securing its reintegration into the international community. The greatest single obstacle to improved relations with Western countries was initially Iran's perceived complicity in the holding of Western hostages in Lebanon by groups linked to the pro-Iranian Hezbollah. Between August and December 1991, with Iran, Syria, Israel and the UN diplomatically active, all remaining British and US hostages were released. While the aim of the captors was to trade the release of such hostages for the release of Shi'a hostages held by Israel, it was decided ultimately to release them unconditionally. The last remaining Western hostages were freed in June 1992.

The release of US hostages, accompanied by some progress at the US-Iran Claims Tribunal in The Hague, the Netherlands, temporarily removed some of the tension between the USA and Iran. In September 1990 the USA paid Iran US $200m. for armaments not delivered after the Revolution of 1979. In December 1991 a further $278m. was paid by the USA. In March 1992 the USA was ordered to compensate Iran for property frozen in the USA after 1979.

Relations between the USA and Iran deteriorated after President Bill Clinton took office in January 1993. Throughout the year the USA pressed initially reluctant Western allies to reduce levels of economic assistance to Iran and sought to block Iranian efforts to reschedule its international debts. In May 1994 US pressure was evident when it emerged that no new loans would be made to Iran by the World Bank in the foreseeable future. In June President Rafsanjani stated at a press conference that Iran sought a gesture of goodwill, such as the release of frozen assets, from the USA as a prelude to improved relations. In July the bomb attacks against Jewish targets in London and Buenos Aires prompted the USA to accuse Iran—which it alleged was responsible for the attacks—of seeking to disrupt the Middle East peace process. In August, however, the Argentinian authorities decided that there was insufficient evidence to pursue charges against four Iranians for whose arrest international warrants had earlier been issued.

In early 1995 the USA, the United Kingdom and Israel were reported to be alarmed at the possibility that Iran might be able to manufacture nuclear weapons within a few years. This was at the time of a final preparatory UN session before a conference on the extension of the Nuclear Non-Proliferation Treaty (NPT) took place, and Iran was reported to be seeking a more effective effort from the five principal nuclear powers to disarm further, and insisting that Israel should also sign the NPT. (Israel had previously refused to do so because it perceived itself to be potentially at risk of nuclear attack by Syria, Iraq and Iran.) According to some observers, Iran's aim was to pressurize Western governments into offering it assistance with its civilian nuclear programme. The head of the Atomic Energy Organization of Iran subsequently suggested that Iran would remain a party to the NPT whether Israel signed it or not. The International Atomic Energy Agency (IAEA, see p. 250) stated that it had found no evidence to suggest that Iran was seeking to develop nuclear weapons. In early 1995 Russia was reported to be determined to sell at least one 1,000-MW nuclear reactor to Iran in accordance with an agreement concluded despite the objections of the USA, where members of the Republican opposition in the US Congress had raised the possibility of discontinuing aid to Russia in retaliation for the sale. Japan's decision, in February, to postpone the extension of a $450m. loan to Iran to finance the Godar-e-Landar dam was reported to be the result of US diplomatic pressure, in particular the disclosure to the Japanese authorities of US intelligence reports about unspecified Iranian activities. In March the US company Conoco withdrew from a contract to develop Iranian oil fields after the USA announced that President Clinton would shortly issue an executive order prohibiting US companies from such activities.

On 30 April 1995 US efforts to isolate Iran internationally culminated in the announcement of a complete ban on trade with Iran within 30 days: all US companies and their foreign subsidiaries would be prevented from investing in Iran, and from undertaking any trade with it. There was no international support for such an embargo, and without the support of Iran's European trading partners and of Japan it was far from clear how the embargo would damage Iran's long-term economic interests. Furthermore, the USA subsequently conceded that US oil companies active in the Caucasus and in Central Asia would be allowed to participate in exchange deals with Iran in order to facilitate the marketing of petroleum from former Soviet states. In the immediate aftermath of its announcement, however, the value of the Iranian rial declined by about one-third. In an interview broadcast by US cable television in early July, President Rafsanjani denied US allegations that Iran sponsored terrorism and was seeking to develop nuclear wea-

pons, or that Iran was offering any material assistance to Palestinian groups opposed to the Middle East peace process.

In late 1995, in response to the lack of international support—except that of Israel—for the ban on trade with Iran, the US Congress drafted legislation aimed at pressurizing other countries into observing it. The US Administration, however, opposed initial attempts by the US Congress to force the USA's trading partners to impose trade sanctions on Iran; and Japan and the EU threatened to refer the issue to the World Trade Organization if such legislation were to be adopted. In March 1996 the USA and Israel accused Iran of being an active supporter of the Palestinian group, Hamas, which had claimed responsibility for a wave of suicide bombings in Israel. Iran denied any involvement in the bombing campaign. Moreover, the US Government publicly stated that it was investigating allegations of Iranian involvement in the June 1996 bomb attack on US military personnel at al-Khobar, near Dhahran, in Saudi Arabia.

In June 1996 the US House of Representatives approved legislation seeking to penalize companies operating in US markets that were investing US $40m. or more in Iran's oil and gas industry. The sanctions received presidential assent despite sustained protests from Japan and the EU. The investment 'ceiling' was lowered to $20m. in August 1997. Like the trade embargo imposed in 1995, however, these co-called secondary sanctions were effectively disregarded by the international community.

Despite US pressure, and in spite of the unresolved issue of the *fatwa* seeking the death of Salman Rushdie, the EU persisted with a policy of 'critical dialogue' with Iran. However, in March 1996 it threatened to reconsider this policy following alleged remarks by President Rafsanjani welcoming the assassination of the Israeli Prime Minister, Itzhak Rabin. In the same month the German Government announced that a warrant had been issued for the arrest of the Iranian Minister of Information, Ali Falahian, in connection with the murders of four prominent members of the dissident Democratic Party of Iranian Kurdistan in Berlin in 1992. 'Critical dialogue' was suspended in April 1997, after a German court ruled that the Iranian authorities had ordered the dissidents' assassination: testimonies at the trial directly implicated senior members of the Iranian political and religious establishment in the murders, and, moreover, alleged that Falahian had attempted to influence the outcome of the case. (The court found two defendants–an Iranian and a Lebanese national—guilty of the murders, sentencing them to life imprisonment, and two others—both Lebanese nationals—of having been accessories to the killings.) Germany announced the withdrawal of its ambassador to Teheran and expelled four Iranian diplomats, and other EU members similarly withdrew their representatives. Iran retaliated by threatening to bring lawsuits against 24 German companies allegedly involved in supplying chemical weapons to Iraq during the Iran–Iraq War.

During the conflict over Kuwait in 1990–91 and its aftermath, Iran sought to normalize its relations with Egypt, Tunisia, Jordan and the Gulf states, and to reassert itself as a regional power. In March 1991 it re-established diplomatic relations with Saudi Arabia, and about 115,000 Iranian pilgrims were subsequently able to participate in the that year's *Hajj*. Thereafter, however, relations were characterized by mistrust.

In August 1991 Iran and Iraq met directly for talks on a comprehensive settlement to the 1980–88 war. A UN Commission had formally blamed Iraq for starting the Iran–Iraq War and Iran expected a proposed UN conference to award it US $100,000m. in reparations. In April 1992 Iran launched airstrikes against Mujahidin-e-Khalq camps in Iraq. Iraq protested to the UN Security Council. The treatment by the Iraqi Government of its southern Shi'a population continued to obstruct relations between Iran and Iraq. In February 1995 and in May Iran denied Iraqi allegations that armed groups under Iranian control had been responsible for attacks inside Iraqi territory on Iraqi armed forces and on a base of the Mujahidin-e-Khalq. In May there was evidence, in the form of preparations for a visit to Baghdad of the Iranian Minister of Foreign Affairs, that Iran was seeking an improvement in its relations with Iraq, possibly so that the two countries could co-operate to counter US hostility. In August, however, on the anniversary of the end of the Iran–Iraq War, the Iraqi President made an uncompromising speech in which he criticized Iran for continuing to detain Iraqi prisoners of war, refusing to release Iraqi aircraft impounded in January 1991, and for rejecting Iraqi efforts to secure peace.

Iran reacted negatively to efforts based on the Damascus Declaration of March 1991 to create a regional security structure in the Gulf from which it was itself excluded. While opposing the defence agreements which the Gulf states subsequently negotiated with the USA, Iran focused its diplomatic efforts on improving its relations with them. Significant progress in that sphere was thwarted by a dispute between Iran and the United Arab Emirates (UAE) over the islands of Abu Musa after March 1992, when Iran occupied those parts of the Abu Musa islands and the Greater and Lesser Tunbs that had remained under the control of the Emirate of Sharjah since the original occupation in 1971. In September 1992 the Arab League expressed its support for the UAE in the dispute over the islands, and at the end of the month negotiations between Iran and the UAE on this issue collapsed. In September 1993 Iran refused to accept any preconditions for discussions with the UAE on the dispute. In December 1994 the UAE announced its intention to refer the dispute to the ICJ. In November 1995 Iran and the UAE held direct talks on the issue for the first time in three years, but again no progress was made.

A further source of tension between Iran and the members of the Co-operation Council for the Arab States of the Gulf (or Gulf Co-operation Council—GCC, see p. 255) states arose in June 1996, when the GCC accused Iran of plotting to overthrow the Government of Bahrain. The allegations, which were strongly denied by Iran, prompted a downgrading of diplomatic relations between Iran and Bahrain.

The dramatic developments in the USSR after August 1991 opened up a new arena for Iranian diplomacy in Central Asia, as Iran, Saudi Arabia and Turkey vied for influence in the newly-independent states of Central Asia. Iran is seeking to strengthen its position in Central Asia through bilateral agreements and institutions such as the Teheran-based Economic Co-operation Organization (ECO, see p. 278). These new alliances gave rise to renewed concern in the West at the extent of Iranian political, economic and religious influence. In June 1994, under the auspices of the UN, Iran attempted to mediate a cease-fire in the civil war which had erupted in Tajikistan in 1992. In September 1994 the Tajik Government and its opponents signed a cease-fire agreement in Teheran. In July 1995 Iran sponsored further talks between the Tajik Government and its opponents, which resulted in an extension of the cease-fire agreement.

During 1996 Iran became increasingly interested in events in Afghanistan, owing to the military advance of the Sunni fundamentalist Taliban guerrilla fighters in that country. Following the Taliban capture of the Afghan capital, Kabul, in September 1996, Iran accused the group of being a proxy for US, Saudi and Pakistani interests in the country. The Iranian Government refused to recognize the Taliban-sponsored authorities in Kabul, and continued to express support for ousted President Rabbani. In early June 1997, amid accusations of espionage activities, the Taliban authorities in the Afghan capital closed the Iranian embassy and requested the departure from Afghanistan of all Iranian diplomats. In retaliation, Iran ordered the halt of all trade (including goods in transit) across its land border to Afghanistan, prompting Taliban accusations that Iran had perpetrated 'a violation of international protocols'.

In April–May 1991 President Rafsanjani made an official visit to Turkey—the first such visit by an Iranian Head of State since 1975—where he publicly stated his agreement with Turkey's President Turgut Özal that a Kurdish state should not be established in northern Iraq. In early 1992 Turkey alleged that Iran was lending support to guerrillas of the Kurdistan Workers' Party (Partiya Karkoren Kurdistan—PKK) engaged in hostilities with Turkish armed forces in north-east Turkey. Further deteriorations in Iran's relations with Turkey were reported in subsequent months. In October, however, the Turkish Prime Minister, Süleyman Demirel, made a visit to Teheran. As a result of the visit, Iran and Turkey agreed to increase economic and political co-operation. In December 1993 Iran's First Vice-President, Hassan Habibi, visited Turkey, where he signed an

agreement on security co-operation between Turkey and Iran. In March 1995 Iran criticized a military operation undertaken by the Turkish armed forces against PKK fighters in northern Iraq, fearing that the hostilities might spread to Iran. In April 1996 new tensions arose in relations with Turkey after four Iranian diplomats were arrested in Turkey for alleged espionage; retaliatory expulsions of Turkish diplomats by Iran ensued. Iran was reported to be increasingly anxious at growing military co-operation between Turkey and Israel. In June 1996 the rise to power of a governing coalition in Turkey led by the Islamist Welfare Party facilitated closer relations between Turkey and Iran. However, Iranian influence was cited as one of the main reasons for the sustained political offensive by the Turkish military to bring down the coalition, which duly collapsed in June 1997. In the same month Iran became a founder member of the Istanbul-based Developing Eight (D-8, see p. 278) group of Islamic countries. Meanwhile, in February the Iranian ambassador to Turkey provoked a diplomatic crisis by advocating the introduction of *Shari'a* law in Turkey. Criticism of the actions of the Turkish military by an Iranian consul-general later in that month resulted in both men being asked to leave the country. Iran responded by expelling two Turkish diplomats. However, both countries immediately undertook initiatives to restore relations, and in March it was agreed, during a visit to Turkey by Iran's Minister of Foreign Affairs, that all bilateral agreements were to be pursued. Ambassadors were exchanged in early 1998.

From mid-1992 the Iranian Government was reported to be seeking ways of lending support to Bosnian Muslims engaged in hostilities with mainly Serb forces in Bosnia and Herzegovina. In April 1995 the USA claimed that the Iranian Government had supplied large quantities of small weapons and ammunition to the Bosnian Government. In July the Iranian Ministry of Foreign Affairs declared that the UN embargo on the supply of weapons to the Bosnian Government was invalid, and the Iranian Minister of Foreign Affairs travelled to Bosnia in order to discuss ways of delivering military support to the Government. In April 1996 the USA admitted that it had approved covert shipments of Iranian military equipment to Bosnia between early 1994 and January 1996. Following the end of the war in Bosnia, US pressure on Bosnia to sever all links with Iran was evident.

In July 1995 Iran was reported to have organized a month-long extension of a cease-fire between rival Kurdish groups in Iraqi Kurdistan, prompting Iraq to denounce Iranian interference in Iraqi internal affairs.

In September 1996 Iran appealed for international assistance to provide emergency aid to as many as 500,000 Kurdish refugees, who had fled towards the Iranian border in response to inter-Kurdish hostilities around the towns of Arbil and As-Sulaimaniya in the Kurdish 'safe haven' in northern Iraq. Supporting the Patriotic Union of Kurdistan (PUK) in these hostilities, Iran apparently aimed to defeat US allies in Iraqi Kurdistan and assert its own influence.

ELECTION OF KHATAMI

The months following the 1996 Majlis elections were something of an 'interregnum' as 'liberals' and 'conservatives' manoeuvred in anticipation of the presidential elections scheduled for May 1997, and it became clear that the Constitution would not be amended to allow Rafsanjani to seek re-election for a third term. In March 1997 Rafsanjani was appointed Chairman of the Committee to Determine the Expediency of the Islamic Order (which arbitrates in disputes between the Majlis and the Council of Guardians) for a further five-year term, indicating that he would continue to play an influential role in political life upon the expiry of his presidential mandate. In May the Council of Guardians approved four candidatures for the presidential election (a further 234 were rejected). The selected candidates were Ali Akbar Nateq Nouri (Speaker of the Majlis); Sayed Muhammad Khatami (a presidential adviser and former Minister of Culture and Islamic Guidance); Muhammad Muhammadi Reyshahri (a former Minister of Intelligence and Internal Security, Prosecutor-General and, of late, Khamenei's representative in *Hajj* and pilgrimage affairs); and Sayed Reza Zavarei (hitherto vice-president of the judiciary and a member of the Council of Guardians). Despite early expectations that Nateq Nouri would secure an easy victory, Khatami emerged as a strong contender in the days prior to the election, which took place on 23 May. Regarded as a 'liberal', Khatami—supported by the Servants of Iran's Construction, as well as by intellectuals, by women's and youth groups, and by the business classes—took some 69.1% of the total votes cast, ahead of Nateq Nouri, with 24.9%. The rate of participation by voters was in excess of 88%. (Nateq Nouri was re-elected Speaker of the Majlis at the beginning of June.)

Khatami was sworn in by Khamenei on 3 August 1997, and took the presidential oath of office before the Majlis on the following day. The new President stated that it would be the responsibility of his administration to create a safe forum for free speech, within the framework of regulations defined by Islam and the Constitution, and to promote 'easy and transparent' relations between the people and the organs of state. Khatami emphasized his commitment to fostering sustained and balanced growth in the political, economic, cultural and educational spheres, and to the freedom of the individual and respect for the rights of the nation, in the context of the rule of law. In foreign affairs, the President undertook to promote the principle of mutual respect, but pledged that Iran would resist any power seeking to subjugate Iranian sovereignty. Despite some concern that 'conservatives' in the Majlis might oppose some of the more liberal members of Khatami's first Council of Ministers, which was presented for approval in mid-August, all of the nominees were endorsed by the assembly after several days' debate. Notable among the 'moderate' appointees were Ata'ollah Mohajerani (a former Vice-President) as Minister of Culture and Islamic Guidance, and Abdollah Nuri as Minister of the Interior (a post he had previously held in 1989–1993). Kamal Kharrazi (hitherto Iran's ambassador to the UN) replaced the long-serving Ali Akbar Velayati as Minister of Foreign Affairs, while Qorbanali Dorri Najafabadi became Minister of Information. Upon taking office, Khatami had reappointed Hassan Habibi as First Vice-President. Six further Vice-Presidents were named later in the month, among them Muhammad Hashemi Rafsanjani, who retained the post of Vice-President in charge of Executive Affairs; Ma'sumeh Ebtekar, as Vice-President and Head of the Organization for the Protection of the Environment, was the first woman to be appointed to a government post of such seniority since the Islamic Revolution. In mid-October Khatami named former Prime Minister Moussavi as his senior adviser. In the following month the President appointed a new Committee for Ensuring and Supervising the Implementation of the Constitution.

Although Khatami pledged his allegiance to Khamenei as Iran's spiritual leader, the new President's assumption of office revived long-standing rivalries among the senior clergy. The focus of opposition to Khamenei was seemingly Ayatollah Montazeri (Khomeini's designated successor prior to March 1989), who began openly to question Khamenei's authority and to demand that Khatami be allowed to govern without interference. In mid-November 1997 police used tear-gas to disperse a violent demonstration in Qom by supporters of Khamenei, who had gathered to denounce Montazeri and one of his allies, Ayatollah Azari Qumi. Demonstrations in support of Khamenei persisted in Qom, Teheran and elsewhere for several days, until Khamenei urged an end to the protests; none the less, he demanded that Montazeri be tried for treason, and that all others who questioned his authority be prosecuted in accordance with the law. In mid-December the General Secretary of Nehzat-Azadi, Ibrahim Yazdi, who had reportedly met with Montazeri shortly before the latter had publicly criticized Khamenei, was detained for almost two weeks, on charges of desecrating religious sanctities, after he had signed an open letter to Khatami urging that Montazeri's rights be respected.

During the first months of his presidency, in spite of his relative lack of experience in government, Khatami was judged to have strengthened his position, and that of his supporters, mainly through the successful conduct of foreign policy (see below); and in January 1998 the Iranian Union of Journalists was sufficiently emboldened to express rare public criticism of the powerful Head of the Judiciary, Ayatollah Muhammad Yazdi (an influential member of the Committee to Determine the Expediency of the Islamic Order, appointed by, and responsible only to, Khamenei), whom it accused of seeking to obstruct the

freedom of the press. In April the Mayor of Teheran, Gholamhossein Karbaschi, became the focus of political rivalry when he was arrested on charges of fraud and mismanagement. Karbaschi was a popular national figure and a prominent supporter of President Khatami, and on the day of his arrest the Council of Ministers issued a public statement criticizing the decision to detain him. Later in the month students demonstrating in support of Karbaschi were involved in violent clashes with the police. The political nature of the case was further underlined in May, when it was announced that the Servants of Iran's Construction had been authorized by the Ministry of the Interior to form a political party of the same name and that Karbaschi would be the party's Secretary-General.

Karbaschi's trial, broadcast in full on Iranian television, commenced in early June 1998 and achieved unprecedented publicity. Any concerns that an unwarranted level of attention was being directed at a simple case of corruption in local government were dispelled on 21 June by the impeachment, by 'conservative' deputies in the Majlis, of the Minister of the Interior, Abdollah Nuri, who had expressed his personal support for Karbaschi in April. (Earlier in the year Nuri had, furthermore, expressed criticism of Yazdi for allegedly persecuting Garbaschi and his aides.) Nuri was duly dismissed from the interior portfolio, the Majlis having upheld a motion expressing 'no confidence' in him. However, Khatami promptly demonstrated his full support for Nuri by appointing him Vice-President in charge of Development and Social Affairs, an appointment which allowed him to retain a position in the Council of Ministers, beyond the scrutiny of the Majlis. In July the Majlis approved the appointment of Khatami's former Vice-President in charge of Legal and Parliamentary Affairs, Sayed Abdolvahed Musavi-Lari (perceived as a 'moderate'), as Minister of the Interior. Later in the month Karbaschi was sentenced to five years' imprisonment and 60 lashes. He was also fined and banned from holding public office for 20 years. Following an appeal, in late December the duration of the custodial sentence was reduced to two years; the punishment of 60 lashes, suspended at the time of sentencing, was commuted to a fine of IR 10m. (in addition to the fine of IR 1,000m. imposed in July), and the term of prohibition from holding public office was reduced to 10 years. A further appeal failed to overturn the conviction, and Karbaschi began his custodial term in May.

Several months of factional tensions preceded the next major test of strength between 'conservatives' and 'liberals', the elections to the Council of Experts (the body responsible for the appointment of the country's spiritual leader), held on 23 October 1998. The 'conservatives' retained control of the Council, but, to many observers, the low turn-out at the polls to a large extent undermined the legitimacy of their victory. Leaders of the 'conservatives' none the less hailed the results of the elections as a sign of public devotion to religious values. More than 60% of the seats in the 86 member body went to the radical right wing, some 30% to 'conservative' candidates, while 'centrists' secured about 10%. This outcome had been widely predicted, as the Council of Guardians (responsible for scrutinizing candidates), which was firmly in the hands of 'conservative' elements, had approved only 161 of 400 candidates, of whom 130 were declared 'conservatives'; all were clerics. Although the 'conservatives' had done their best to mobilize voters, it appeared that public disillusion with the electoral process led to a poor level of participation. The number of people voting was variously reported at between 15m. and 18m., about 40% of all eligible voters. In the previous year's presidential elections 29m. had voted. None the less, the figures indicated that the 'conservatives' had a real social base, estimated at around 30% of the population.

During the campaign Khatami himself had little room for manoeuvre. He criticized the election authorities for not allowing a larger number of competent figures to stand, but 'joined' the 'conservatives' in urging the population to vote. The elections represented the culmination of a 'conservative' attack on the 'reformist' coalition. The 'leftist' wing of this coalition refused to give its support to any candidates after its own list was rejected by the election authorities. The centre, however, although many of its candidates were also refused, none the less persisted with the remainder, and succeeded in establishing for the first time a minority opposition group in the Assembly. The day after the election results were announced the Ministry of the Interior, which remained in the hands of the 'reformists', announced that the first local council elections were to be held early in 1999, thus immediately precipitating another round of factional struggles.

In the final weeks of 1998 the murders of a number of political dissidents engendered an atmosphere of terror among Iran's intelligentsia. The first, and most prominent, victim was Dariush Foruhar, who was, with his wife, killed in their home in Teheran. Foruhar had founded the Iranian People's Party, and had for some time also edited a newsletter that was critical of the regime. In subsequent weeks three more dissidents were kidnapped and murdered: all three were writers and campaigners against censorship, who were attempting to revive the secular Writers' Association. The murders prompted outcry both within Iran and abroad, and it was immediately rumoured, and widely believed, that a radical right-wing group, possibly with links to elements within the State, was responsible. President Khatami and members of his cabinet denounced the crimes, and Ayatollah Khamenei also condemned the killings and urged the intelligence service to arrest and punish the culprits.

President Khatami and his supporters made another significant advance after their victory in the local council elections on 26 February 1999. The 'conservatives' had again tried to preclude a large victory for the 'reformers' by vetting candidates (through the Council of Guardians) ahead of the poll, and had disqualified many contenders allegedly for rejecting the doctrine of *velayat-i faqih* (i.e. that ultimate political authority should rest with Iran's spiritual leader). None the less, the elections themselves were generally accepted to have been among the most transparent in the country's history. Three tendencies competed for votes, the 'left-wing' pro-Khatami Participation Front, the 'centrist' pro-Rafsanjani Servants of Iran's Construction, and the 'conservative' Green Coalition. The Participation Front and the Servants of Iran's Construction campaigned on a 'reformist' platform, and presented candidates in many areas. However, owing to their rudimentary organization, all three tendencies managed to field candidates in only about 25 major cities. The rest of the constituencies, some 700 smaller towns and 33,000 villages, were mostly controlled by independents, who were motivated more by local concerns, such as running water and more telephone lines, than by issues of national politics. In the capital and the larger cities the victory of the Participation Front and the Servants of Iran's Construction was decisive. In the capital they won all 15 seats, thus ensuring that the next mayor of Teheran would also be a 'reformist'. In Isfahan and Shiraz they also won substantial majorities. Even in Mashhad, a 'conservative' stronghold, 'reformers' secured five of 11 council seats, with a further two going to independents. Women also did well in the elections. The most prominent woman elected was Jamileh Kadivar, the sister of the reformist thinker Mohsen Kadivar and the wife of the pro-Khatami Minister of Culture and Islamic Guidance, Ata'ollah Mohajerani. Jamileh Kadivar polled third in Teheran, with 370,000 out of 1.4m. votes. Although numerically still small (some 5,000 female candidates were among a total of 300,000 contenders, winning 300 of 197,000 seats), women's electoral successes, and the proportion of the vote that they were able to attract, represented a significant step forward in their participation in the political process.

Iran's 'conservatives' immediately responded to the success of the 'reformists' with renewed efforts to use the institutions that they still controlled, particularly the judiciary, to restrict the freedom of action of the 'reformers' and the press. In the immediate aftermath of the elections the political philosopher Mohsen Kadivar was arrested. The main focus of Kadivar's thought and published work was that the doctrine of *velayat-i faqih*, a key ideological tenet of the Islamic republic, was an innovation in Islamic thought. In April Kadivar was ordered to be detained for 18 months by the Special Clerical Court on charges of spreading fabrications and inciting public unrest, although his books remained freely available. In this action against Kadivar, the 'conservatives' apparently hoped to limit the influence of those offering legitimacy to popular demands for more say in political and social affairs. The tactic failed, however, as Kadivar was widely represented as a martyr, and even more signficantly, hundreds of otherwise 'conservative'

clerics in the holy city of Qom parted ways with the establishment and signed petitions demanding Kadivar's release, insisting that he had done no more than exercise the traditional right of a learned theologian to interpret religion.

The second focus for the 'conservatives' was the press, most notably the 'reformist' women's daily *Zan*, run by Faezeh Hashemi, daughter of former president Hashemi Rafsanjani. *Zan* was accused of anti-revolutionary activity for publishing a Nowrooz (new year) message from the widow of the deposed Shah, Farah Diba, and ordered to cease publication immediately. These actions, against Kadivar and *Zan*, were apparently part of a co-ordinated right-wing strategy to reduce the influence of the 'reformists' prior to the crucial Majlis elections scheduled for early 2000. The 'conservatives', in a clear majority in the incumbent Majlis, were especially fearful of losing control of this institution to the reformers.

In April 1999 the 'conservatives', while still attempting (and finally succeeding) to have five leading pro-reform city councillors (among them former Minister of the Interior Abdollah Nuri) in Teheran removed from office on technicalities, turned their attentions on the Minister of Culture and Islamic Guidance. Mohajerani, staunchly pro-Khatami and a leading member of the reform movement, had for the past 18 months been providing political and financial support to help build up an independent press. As a result, the numbers of publications increased rapidly, newspaper readership grew by several millions, and the press became an important arena for the 'reformers' in their efforts against the 'conservatives' and 'hardliners'. In an attempt to check the ideological advances of the 'reformers', a group of 'conservative' Majlis deputies tabled a motion to impeach Mohajerani, on the grounds that his 'liberal' strategy was undermining religious and revolutionary values. In the parliamentary debate on the impeachment, at the beginning of May, Mohajerani was accused of being un-Islamic, anti-revolutionary, immoral, unwise, corrupt, politically naive and deviant. In his defence, Mohajerani elaborated the ideas that had become the hallmarks of the 'reform' movement: tolerance, the rule of law, freedom, constitutionalism and civil society, often quoting classical Persian poetry and verses from the Koran. In the final vote a large number of independent deputies joined with the reformers and the impeachment motion was defeated by 135 votes to 128.

The arrest, revealed in June 1999, of 13 Jews in Shiraz and Isfahan, on charges of spying for Israel and the USA, was widely interpreted as an attempt by 'conservatives' to undermine President Khatami's policy of détente with the West. Meanwhile, 'conservatives' and 'reformers' also appeared to be vying for control of the Ministry of Information. In mid-June a deputy minister, Said Emami, committed suicide while in detention; he and three other intelligence officers had earlier been arrested on charges of arranging the murders of political dissidents in late 1998 (see above). It was believed that a group had existed within the Intelligence Ministry for the purpose of the systematic elimination of opponents of the regime. As to who may have given this group its orders, however, there was no information. None the less, the 'reformers' seized this issue as an opportunity to wrest control of the Ministry of Information from the 'conservatives', demanding that the ministry be restructured and that radical right-wingers be purged from it. The 'conservatives', greatly embarrassed by revelations of such activities, tried to distance themselves from Emami, claiming he was an Israeli spy, but the independent press pursued the matter relentlessly, and continued to demand explanations.

In early July 1999 one of the most serious challenges to the regime in many years erupted on the streets of Teheran. The crisis began when the 'conservative'-dominated Majlis approved legislation aimed at curbing press freedom. The new press law was an integral part of efforts by 'conservatives' to ensure their success in the forthcoming Majlis elections. The judiciary, equally 'conservative'-controlled, immediately seized the opportunity to ban the publication of Iran's oldest pro-reform newspaper, *Salam*, on 7 July. The same night hundreds of Teheran university students held a demonstration in support of the suppressed daily. The response to this relatively minor disturbance followed swiftly, as early the next morning right-wing vigilantes of the Ansar-e Hezbollah, with the help of the police, forcibly entered halls of residence. Their assaults on the students left several hundred injured and at least one student dead; about 200 arrests were made. In subsequent days thousands of students gathered in Teheran, and unrest spread to other cities. Student leaders made speeches demanding radical change; there were repeated clashes with riot police, and there was open criticism of Ayatollah Khamenei. Supporters of President Khatami came to the defence of the students, and Teheran university chancellors resigned in protest at the police violence. Ayatollah Khamenei also distanced himself from the attack on the students, and the Supreme Council for National Security ordered the dismissal of two senior police officers.

The student movement is regarded as an important element of the pro-Khatami coalition, with several effective networks that are mostly controlled by 'moderate' Islamists. In the course of the demonstrations, however, leftist and secular elements emerged more clearly, and the split between the 'moderate' and 'radical' wings of the student movement became more apparent. Khatami appealed for restraint, and the unrest subsided when the students dispersed for the summer vacation. However, the announcement, in September 1999, that four students had been sentenced to death for their part in the July riots did little to inspire confidence that the crisis was at an end. In mid-August, meanwhile, Ayatollah Sayed Mahmoud Hashemi-Shahrudi, considered a 'modernist', but none the less 'conservative', assumed the post of Head of the Judiciary, in succession to Ayatollah Yazdi, who was immediately appointed to the Council of Guardians.

FOREIGN RELATIONS UNDER KHATAMI

The success of President Khatami's reformist project depends on ending Iran's isolation—both political and economic—by seeking an improvement in relations with the West. Any such improvement will be determined by the course of Iran's relations with the USA. This key area of foreign policy is also most likely to provoke conflict between opposed factions within the Iranian leadership. In August 1997, in an address to the Majlis, President Khatami identified Iran's need for 'an active and fresh presence' in the sphere of foreign relations. The US Department of State greeted the announcement of a new Iranian Council of Ministers in August 1997 with a statement of its willingness to engage in dialogue, provided that Iran would discuss the issues of nuclear weapons, 'terrorism' and the Middle East peace process. This was tantamount to setting impossible conditions for dialogue: Iran's definition of 'terrorism', for instance, was substantially different to that of the USA; and Iran had long regarded the Middle East peace process as dead. In mid-1997 official US attitudes towards Iran continued to be dominated by concern about the country's weapons programmes. In June, during a tour of the Gulf states, the US Secretary of Defense, William Cohen, repeatedly claimed that such programmes posed a threat to Iran's weaker neighbours. Later in the month, the commander of US forces in the Gulf warned that Iran was still seeking to develop nuclear weapons and that it might be closer to achieving this goal than had previously been thought. In July the announcement that Russia was to assist Iran to complete the nuclear power plant at Bushehr prompted the USA to reiterate its concern that Iran might seek to exploit civilian nuclear technology for the development of nuclear weapons. In September the US Vice-President announced that US and Russian investigators had concluded that Iran was engaged in a 'vigorous effort' to obtain technology for the manufacture of nuclear weapons and ballistic missiles capable of transporting them. (Earlier in September the Russian authorities had stated that they would be willing to allow the USA to monitor the Bushehr nuclear plant.) In the same month it was reported that Israel was attempting to persuade the Clinton administration to impose sanctions on Russian organizations and companies involved in supplying missile technology to Iran. In October China announced an end to the sale of nuclear technology, as well as of conventional weaponry, to Iran. In November Iran became a signatory to the International Chemical Weapons Convention; under its terms, which prohibit the production and possession of chemical weapons, Iran became subject to mandatory international inspections. Earlier in the month it

was reported that the USA had purchased fighter aircraft from Moldova, in order to prevent their sale to Iran.

As a result of a visit to Teheran at the end of November 1998 by Russia's minister responsible for nuclear power, Yevgenii Adamov, it became all the more evident that Russia intended to finish building the nuclear power plant at Bushehr. Despite unrelenting pressure from the USA and Israel to withdraw from the project, Russia was determined to continue with its programme of nuclear co-operation with Iran. In Teheran Adamov signed an agreement with Muhammad Aghazadeh, head of the Atomic Energy Organization of Iran, committing Russia to complete the installation of the first reactor at Bushehr and to conduct a feasibility study for the construction of three additional units at the site. Although Iran has signed and ratified the Nuclear Non-Proliferation Treaty and is giving the IAEA full access to Bushehr, the US and Israel repeatedly alleged that the reactor could give Iran the technology it needs to develop nuclear weapons. Adamov, however, reiterated assurances that Bushehr could not be used for military purposes.

Khatami's election had inevitably aroused widespread speculation in Western media regarding the prospects for an improvement in relations with the USA and with other Western countries. However the US Administration might feel disposed towards a new Iranian President with exemplary democratic credentials, who had clearly revealed his reformist instincts, the secondary sanctions act, sponsored by US Senators D'Amato and Kennedy, and approved by the US Congress in June 1996 (also known as the Iran-Libya sanctions act) remained an obstacle to any *rapprochement*; but the sanctions act was being increasingly undermined by commercial and geopolitical realities: European companies, and their governments, were simply not prepared to forgo opportunities in the development of the energy resources of the newly-independent states of Central Asia for the sake of US foreign policy aims. In July 1997 the Clinton administration raised no formal objection to a project to construct a 2,000-mile pipeline to carry gas from Central Asia to Turkey and, thence, to Europe, despite the fact that the pipeline would cross some 788 miles of Iranian territory. The dilemma of the USA regarding sanctions was to become more acute as the year progressed. At the end of July 1997 it became clear that the French energy company, Total, was determined, in partnership with Gazprom of Russia and Petronas of Malaysia, to proceed with a $2,000m.-investment in Iran's South Pars gas field. US Senator Alfonse D'Amato, who had been instrumental in the conception of the sanctions act, immediately urged the US Administration to impose sanctions on Total. However, such a move would risk provoking a 'trade war' with the EU, damaging relations with Russia, and thus further complicating other areas of US foreign policy—the question of Iraq's compliance with UN Security Council resolutions, for instance—where European and Russian co-operation was essential. US commercial interests were also at stake. At the same time, the US Administration was conscious that ending objections to investments in the Iranian gas industry could precipitate the collapse of its aim, in the longer term, to direct the flow of energy from the Caspian Basin via Turkey rather than Iran. In October the USA was reported to be seeking an agreement with the EU under which it would suspend the implementation of sanctions in return for increased European pressure on Iran to curb its alleged involvement in terrorism.
